PROCEEDINGS OF THE COMMITTEE	- - - - -	p. v

R E P O R T.

BY THE SELECT COMMITTEE appointed to inquire with regard to all HOSPITALS and PROVIDENT and other PUBLIC DISPENSARIES and CHARITABLE INSTITUTIONS within the Metropolitan Area for the care and treatment of the SICK POOR which possess real property or invested personal property, in the nature of endowment, of a permanent or temporary nature ; and to receive, if the Committee think fit, evidence tendered by the authorities of voluntary institutions for like purposes, or with their consent, in relation to such institutions : And, further, to inquire and report what amount of accommodation for the sick is provided by rate, and as to the management thereof ; and to Report thereon to the House.

ORDERED TO REPORT,

THAT the Committee have met, and have considered the subject referred to them, and have examined numerous Witnesses ; and have directed the Minutes of Evidence taken before them, together with an Appendix, to be laid before your Lordships ; and they beg to recommend that the Committee be re-appointed in the next Session.

31st July 1890.

ORDER OF REFERENCE.

Die Lunæ, 28° Aprilis, 1890.

METROPOLITAN HOSPITALS, &c.

Moved, That a Select Committee be appointed to inquire with regard to all hospitals and provident and other public dispensaries and charitable institutions within the metropolitan area for the care and treatment of the sick poor which possess real property or invested personal property, in the nature of endowment, of a permanent or temporary nature; and to receive, if the Committee think fit, evidence tendered by the authorities of voluntary institutions for like purposes, or with their consent, in relation to such institutions: And further, to inquire and report what amount of accommodation for the sick is provided by rate, and as to the management thereof; and that the witnesses before the said Select Committee be examined on oath; agreed to (The Lord Sandhurst):

Then the Lords following were named of the Committee:—

Lord Archbishop of Canterbury.	Lord Clifford of Chudleigh.
Earl Cadogan (<i>Lord Privy Seal</i>).	Lord Sandhurst.
Earl of Winchilsea and Nottingham.	Lord Fermanagh (<i>Earl of Erne</i>).
Earl of Lauderdale.	Lord Lamington.
Earl Spencer.	Lord Sudley (<i>Earl of Arran</i>).
Earl Cathcart.	Lord Monkswell.
Earl of Kimberley.	Lord Thring.
Lord Zouche of Haryngworth.	

The Committee to meet on Thursday next, at Three o'clock, and to appoint their own Chairman.

Die Lunæ, 5° Maii, 1890.

The evidence taken before the Select Committee from time to time to be printed for the use of the Members of this House; but no copies thereof to be delivered except to Members of the Committee until further order.

Die Lunæ, 12° Maii, 1890.

Ordered, That the Select Committee have power to direct that copies of the evidence be delivered to such persons as they shall think fit.

Die Veneris, 6° Junii, 1890.

The Lord Saye and Sele added to the Select Committee.

PETITIONS.

Petitions that the inquiry of the Select Committee may be extended so as to embrace the provincial medical charities; of British Medical Association (29° Aprilis); of Members of the Medical Profession signing (4) (9° Junii); of Members of the Medical Profession at Liverpool (16° Junii); of Members of the Medical Profession signing (19° Junii); read, and referred to the Select Committee.

SECOND REPORT	- - - - -	p. iii
PROCEEDINGS OF THE COMMITTEE	- - - - -	p. v
MINUTES OF EVIDENCE	- - - - -	p. 1
APPENDIX	- - - - -	p. 769

S E C O N D R E P O R T.

BY THE SELECT COMMITTEE appointed to continue the Inquiry with regard to all HOSPITALS and PROVIDENT and other PUBLIC DISPENSARIES and CHARITABLE INSTITUTIONS within the Metropolitan Area for the Care and Treatment of the SICK POOR which possess real property, or invested personal property, in the nature of endowment, of a permanent or temporary nature ; and to receive, if the Committee think fit, evidence tendered by the authorities of Voluntary Institutions for like purposes, or with their consent, in relation to such Institutions ; and further, to continue the Inquiry as to what amount of Accommodation for the Sick is provided by rate, and as to the management thereof ; and to Report thereon to the HOUSE.

ORDERED TO REPORT,

THAT the Committee have met, and have further considered the subject referred to them, and have examined numerous witnesses, but having regard to the late period of the Session, and the fact that they have so lately concluded taking evidence, the Committee feel that they must defer the consideration of their Report until next Session, in order that they may have ample time to weigh the evidence and discuss their Report. They have, therefore, directed the Minutes of Evidence, together with an Appendix, to be laid before your Lordships ; and they beg to express their hope that they may be re-appointed next Session for the purpose of making a full Report on the evidence taken by them.

18th July 1891.

ORDER OF REFERENCE.

Die Veneris, 23^o Januarii, 1891.

METROPOLITAN HOSPITALS, &c.

Moved, THAT a Select Committee be appointed to continue the inquiry with regard to all hospitals and provident and other public dispensaries and charitable institutions within the metropolitan area for the care and treatment of the sick poor which possess real property or invested personal property, in the nature of endowment, of a permanent or temporary nature; and to receive, if the Committee think fit, evidence tendered by the authorities of voluntary institutions for like purposes, or with their consent, in relation to such institutions; and further, to continue the inquiry as to what amount of accommodation for the sick is provided by rate, and as to the management thereof, and to report to the House; and that the Witnesses before the said Select Committee be examined on oath.

The Lords following were named of the Committee :

Lord Archbishop of Canterbury.	Lord Saye and Sele.

LORDS PRESENT:

Earl of LAUDERDALE.

Earl CATHCART.

Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE and SELE.

Lord SANDHURST.

Lord SUDLEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. EDWARD HARBORD LUSHINGTON, is called in ; and, having been sworn,
is Examined, as follows :

Chairman.

9759. You are the Treasurer of Guy's Hospital, are you not?—Yes.

9760. What occupation had you in life before you became treasurer of Guy's Hospital?—I was for 27 years in the Bengal Civil Service.

9761. And to what point in the Civil Service did you ultimately rise?—I rose to be Secretary to the Government of India, in the Financial Department.

9762. How long have you been treasurer of Guy's?—I have been treasurer of Guy's for close upon 15 years.

9763. And during that time have you observed great improvement in hospital management?—Yes, I have.

9764. In what particular branches?—Particularly in the nursing branch.

9765. Could you develop that answer a little further?—I may mention that when I was first appointed to the hospital, for a period of four years I did scarcely anything in the way of reform, but looked on and made myself thoroughly acquainted with the system. The system was that the sisters in charge of the wards were not trained nurses ; that they knew little or nothing about their duties before they came there ; they learned them as they could ; they had no fixed hours of work ; they breakfasted in their own rooms ; they came into the wards when they pleased, and practically they went out when they pleased, so long as they were there when the surgeons and the medical staff went round.

9766. I will come back to the nurses later ; I am taking the constitution of the hospital now. Has there been any alterations made during your time in that?—No, no alteration in the constitution of the hospital.

9767. The hospital was founded by a person of the name of Guy, was it not?—Yes, the hospital was founded about the year 1725, or a little
(24.)

Chairman—continued.

before that, by Guy. He died in 1725, just after the building, I think, had been completed. He left a will defining what in his opinion should be the constitution of the hospital ; and that will formed the basis of an Act of Parliament that was passed in 1726 or 1727 ; and the constitution of the hospital is as follows : It consists of 60 governors, self-elected. Out of this body of governors there is a court of committees, as it is termed, consisting of 21 members ; and this court of committees practically discharges the whole business of the hospital.

9768. How is the court of committees nominated ; there are 21 of the governors you say?—Yes.

9769. Are they taken in rotation?—No, they are elected amongst themselves ; but seven have to go out every year, and seven new members, taken out of the remaining number, are appointed in their place.

9770. Then, with regard to this court of committees, what are their particular functions ; do I understand that they manage the business of the hospital?—They manage the business of the hospital. They take up an agenda, which is prepared by the treasurer, of the several cases and business which have to be brought before them, whether it relates to the estates or to the management of the hospital, or to any expenditure of a character sufficiently large to demand their attention.

9771. And their business is of a formal character?—Entirely ; it is the business of the hospital.

9772. At the same time in the absence of this court you represent that court?—In their absence.

9773. How often do they meet?—Seven times in the year.

9774. Then for the whole of the rest of the year you are in full power in the hospital?—That would be so.

A 2

9775. Does

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

9775. Does that mean that you have the power of settling everything practically off-hand yourself?—If it was of any importance I should call a court of committees; I mean if it was of any importance that I thought was beyond my province, or such that it would be advisable to take the opinion of the governors upon the subject.

9776. Then you have the power of summoning this court of committees in a case of emergency?—Whenever it is necessary.

9777. Whenever you have a case with which you cannot deal yourself?—Yes.

9778. Have you ever called a court of committees together?—Yes.

9779. And what is the quorum?—The quorum consists of seven members of the court besides the chairman, whether it be the president or whether it be the treasurer.

9780. Have you any difficulty in getting a quorum?—I do not think so; I think on the whole we generally have a quorum.

9781. Is your calling this court of committees together a rare occurrence?—They are very rarely called together besides at the appointed times; in fact, I do not think I have called a court of committees together for several years. But I should like to mention that besides this court of committees we have certain standing sub-committees, and we appoint sub-committees for the consideration of important subjects. For instance, we have a standing sub-committee relating to the management of our estates, consisting of three other gentlemen besides myself, and I consult with them on all important particulars concerning the management of these estates. We have a sub-committee just now to consider the expediency of adding to the buildings in the hospital. We have also besides that a consultative body which meets once a month, which is called the "Taking-in-Committee." I do not know how the name exactly came about, it does not apply to what the name indicates, but it is a committee consisting of a certain number of the medical officers, and a certain number of the governors. This committee have no authority to issue any orders, but they meet together once a month to consider whether it would be advisable to introduce any alteration or modification of the nursing arrangements, and their opinion is submitted to the court of committees, and the court of committees either accept it or reject it, or modify it, as they think proper.

9782. That taking-in committee, I understand from you, is practically a nursing sub-committee?—Entirely a nursing sub-committee, relating entirely to the nurses.

9783. Has it anything to do with any other part of the administration of the hospital?—Nothing.

9784. Nothing to do with discipline?—No; nothing.

9785. How is this taking-in committee formed?—It is elected by the court of committees; they choose the governors for this committee, and then we write to the staff, or I write to the staff under the orders of the governors, and beg that they will send two members from the medical

Chairman—continued.

staff to join this committee; any two members they think proper.

9786. Then the medical staff choose two members of their own number?—Yes; generally one surgeon and one physician, and they attend the meetings of this monthly committee.

9787. Then you are assisted in your administration by these various sub-committees?—I am certainly, very much.

9788. But the ultimate responsibility rests with the court of committees?—Yes, the ultimate responsibility certainly does rest with them.

9789. At the same time they are the final court of appeal?—Yes; at the same time there are four general courts that we have; four in the year; and the proceedings of the court of committees are read before the general courts and confirmed by them; it is a mere matter of form, but still all the proceedings of the court of committees come before the general court of governors and are read to them.

9790. Then in the case of some official of the hospital thinking himself very unjustly used, we will say by yourself, he could appeal to the court of committees?—Yes, he could do so certainly.

9791. Then in the case of the court of committees not supporting him he could again appeal to one of these four general courts?—I assume that he could do so; we have never had a case of the kind.

9792. Has it ever occurred to you that it would be useful to have a weekly committee to support you as an executive committee?—We have a meeting once a week, which in former days one of the governors always attended. The meeting is held on Wednesday when I receive all the principal officers of the hospital, the superintendent, the matron, the chaplain, and the foreman of the works. In former days a governor always used to attend those meetings; they are held at 10 o'clock on Wednesday mornings; but of late years the practice of a governor attending has fallen into disuse.

9793. Are not you a governor?—I am a governor.

9794. And you attend?—Yes; but then I take the chair as the treasurer and dispose of the business.

9795. Does the discipline of students come before you in that weekly meeting?—No. As a general rule any misconduct on the part of the students would be brought up to me, especially by the dean of the college.

9796. I will come to that afterwards; but this meeting really has reference to the administration of the hospital, setting aside the medical school?—Yes. It really comes to this: that the superintendent appears with a book in which he has recorded all the events of the week, as far as he is concerned; the number of patients that he has taken in, the number of patients that have died, the number of patients that have been discharged, and so forth; and also if he has noticed any impropriety or misconduct in the wards on the part of the junior medical staff. The matron appears with her book of nurses showing all the transfers, nurses who have been discharged or removed or appointed. The chaplain gives the detail of the various wards he has visited, of the services that he has held, private baptisms, if any child has been

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

been born, and so on. And the overseer, the foreman of the works, brings a detailed account of all the men, the plumber, the glazier, and so forth, who have been employed during the week, and the various works that have been accomplished.

9797. Then, in addition to that, do the petty cash accounts come before you; you have some petty cash accounts, I presume?—Yes, we have some petty cash accounts.

9798. Do those come before you once a week?—No, not so often as that. All the bills that have to be paid come before me on a Wednesday.

9799. To whom of the high officials do the petty cash accounts go in the first instance?—The petty cash accounts go to the accountant in the first instance. If you mean small sums such as 1 *l.* or 2 *s.*, and so on, they are all looked at by him, and he brings them to me with the vouchers once a quarter, or something like that.

9800. There is a voucher for everything; every small detail?—Yes.

9801. Then, do I take it as your answer, that these petty cash accounts are only looked into once a month?—Not so often as once a month; probably once in three months.

9802. And the vouchers go on accumulating during all that time?—Yes.

9803. Do you think that that is a good plan?—The total amount of petty cash accounts, when I go through them, I think only averages about 60 *l.*

9804. Now, passing to another subject, the principal part of the income of Guy's Hospital is derived from estates?—Yes.

9805. What amount of estates have you?—We have three large estates; one in Herefordshire, one in Lincolnshire, and one in Essex. The Herefordshire estate is about 10,000 acres, the Lincolnshire about 9,000 acres, and I think the Essex estate about 9,000 acres; and then we have an estate in Southwark, consisting of warehouses round about the hospital, which produces about 7,000 *l.* a year. These four properties used to give us about 50,000 *l.* a year gross; but in consequence of the agricultural depression we have lost in Essex quite 40 per cent. of our rents. Our rents in Essex have dropped from 9,500 *l.* to 4,000 *l.*; and in Herefordshire and in Lincolnshire they have dropped about 30 per cent.; between 25 and 30 per cent.

9806. Have you any farms on your hands now?—At this minute we have about 1,400 acres of land in hand in Essex.

9807. You used, I understand you to say, to clear 50,000 *l.* a year from these estates?—That was the gross amount.

9808. Now you have a sum much less than that?—Yes; net, to spend on the hospital, very little over 26,000 *l.*

9809. Then how do you make up your deficit?—We make up our deficit from two or three different sources. First of all, we realise a certain income from our lady pupils; we realise a certain income from our out-patients, and we realise a certain income from our in-patients; and we further raised from the public 100,000 *l.*, and we take out of that 100,000 *l.* each year whatever may be sufficient to make up our income.

9810. But now, with all these different methods (24.)

Chairman—continued.

of procuring money, have you got all the beds full that there are in the hospital?—No.

9811. Can you tell me, in round numbers, how many are vacant?—We can take in 600 patients; we have beds for 600 patients, but at this very minute we have about 427 or 428 actually in beds.

9812. Therefore you have about 150 beds vacant for want of funds?—I should rather say 100 beds vacant for want of funds; we always like to keep an odd 50 unoccupied in case there should be any outbreak of cholera or dysentery, or any very serious accident on one of the railways, as the result of which we might have to take in a great number of people. So that though we have only 450 people in beds we practically have an establishment that would enable us to take in 500 on a pinch. I may say, therefore, that we are 100 beds short of what we could maintain if we had sufficient funds.

9813. You are 100 beds short for want of funds?—Yes.

9814. That is in a very densely populated district, is it not?—Very much so.

9815. And is it not very short of hospital accommodation; you have only one other hospital in the neighbourhood, I think?—We have no other hospital immediately near at hand. In the case of all these serious dock and wharf accidents, the nearest two hospitals are the Poplar Hospital and the Seamen's Hospital at Greenwich, each about four miles distant from Guy's.

9816. Then the case is even stronger than I thought; you are the only hospital in that district?—The only one.

9817. And yet for want of funds you are obliged to keep permanently vacant 100 beds?—Yes.

9818. Do you make a habit of appealing annually, or three or four times a year, for money?—I think we almost do more than that. Whenever anybody gives us a present, say some 400 *l.* or 500 *l.*, or 1,000 *l.*, as we now and then get, I immediately put an advertisement into the newspapers headed by this 1,000 *l.*, or 500 *l.* or 400 *l.*, and invite further subscriptions.

9819. Using the gift as a sort of decoy?—That is pretty well what I try to do. It brings the hospital before the notice of the public.

9820. In regard to tradesmen's bills, who pays them?—I do, every one.

9821. Are they examined by any sub-committee, or what is the course taken?—That depends upon what department they are in. If they are in the medical store and drug department, Dr. Steele looks at them; they are signed by the head dispenser, examined by Dr. Steele, and submitted to myself; and he brings a book every week to me, showing me the quantities of drugs that should be ordered. I go through this list of drugs, and if it occurs to me that it would be advisable to apply for contracts for any one of those drugs, then I desire Dr. Steele to apply for contracts, consider the contracts afterwards, and accept whichever contract seems most advantageous to the hospital.

9822. Then the dispenser himself does not order the drugs?—No; he puts them down in a list.

9823. And you pass it?—I pass it.

9824. And you order the drugs, and you pay for them?—I order the drugs and I pay for them.

9825. But is there no committee appointed to take

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

take the responsibility from your shoulders?—No, not in that matter.

9826. You are responsible entirely?—I am responsible entirely. In the same way with regard to the instruments that are used in the hospital, of course I do not order these instruments unless the instrument committee, which is a committee consisting entirely of surgical men, think they should be purchased. They have a book for the purpose, and they put down what instruments they think should be purchased for the benefit of the hospital, and when I get that book, then I look into it as carefully as I can and order the instruments.

9827. But in the matter of the one hundred and one things required for a hospital, food and drugs, and clothes, and all the other articles required, when are those bills paid; once a quarter or once a month?—We pay some of them once a quarter, but we generally try and pay our bills as rapidly as we can. Take our coal bill, for instance; we make contracts for coals, and that bill is paid once in three or four months, or once in six months, when it comes in. And again, our fish and chickens are paid for, I think, about once a month or once in two months.

9828. Not once a week?—No.

9829. You do not have any regular system of paying large amounts once a quarter, petty cash accounts once a week, and certain other bills once a fortnight?—No; I always devote my Wednesday morning to paying all the bills I can, all that we have got in and that have been examined before they come up to me. The whole bundle is brought to me; my accountant gives me one bill after another; I make inquiries about it and see that it has been duly examined and tested; and then I sign the cheque.

9830. Is any other signature required to the cheque besides your own?—The accountant countersigns the cheque after I have signed it.

9831. With regard to some of these contracts, for food, say, who makes the contract?—The applications or tenders are sent to me in sealed envelopes, and I open them in the presence of the superintendent, and I read out the figures; he notes them down, and then I discuss with him as to which person we should give the contract to. It does not always follow that we give the contract to the lowest application. For instance, if I have known a butcher who has not served us very well, though he may quote a little lower than somebody else, I very often pass him over and give it to another man who I think will give us better meat.

9832. Who receives the food when it comes into the hospital?—We have a hospital steward.

9833. Does he receive every item of food that comes in?—Yes.

9834. Then is there any check over him at all; how do you know that he performs his duty?—He is a very old servant of the hospital, and I think we have this assurance that he performs his duty; namely, that if he did not supply the amount of fish and chicken and meat that was ordered, according to the sisters' tickets which he receives every day for the diet, the sisters would complain and say that A. or B. was ordered fish or poultry and never got it.

Chairman—continued.

9835. You think that indirectly there is a check upon him in that way?—I think that indirectly there is.

9836. And you think you are secure of having good food supplied, because the sisters and patients would complain if it was not good?—I may say also that one of the steward's clerks goes down into the kitchen every morning, when the meat arrives, sees it, weighs it, examines it, and reports upon it.

9837. Is the steward always present himself on those occasions?—Not when the meat arrives always; he probably does not come till a little afterwards.

9838. That is what my former question alluded to?—He does not go down to receive the meat himself; one of his assistants does that.

9839. The assistant goes down and weighs the meat, you say?—Yes.

9840. This is a delegation of duty; the steward is responsible, though his clerk weighs the meat?—He would be responsible; I should hold him responsible. He goes himself and serves out beer, wine or spirits, or anything in that way; he goes down to the cellar himself and serves out those personally; that I know.

9841. Now, in regard to these various amounts of meat, beer, and other commodities, are the amounts consumed compared with previous figures?—Very closely; and I constantly turn round to the accountant and say, "How does this fish bill compare with last month?" or, "How is it we have had so many fowls?" It is very difficult to get at the exact truth of the matter, because it depends upon what the medical officers may order. They may have a dozen men on fish in one week in one month, and only six in a week in the following month, and so on; so that you cannot make any very close comparison.

9842. Passing now to the officials, who are the senior officials appointed by; who were you appointed by?—I was elected by the governors.

9843. By the governors in general court?—Yes.

9844. And the other senior officials, the medical superintendent and others?—They are elected by the governors in general court. Under our Act of Incorporation there are certain appointments that are placed in their hands; the matron, the superintendent, and the chaplain are elected by the general court, also the physicians and surgeons.

9845. In the case of dismissal, would they be dismissed by the same body?—I have never had such a case of that kind, but I should think that probably if they were dismissed their misconduct would be inquired into in the first instance by the court of committees, and they would make such a report to the court as they thought proper, and the court would, no doubt, adopt their views. As I have already said, the court of committees really does all the business of the hospital.

9846. Are the assistant physicians and surgeons also appointed by the general court?—Yes.

9847. Then the other gentlemen, the house surgeons, how are they appointed?—They are appointed by me on the recommendation of the medical school.

9848. Now the medical superintendent, Dr. Steele, has, I think, told us in his evidence, that
he

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

he has nothing to do with the medical work of the hospital?—I think he ought not to be called medical superintendent at all; that is a term that has crept in. When he was appointed in 1853 he was appointed as steward, and resident superintendent I think was his title, and it had nothing to do with the medical department at all.

9849. He called himself medical superintendent, I think, when he was examined here?—Yes, but he was never appointed so by the Court.

Earl Cathcart.

9850. He is called "superintendent" in Burdett's Hospital Annual?—Yes, that is the title by which he generally goes.

Chairman.

9851. In answer to Question 614 he gave us his exact position and title as "medical superintendent"?—"Medical" is not correct, strictly speaking.

9852. Where do the resident officers, the house physicians, and house surgeons, live?—Till within the last year, the last few months I may say, they lived in accommodation that was assigned to them in the hospital, and they were fed at the expense of the hospital; they had bedrooms and meals provided for them at the expense of the hospital. When the college was built and opened, I think in April last or May last, they went over to the college, and we handed over to the college authorities the money; and pay them annually the money that they used to cost us when they boarded and lodged in the hospital.

9853. Is that the Residential College of Students?—Yes.

9854. Is that residential college some way from some of the wards?—It is immediately outside the gates, and we have a subway leading into the wards.

9855. Then you have actually no medical officer residing within the walls of the hospital?—Yes, we have in this way, that the medical officer on duty for the week, and the surgeon on duty for the week, sleep in the hospital, but they do not get their meals in it.

9856. So that those are the gentlemen who are called down in case of an accident being brought in in the middle of the night?—Yes, or in a case of any serious illness occurring suddenly.

9857. Have those gentlemen salaries?—They have no salaries.

9858. Now, as regards the nurses, you began to tell us something about the sisters; by whom are the sisters appointed?—The sisters of the hospital are appointed by myself; that is to say, the matron informs me that a ward is vacant, and she recommends A. B. or C. D. to be the sister of the ward, and these sisters are generally taken from amongst the lady pupils who have been trained in the hospital, and who have had a year's training; so that they come to us knowing all about the hospital, and knowing their respective duties.

9859. Do you train your own nurses at the hospital?—Yes, we train our own nurses at the hospital.

9860. You appoint the nurses on the recommendation of the lady superintendent?—The sisters I appoint.

(24.)

Chairman—continued.

9861. They are commissioned, as it were, by you?—Yes.

9862. But who appoints the nurses?—The nurses come as probationers; all our nurses begin life as probationers.

9863. Who appoints them?—They are appointed by the matron.

9864. They are commissioned, one may say, by the matron?—Yes; and provided they conduct themselves properly they become, after 18 months, full nurses.

9865. Being appointed by the matron, are they also dismissed by the matron?—During the period of their probation they are dismissed by the matron.

9866. Is that up to 18 months?—That is up to 18 months.

9867. Then, at the same time, is the engagement terminable by the other party, the probationer, during her time of probation?—Yes; for the first month they have the option of terminating their engagement if they think proper. After that, after the first month, they sign papers to say that they will serve us for three years.

9868. Then there is no giving a month's notice, and going away?—No.

9869. Then, do I understand that the matron has power to discharge?—Yes, the probationers.

9870. As regards the full nurses, who discharges them?—She would speak to Dr. Steele, the superintendent, on the subject, and if they were both of one mind I think the matron would probably speak to me first about it, and then discharge the woman; but that very seldom, if ever, happens.

9871. But that seems rather a haphazard way of doing it; would it not be simpler if the matron had simply the power of suspending, and then bringing the thing formally before you?—That would be, perhaps, a more complete way of doing the business; but I think that, as I am always on the spot, there is scarcely any necessity for that. When I say always on the spot, I am on the spot every day for six months, and, during the rest of the year, always three days a week. There is scarcely any necessity for suspending a nurse pending such orders as I might have to give on the subject.

9872. The fact of your being on the spot, you mean, obviates the necessity for suspension?—Yes. I think, if a nurse committed any very flagrant act, the matron would immediately remove her out of the ward and apply to me for orders; that would be practically suspension.

9873. But, as a matter of your own private opinion, do you think it wise to give a subordinate official the power of dismissal?—Yes; I have no doubt it is advisable to give the matron this power to dismiss probationers. Nobody can really so well tell as herself whether they are inefficient or incompetent. She visits all our wards every day, and she knows the work of everybody in the wards.

9874. Does the matron go round all the wards every day?—Every day.

9875. Does the superintendent go round the wards?—Every day. He goes round the wards every morning; he goes into the wards and ascertains the number of beds empty, or likely

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

to be empty : he takes a record of that, and also notices whether the dressers are in attendance and doing their duty ; and, if they are late, it is his business to report it to me ; for instance, that he found a dresser very late, that he had not finished the work by dinner-time.

9876. We will keep to the nurses for the present ; he would be communicated with by the sister in regard to any of the nurses ?—Certainly.

9877. About the working hours of these nurses, can you tell us what they are ?—Yes, I can give it you exactly. First of all we may deal perhaps with the day nurses. The day nurses are expected to be up and out of their dormitories at 20 minutes past seven ; they breakfast immediately afterwards, at half-past seven, and they enter the wards at eight o'clock. They dine in two batches. The first dinner hour is from half past 11 to 12, and the second batch dine from 12 to half-past 12 ; half an hour being allowed for dinner. They have tea at half-past four to five, and five to half-past five. They have supper again at half-past eight to nine, and nine to half-past ; and they leave their wards at a quarter to 10.

9878. But now in regard to dinner, you say the first lot of nurses have only half an hour for dinner, namely, from half-past eleven to twelve o'clock—Yes.

9879. Does that actually mean the time they have for dinner ?—Yes.

9880. Are not the wards a long way from the dining room ?—Not very far ; but, I am sorry to say, I think as a general rule the nurses are very much disposed themselves to curtail this half hour. It is, as you know, a very busy time in the morning in the wards between half-past eleven and twelve ; and they run down and get their dinner as fast as they can.

9881. You say that they are “disposed” to curtail this half hour ; would you not rather say obliged ?—No, I am sure it is a voluntary service on their part ; I am quite certain of that.

9882. Still, at the same time, though we may give them credit for all possible zeal, would it not make the work very much behind-hand if they took longer at their dinner ?—If they had a longer period it would make it very much behind-hand indeed.

9883. I suppose that it takes the nurse two or three minutes to get from the ward to the dining room ?—Yes.

9884. And then she wants to wash her hands, and for that she has to go to her room, and then it takes two or three minutes to get back to the ward ; so that you whittle down this half hour ?—It is whittled down a little bit, I am bound to say that.

9885. Have you ever had under consideration the possibility of elongating this time ?—I have thought over it, but it is not feasible very easily, because our patients dine at a quarter or twenty minutes past twelve ; the sister carves the patients' dinner and the nurses have to hand it round ; and they must be back to do that. Then they have to tidy up the wards directly after that, and at half-past one o'clock our surgeons and physicians begin to come round.

9886. At what o'clock do the house surgeons

Chairman—continued.

go round ?—They ought to be going round directly after 10 o'clock.

9887. Then coming to the night nurses, what are their hours ?—The night nurses go on duty at half-past nine in the evening.

9888. Before they go on duty what do they do ; have they what one may call breakfast ?—Yes ; they breakfast at 10 minutes past nine p.m. They go on duty at half-past nine, and they leave their wards at half-past eight on the following morning.

9889. Therefore, for one hour you have the whole staff at work ?—Yes ; because it is very important just to have that time. It is the beginning of the day ; not quite a whole hour, but a good portion of one.

9890. Do they begin attending to the patients earlier than half-past seven ?—Yes ; people of the working-classes have been all their lives in the habit of waking very early.

9891. And then the night nurses come down out of the wards at half-past eight ; and then do they have any dinner ?—Yes ; at twenty minutes past nine.

9892. Do they take anything into the wards with them by way of food ; what we might call luncheon ?—Yes, they do ; night nurses have tea and sugar served out weekly for consumption in the wards, to which is added each night bread and cold meat, or ham, or eggs, or potted meat. They usually make two light meals in the wards, one about midnight and the other about five in the morning.

9893. And what do they drink, tea or coffee, and do they make their own tea in the wards ?—They make their own tea in the wards.

9894. They do not have any beer in the wards ?—No, not at night, in that way.

9895. Does anybody dine with the nurses, any official ?—No, the matron goes down and carves for them on Sundays, and on other days the dormitory matron and the housekeeper.

9896. She does not actually eat the dinner ?—No.

9897. Is there a housekeeper ?—Yes.

9898. Where does she eat ?—She carves at the other end of the table.

9899. Supposing that the food fell short in quantity or quality, you presume that it would be brought to your notice ?—Certainly it would.

9900. Have you ever had complaints in that respect ?—Little petty complaints ; not that they did not have enough, but that the meat was not as nicely cooked as it might be, and so on.

9901. To whom does that complaint ultimately go, to the superintendent ?—It comes to me generally.

9902. Comes to head-quarters ?—Yes ; and I make inquiries into it, of course ; and now and then I drop in to the nurses' dinner myself and see what it all comes to.

9903. In regard to the patients, have they the same advantage ; does anybody go and see what they have for dinner ?—Yes, I constantly see the patients' dinner.

9904. You said, just now, that one of your sources of income was from lady pupils ?—Yes.

9905. Have you got a separate lady-pupil fund, or probationer fund, or do you keep it with the accounts

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

accounts of the hospital?—We keep a separate account, but it is included in the balance of the income of the hospital. We charge a guinea a week for each lady pupil, and we have got 20 of them now, I think; so that you see it, produces a pretty good sum in the year. The rooms are all full.

9906. In addition to your hospital nurses, I think Dr. Steele has told us that you have what is called an institution for nurses?—Yes.

9907. Something like the institutions for private nurses?—Yes.

9908. Is there any possibility of your hospital nursing suffering because of the withdrawal of nurses for the purposes of this institution?—None whatever.

9909. Supposing there was a chance of sending one of your nurses out, and you had not got one in the institution available, should you ever send into the hospital for one to go out?—I do not say that has not been done; it may have been done, but I think very rarely. If we have no nurses to send out, when an application comes, we tell them we have nobody to send.

9910. It is not your practice to take them out of the wards?—No, certainly not.

9911. How long do you train your nurses before you allow them to go to the institution?—Never for less than 18 months; and we pay the whole expenses of their training at the hospital from the funds of the institution, from the profits arising from our private nursing institution. I have always 12 nurses in training for our institution in the hospital, whose services are placed at the disposal of the matron as long as they remain in the hospital, and we pay for their keep; we pay about 400 *l.* a year from the profits of the institution to the hospital; so that the hospital has a clear gain of 12 nurses outside the nursing staff of the hospital to make use of for such purposes as they see fit.

9912. Then it frequently happens in a hospital that cases occur which require special assistance, and then are what are termed special nurses provided for them?—Yes.

9913. Have you got any such special nurses?—We have always a few extra, about six or seven; and then we have got the probationers if they are sufficiently competent; and if there should happen to be an institution nurse who is doing nothing at the time, I think the matron would ask for the loan of her, and we should be glad to send her.

9914. But still that nursing institution has its own separate funds?—Entirely separate.

9915. Then would the hospital credit the institution with the value of that nurse's services?—We have done so for three years; but last year we found our institution so flourishing that we said, "You shall have your nurses for nothing, and we will not charge you anything."

9916. Have you ever had to go outside for nurses?—Never.

9917. You have always had enough to satisfy the demand?—Yes. Supposing the surgeon wishes to perform some delicate or difficult operation, ovariectomy, for instance, and he wants two special nurses to attend that case, the matron may say to him, "I am sorry I cannot let you

(24.)

Chairman—continued.

have these two special nurses for to-morrow or Tuesday, but if you will put it off for two or three days I shall then be able to provide for you; "so that we never go outside for a nurse.

9918. Do your nurses, institute nurses and all, have any leave during the year?—Yes; I think our institute nurses get three weeks' leave in the year, and our hospital nurses get a fortnight's leave in the year.

9919. What do the nurses do; merely nursing, or do they also engage in what are known as menial occupations?—They engage in no menial occupations whatever.

9920. Who does that sort of work?—We have a set of ward maids. The probationers are required to clean the lockers that are by the bedside; that is the only menial occupation they have to perform. The fact is our nurses would not be strong enough to perform the rough menial work that used to be done in the wards by nurses 20 years ago; they are a different class of women.

Earl Cathcart.

9921. I think Dr. Steele told us that the conduct of the medical students, as a rule, was excellent?—So it is.

9922. And that he did not remember any case of expulsion of any kind?—I am afraid I could not quite endorse that, and say that I have never known any case of expulsion, because such a thing has happened.

9923. I am speaking from memory only, but I think Dr. Steele said that at the moment he did not recall any case of expulsion?—You see this matter would not come before Dr. Steele. Supposing that by any chance a student was found stealing somebody's microscope, or books, or something of that kind, that would not come before Dr. Steele; he would know nothing about it.

9924. But as a rule the conduct of the medical students is good?—Excellent.

9925. The 1,400 acres of land you have on hand must cost you a great deal of money?—That it does, but I am happy to say that we are not entirely out of pocket by it. I think that last year, when we made up our accounts, after debiting ourselves with interest for the capital and charging a small amount to rent, we still had a little over.

9926. There has been a good deal of complaint in the newspapers lately with regard to your hospital, has there not?—Not very lately; there was some years ago.

9927. But not lately?—Not lately. I did see something, but I really forget what it was about.

9928. Have you paying patients?—Yes, we have.

9929. Are a great many beds occupied by paying patients?—No; we have one ward set apart for three-guinea patients; each patient occupies a cubical, and a resident physician or resident general practitioner is in charge, and if the patient is not satisfied with this general practitioner, he or she may call in any medical man that they desire. If they are too poor, which is very often the case, to have a very first-

B

class

26 January 1891.]

Mr. LUSHINGTON.

[*Continued.*]

Earl Cathcart—continued.

class surgeon, and pay his fees, then the senior surgeon of the week at Guy's will come in and perform the operation for nothing.

9930. And you think there is no danger of these paying patients running away with the attention that ought to be devoted to the poorer patients?—Certainly not. They are kept in a separate ward by themselves; they have a separate staff, a separate cook, and a sister in charge, and so on. Then, also, we have in the general wards what we call guinea beds, and the patients who occupy those beds are treated in precisely the same way as if they were free patients.

9931. And you think there is no tendency that those guinea patients should run away with the attention that ought to be devoted to the poorer patients?—No, it is rather the other way; we generally find these guinea patients' beds filled up with free patients.

9932. Do you find the guinea patients discontented, and more apt to complain than the poorer patients?—No, I do not think so.

9933. The guinea does not really defray the expense of the patient?—No, but it covers a certain amount.

9934. Did the idea ever occur to you of a co-operation for the supply of drugs to the different hospitals; I believe that some such system exists in Paris; did you ever hear of it?—No, I cannot say that I did.

9935. Would any such system be likely to work well, in your judgment?—I am afraid it would not work well.

9936. My opinion does not quite agree with yours on one point; my experience teaches me that if I were in your position I should, myself, go and see the bread and meat that comes in, and certainly I should make the steward go and see it?—I can only say about the bread, that I eat it every day myself; with regard to the meat, I could not promise to see it every day; it arrives early in the morning.

9937. In your position, I think I should get up sometimes even early in the morning to be there when it came; but I should certainly make the steward go to see it. My experience tells me that such supervision is of the greatest advantage in the Army. When I was adjutant of a regiment, my colonel used to come every morning to see the meat, and it was attended with the greatest advantage. Do you know that there are complaints in the London hospitals about the supply of meat?—Yes, I do.

9938. That the meat is of inferior quality?—Yes; I have heard that stated.

9939. Have you got a college club in connection with your college?—Yes.

9940. And it works well?—Yes, very well.

9941. Is it on the same principle as the club in the London Hospital?—I am not acquainted with the club in the London Hospital; but ours works very well.

9942. Now, with regard to the power of dismissal of a nurse which is confided to the matron; that matron is brought into contact with that nurse, and there might be a case where the matron might lose her temper; in a case of that sort, would it not be desirable that there should be somebody who was not brought into contact

Earl Cathcart—continued.

with the nurse who might adjudicate upon the case with an even mind?—It might be so; but, at the same time, I feel that our matron is a very just woman, and I think she would be very sorry that her temper should lead her to do any injustice to another woman; she would rather lean the other way.

9943. But still, from an abstract point of view, leaving your own matron out of the question, you would admit that it would be better, where people are brought into contact, and there might be temper, that there should be some person of an even mind to adjudicate?—In the abstract, I do not deny that.

Earl of Arran.

9944. I think you said that, if there were any changes necessary in the nurses, they first came before the taking-in committee?—Yes.

9945. And then were referred to the court of committees?—Yes.

9946. If a long period elapsed between the meeting of the taking-in committee and the court of committees, how would any changes which were necessary to be made be dealt with?—I should deal with them myself, if I thought it advisable, and mention it to the taking-in committee; if orders should issue at once, I have issued them.

9947. If your funds allowed it, would you easily fill up the 100 beds which you now say are vacant for want of funds?—I should think there would be no doubt about that.

9948. There is a greater need for accommodation than there is accommodation existing?—It is so; we have constantly to send patients out of the hospital, besides sending them away occasionally when we should have been glad to have kept them in until their convalescence became well assured.

9949. If patients apply for admission and you cannot admit them, what becomes of them?—We send them to St. Thomas's very often.

9950. What would be the proportion of guinea patients to non-paying patients?—Something very small. We have altogether 17 or 18 wards, and I think somewhere about 20 beds of guinea patients.

Earl Cathcart.

9951. Is there an absolute limit to the guinea patients?—There is an absolute limit.

Earl of Arran.

9952. Is it a percentage; can you only take so many, or would that depend upon the number of free patients in at the time?—No, it is a fixed limit.

9953. What is the limit?—It rather depends upon the size of the ward. We will say that in this ward we may keep four beds, in that ward two, and so on.

9954. I understand that there are about 500 beds altogether; how many of those 500 could you say are for paying patients. What is the limit of paying patients?—I think 19 to 20.

9955. Altogether?—Yes, not more.

Lord Zouche of Haryngworth.

9956. Before the agricultural depression set in,

was

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Lord Zouche of Haryngworth—continued.

was the income from your estates sufficient?—We never asked the public for a sixpence.

9957. All your difficulties then commenced?—All our difficulties commenced then.

9958. I think you said that your present disposable net income was about 26,000 *l.* a year?—Yes, from our estates.

9959. I think the public subscribed 100,000 *l.* a short time ago?—Yes.

9960. Are you obliged to take from the capital of that sum to supplement the income from time to time?—Yes, we have to do so.

9961. So that in course of time that will be exhausted?—Yes, but we did it with our eyes open; we felt that posterity must put their hands in their pockets in their turn, and do something for the hospital. We thought that better than reducing our expenditure, where a hospital was so very much needed, to our absolute income.

Lord Thring.

9962. I understand, with respect to the management of the hospital, you would not yourself at all object if the governors took a little more active part in it, and appointed a weekly committee to help you?—I always find that I can get any assistance from the governors. I think they are always ready to help me.

9963. You do not think it is necessary for them to take a more active part?—I do not think so; I do not think the business would be done any better.

9964. With respect to this half hour that the nurses are supposed to have for dinner, do not you think that, *coûte que coûte*, some arrangement ought to be made by which they should have at least a clear half hour for dinner; could not the doctors give way if necessary; surely the health of the nurses is quite as important as the convenience of the doctors?—I have not heard our nurses complain that they find the time short; that is my only standard. As a general rule, I should say that half an hour or twenty minutes is too little time for dinner; but I have no complaints on the subject.

9965. I am aware that there are no complaints, and I am aware that it is not your fault that there is this short time, but you really do not think it is enough?—When it is cut down to less than one half hour I fear it is too short a time.

9966. And you think, therefore, that a little sacrifice ought to be made to secure a full half hour?—Yes.

9967. With regard to those who die in the hospital, what happens?—When a death takes place in one of the wards two attendants come up with the shell, and a pall is thrown over the coffin, and then the body is placed in it, and the nurses and the sister walk reverently behind the coffin to the door of the ward. It is then taken and put into the mortuary. When any friend of the deceased wishes to see the body he comes up to the ward where his friend died, and says, "I wish to see the body of So-and-so who died on such and such a day." The nurse then goes down to the dead-house, speaks to the man in charge there, has the body taken out of the dead-house, put into a little mortuary entirely separate in a shell that is kept for the purpose, sees that

(24.)

Lord Thring—continued.

the corpse is decently and properly arranged, and then when all that is complete she takes the friend of the deceased into that mortuary.

9968. With respect to the opening of a body, supposing the patient dies of a particular disease, and the doctor wishes to open the body, who has the control over that?—The doctor manages that, but it is his duty in the *post mortem* department to see that everything is decently and properly covered up afterwards.

9969. But nobody except the doctor looks to see whether the body is, say, properly sewn up so that it shall not unnecessarily offend the friends?—The nurse sees that everything in the shell is in decent order; that grave clothes are arranged so that the friends see nothing of course but the face of the deceased.

9970. And care is taken not to offend them?—Every care is taken not to offend them.

Earl of Arran.

9971. Have you ever turned your mind, by chance, seeing the large size of your estates, and the amount of land that you unfortunately have had on hand for some time, to the question whether it would be possible to supply the needs of the hospital from those estates yourselves instead of by contract; for instance, whether you could grow your own meat and vegetables, and things of that sort?—I am glad to have the opportunity of answering that question, because of late we have made arrangements for the supply of our milk from our own estates. All the milk that is consumed in the hospital comes from our own estates; it costs us a little more money, but we are sure that it is perfectly good and pure; and I think it has been a very great additional comfort to the patients in the hospital to have had such good milk. I have now got under consideration whether we could furnish our poultry from our estates, but I have not yet turned my attention to vegetables. It is a very difficult thing to arrange for our poultry, because I cannot say how many fowls will be wanted for the next day; it depends upon what the doctor orders; if he says there are to be so many patients on chicken diet next day, we have got to get the chickens ready. But as regards milk, we have nearly a fixed supply every day.

9972. The question of supplying meat from your own estates you have not turned your attention to?—Meat I have not; there would be a similar difficulty about that.

Lord Thring.

9973. The sister is the superintendent of the ward?—The superintendent of the ward, the head nursing authority in the ward.

9974. Is she a lady?—She is a lady; and that has been of great advantage in the new system, I think.

9975. She has a permanent appointment?—She has a permanent appointment.

9976. And I suppose that the removal of her would, in fact, rest with yourself?—Yes.

9977. The matron is the head sister?—Yes.

9978. And, supposing anything were wrong, a sister would be removed, on the recommendation of the matron, by yourself?—Yes.

B 2

220. When

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Lord Thring—continued.

9979. When do the sisters dine?—At half-past five; they have a separate dining-room.

9980. And what hours do they keep generally?—They are expected to be in their wards at eight in the morning.

9981. A day sister, you mean, has to be in the ward at that time?—A day sister.

9982. And then she breakfasts?—She breakfasts first.

9983. And then does she take something into the ward for luncheon?—No; she has luncheon provided for her in the dining-room.

9984. And dines at half-past five, you have told us?—Yes.

9985. What time does she go off duty?—That very much depends on circumstances. If she is taking in accidents, as we call it, for that week, she probably stays in her ward; it may be the whole of that day.

9986. To what hour?—Her sitting-room and bedroom are part of the ward; she sits in her room occasionally, but considers herself ready to receive patients in case of accident till she goes to bed, which is at 10 o'clock.

9987. The night sister comes on at 10 o'clock?—Yes.

9988. She has breakfast before she comes on?—Yes; and then she has her own room where she has refreshments for the night.

9989. And at what time does she go off duty in the morning?—At the same time as the night nurses go off.

9990. And what holidays do they get?—The sisters get a month in the summer and about a week or ten days at this time of the year; and we are always ready if they want a holiday at any other time to allow them to go, because we can always temporarily supply their places from lady pupils who have completed their training, who are only too glad to come back to the hospital and do work for a fortnight, or three weeks, or a month, for nothing.

9991. Who attends a sister in her illness?—One of the assistant physicians, whichever physician they originally ask; they are allowed to ask any physician that they like.

9992. They have a choice in fact?—They have a choice.

9993. They are attended in their own rooms?—Yes.

9994. Who attends to the nurses?—One of our assistant physicians, Dr. Shaw, is told off on purpose.

9995. And is there a separate room for them?—There is a small room for them when they are ill, provided they are not very ill indeed; if they are very ill, we find that they get better attention by being warded, because then they get the full benefit of all the hospital staff.

Chairman.

9996. You said that Dr. Steele went round the hospital twice in the course of the day?—Yes.

9997. He would, therefore, have the opportunity of observing whether the beds were kept full?—Yes.

9998. In addition to his observation, I think you told us that there was a weekly and a daily return of beds?—Yes.

Chairman—continued.

9999. Do you find that there is any disposition on the part of surgeons to keep beds vacant with a view to having them used for "interesting" cases, say if they are aware at the time of any interesting case that is coming?—I do not think they would attempt to keep a bed vacant if they had not got somebody in their mind's eye.

10000. But possibly the interesting case might be that of a person who could perfectly well afford to pay for himself, and that person might be received to the exclusion of some other case not equally interesting, which ought to come on the funds of the hospital?—I hope our surgeons would say to such a person, "As you can afford to pay for yourself you must take a guinea bed, or go into the Bright ward, which is a three-guinea ward."

10001. But you think that your system of supervision is such that if beds were kept vacant that fact would be noticed?—Yes, I think it would.

10002. Which beds are the fullest, medical or surgical?—We have many more surgical beds than medical. We have only now four medical wards, one holding 50, another 32, and two others 40 each, 162 in all, and the rest of our 422 cases are surgical.

10003. Are there any children in your wards?—Yes.

10004. Is that a good plan, do you think?—We think it a good plan; we think it affords a great deal of interest to the female patients to have a child in the room; they take an interest in it and forget themselves; they nurse it and play with it and so on. On the other hand, I quite admit that sometimes a child is a very troublesome neighbour.

10005. But you do not keep one specific ward for children?—No.

10006. You have cots throughout the hospital?—Cots throughout the hospital.

10007. You have a large number of out-patients we were told by Dr. Steele?—Yes.

10008. That is not entirely free?—No. A few years ago I submitted a proposition to the governors that we should charge out-patients 3*d.* for the first supply of medicine; and 6*d.*, I think, covers the medicine for a fortnight; and we absolutely have no trouble in collecting this money. The course pursued is this: that they are attended by the physician or surgeon, as the case may be; he writes a prescription for them; when they have got their prescription they hand it on to a clerk who is there; he takes their 3*d.* or their 6*d.* if they like to pay it, and then stamps the prescription as having received the money, and then the prescription is taken across the room to the dispensary. In cases where a man says that he has absolutely nothing, and where he is very ill, he is supplied with medicine without charge; at the same time he is told that inquiry will be made into his condition and circumstances, and if we find out that he is misrepresenting matters and that he can afford to pay for this, he will get no more medicine from us till he does pay.

10009. Do you make many of those inquiries?—Not very many, I am afraid; I have no return before

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

before me from which I could say exactly how many.

10010. Can you tell us generally whether you find that people tell the truth in those cases, or have you been imposed upon to any great extent?—I do not think we have often been imposed upon in that way. Of course we are imposed upon in the out-patient department, when people pay their 3 *d.* and could easily pay a great deal more.

10011. Is that an argument, in your opinion, against an out-patient department?—I think for the few people who try to cheat we do a great deal of good to an immense number of people who are only too glad to avail themselves of the medicine and the medical skill provided for them.

10012. As a matter of general opinion, would you be opposed to the doing away with the out-patient department?—I should be very sorry to do away with the out-patient department; I think by means of it we afford a great deal of relief to many people who need it.

10013. Did the idea ever occur to you to see whether you could make a provident dispensary work in with the free charity?—It has occurred to me in this way, not to work with the free charity, but to work separately. In these metropolitan provident dispensaries that were started some little time ago by the late Sir Charles Trevelyan—

10014. My question was, whether there could be any co-operation between the provident dispensary and the free charity; you are speaking merely of the provident dispensary by itself?—Yes.

10015. I meant whether by some system of inquiry at the free charity you could turn over the people that you found could pay to the provident dispensary?—I have never carefully examined that part of the question. It would entail a great deal of trouble upon the patient who was being bandied about from pillar to post; first going to the free charity, then coming to the hospital and going back again. But perhaps as I have not considered the question, I had better not say anything about it.

10016. Now about these provident dispensaries; you have had some experience of them?—Yes, I have had some.

10017. Did you find them starved out by the free charities in London?—No; on the contrary, they flourish very well in some places in London.

10018. In what districts?—In Bloomsbury I think they do very well.

10019. Have you in the case of Bloomsbury any adjacent large hospital?—I think the Middlesex would be the largest.

10020. You have King's College or University College quite close?—I think the one I heard of, that I knew did very well, would lie between two large hospitals.

10021. And therefore you would say, I suppose, that although it is in close proximity to two or three large hospitals it does well?—Yes.

10022. What is the name of that?—The Metropolitan Provident Dispensary; I forget what street it was in now.

10023. Was that one of an organisation of a

Chairman—continued.

number of provident dispensaries; how long ago was this?—This was about seven or eight years ago, and I believe it is still going on now.

10024. Was that a place where people paid in health and in sickness?—Yes.

10025. A weekly subscription?—Yes, according to whether you were a single man or a family man.

10026. Have you anything to do with that now?—I was a subscriber to it; but I found I had too much to do connected with my own hospital to go on with that.

10027. When you were connected with it it was a going concern?—Yes.

10028. And may I understand that it was maintained entirely by the subscriptions paid by the members of it?—Several of us took some shares with the view of affording some little money to start it with, and keep it going.

10029. Did you ever get any dividend?—Never.

10030. If the society had to pay any interest, that would, of course, make the treatment more expensive?—Yes.

10031. But still you did not anticipate a very large dividend?—No; we merely subscribed out of charity.

10032. Do you know Mr. Bousfield?—Yes.

10033. Mr. Bousfield mentioned at No. 1461, that there were 15 of these that were going concerns; he said, "There is one at Bloomsbury, Camden Town, Croydon, Deptford, Hackney, Kensal Town, Pimlico, Walworth, Westbourne Park, Whitechapel, and another has just been opened in connection with the University Club at Bethnal Green. Those have all dispensary buildings. In addition to that we have medical clubs where the doctors give medicine and attend at their own homes at Clerkenwell, Dalston, Soho, and Tottenham?—Yes; that is what I refer to.

10034. We have got all those matters from Mr. Bousfield?—Yes.

10035. I need not trouble you, therefore, about them. Then, in addition to the out-patient department at Guy's, we have been told that you have a system of attending midwifery cases in their own homes?—Yes.

10036. To the extent of over 3,000 in the year?—Yes, not quite that; I think it is about some 2,700 or 2,500.

10037. Are those attended by externs?—Yes.

10038. Is that part of their education?—That is part of their education. There is an obstetric physician and assistant physician in the hospital, and they look after that department.

10039. Are you the only institution which assist women in that condition free in that district?—In that district there is nobody that does it but ourselves that I know of.

10040. And supposing that that was not done by you free it would fall upon the poor law?—Certainly.

10041. And would have to be performed by the poor law also for nothing?—Yes, I suppose so.

10042. You pay 1,500 *l.* a-year rates, do you not?—Yes.

10043. Have you ever made any estimate as to how much you save the rates by the charities

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

you dispense?—I have made this calculation, which I believe to be correct, that out of every 1,000 people who are in Guy's Hospital, 600 come within a radius of one or two miles of the hospital; so that we are really keeping 600 people that would otherwise have gone to the infirmaries.

10044. Do you think that that is quite proved, because there might be a good many of those people who would not like to go to the poor-law officer, and who therefore would pay for themselves?—Yes; of course it is an answer, assuming that our patients are poor.

10045. Do you not rather assume that every one of your patients who comes to you is in a state of destitution?—Yes, we do; of course when I make that statement I rather assume that.

10046. But that can hardly be your opinion, is it?—Instead of saying that 600 would go to the infirmaries, say that 450 would; I think 450 would be quite within the mark.

10047. Do you think that 75 per cent. of the people you treat are destitute?—In a very miserable condition. Many that come in have not any clothes to their backs; the rags they come in we have to throw away, and very often to clothe them before they go out.

10048. So that while you save such a very large amount of expenditure to the rates, you at the same time have to pay 1,500 l. or 1,600 l. a year poor rates?—Yes.

10049. Are all your accounts audited?—Yes, by a professional auditor, a chartered accountant, Turquand and Young.

10050. Does the balance sheet go before the court of committees, or whoever is responsible for that?—Yes, and also the Charity Commissioners. I shall be glad to file a copy of the accounts if you will allow me to give it you.

10051. Is the chartered accountant elected?—No, not elected. We discussed that; it was one of the things that we discussed in the court of committees, and we thought that we could not have better people than Turquand and Young; and so under the orders of the court I wrote and offered them the appointment.

10052. And they are paid a fee for it?—They are paid a fee for it.

10053. Have you ever considered at all the possible advantage of having a central body to control all our great London medical charities?—I do not know that I have considered it very carefully. If I had to answer upon the first blush of the question, and the little I have thought about it, I should say that I think it would be decidedly objectionable; I think it would destroy that spirit of interest which is now diffused amongst all the several hospitals. I should very much like to see, if you asked me that question, a central form of accounts. I should like to see every hospital bound to render their accounts in the same shape and form, so that the public might then understand which hospital manages its affairs economically, and make comparisons, which they cannot do now; but I should not like to see the management under any central body.

10054. You would not see any advantage in a central body which might meet for consultation

Chairman—continued.

as regards grievances or improvements. I do not mean so much the management of the internal affairs of a certain particular hospital, but the general supervision, as it were?—I do not think I should see any advantage in such a body.

10055. In fact you do not think it would be workable?—I do not think it would be workable. I have tried on two or three different occasions to get the treasurers of the other great hospitals to join with me. I did, for instance, in that matter of charging the out-patients, and they would not do it.

10056. But supposing you are not quite certain as regards a particular system, you can always apply to the other hospitals for advice, cannot you, and they will furnish it?—Always. All the treasurers I have had communication with have been ready to help me with any information, as we at Guy's are ready to help them.

10057. There is no jealousy, in fact, between the different hospitals?—Not a bit.

10058. Then why should not some board of supervision work?—I think it is one thing applying for a thing when you want it, and another thing meeting other people to consider it and report.

10059. Perhaps you think that the subscribers and committees ought to look after their own interests?—Yes.

10060. Do you think there is sufficient sick relief in that district of Southwark where you are?—I believe that there is sufficient relief generally to the poor. Is that what your question meant?

10061. Yes; but did you not tell us just now that sometimes you have to send patients away?—Very seldom; but we have had to do such things.

10062. Then, as a rule, you do not find the want of your 100 vacant beds?—I do not think that that follows. I think that the public know very well how many we can take in, and if they hear that the hospital is full they do not care to apply.

10063. Do you think that the public have great confidence in the London hospitals?—Yes.

10064. And that they are satisfied that they would take them in if they could?—I am sure they are.

10065. Then you have a medical school at Guy's?—Yes.

10066. Who is the head of the medical school?—I am the head of the medical school.

10067. You have, then, the power of the dismissal and the reprimanding of students if they misbehave?—Yes.

10068. Supposing a student misbehaves, whose advice do you take; is there any committee of the medical school?—The dean would probably report it to me, and make his suggestions as to what he thought would meet the requirements of the particular case, and I would consider this over and talk it over with him; and if we were satisfied that we had arrived at the right decision we should send for the student and deal with him accordingly.

10069. Then perhaps it will be advisable for me to ask the dean of the school, when he comes, about the school?—Yes, he is here; Dr. Perry. I should

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman—continued.

should be glad to answer any questions that you think I should answer as treasurer about it.

10070. Practically, the whole of the finances of the hospital and the responsibility for the school rest upon your shoulders?—It is so. You will not, I hope, imagine that I am assuming any position in that respect that I ought not. Of course, I have always my court of committees to fall back upon.

10071. I think your answer to a similar question just now was that in the absence of these courts you had power?—That is so.

10072. Practically, you are the responsible officer?—Yes.

10073. Are you a salaried officer?—No.

10074. You are an honorary officer?—I am an honorary officer; the governors give me a house.

10075. And firing and lighting?—Yes.

10076. With regard to the surgeons and assistant physicians, are they honorary officers?—They are honorary, but at the same time they receive a small salary, 100 *l.* a year, the assistant surgeons and the full surgeons, 40 *l.*, and the assistant physicians and physicians on the same scale. You can scarcely call that salary; it is an honorarium given by the governors to members of the staff.

10077. I finished up with this question to Dr. Steele (No. 276): "Then at Guy's all the staff is paid?" and his answer is, "All the staff is paid, with the exception of the aurist; I do not think the aurist is paid or the dentist." Where does the money come from from which they are paid?—The money which is paid to the assistant surgeons, full surgeons, assistant physicians, and full physicians, is paid out of the funds of the hospital.

10078. Then the fees are paid to the lecturers by the school?—The fees are paid to the lecturers by the school.

10079. That comes out as shares; they receive certain shares?—Yes.

10080. These gentlemen, surgeons and physicians, who are paid a salary, do they come under the heading of Officers' Salaries?—They are entered in that way in the sheet.

10081. I suppose considerable difference exists in hospitals as regards physicians and assistant physicians?—Certainly.

Earl Cathcart.

10082. The midwifery cases are really taken for the purposes of education?—Yes, for the purposes of education.

10083. And every student must take a certain number of midwifery cases before he can pass; he is required to have attended a certain number of cases?—Yes.

10084. And therefore there is no philanthropy really in the midwifery cases; it is an educational matter?—These women would be very badly off if they were not attended.

10085. But your motive, your object, is educational?—Yes.

10086. And therefore you would not be particular; you would admit any case that would submit itself to your administration?—Yes. These women have cards, and when the time comes on they send the card to the hospital and are attended directly.

10087. Have you any lock wards?—No.

(24.)

Earl Cathcart—continued.

10088. Not separate ones?—No.

10089. Do you restrict lock cases in any way?—As a general rule, we do not take lock cases now.

10090. Where do they go to?—I do not know; they may go to Bartholomew's or other hospitals, but we do not take them.

10091. For what reason do you not take them?—When we had to reduce our expenditure, and at one time the number of our beds, we felt that we had better give up having a ward for this class of patients.

10092. But there is no class of disease more highly infectious; is there not a danger to the public in discouraging the reception of such cases?—I should not have thought so; I do not know; I cannot form any opinion on the subject. Of course we have many cases where diseases in the surgical department have sprung from that source, but not actually lock cases.

10093. You say that you have made this change since your adverse circumstances, but how long ago was it that you ceased to take lock cases as a rule?—I should think it was quite seven or eight years ago.

10094. When the bad agricultural times began?—Yes, when it was absolutely necessary to curtail our expenses.

10095. But you thought that that was an advisable branch in which to begin your retrenchment; that it should be in the direction of the lock ward?—We consulted the medical and surgical authorities on the subject and came to that conclusion.

10096. How do you manage for instruction for your students in that branch if you have not lock cases?—I think you had better ask one of the surgeons or physicians what he does in such cases; but I can only say that we have no longer a ward set apart for that purpose.

10097. But these are dirty and disagreeable cases, and the tendency on the part of any administration would be to get rid of such cases if they could?—I hope that was not our tendency. We really thought that we had better receive patients who had fallen into misfortune through no fault of their own, than receive patients who had got into trouble through their own lives.

10098. But you are aware, with your great experience, that there are thousands of innocent victims, perfectly innocent themselves, who have contracted that disease from no fault of their own?—Yes, that is so; very sad it is, but it is so, I know.

Earl of Arran.

10099. With reference to the accounts, you said you wished there was some general form of accounts to enable the economy of the management of one hospital to be compared with another; should you say that the form that was laid down by the Sunday Hospital Fund would be a good form; do you know that form?—I know it; but not sufficiently to give an authoritative opinion on the subject. I should like to see that carried through into the statistics. For instance, there are many hospitals where one man counts as two, and other hospitals where he only counts as one man. So that we can really have no actual faithful return of the number of out-patients.

B 4

10100. As

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman.

10100. As a matter of fact, if you state that you have 50,000 new cases in the hospital in the out-patient department, that does not represent the total amount of work in the out-patient department?—No; certainly not.

10101. Then, in order to get at the real amount of work done in that department, you must multiply that number by three or four?—Yes, very often.

10102. You have no experience of other hospitals besides Guy's?—No, none; I know nothing of any hospital except my own, except as a visitor.

10103. I will just ask you this one question: do you consider that on the whole the nursing and the hospital management, so far as you are acquainted with it, has enormously improved in the last 15 years?—Yes; I should say enormously improved.

10104. You have no acquaintance with poor law infirmaries?—None.

10105. With regard to the out-patients, within the last 10 years you have made them pay a certain amount?—Yes.

10106. Did you find that reduce their numbers very materially?—It did at first very considerably, but I think now we have nearly got back to as many as we used to have.

10107. Do you find inconvenience arise from the number of out-patients being too large?—No. As a general rule, when more than we can properly attend to come, we tell them: "You had better go away and not waste your time here," with a view to relieve them from sitting, and waiting for endless hours.

10108. In the case of the examination of females in the out-patient department, is care taken for decency and that a female shall be present?—Always; a nurse is always present.

10109. And no examination of such cases made by students?—No.

10110. You leave the students to practice in the out-patient department unsupervised?—No.

Lord Saye and Sele.

10111. The estates are in four different counties, you have told us?—Yes.

10112. Do you keep separate agents on each of those estates for the management of them?—Yes. We keep three agents for our country estates; one for Herefordshire, Haywood and Son; Mr. Haywood is our agent there. On our Lincolnshire estate we have Mr. Thorold; and in Essex we have the Honourable Mr. Strutt; our estates join Lord Rayleigh's, and he manages for his brother, Lord Rayleigh, and also manages for us.

10113. Do you mind telling me what you pay your agents?—I think Mr. Haywood gets 350 *l.* a year; he has only lately been appointed, so that he begins on a smaller salary. Mr. Thorold has 500 *l.* a year and a house; and Mr. Strutt is paid by results by a curious arrangement; he has 150 *l.* a year as salary, and then the addition to his salary is made up according to whether the lands in hand which he manages give any return after they have been charged with expenditure or not; and then whatever is left over is divided between him and the hospital.

10114. And with regard to the Southwark pro-

Lord Saye and Sele—continued.

perty?—The Southwark property is managed in our own office in London here; we have no special agent for that; it is a small property, entirely house and warehouse property, worth about 7,000 *l.* a year, and we do that work partly through our steward and partly through the clerk and accountant.

10115. The agents all collect the rents?—The agents all collect the rents, and they also expend money which has been previously sanctioned, in repairs, for instance. They generally visit the treasurer once every year with a list of various buildings that require repairs, and also with any requisitions from the farmers as to additional buildings, and the treasurer goes through this list very carefully with the agent, discusses what is absolutely necessary and what really would be an improvement to the estate, for which we think the tenant ought to pay 5 per cent. interest on outlay, and when this has been completed I submit it to the court of committees and the expenditure is sanctioned. Before we got into these agricultural troubles we used to reckon that we spent about 2,000 *l.* a year on each estate for the benefit of the estate, partly for money that was laid out by the governors, for which they got no additional return, partly in money laid out at the request of the tenants, and on which the tenants paid 5 per cent.; but since our agricultural troubles we have cut down our expenditure under this head as close as we can, and we do not really now spend above 1,000 *l.* a year on each one of these three estates.

Earl Cathcart.

10116. What is the acreage that Mr. Haywood manages for 350 *l.* a year?—I think it is about 9,000 acres.

10117. And Mr. Thorold?—That is about 9,000; and the Essex estate is about the same size as Hereford.

Lord Saye and Sele.

10118. You do not think that one agent could manage the whole of the properties?—No; we tried having one agent for Lincolnshire and Essex, but it was not satisfactory; in fact, if we had not given it up we should have been compelled to have done so, because all our land that is in hand is in Essex, and it requires to have a man there going over the farms and seeing the bailiffs, whom he appoints, carrying out the works satisfactorily.

Earl of Lauderdale.

10119. Are you empowered to sell land?—We are empowered to sell land, provided that we buy just the same amount of land elsewhere; that is to say, if we sell an acre we must buy an acre, or, at any rate, if we sell an acre we must expend the money we have received for that acre in purchasing a bit of land elsewhere; and that really has been, if I may say so, one of the causes of our difficulties. You see we cannot sell our estates.

Lord Zouche of Haryngworth.

10120. That is a great burden to you?—A very great burden.

10121. Have

26 January 1891.]

Mr. LUSHINGTON.

[Continued.]

Chairman.

10121. Have you ever taken into consideration the expediency of getting an Act of Parliament to relieve you of that obligation?—Yes, we have thought over it, but we thought that at the present time it would not be advisable, because our landed property has depreciated 25 or 30 per cent., if we were to put it up for sale. It so happens that our estates are situated in the most out-of-the-way parts of Lincolnshire and Essex; in Herefordshire we are not so badly situated, but in Essex many of our farms are eight, ten, or twelve miles away from a railway station, in a very heavy clay soil, with indifferent roads.

10122. Have you ever considered the advisability of pulling some of these London hospitals down and selling the land, and transplanting them into the country?—I have never thought of that.

10123. Would you furnish a return to the Committee of the establishment that you keep at Guy's Hospital, with their salaries?—Yes, certainly; I should be most happy.

10124. I think you want to correct a certain answer made earlier in your evidence as to the amount of medical relief in that district in which your hospital is placed?—Yes, it was my mistake; I misunderstood the purport of your question. Of course I feel that the medical relief could be and would very properly be extended if we had sufficient means to open more beds; but I do not think that the medical and surgical relief is sufficient for the neighbourhood in which we live, and most especially in the surgical department, where we constantly have so many accidents in at a time that we are compelled to make up temporary beds in the accident wards.

Earl of Lauderdale.

10125. In the event of your selling any land, is it acre for acre that you must take, or is it the money equivalent?—The money equivalent.

Lord Zouche of Haryngworth.

10126. That is to say, if you sell a piece of land you must invest the amount in land?—Yes.

Earl of Lauderdale.

10127. Are there any expenses connected with the offices of these agents in addition to their salaries; for instance, Mr. Haywood, who has 350 *l.* a year, has he any office establishment in addition?—No, he has no office establishment in addition; he does everything for that.

10128. Does the same answer apply to the other agents?—In the case of Mr. Strutt, we pay him in the way I have described, and he gets nothing for establishment. Mr. Thorold has an establishment attached to his office; but it is an establishment for a carpenter's shop, and an overseer, and so forth; that is a small addition to the expense of the Lincolnshire agent.

10129. In addition to his *bonâ fide* salary?—In addition to his *bonâ fide* salary. And then if our agents come up to see me in London their expenses are paid there and back.

10130. Incidental expenses, that is to say?—Yes.

10131. They are inappreciable, in comparison?—Yes.

Witness is directed to withdraw.

MR. EDWIN COOPER PERRY, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

10132. YOU are a member of the staff of Guy's Hospital, are you not?—Yes.

10133. Are you a fellow or member of the College of Physicians?—I am a member of the College of Physicians, having become so since my appointment on the staff of Guy's Hospital.

10134. Were you formerly a student at Guy's?—No; at the London Hospital, and at Cambridge.

10135. Were you obliged to take the London diploma before getting your appointment at Guy's?—No, I got it without the London diploma.

10136. At Guy's are gentlemen admitted with other diplomas?—Yes.

10137. Would a Scotchman coming with a diploma from Edinburgh be admitted?—Yes. Dr. Addison, whose name you may have heard, did come from Edinburgh; he was not educated at Guy's, and he came to Guy's with Scotch diplomas; but I should not like to speak with certainty as to whether he was a member of the College of Physicians before he was appointed.

10138. At any rate, this occurs at Guy's, that the fact of a gentleman not having the diploma of the College of Physicians or Surgeons in London does not prevent his getting an appoint-

Chairman—continued.

ment at the hospital?—No, it does not. When I was appointed, the only qualification I had was that of Bachelor of Medicine in the University of Cambridge, that is to say, the only qualification in medicine; I was also a member of the College of Surgeons.

10139. What is your position on the staff?—I am Assistant Physician to Guy's Hospital, and in the medical school I am Dean and Demonstrator of Morbid Anatomy; I am also the Warden of the Residential College.

10140. I will take the Residential College. You are the warden of the Residential College you say. The Residential College, as its name bespeaks, is a place for the residence of students, is it not?—Yes.

10141. What are your particular functions in regard to the college?—My particular functions may perhaps be put under two heads. I have the business management of the concern, and the supervision of the students as regards discipline.

10142. What does the business management include?—There are three departments of the college, taking the warden's functions as one; then there are the duties of the matron and the duties of the caterer. The matron is subject to the warden, but has reasonable liberty for managing

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Chairman—continued.

managing her department as she chooses. Practically what she does is to engage the female servants, who keep the men's rooms clean, keep their coal-scuttles full, and attend to affairs of that sort. Then the caterer is the steward of the students' club, a club which has extensive accommodation given to it in the college, and provides room not only for the students residing in the college, but also for the students about the hospital, who number between 400 and 500, and nearer 500 than 400.

10143. That is the whole number of students in and out?—Yes; the students actually residing in the college number about 52, together with, not included in the 52, house surgeons, house physicians, two obstetric residents, and the extern obstetric attendants, of whom you have lately been speaking.

10144. That, I suppose, you find gives the tone to the students?—We think so.

10145. Now how is the Resident College supported; where does the money come from?—In June of 1888 a deed of arrangement was made between the president and governors of Guy's Hospital and Henry Hucks Gibbs and others, who form the college committee. I have pleasure in handing to you the last of the college committee, together with the prospectus of the scheme as it was then started. This committee obtained from the hospital a lease of a certain plot of ground adjoining the east gate of the hospital at a nominal rent, in consideration of certain advantages derived by the hospital from the college. They then issued that prospectus, to which I have referred, inviting a subscription of 20,000 *l.* debentures, bearing interest at the rate of 4 per cent.

10146. What is the security for the 20,000 *l.*?—The security for the 20,000 *l.* was the building to be erected; the security for the interest was the receipts from the college, and also an additional security was the school fund, as we call it, that is to say, the sum accruing from fees paid by students of the medical school to the treasurer of the hospital as the head of the school.

10147. Then it is really a commercial speculation?—It is a commercial speculation purely and simply, and no part of the hospital funds was used to build it.

10148. Does it pay its way?—The opening of the college was on the 26th of March last year; it was opened by Mr. Gladstone, as perhaps you might remember, and since last October, when our winter session began, every room has been occupied; but it is not possible at present to say whether as a commercial speculation it will succeed.

10149. Do you find that in the Residential College, as far as you have gone, men work as well as they do in their private lodgings?—I think considerably better.

10150. You find that the fascination of society in the college does not distract their attention from their studies?—I do not think so. Many of the men that we have at the Residential College are Oxford and Cambridge men, who have been accustomed to live in a college; and we have the house surgeons and house physicians living there, so that the place is not exactly

Chairman—continued.

what might be called a nursery for students, but is resorted to by the more advanced of the students as well as the juniors. We have a certain number sent there by their parents in order that they may be overlooked.

10151. What are the expenses that a student incurs by going to this Residential College?—They vary from 12 *s.* to 20 *s.* per week for a set of rooms, consisting of sitting room and bedroom. Then we have some combined rooms, consisting of bed and sitting room in one, the rent of which varies from 9 *s.* to 12 *s.* per week; and we have four sets, each consisting of a sitting room with two bed-rooms, the rents varying from 23 *s.* to 27 *s.* per week.

10152. Taking a middle sum, what do you estimate a man can live there for, counting in everything?—We have an arrangement by which they can board there if they like at one guinea a week, or if they arrange for three months then it comes to 1 *l.* a week, 13 *l.* a quarter.

10153. But that 13 *l.* a quarter does not include the rent of their rooms?—No, that is board. Then the rent of their rooms varies, as I have before stated; but an ordinary set of rooms will be perhaps 14 *s.* or 15 *s.* a week.

10154. Therefore a man could board and lodge there for about 80 *l.* or 90 *l.* a year?—Yes, if that is the result of the figures I have given you. I should say that we do not have the plan that is adopted at other residential colleges, of making a man take his rooms by terms or sessions: they are taken for three months at any time, but if a man occupies his rooms for a year, then we give him an allowance for vacation of eight weeks, during which he keeps on his rooms for half-rent. We find that practically more convenient than the other plan.

10155. And at present you have all your rooms full?—Every room.

10156. I think you told us of two of the heads, the matron and the caterer; what about the caterer?—The caterer is appointed by the college committee. The college committee, you understand, is that body whose names you have before you, consisting of governors and members of the staff; and the caterer's department is very much an independent department in the college; I have nothing to do with it except to see that he carries out the terms of his agreement with the college committee. He provides the board not only for the residents in the college, but also, as I said before, for the large club. The number of men who lunch there every day would be about 200; and also for the house surgeons and house physicians, as to whom we receive a certain sum of money yearly from the hospital; and we spend that sum or more in boarding and lodging them in the college.

10157. Then is he paid a nominal salary?—He is not paid a salary, he pays a rent.

10158. The caterer pays a rent?—Yes.

10159. Then who was the third head?—I said that I might be regarded as the third functionary, and perhaps the chief functionary in the college, and my business is discipline; but in a building of that size there are a large number of things I have to attend to. The matron consults me about repairs, frozen pipes, anything of that

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Chairman—continued.

that sort ; all that work comes before me ; and of course all the accounts of the college I am responsible for.

10160. Do you render an account to the committee ; are you responsible to the committee ?—I am responsible to the college committee.

10161. That is entirely distinct from the hospital?—Yes.

10162. I am speaking now of students living in your college ; in a case of discipline would you report it to the committee, or would you deal with it yourself?—It depends upon what the breach of discipline was. By the deed of arrangement, which I shall be happy to put in if you care to see it, I have the discipline of the students, subject to the control of the college committee ; and the college committee have the letting of the rooms ; so that I should not feel myself allowed to send a student out of the college without consulting the college committee ; but any offence requiring a less punishment than that I should deal with myself.

10163. Would you gate a man for instance, supposing he was always late?—Yes. I might say that the arrangements in the college differ from arrangements at Oxford and Cambridge, with which you are perhaps familiar. What is done is this : the names of all the men who come into the college after 11 o'clock are brought before me the next morning, and it is for me to decide what action I shall take in the matter. If I see a young boy constantly coming in late, I interview him, and ask him what he means by it, and if he can give no good explanation, I write to his father and say I should like him to know that his son is coming in late, and then his father deals with him.

10164. Then I understand that they do not have to ask you for leave to be out after 11 o'clock?—No ; they have to ask me for leave if they propose to be absent all night, but not otherwise ; and I receive from the house-keeper an account of whether a man has slept in his room or not ; if he has not slept in his room I take action accordingly. You understand that considerable elasticity is necessary, because the residents in our college are not junior men by any means ; many of them are men with a Cambridge degree ; and it is only in the case of the junior men that one wishes to enforce such strict rules as would be enforced at Oxford or Cambridge.

10165. They pay for their messing once a quarter or once a month, if I understand you?—I said that the students might board in the college by a weekly payment, and then they pay a guinea ; if they make a three months' agreement, they pay 1*l.* a-week.

10166. In the case of a student who had made a three months' agreement, could he sign off for a dinner?—No.

10167. He must pay for it all the same?—Yes ; consequently very few adopt that plan. That plan is adopted by parents, not by students. If a father has a son whom he wishes to provide with only a certain amount of money, he pays for his rent and board in the college, and knows that he will not starve ; but the ordinary student is allowed by his father to do what he will with

Chairman—continued.

his allowance, and he finds it more convenient to dine by the week or the month.

10168. Therefore, as far as you have gone, you found the club system more popular?—Yes. Before our college started I had the regulations of every other college in London, and I was myself a fellow of my college, and had had to do with young men, so that perhaps we started our college with a fuller knowledge of the conditions of medical student life than some others have done.

10169. Now to come to the medical staff ; you are dean of the medical school, are you not?—Yes.

10170. The number of students is about 500?—Yes, the number of students about the hospital.

10171. Is yours an increasing school, or does it go up and down?—I can give you the numbers for the last five years. In 1886 the full students were 69 ; the full students being students who had entered for the full curriculum.

10172. And what fee do they pay?—One hundred and twenty-five guineas. In 1887 the full students were 64 ; in 1888 they were 74 ; in 1889 there were 85 full students, with six dental students (perhaps you may be aware that we have lately started a complete dental school attached to Guy's Hospital), and in 1890 there were 101, with 16 dental students.

10173. How long is the whole curriculum?—The curriculum until lately was a curriculum of four years in the case of qualifications, M.R.C.S., L.R.C.P. ; and in the case of London University and Oxford and Cambridge qualifications, five years.

10174. That accounts for 60 or 70 of the students ; what are the numbers of the other men who are at the hospital for a shorter time?—I am not sure that I quite follow the question. The total number of the students that I can give you from 1886 is as follows : in 1886, 101. You see there are three classes to be considered : the students who enter for full curriculum, the students who enter for the preliminary scientific examination of the London University, and the students who enter for special courses. For instance, we get men from Edinburgh, or from different parts of the country, as Army surgeons, and others who come to Guy's to take out a course of instruction, hospital practice, or attendance at special departments for a certain number of months ; these are entries for hospital practice. The figures for 1886, taking into account the preliminary scientific students, and the special students, were, as I have just said, 101 ; in 1887, 95 ; in 1888, 103 ; in 1889, 144 ; and in 1890, 164.

10175. Those are the new entries?—Those are the new entries, year by year.

10176. I suppose you would say that your school is an increasing one?—Yes.

10177. Then during the time these gentlemen are at the medical school they attend lectures?—Yes.

10178. And the lecturers are medical men, surgeons and physicians, who are on the staff of the hospital?—Most of them, not all of them. For instance, chemistry is taught by professed chemists.

c 2

10179. But

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Chairman—continued.

10179. But, as a general rule, they are members of the staff?—I think that what you say is quite correct; but the preliminary subjects, chemistry, experimental physics, and biology are taught by gentlemen who are not on the staff of the hospital. Chemistry is taught by Mr. Groves, who is a professor of chemistry, and experimental physics by Professor Reinold of Greenwich, and so on.

10180. Do you think that the system of individual schools is a good one, or would you prefer to have some great central university for the education of medical students?—My own feeling about the matter is this: that as regards the large medical schools a central institution would be of little value, because the large medical schools can afford to give adequate remuneration to their lecturers, demonstrators, and teachers; but as regards the smaller hospitals I think there can be no question that it would be better to have a central institution for teaching the scientific subjects or the pre-professional subjects, as I may call them.

10181. Does it not come to this: that if you had a very large central university where lectures were given you would be able to have a better class of lecturers; because a medical man may be a very clever man, and at the same time be a very bad lecturer?—On the other hand, you might get lecturers who were worse. After all, if you have your central institution, you must elect your lecturers, and you may make a mistake in electing them at a central place as well as elsewhere. There are advantages in keeping the teaching of anatomy and physiology in the medical schools. I might illustrate what I am going to say by the example of my own university. When I was there, anatomy was taught by Professor Humphry, who was himself a surgeon; since he resigned, anatomy has been taught by a professor, who is probably a far more excellent scientific anatomist, but the teaching tends to get away from practice. A scientific anatomist lectures on the things scientifically interesting, development and such like things; there is a tendency to get away from the anatomy which the student must learn in order successfully to practise surgery; and, as we aim in the medical school to turn out practical surgeons, there are advantages in keeping the teaching of anatomy in the hands of practical surgeons.

10182. Then for all practical purposes you think the existing system is, on the whole, the best?—I should hardly go so far as that. I have no doubt that if there were some central place where students could go, the teaching of anatomy, physiology, chemistry, and such subjects would be, on the whole, better than it is now; but I do not think that such a central institution would improve the teaching of these subjects in the great medical schools, by which, I mean Guy's, Bartholomew's, and St. Thomas's, which can afford to pay their lecturers adequately, and have a good choice of men to take their lecturers from.

10183. Whence comes the remuneration you spoke of?—From the fees of the students which, taken together, form what we know as the school fund.

Chairman—continued.

10184. And how much does it come to in round figures in the year?—Last year the income from the fees of students amounted to 11,000*l.*; of that sum about 3,000*l.* is spent on carrying on the school; by "carrying on," I mean the current expenses of the school, apart from the sums paid to the lecturers and teachers.

10185. But in those current expenses do you include instruments and books?—No.

10186. Merely the maintenance of buildings?—The maintenance of buildings is done in Guy's by the hospital, that is to say the external repairs of the building; but any internal fittings required, the keeping of the school buildings well painted and cleaned, and such expenses as those, are paid by the medical school; and in the office of the dean there are employed three clerks who are paid; there is a considerable staff of servants, and there are considerable expenses connected with the laboratories. In all those amount to 3,000*l.* a year.

10187. I understand you to say that all the instruments are paid for by the hospital?—Would you kindly explain what instruments you are referring to?

10188. What I was coming to was this, that the majority of the expenses, such as books for teaching purposes, would be paid for by the hospital?—The lecturer provides his own books.

10189. Are there no books provided for the school?—There are no books provided for teaching purposes; there is a hospital library.

10190. We have been told on several occasions that the fact of having a medical school makes the hospital more extravagant?—Yes; but what I wish to say to you is, that the instruments required for our purposes *quâ* a teaching school are bought by ourselves, not by the hospital.

10191. Bought by the teachers, do you mean?—By the teachers out of the school fund. You understand that none of this is done individually; these grants for instruments are made out of the school fund. I might say, as bearing on the question that you propose to ask me, that the plan we go upon is this: We expect the hospital to buy the instruments required *bonâ fide* for treating the patients and for diagnosis, for ascertaining what is the matter with the patients; but instruments which are in what may be called the experimental stage, instruments of not yet ascertained value, the school purchases; and the school also keeps up the supply of instruments which were originally bought by the hospital; we pay for the repairs of these instruments; and when I tell you that many of these instruments are made of glass, and that when broken, repair means buying a new one, you will understand that the original cost to the hospital by no means represents the cost that it is to the medical school.

10192. There are certain instruments, such as knives, that are used in the hospital for the surgical wards; are those provided by the school?—No; operating instruments are, of course, provided by the hospital. What I was saying just now was that instruments required for diagnosis and for the actual treatment of patients the hospital would buy.

10193. Then the remuneration of the teachers comes from the fees of the students?—The remuneration

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Chairman—continued.

remuneration comes from the fees of the students.

10194. That would be in round figures about 8,000 *l.* a year?—It was 8,000 *l.* last year.

10195. Would you mind telling us how that is divided; Dr. Steele said something about shares being assigned?—I think I might make the matter more clear to the Committee if I read to them the historical documents bearing on the starting of the school. By the permission of the treasurer I have the following extract from the minutes of a court of committees held on the 13th of April, 1825: "Resolved, that an anatomical theatre, museum, dissecting room, and other requisite offices be built on the vacant freehold ground in Maze Pond belonging to this hospital, and under the direction and at the discretion of the treasurer, and that he be authorised to borrow such a sum of money as may be requisite beyond that which the hospital can conveniently supply:—Resolved, that the treasurer be authorised to divide at his discretion between the surgeons and apothecary the money arising from surgeons' pupils, reserving such portion of this fund, and of the sum received for lectures given in the new theatre, as may be found necessary to pay the interest of the money, and, for the liquidation of the expenses incurred, in such proportions as he may from time to time find expedient." It was by that resolution of the court of committees that the treasurer became the head of the medical school; and up to within the last 20 years the treasurer divided among the lecturers and teachers in the medical school the money received from pupils according to his own discretion; he retained what part of the fees he chose to be applied as directed there in payment of the interest of the money, or in payment for the building, but no account was given; a cheque was handed to the lecturer, and he was told, "That is your share for the year." But about 20 years ago certain shares were assigned to certain lectureships, and the whole of the school fund was divided into about 90 shares, and whenever a man is appointed to be lecturer on this or that subject, the staff meeting, who recommend to the treasurer the appointment, recommend that a certain number of shares should be assigned to the holder thereof, and that is what is done, and the amount paid is regulated in that way; so that it is no fixed amount, but a varying sum according to the value of that sum for that year or from one year to another. Dr. Steele, I am afraid, gave you the impression that the affairs of the school were managed by the seniors rather in their own interests than in the interests of the juniors. Now, as a matter of fact, the number of shares applied to these senior lectureships has remained the same since anything of the kind has been settled; and at that meeting to which I have referred, all the members of the staff have a vote; they are all represented, senior and junior.

10196. Could you give us the detail of the amounts that the lecturers annually receive?—I hope the Committee will not order it to be put on the Notes.

10197. Will you send a statement showing that to the Chairman of the Committee?—Yes.

10198. One of the objects of this inquiry is to

Chairman—continued.

find out whether the funds are well or badly applied. Take your senior surgical lecturer: will you state what he receives; there is nothing invidious in that, I think?—There are two lecturers on surgery, each of whom receives three shares from the school fund; as I told you, that is a varying sum, according to the entry of students; this last year it would be three times 90 *l.*

10199. These lecturers you are now speaking of are distinguished men, I suppose?—Very distinguished indeed.

10200. How do these fees vary; what would be a low fee?—When I was appointed at Guy's in 1887, the share stood at 65 *l.*, so that instead of having three times 90 *l.*, as now, a lecturer of that year received three times 65 *l.*; 65 *l.* is a low share; 90 *l.* would be good.

10201. That means to say that the school is a very flourishing thing?—Yes.

10202. That remuneration gradually gets reduced, I suppose, down to a person getting half a share?—Yes; the seniors undoubtedly have the appointments that are more highly paid.

10203. Then how are the lecturers appointed; are they appointed by a committee?—Every appointment in the medical school is made by the treasurer; he is the head of the medical school, and possesses absolute power; the appointments are made by him. But what is done is that the vacancies in lectureships are advertised; the claims of the candidates are considered, and a staff meeting, as we call it, reports to the treasurer recommending the appointment of certain people at a certain number of shares per annum, and I need perhaps hardly say that unless there is some very extraordinary circumstance the treasurer would accept the recommendation of that committee.

10204. Then, with regard to the nurses; are the nurses lectured to?—Yes, the nurses are lectured to. I have lectured to them myself.

10205. That is not included in the sum you have mentioned?—That has nothing to do with the medical school; it is an arrangement that the treasurer makes entirely outside the medical school.

10206. But I suppose the lecturer receives something for it?—I think for my course of lectures I received 10 guineas.

Earl Cathcart.

10207. The three shares does not represent the entire advantages that the lecturer derives from lecturing?—By no means.

10208. There is also the fact that he increases his reputation and makes himself famous?—Sometimes.

10209. Do the lecturers lecture at more than one hospital; is there any restriction as to where they lecture?—Very few of our surgeons hold any other appointments except at Guy's Hospital.

10210. It does happen that surgeons and physicians hold appointments at more than one hospital?—Yes; but not so much at the big as at the small ones.

10211. With regard to a central institution, that would cause dislocation, would it not; it would be very inconvenient for students to have to
c 3 hurry

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Earl Cathcart—continued.

hurry off from their college or hospital to it?—I do not think that a central institution could ever be more than a central institution for teaching the subjects that are preliminary to the work of the students in the wards. The way in which such an institution would be organised, I take it, would be that the student would enter at a hospital, and be drafted from the hospital to the central institution until such time as he had completed his preliminary subjects, and he would then come to his lectures and clinical work in the wards of the hospital to which he was attached. That would be the only practicable scheme.

10212. I understood you to say that the club system was more generally popular than the boarding system at the college?—That is so.

10213. By that the student pays for every meal?—Yes; clearly if he takes several meals outside the hospital with his friends he loses the advantage that he gains by boarding.

10214. In fact it is the system known as the club system?—Yes.

Earl of Lauderdale.

10215. With reference to this particular lecturer you have spoken of, is there any limit to the number of lectures he has to give during the year; is it a fixed number, or how is that arranged?—The number of lectures is settled by the requirements of the examining board.

10216. Then it is a fluctuating requirement?—No.

10217. I mean, is he obliged to give a certain number of lectures per week or per month?—Yes; he is obliged to give a certain number of lectures per week.

10218. What might that number be in this instance?—The lectures on surgery are three per week.

10219. For each lecturer?—Each lecturer gives three lectures; but they are not lecturing at the same time; one takes half the session and the other the other half, and these lectures go on during the winter session, from October to March. But I might point out that the lectures will not fall below that point, because we have to send a return to the College of Physicians and Surgeons as to the number of lectures given, and they would not recognise a course unless it consisted of three lectures a week, and every man before he presents himself at their examinations has to be signed for as having attended a recognised course.

Chairman.

10220. Take the case of a student who is going on for his first appointment as surgical ward clerk, does he undergo any examination in the hospital for that?—No.

10221. What is the first he does undergo?—He undergoes no examination in the hospital; his examinations are conducted by the examining bodies.

10222. But supposing there is a vacancy for a house surgeon, does he not undergo any examination in the hospital for that?—No; our plan is that the vacancy is announced, and perhaps a dozen men send in their names; those names are

Chairman—continued.

considered by the medical committee, which consists of all the members of the staff, and out of those 12 men one is chosen, and he is recommended to the treasurer by the medical committee for appointment. And you will understand that this medical committee is extremely familiar with the previous work of the student in the wards, and they know also what professional qualifications he has.

Lord Monkswell.

10223. With regard to the London diploma, do you think that your hospital is right in not requiring it?—I think our hospital is right.

10224. You think that it would be a great pity to restrict the employment of medical men in the hospitals to those who have the London diploma?—As I myself was appointed without one, I naturally feel that.

10225. Independently of that, you feel that it is a mistake, I suppose?—I guarded myself; I said, in our own hospital. I think it depends very much upon the body of electors. Sir Andrew Clark, in speaking for the regulation by which a candidate has to be a member of the College of Physicians, alluded to a doctor who he thinks might have got on at the Middlesex Hospital, who took the Middlesex Hospital “by storm”; and he said that the rule in question prevents such an improper person being chosen; but in our own hospital, when there is a vacancy on the staff, the treasurer writes a letter to the dean of the medical school. Such a letter I might read to you to show what happens. “Dear Dr. Perry,—As it seems advisable in the interests of the school to settle matters a little in anticipation of Dr. Pavy’s retirement at the end of next month, I purpose taking the orders of the court on the 14th May in regard to the promotions and appointments that would follow. I presume Dr. Hale White will move up, as a matter of course, among the physicians; this would leave an assistant physicianship vacant, and I should be obliged by your summoning a meeting of the medical staff to consider and report who, in their opinion, is a proper person for the appointment. I think I am correct in assuming that the vacancy can be very efficiently filled by one of our own men.”

10226. But do not you think that there are other diplomas besides the London diplomas good enough to keep out improper persons?—Yes.

10227. Therefore I gather that you are of opinion that it is a mistake to restrict the appointments of medical men in hospitals to those who hold the London diploma?—I think that there is a certain safeguard in requiring the membership of the College of Physicians where you have a large number of ignorant electors; I think that at Guy’s, where we have a governing body of 60 of the most important people in London, we do not require any such safeguard.

10228. What about the Edinburgh diploma, would not that be sufficient?—Yes; but there are other inferior qualifications which men obtain who would be very unsuitable for an appointment on a hospital staff.

10229. But

26 January 1891.]

Mr. PERRY, M.D.

[Continued.]

Lord Monkswell—continued.

10229. But do not you think that the Edinburgh diploma is practically good enough?—Certainly; I am not alluding to the Edinburgh diploma.

10230. What I wanted was to get your answer to this question: whether you thought that under any circumstances in any hospital it would be desirable to restrict the appointments to the London diploma?—I think so.

10231. Even in the case of a man who had an Edinburgh diploma?—I did not say that.

10232. That is my point; whether there are not other diplomas almost practically equal to that of London?—Yes.

10233. With regard to the breaches of discipline, on the part of the students, I think I understood a witness who was previously examined, that no one had ever been dismissed from Guy's; at all events, not since you have been there?—I have not made that statement.

10234. Expelled, I will say; have you ever had a person expelled on your recommendation?—I might say not expelled. If you ask me, have I through the treasurer requested the parents of certain students to remove them, I should say that that has happened. What I think Dr. Steele, in his evidence did not sufficiently draw the attention of the Committee to, is the distinction to be made between the maintenance of discipline in the medical school and the maintenance of discipline in the wards. Now, I regard myself as responsible for the maintenance of discipline in the medical school; in the wards the maintenance of discipline falls upon Dr. Steele, or upon the sisters or upon other authorities. But what happens if a student misconducts himself to my knowledge is, that I summon a meeting of the medical council, and the matter is put in their hands. For instance, here is the case of a student, whose name I need not mention. "Dr. Taylor brought before the council the case of Mr." So-and-so, a student of the hospital, "who had borrowed a microscope from Mr." So-and-so, another student of the hospital, "which microscope he subsequently admitted he had pawned. After full discussion it was resolved that the treasurer be requested to intimate to the friends of Mr." So-and-so "that it is desirable that they should withdraw him from the hospital." I have no power of expelling a student; that rests with the treasurer, but he is guided by the authorities of the medical school.

10235. Supposing a student is had up before the magistrates for creating a disturbance?—To my knowledge a student has not been had up before the magistrates for creating a disturbance.

10236. You say that to some extent you look after the juniors and see that they sleep in the rooms provided for them; would you consider it a considerable breach of discipline if a junior student was constantly away from his room at night?—Unless he had a good explanation I should.

10237. And you would lecture him pretty severely if that happened?—Yes.

10238. And report him if it continued?—I have no power of reporting a student, beyond reporting him to his own parents.

10239. Not to the treasurer?—If a student was

Lord Monkswell—continued.

to be removed from the college I should report the matter to the college committee, who are supreme in the college.

10240. How far would you consider that what I have mentioned would be a breach of discipline; do you really insist upon these young men sleeping in the places provided for them?—I do.

10241. And how do you insist upon it, providing they do not do so, or if they say they will and do not; do you bring the matter before the treasurer?—I bring the matter before the college committee, and the college committee, if the case arises, would remove the student.

Chairman.

10242. The college is quite distinct from the hospital altogether?—It is, entirely. The treasurer is the chairman of that committee.

Lord Monkswell.

10243. So that it does come before the treasurer?—Yes.

10244. You know, perhaps, that there are one or two objections which have been taken against Guy's. The Reverend Mr. Bhabha, a nonconformist minister, at Question 3965, says that the patients in the out-patient department make complaints, "that there are so many doctors round them; that does not mean the doctors of the hospital staff; it is the students and the clinical clerks who really do the work. (Q.) That is to say, they are examined medically by a number of young inexperienced men?—(A.) That is quite so. I had a case exactly of that kind happen within this fortnight. A patient was taken to one of the hospitals with two broken legs; before the house physician came to examine the injuries that were done to the limbs there were at least four young gentlemen who examined the patient, who were not medical men. (Q.) That is to say, not qualified medical men?—(A.) Not qualified medical men." And then on being asked what hospital that was, he says, that is "Guy's Hospital"; do you think that such a thing as that could be common?—I should say with no hesitation it was extremely uncommon, and I should trust that it did not occur. An accident being brought to the hospital is seen by one of the house surgeons, or by the assistant house surgeon at the surgery, and there are two dressers on duty in the surgery at that time, and they are the only persons who should examine the limb at all, even if they did.

10245. Then it certainly would be wrong to say that "four" young men examined the patient?—Yes.

10246. Then in regard to the lying-in cases, we have the evidence of Mr. Farmer. He says, in answer to Question 3537: "Only the other day I went in to see a woman; five medical students had turned up, as they often do, all together; it frightened the poor thing out of her life, and we got them out of the room, fortunately." That is not Guy's?—I might say that we only have four or five students attending midwifery cases altogether in the month; and that they all rushed off to see one case when they were probably engaged on others, I think is not at all likely.

21 January 1890.]

Mr. PERRY, M.D.

[*Continued.*]*Chairman.*

10247. In reference to this case that Lord Monkswell called attention to, would the woman with two broken legs be at once taken to a ward?—Yes.

10248. She was probably, you said, examined in the surgery?—I did not understand that the question which I was then answering, was one alluding to an examination in the ward; I took it to be an examination which occurred as soon as she came into the hospital.

10249. The case was a woman with two broken legs; do you think it is likely that a patient with two broken legs would be examined in the surgery?—I do not think she would be any further than to see, what probably could be seen without any examination, that her legs were broken.

10250. If she were examined in the ward who would be present then?—The house surgeon with two dressers; the house surgeon might either set the limb himself, and probably would in a case of that kind, or he would allow a dresser to set it under his immediate supervision.

10251. Would not the patient in such a case be attended by the sister of the ward?—Yes.

10252. And if anything of the kind stated occurred, would not the sister report it; can you conceive a case in which she would not report it?—No.

10253. Is there anything else you desire to refer to?—No. I did not come with any intention of doing more than answering, to the best of my ability, questions that were put to me.

10254. You have mentioned the maximum fees that the gentlemen who lecture get?—Three shares for lecturing, or, I am not perfectly certain that it is not three-and-a-half.

10255. Now, what would be the minimum

Chairman—continued.

amount; half a share, or an eighth, or what?—There is no division of a share beyond a half.

10256. So that the shares assigned will vary from three or three-and-a-half down to a half?—Yes; but I do not wish you to understand that no man gets more than three shares from the school fund; what I wish you to understand is that he gets that sum for lecturing. As a matter of fact the physicians and surgeons receive further money for clinical teaching.

10257. And that augments their shares?—Yes, that augments them.

10258. Upon what is the figure 90 based; there are not 90 lecturers?—There are not 90 lecturers, but 90 shares; adding all the shares together, they come to 90.

10259. You mean, assuming that it is fair, that a certain man should have three shares, somebody else two, and so on, adding them all up together, they come to 90?—Yes; so that to arrive at our "share," we have our divisible income divided by 90, and we know what a share is.

10260. So that somebody estimates the value of a certain lectureship at three shares?—Yes. Most of the old lectureships have had the same number of shares assigned to them from the first. In the case of new lectureships a committee decide to recommend that the lecturer should be paid two shares, or one share, or half a share as the case may be.

10261. You are constantly in the wards, are you not?—Yes.

10262. Do you ever have to find fault with the sanitation of the wards in Guy's?—I have never had to find any fault with the wards.

The Witness is directed to withdraw.

Ordered,—That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 29^o Januarii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.

Earl CATHCART.

Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.

Lord SANDHURST.

Lord SUDLEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. WILLIAM HENRY CROSS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

10263. You are the Secretary, are you not, of St. Bartholomew's Hospital?—Yes; I am termed the clerk; clerk is my proper title.

10264. What is your exact position; to whom are you responsible?—I am responsible to the governors at large, but primarily to the treasurer. The treasurer, as, I think, your Lordship knows, is the representative of the governors in the management of the institution.

10265. We have had the advantage of Sir Sydney Waterlow's evidence. I think he gave us some outline of the constitution; I think he told us that there was no actual committee that sits from week to week; is that so?—There is a committee that meets every Thursday consisting of the treasurer and four governors elected by the general body. These four governors are termed almoners, and this committee, which meets weekly, is termed the committee of the treasurer and almoners.

10266. Then they are the executive of the hospital?—Yes. In addition to that body there is what is called a house committee, which meets once a month regularly and oftener if occasion requires.

10267. What are the particular functions of the almoners' committee?—To supervise all matters of detail throughout the hospital. They receive reports at their weekly meetings from the steward and the matron, and they take cognisance of what is going on throughout the place.

10268. That is the executive, in fact?—It is the executive.

10269. Then the house committee, what does that do?—The house committee deals with lettings of property, and all the more important matters of expenditure regarding the hospital, and makes contracts for provisions; and any large outlay which has to be made in the hospital must be sanctioned by the house committee; the treasurer and almoners have not authority to incur any but small expenditures.

(24.)

Chairman—continued.

10270. Am I right in saying that you are the secretary, as it were, of that body which is called the treasurer and almoners?—Yes. Shall I just, in a very few words, summarise what I conceive to be my duties?

10271. If you would be so good?—First, I may say that my whole time is devoted to the hospital. I attend all meetings of the governors, and all committees; I make minutes of the proceedings; I accompany the treasurer and almoners on their view of the estates (because they view all properties before they are re-let), and I accompany them also in their visits to the convalescent home. I prepare all agreements with tenants and contracts with tradesmen. I conduct all correspondence; I countersign the cheques; I issue all orders for supplies, except those for daily provisions, which are issued by the steward. I have charge of all deeds and records of the hospital; and I have a general oversight of the whole establishment with the object of enabling me to acquaint the treasurer, the almoners, and the governors whether their orders are carried out throughout the institution.

10272. Is it your duty, at these weekly meetings of the treasurer and almoners to report any circumstances that may have occurred outside the ordinary routine of reports?—I should ordinarily report anything to the treasurer, whom I see much more frequently than the meetings of the committee; in fact, in some sense, I am perhaps the eyes of the treasurer about the place when he is not there.

10273. We will assume that the treasurer is there and sees that something is going wrong, or has a suggestion to make for the alteration of some system; would he report that to the almoners when he meets them?—Yes, unquestionably; I am present on those occasions.

10274. In the absence of that committee, of the treasurer and almoners, he has the power himself?

D

29 January 1891.]

Mr. Cross.

[Continued.]

Chairman—continued.

himself?—Yes; he is the governor of the establishment.

10275. You, of course, reside on the premises?—Yes.

10276. You are a salaried officer?—Yes.

10277. May I ask what your salary is?—£1,000 a year.

10278. And board and lodging?—No, not board and lodging; a house.

10279. Lodging, then?—Yes.

10280. And lights?—Yes; gas.

10281. Coals?—No; not coals, nor furniture.

10282. I forget whether Sir Sydney Waterlow told us whether he is a paid official?—No; he is not.

10283. Now, as you live always on the premises, you would be in a position to hear any complaints?—Yes; I am constantly about the place.

10284. I suppose you are the person who receives all the complaints of patients or patients' friends or officials which may occur from time to time?—Not necessarily. The patients and patients' friends come more into contact with the sisters and with the steward than they do with me; but the steward would always come to me in case there were anything serious, and tell me of it; and I should investigate it, and report to the treasurer.

10285. Would not necessarily every complaint be brought to you, or would the steward be able to settle them sometimes on his own responsibility?—He would judge whether the matter were a serious one or not; if it were at all of a serious character, which he felt he could not settle himself, he would unquestionably come to me.

10286. Then he has a responsibility to settle certain minor disputes or complaints?—There is no direct authority given to him to do so; but I am quite certain if the matter were at all serious, if it involved any investigation at all, the steward would come to me at once about it. I do not mean to say that nobody ever comes direct to me. If anybody asks to see me, of course they can see me without the intervention of the steward or anybody else, and I am always willing to see any one.

10287. You mentioned the sisters just now; cases sometimes occur that relatives of patients are abusive in the wards: would the sister of the ward, if such a case as that happened, go to the steward?—Yes, it is her duty to report such a matter to the steward.

10288. How would she communicate with the steward?—She would either go to his office if it were an urgent matter, or wait till he came to the wards, if it were not. He is round the wards several times in the course of the week.

10289. St. Bartholomew's is a large place, and of course one of the wards might be a very long way from the steward's office?—Yes; but the sisters have occasion to go to the steward's office every day to report discharges and various matters.

10290. Perhaps you will say what the duties of the steward comprise. He is a very important official?—He is a very important official.

10291. I think his salary is 350 *l.* a year?—

Chairman—continued.

That is so. He keeps a record of the patients; he sees to the allocation of the patients in the different wards, of course under the advice of the medical and surgical officers; he orders the provisions from day to day, and he keeps the accounts of the provisions and sees that they are properly cooked and sent up to the wards; he has the direct supervision of the cook and of the beadles, and of all the inferior officers throughout the establishment, and is in constant communication with the patients' friends. In case of death, or in case a patient is seriously ill, and the friends have to be sent for, it is done through the steward.

10292. It is notified to the steward by the sister?—Yes.

10293. And he has two or three messengers at his disposal, has he?—He has beadles.

10294. They are the messengers?—They would be used for such purposes; sometimes the telegraph would be used, or other means of communication; he would judge by the urgency of the case as to what he should do.

10295. Is the steward under you?—Well, he is not directly under me.

10296. To give an instance of what I mean by that question: supposing you thought that the steward was misconducting himself in some way, have you the power of suspending him?—No.

10297. But would you think it your duty to report to the almoners and the treasurer if you saw something going wrong?—Yes; I should report to the treasurer at once; and if it were a matter of grave urgency, I do not think I should hesitate to take a responsibility upon myself, which is not committed to me by the letter of my duties, feeling that in the treasurer's absence I was the responsible officer in charge of the establishment. I should assume whatever responsibility might be necessary for dealing with any particular emergency, and I am sure that the governors would approve of my doing so.

10298. I suppose what you would really do would be that you would telegraph to Sir Sydney Waterlow if you did find yourself in difficulty?—I should try and communicate with the treasurer.

10299. Do not you think it is rather an inconvenient system to have two heads, as it were, because you are supreme under the treasurer in the hospital, and at the same time you have an important official in the hospital not directly under you; I am not speaking of your own hospital, but asking about the system generally?—It is rather a difficult and perhaps a delicate matter for me to express an opinion upon.

10300. You have great experience in hospital administration?—Yes.

10301. And cannot you conceive of such a case arising where it might be inconvenient if you had not someone with authority to act?—Yes, I think that, viewed abstractedly, it would be very much better that there should be always somebody on the spot who had supreme authority for the time. I altogether dissociate myself personally from that answer.

10302. I quite understand that. In the case of provisions the steward is supreme in his own department?—He takes provisions into the kitchen in the presence of the cook. Shall I just

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

just explain the system which is adopted about these provisions?

10303. I think it would be very convenient that you should do so?—Every sister, every afternoon, makes out from the diet sheets of the several patients, a tabulated account for her ward of the several diets required for the next day. All those sheets, so made out by the sisters, are taken in the afternoon to the steward's office, and there they are summarised in a book by one of the steward's clerks, and from that book sheets are sent to the kitchen and to the other departments of the hospital, from which supplies have to be given out. Then taking, as an instance, the kitchen, and the meat and the bread which have to be issued from day to day, the butcher and the baker have an order direct from the steward's office, to supply the quantities of meat and bread so ascertained to be required for that particular day's consumption. The steward, in the presence of the cook, receives the meat on the following morning in the kitchen. That meat is then under the control of the cook; and after it has been cooked, either in the boilers, or in the ovens, either the steward himself, or one of the clerks, goes down and sees the meat weighed out for the several wards, before it is sent up for the patients. The sister knows what quantity she should have, and if she did not get that quantity she would complain. The steward orders no more from the butcher than appears to be requisite by these summarised requisitions.

10304. So that, supposing the proper quantity did not come up to the ward, somebody would be short, and somebody, that is to say, the sister, would complain?—Yes.

10305. So that, in point of fact, that is checked by the sister?—Yes, I think it is. Of course it is conceivable that fraud may be committed under any circumstances.

10306. Does the sister get the weight in cooked meat?—Yes, her requisition is for so much cooked meat, and there is the usual allowance made for loss in cooking, which is the result of long experience of the waste and the bone which would be so expended.

10307. All the cooking for the patients is, no doubt, done in the kitchen of the hospital?—It is done in the general kitchen of the hospital.

10308. Is there any cooking at all in the wards?—No, only warming up beef-tea, and things of that kind.

10309. And making tea?—Yes, making tea; the tea is made in the wards for the patients.

10310. When you speak of these books, in which the steward enters the totals of these diets, is there any committee whose business it is to go through these books and see how they vary from week to week, or month to month?—These books are placed on the table of the treasurer and the almoners' committee once a month at the same time that the provision bills are produced to them for audit, or for their allowance before being paid. The steward certifies these bills as correct in reference to the quantity of provisions he has received. They are checked in my office as regards the moneying out of the bills, and seeing that a proper price is charged according to contract; that is quite

(24.)

Chairman—continued.

independent of the steward. The steward has nothing to do with the payment of them.

10311. But then these bills are placed, you say, on the table, before the committee of the treasurer and almoners?—They are placed on the table.

10312. Are they ever inspected and initialled?—They are always signed.

10313. By one of the almoners?—Yes; by one of the almoners. There is a book that we keep showing what books should be laid before the treasurer and almoners at each of their meetings; and the almoners not only initial or sign the actual book examined, but put their initials in this register book, so that they may see that the proper books have been brought before them.

10314. So that at the end of the year, when you come to compare the year's account, with the accounts for other years, if there was a great increase of any particular commodity, the responsibility for that would rest, not upon your shoulders, but upon those of the almoners?—As far as examining bills is concerned. But I always see the bills before they go in, and form my own opinion about them; and if there is anything to which I think attention should be directed, I speak to the treasurer and almoners about it.

10315. But assuming that fraud had crept in, and that there was detected a great increase in the consumption of meat, for instance, the responsibility would be with the almoners and treasurer, because they had initialled the book, and therefore, we may presume, examined it?—Yes, to that extent.

10316. But, surely, you look upon that committee, do you not, as being a safeguard for yourself?—Yes; but still I do not think that they can do more than see that the bill is properly certified by the officer who has had the goods, that it has been checked by an independent officer, and that there is nothing extraordinary about it to which their attention should be directed.

10317. There are stock books, I presume?—Yes, there is a book in which, from day to day, the steward enters what he receives; and this book is produced at the same time.

10318. Supposing that 100 lbs. weight more meat than usual has been consumed, they would observe that, would they not?—They might; perhaps I might say they ought to; but so small a quantity as that in so large an establishment would not attract notice.

10319. I mean a large quantity beyond the usual amount?—Yes, if it were anything unusual.

10320. They ought to notice it then?—Yes.

10321. And they would interrogate the steward?—Yes, they would interrogate him or interrogate me; they would make inquiry about it.

10322. That is what I mean by the ultimate responsibility resting upon the shoulders of that committee?—Yes, quite so; the ultimate responsibility would rest upon them.

10323. Now, there is another committee you said, called the house committee?—Yes.

D 2

10324. They

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

10324. They have to deal with the estates?—Yes.

10325. Referring to the nature of your endowments and your revenues, it is stated by Sir Sydney Waterlow, in answer to Question 2586, page 169, amongst other things, that there are "about 13,000 acres of land in the country, in the counties of Essex and Kent, Hampshire, and in some of the midland counties, but principally in the southern division of England;" that is what he states?—Yes, I should have thought that that figure, 13,000, was a misprint; it ought to be more like 9,000.

10326. That was his statement, and I do not recollect any correction of it. You have got properties distributed over various counties?—Yes.

10327. Are those managed by agents?—We have one land agent.

10328. Perhaps you would explain a little further about that?—He lives at Chelmsford; and our principal estates are in Essex; so that he is very conveniently situated for the management of most of the estates. We will suppose that a lease or tenancy is about to expire; the tenant applies for a renewal; the treasurer and the almoners always visit the estate, as they do their London estates, before any renewal is granted; a report is made then by the land surveyor of his valuation for reletting; the tenant comes to London to the committee and has an interview with the treasurer, and ultimately with the committee, at which terms are arranged for the fresh tenancy. With regard to outlay on buildings, repairs and maintenance of buildings generally, the practice is (I am speaking of farming estates, country estates) for the hospital to make any outlay in the construction of buildings. When new buildings are necessary, the money is found by the hospital as part of the arrangement upon the reletting; but for ordinary repairs the hospital provides the materials, and the tenant finds the labour.

10329. You have mentioned the almoners in connection with the management of the estates; are they doing this work because of their knowledge of estate management, as a rule, or are they almoners who happen to be doing duty on that committee at the time?—There are only four almoners, and each holds office for four years; so that one almoner goes out, and a new one is appointed in his place every year.

10330. Are those gentlemen men who are acquainted with the management of estates, as a rule?—Yes; not specially estates, because you see they have many other kinds of business to conduct. They are men, as a rule, of large business experience.

10331. They are men, as a rule, who have had experience of some kind, in the management of estates?—I should say that we are never without one among the four almoners who has had considerable experience of that kind.

10332. You have one agent for all the estates, and he lives in Essex?—Yes.

10333. And the bulk of your property is in Essex, I understand you to say?—Yes.

10334. What do you pay your agent?—We pay him 3 per cent. upon the rental value of the estate and his travelling expenses.

Chairman—continued.

10335. Three per cent. of the net value?—Of the rent that we receive.

10336. And no fixed salary?—No fixed salary. I need not point out that with the present depreciated rentals, he receives very much less than he used to do.

10337. Could you tell us, with regard to last year, what his receipts were; do you happen to have got it there?—The land surveyor's charges in the last year were 243 l. 19 s.

Earl Cathcart.

10338. And the acreage?—About 9,000 acres.

Chairman.

10339. Are these estates managed through your office?—Yes; all the lettings go through my office, as do those of the London estates too.

10340. Your London estates have increased in value, have they not?—Yes; they have considerably of recent years.

10341. Do you find that that increase balances the decrease in the value of the country estates?—It more than balances the decrease.

10342. Then, are all these estate accounts audited in your office the same as the hospital accounts?—Yes, everything.

10343. Now, as to your system of accounts, you have a system of your own at St. Bartholomew's?—Yes.

10344. Is it the same as the system of the Hospital Sunday Fund?—Well, we have nothing to do with the Hospital Sunday Fund, so that I cannot say that I am intimately acquainted with their system; I do not believe that it is quite the same.

10345. You have nothing to do, you say, with the Hospital Sunday Fund; at the same time your treasurer is the head man on that committee, is he not?—That is so.

10346. And the Hospital Sunday Fund committee have got a certain system which they require other hospitals to follow out before they give them grants; but you say that has nothing to do with you?—That has never been introduced into our hospital accounts.

10347. You have never applied, in fact, to the Hospital Sunday Fund?—We have never applied, and they would not give us anything if we did, because, as perhaps your Lordship knows, the basis on which the award is made is the hospital's total expenditure, after deducting from that expenditure all the income derived from endowments. As almost the whole of our income is from endowments that would leave practically nothing on which to found our claim for a grant from the fund.

10348. You are in the fortunate position of having a large income and being able to save money?—For the last three years we have been putting by money. May I read to your Lordship a copy of a resolution that was passed by the house committee, with reference to this putting by or saving of money, nearly three years ago: "That having regard to the importance of acquiring, whenever opportunity offers, a portion of the site of Christ's Hospital as an addition to the area of this hospital, and to the desirability of making provision beforehand so far as is possible

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

possible both for the purchase thereof, and for the re-building of the nurses' home, and the college (which re-building will be greatly facilitated by the acquisition of an extended area) it be an instruction to the treasurer and almoners to carry from time to time to a reserve fund to be applicable to the said purposes, all surplus income of the hospital beyond that required for current expenditure, such fund, together with the income arising therefrom, to be invested in the names of hospital trustees," and so on. During the last three years we have invested on that account 23,000 £. But when I tell your Lordships that we hope to be able to acquire at least as much as an acre and-a half from Christ's Hospital when that institution moves into the country, I think you will see that that 23,000 £. will go but a very short way towards its purchase.

10349. We were told that your hospital, St. Bartholomew's, is a parish in itself?—The whole of the parish of St. Bartholomew-the-Less, except one house which belongs to the governors, is comprised in the hospital. We also jut into other parishes, St. Sepulchre and St. Botolph, Aldersgate; but, practically, you may say Bartholomew-the-Less is St. Bartholomew's Hospital.

10350. How much land do you cover?—Between four and five acres.

10351. In respect of St. Botolph and St. Sepulchre, do you pay any rates?—We do.

10352. Not on behalf of St. Bartholomew?—Not for St. Bartholomew-the-Less, except for the residences in the hospital.

10353. Could you tell me how much your rates comes to?—Our rates for the last year came to 1,186 £.

10354. You have seen reports of other hospitals from time to time?—Yes.

10355. Have you been able, with your knowledge of your own accounts, to discover anything from them?—I think that our system is an exceedingly good one.

10356. I do not doubt that; I am not speaking of your system; I am speaking of the systems of other hospitals; you say you have seen the reports of other hospitals?—Yes.

10357. And can you, as a rule, make out what the accounts of other hospitals mean?—I have never failed, I think, to find out what I required to ascertain from those accounts; but, perhaps, my inquiries have been supplemented by personal applications to the people at the different hospitals to give me the information I was seeking for.

10358. It has been frequently said that hospital accounts for want of systematic arrangement, or similarity of system, are so involved that you cannot really make out what the position of the hospital is; do you think there is anything in that allegation? I am not speaking of your own hospital, you will understand?—I am afraid I do not know enough of the other hospitals to be able to express an opinion upon that. I should be surprised if any intelligent subscriber could not make out from any hospital accounts what they meant.

10359. At any rate, as far as you are concerned, you could understand what they meant?—I have never failed to do so.

10360. Do you see any advantage in having a

Chairman—continued.

uniform system of accounts for the London hospitals; all on the same basis?—I do not see any disadvantage; I do not see any very great advantage in it.

10361. You do not think it would be to the advantage of the public to be able to compare and see whether one hospital is extravagant in its expenditure as compared with others?—I doubt whether a mere examination of the accounts would be sufficient for such a purpose. Anybody wishing to ascertain the facts in order to come to such a conclusion as that would have to learn much more than would be divulged by any statement of accounts; he would have to learn the circumstances of the hospital, the nature of the cases they received there, and many things. Expenditure is largely affected by difference in the character and size of the buildings, and by the relative location of the different parts of the building, and there are many other things varying in different hospitals that affect expenditure; so that I should think that any conclusion arrived at from a mere examination of the accounts might be a very faulty one.

10362. Do not you think that the subscribers to any charity have a right to expect that from the annual report and the balance sheet they should be able to find out the position of the hospital?—Certainly.

10363. And yet at the same time you consider that the report itself and the balance sheet do not convey that information?—I am afraid I did not quite convey my meaning. I mean that in making a comparison between the reports and the statements of accounts of different hospitals, if you were going to draw a conclusion as to whether one was more economically managed or more extravagantly managed than another, you would have to know much more than is divulged by any statement of accounts; I did not mean to convey more than that.

10364. But at the same time the general hospitals of London admit, with one or two exceptions, pretty much the same class of cases, do they not?—Yes.

10365. They all of them have large out-patient departments, and they all have surgical and medical beds; and, their circumstances being the same, ought not their expenditure to be pretty much the same?—I do not think that all out-patient departments are the same. I do not think that there is anything like a relative proportion in all the hospitals, I mean in the larger hospitals, between out-patients and in-patients; and that makes one of the difficulties, to my mind, in instituting any comparison upon figures only.

10366. I was just coming to that question: what do you mean by relative proportion between out-patients and in-patients?—Suppose that one hospital has 500 beds and 150,000 out patients, you would expect another hospital that had 200 beds to have the same proportion of out-patients as the larger hospital has; but that is not the case so far as I know.

10367. They might have a proportionately smaller number of out-patients, you mean?—Yes; but they might chance to have a larger number; but I do not think that there is any proportion between out-patients and in-patients, as a rule.

10368. Have you any means of getting at the charge

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

charge of in-patients and out-patients?—Speaking for ourselves, we have not given, and we never pretend to give a statement of the average cost of in-patients; because out-patients draw their supplies, medicine, bandages, and all surgical appliances from the same stocks as the in-patients do; they have the services of the same officers in common with the in-patients; they use parts of buildings common to in and out-patients. It is true that an estimate might be made, but unless the estimate were formed upon the same basis in all hospitals, and unless the circumstances justified an identical basis for all hospitals I am afraid the result would be rather misleading.

10369. Of course any comparison would have to be made on the same basis; but how does the locality affect that; did I rightly understand you to say that that does affect it?—No, not the locality, but the form of the buildings, the location of the different parts of the hospital buildings within its own area. For instance, we consist not of one building under one roof, which, of course, can be much more economically managed than a building consisting of four sides of a square, with no communication between each other.

10370. Then is your hospital a more expensive one than others?—I should think it is in that respect; there is more service required. I may give this illustration: We have lately been putting lifts into the hospital; we have four detached wings, and we are therefore obliged to have four lifts, and four lift-men to work them. If the hospital were all under one roof probably one lift would suffice, and the services of only one lift attendant would be necessary.

10371. Then I am to take this answer from you that the circumstances of different hospitals differ so materially that it is almost impossible to institute a comparison?—I would not go quite as far as that; I would say that a comparison between them, unless those circumstances were taken into consideration, would be misleading.

10372. It might be necessary to leave out of the comparison these three great hospitals. Your hospital, St. Bartholomew's, that great hospital over the river, St. Thomas's, and Guy's; but taking the other eight general hospitals in London, they are all about the same size, are they not, generally ranging between 250 and 300 beds?—Yes.

10373. And the buildings are pretty much of the same sort, one with another?—Yes.

10374. And the patients the same sort of class?—Yes.

10375. And, with the exception of St. George's, there is not much difference, is there, in the localities in which they are placed?—No.

10376. There might be a comparison therefore instituted in those cases?—Yes, there might be. I am not suggesting that it should not be tried; I was only venturing to point out these difficulties in the reply to your Lordship's question as to whether a comparison in regard to relative economy or relative extravagance could be fairly formed on such a basis. It would have to be taken for what it was worth; and if people would bear in mind that it was not conclusive, I do not know that any harm would be done.

Chairman—continued.

10377. We have been furnished with a statement here of the various hospitals in London, their donations, subscriptions, &c., and there is also a comparative table of the cost of occupied beds; and taking the large hospitals, they take St. Thomas's at 99 *l.* 9 *s.*; they take, we will say, the Westminster at 63 *l.* 12 *s.*; they take the Middlesex at 81 *l.* 15 *s.*; they take the University College at 59 *l.* 11 *s.*; so that there is a very great difference in the cost of beds?—Yes, if those conclusions are arrived at on the same basis. That is what makes me very doubtful; I cannot think there can be such a difference.

10378. Then, have you seen that memorandum; that is, the Charity Organisation Report?—Yes, I saw it. They credit us with some figures, and I cannot tell how they arrived at them.

10379. At any rate, in that document the figures, as regards your hospital; I understand you to say are not correct?—I do not know how they arrived at them; I could not have arrived at those figures.

10380. So that on the whole, are you disposed to think this is a trustworthy return or not?—Well, not as far as we are concerned; I know nothing of anything else.

10381. Are these almoners, who manage your estates, responsible to any court of governors?—Yes; they are responsible to the general court of governors, by whom they are appointed. They would report primarily to the house committee; recommendations from them go to the house committee for their approval; and then the house committee's proceedings all have to be sanctioned by the general court of governors.

10382. You have a plan at St. Bartholomew's of making inquiries in the out-patient department into the circumstances of casual patients?—Yes; that is so.

10383. Do you think that on the whole that works well?—I think that it does.

10384. Do you think that they ought to have an inquiry officer in each of these great general hospitals?—Yes; I think that there should be an inquiry officer.

10385. He is an expensive individual, is he not?—He costs us about 150 *l.* a year; 3 *l.* a week.

10386. Is it that you advocate the plan of an inquiry, because of the saving it brings to the hospital in the way of attendance and drugs, and so forth, or because of the principle?—Because it warns off improper applicants. I do not think that our number of patients have been diminished by our having an inquiry officer; but I do think that some people who improperly came there do not now come.

10387. Do you mean people who could afford to pay?—Yes, people who could afford to pay.

10388. And also a large number of people whose proper home ought to be the infirmary?—Well, I would hardly say that. We do warn them off on account of their extreme poverty.

10389. That I understand; but at the same time you do not take chronic cases, do you?—Not chronic cases; but I do not think that part
of

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

of the question would be affected by the inquiry officer.

10390. Supposing that a patient came to your hospital as an in-patient, and that after getting fairly cured of the disease which he had when he came to you, he developed some chronic symptoms, would you send him to the parish infirmary?—We should send them to the parish infirmary. We should communicate with his friends first of all, and see what arrangements they could make, and if they could not take him away, we should communicate with the parish officers.

10391. Are the class of people who come to your hospital very very poor?—A great many of them are very poor.

10392. So poor that when they go out you have to find them clothes?—Yes, often; from our Samaritan Fund.

10393. The district by which you are surrounded is very poor, is it not?—Not so much as it was. There is a poor district immediately near; it is behind Bartholomew Close, Cloth Fair, and so on; but we draw a great many patients from Clerkenwell, and that district, which is a poor one.

10394. Have you any other hospitals close to you?—No, none close; there is no other in the City. I suppose that the Royal Free Hospital in the Gray's Inn-road is the nearest.

10395. So that the population round about you, for what distance shall I say, a mile and-a-half?—For a mile; Guy's must be a mile off.

10396. The population round about you, for a distance of a mile, depend entirely upon you and the infirmaries for their free medical relief?—Yes.

10397. Do you ever get any complaints from the patients, or the patients' friends, of too rapid treatment or examinations made by students?—Complaints of that kind are so rare, that I may say they have never occurred.

10398. Have you any remark to make about your out-patient department; is it a great inconvenience to the working of the machinery of the hospital?—Of course the great number of patients that we have as casualty patients in the morning, puts a severe strain upon everybody at one time; but I have no reason to suppose that the patients do not get properly treated, and that enough time is not given to them. Most of the cases that come are of a very trivial character.

10399. I referred more to the organisation of the department?—I think that our organisation is good. One wishes at times that we had rather larger buildings in which to do that casualty work. But we are looking forward to the time when we shall acquire this larger area, to remodel some of that department, and perhaps some others too. We are cramped for space.

10400. But this might occur; you might get a message from the medical committee; you have such a committee, have you not?—We have a medical council.

10401. You might get a message from them that the arrangements were bad in the out-patient department, and that by a different organisation you might do the work better. That

Chairman—continued.

you have not had?—No, we have not had any such message.

10402. Therefore you are bound to assume that it works well?—Yes, I think it does; I would say as well as it is possible for such a vast amount of work to be done in a limited time and in rather a limited space.

10403. Do you have a return of all cases in the out-patient department?—Of the numbers, do you mean?

10404. The names and numbers?—We have a return of the numbers only, as regards the medical casualties; in the case of surgical casualties the names are always recorded.

10405. But the names of medical cases are not recorded?—No; there is more likelihood to be some after-inquiry in a surgical case, where there has been an injury, than there is in any medical case; and I am afraid that if we recorded all the names and addresses of the medical casualties, we should have to keep two or three clerks at work for the purpose.

10406. Have you a return like this (*pointing to a return*) of new cases and attendances after the first?—No, not for casualties. With regard to what are known as the out-patients proper, which are selected cases from the casualties, of them there is a very systematic register kept.

10407. Of the new and old cases?—Yes.

10408. But of the casualties, which form the greater mass, you do not keep a register?—No, only of the surgical casualties. The object of keeping a register of the surgical casualties is, that we may be able to answer inquiries, if they should happen to be made, in case of any accident.

10409. Then in fact you number the medical casualties?—Yes, we have a system of numbering the new cases every day, by giving to patients tickets, which they deposit in a box; and I have several times verified a conclusion we came to some time ago, as to the average number of attendances, by taking the whole number every day, for a certain period, and calculating that out.

10410. I will not pursue that question of the out-patient department, because we had evidence as to that from Sir Sydney Waterlow, and you have not more to do with the out-patients than any other branch of the hospital?—No, I am frequently round there, and I see what is going on there.

10411. Is it a part of your business to go round the wards?—Yes, occasionally.

10412. Whose business is it to go round the wards every day?—The steward's and the matron's.

10413. And do the steward and the matron go round the wards every day?—Each goes round at least three times a week.

10414. On alternate days?—Not necessarily on alternate days.

10415. So that there might be one day or two days in a week on which nobody went round the wards?—It might be so; but I do not think it is likely to occur.

10416. Do not you think that it would be a good plan in the abstract if some official, like the matron, or the steward, or the secretary, of the institution, went round every day?—Perhaps so. It takes a long time, you know, to go round to

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

any effective purpose ; it takes you several hours, two or three hours at all events.

10417. Then may I ask you how does the fact of vacant beds come to your notice?—It comes to the notice of the steward.

10418. How does it come to the notice of the steward?—He makes up, as I explained some time ago, his summary of diet sheets, every afternoon, and by that means he ascertains the number of patients that there are in each ward ; and so arrives at the number of vacant beds. Besides, he has a record of all admissions and discharges.

10419. And do you keep a return of the vacant beds ; I do not mean you personally, but is a return kept of the beds in the hospital that are vacant?—There is a record every day of the number of patients in the hospital ; you could easily arrive, by looking at that book, at the number of patients that there are in every ward ; and, of course, knowing the number of beds in the ward, it is easy to tell how many are vacant.

10420. We will assume that there are 300 surgical beds ; each day there is a record made that there are so many occupied ; therefore if beds were kept vacant you would be in a position to ascertain that?—Yes, going back any time we could tell how many beds have been vacant at any given time.

10421. Do you ever have to complain that beds are kept vacant?—Never.

10422. In fact you are always full up?—Yes, allowing a proper interval for filling up beds with fresh cases.

10423. And also I suppose allowing a certain margin for extraordinary demands?—Yes, a certain margin ; but I do not think much attention is paid to that. If there are urgent cases for admission they go in.

10424. But you are in a position to know when the beds are vacant?—Yes.

10425. Now there is one other point that has been commented upon in the press, I have noticed ; of course I know nothing about it myself one way or the other. Have you lately had an outbreak of diphtheria among the nurses?—We have had several cases of diphtheria amongst our nursing staff during the last year. We took into the hospital last year, from outside, 140 cases of diphtheria, being double the number that we received in the previous year. Several of our nurses, 23 nurses, two ward assistants, and one servant, have been attacked with a more or less severe form of diphtheria. The matter has been engaging the very anxious attention of the treasurer and almoners ever since there was any idea that our nurses were suffering in that way, from the earliest development of it, and that is still very carefully under consideration.

10426. Do you admit all cases of diphtheria?—We have admitted all cases of diphtheria.

10427. In whatever stage?—In whatever stage.

10428. And you say that that question is still under consideration?—Still under consideration. I do not mean to say that nothing has yet been done, because a great deal has been done.

10429. I suppose you have a separate ward

Chairman—continued.

for diphtheria cases?—We commenced this year putting diphtheria cases into a separate ward.

10430. Do you take advantage of all the available space in your hospital for patients?—Yes, certainly.

10431. But have you not got a magnificent hall on the first or second floor?—Yes, there is a hall, but the hall has never been considered to be available for patients ; it is not fitted up. I have no doubt it could be adapted for patients.

10432. What use is that hall put to?—The courts of governors hold their meetings there, and it is occasionally used for dinners.

10433. Is that the only place where the governors could hold their courts?—According to present arrangements.

10434. How often do they meet?—The court of governors meet once in every three months ; it is a quarterly court ; sometimes they meet more frequently than that.

10435. Has the question of turning that into a ward, or having it arranged for a ward, ever been considered?—No, I have never heard that suggested.

10436. Have you ever taken into consideration the possibility of co-operation between the hospitals and the provident dispensaries?—No, that has never been before the governors.

10437. As a hospital official, has that ever occurred to your own mind?—I cannot say that it has, to the extent of my coming to any conclusion about it.

10438. Would you favour us by putting in a return of the employes in your hospital?—Yes.

10439. Of the whole of the staff?—Medical and civil staff, do you mean?

10440. I was not speaking so much of the medical staff, but of the civil staff?—Yes.

10441. I think Sir Sydney Waterlow furnished us with two or three returns ; perhaps you will furnish us with this one?—Yes, I will send a complete list.

10442. You do train all your own nurses, do you not?—Yes.

Earl Cathcart.

10443. You have lost a nurse from diphtheria, have you not?—No ; we have lost one from typhoid. I am happy to say that that is the only death we have had amongst our female staff, nearly 250 in number, for the last three years.

10444. Have you any reason to suppose that there was anything wrong in the quarters which were given to the nurses?—We have no reason to suppose that. Two months ago the surveyor was instructed to make a complete examination of the buildings throughout the hospital.

10445. Did you not move the nurses away from the house where they were?—You mean from some cubicles that a few of them were occupying.

10446. I do not know ; I understood that you moved the nurses away for some reason?—We moved those nurses away, because we found that one nurse there had had scarlet fever ; and so we moved them away for the purpose of disinfecting the whole place.

10447. Where did you move them to?—Some to the Nurses' Home and some to another house which was in course of being enlarged,
for

29 January 1891.]

Mr. CROSS.

[Continued.]

Earl Cathcart—continued.

for the purpose when we put them in those cubicles.

10448. Is that the treasurer's house?—No, the treasurer's house is just now finished for an additional staff of night nurses, and they will go there in a week or two.

10449. And the removal into this other house had nothing to do with this outbreak?—No, nothing to do with it.

10450. Where will the treasurer live now?—The treasurer has not occupied that house for some years.

10451. You are paid 1,000 l. a year, and beyond doubt you have great responsibility; and indeed, as you suggested, you are the eyes of the treasurer in his absence?—Yes.

10452. With regard to the accounts, do not you think that if the cash-book dissections were made in all the hospitals on a uniform principle, then the cost of the beds would be a good standard of comparison?—The difficulty that occurs to me is that so long as you draw your supplies for out-patients and for in-patients from a common stock, and have the services of several of your medical and surgical officers for out-patients in common with in-patients, you cannot arrive at that.

10453. But, pardon me, that does not meet my question. My question was this: supposing your cash-book dissections were made on a uniform principle for all the hospitals, that is to say, that the items belonging to the cost of the beds were dealt with on a uniform principle, then would not the cost per bed be a good standard of comparison as between one hospital and another?—I am afraid that I do not quite follow your Lordship. If I may do so, I would ask you to take the item of drugs; we could not say, unless we kept an entirely separate stock for each of these departments, what quantity of the drugs went to the in-patients and how much to the out-patients.

10454. Do you know this book, called "Burdett's Hospital Annual"?—I do know it; I know that there is a system of accounts there, but I have not examined it carefully.

Chairman.

10455. You said, if I understood you, that amongst certain hospitals a comparison could be made, but everybody would have to take it for what it was worth?—Yes.

Earl Cathcart.

10456. Could you suggest any better standard of comparison than the cost per bed?—Not if we could arrive at some understanding as to what should be considered an out-patient, and what the out-patient's cost should include.

10457. You are aware that in the army and navy, and the police force, the cost per man is the standard for comparison between one force and another?—Yes.

10458. Can you suggest anything better than the cost per bed as the standard for the hospitals?—If we can get rid of this disturbing element of the out-patient department, about which there is no uniformity, then we take the cost per bed as the standard.

(24.)

Earl Cathcart—continued.

10459. You have referred to the matron and to the steward paying a daily visit to the wards, but when pressed you said that they did not do so; and from that, I presume, it is their duty to pay daily visits according to the standing orders; will you tell me as regards the matron, if you please, because that is the more important?—The matron has to visit every ward in the hospital at least four times a week.

10460. But you did say that it was her duty to visit the wards every day?—I did not intend to state anything but what was quite correct.

10461. Of course, I only want to get the thing correctly?—May I just give the rule laid down for the steward?

10462. Yes?—It is that he shall daily visit the several wards of one wing in the hospital in turn.

10463. Do not you think it would be better, as is done in several other hospitals, if the matron visited the wards every day?—I think it would occupy so very much of her time, that if she might occasionally send the assistant matron it would be better.

10464. Now, with regard to the bread, do you bake it in the house?—No, we buy it.

10465. The bread is of good quality you find, do you?—Yes, the bread is of good quality; two loaves of bread, one new and one stale, are always placed upon the table of the committee every week.

10466. You do not see any advantage in baking in the house?—I think it would be better, if we had the room.

10467. It is done abroad, as you are, perhaps, aware?—I think it would be very much better, if we had the room.

10468. Do you know what the price of bread per hundredweight is?—The price now is a very small fraction over 4 d. per four-pound loaf.

10469. With regard to the meat, is the steward invariably present when the meat comes in?—I believe that either he or his assistant is.

10470. What is his assistant?—His assistant is a clerk in his office.

10471. He may be a junior clerk in the office, or the office boy?—No; he would be the senior clerk; he has two clerks. I believe almost without exception the steward is there when it comes.

10472. But you think that the steward ought to be there?—I think the steward ought to be there, and I think that nothing but unavoidable circumstances ought to prevent his being there.

10473. And you would think, I suppose, that the steward has no more important duty than seeing that the meat is supplied according to contract?—That is a very important duty.

10474. That is his most important duty, to see that the provisions are according to contract, and of good quality, is it not?—Yes, perhaps so.

10475. What duty has he more important than that? Then with regard to the meat, as a rule, have you frequent complaints from the steward and others that the meat is not satisfactory?—They are very rare indeed. He makes a report every week to the treasurer and almoners, in which he refers to the quality of the provisions received.

10476. And how often might complaints be made

E

made

29 January 1891.]

Mr. CROSS.

[Continued.]

Earl Cathcart—continued.

made of quality of the meat, speaking broadly?—I should not think once in three months; and then he always reports what he has done.

10477. And then what takes place if the meat is reported as bad; is it rejected?—Yes, he would reject it.

10478. And send to the market to buy other meat in its place?—No, he sends to the contractor, and gets more.

10479. Do the committee of almoners visit that offence upon the contractor?—I have known them send for the contractor, and remonstrate with him; and once on the occasion of a supply of bread they put an end to the contract at once.

10480. They have the power of doing so under the contract?—Yes, they have.

Lord Zouche of Haryngworth.

10481. I suppose your buildings are very old?—They were erected, for the most part, in the middle of the last century. The rebuilding of the hospital on its present site began about the end of the first quarter of the last century.

10482. And some of the building is even older than that I think?—No, except a portion of the church; no hospital building is older than that.

10483. Do you think that any danger arises in connection with infectious disease from the antiquity of the buildings?—I do not think that there is any evidence of that as far as our hospital is concerned; the wards are very frequently cleansed and re-painted.

10484. It has been suggested in evidence to us that they might become permeated by emanations from sick persons?—I have heard that suggestion. Of course it is a point on which I am not so well qualified to speak as a medical man would be; but I know that our surgical results are very good indeed, which could hardly be the case if our hospital were impregnated; but I think it would be better for you to have an answer on that point from a surgeon.

10485. I suppose every care is taken to paint all the wards frequently, and to disinfect them when necessary?—Yes; and if there is any case of infectious disease, and the surgeon or physician suggests that it is in the least desirable to do anything beyond ordinary disinfection or cleaning, the ward is turned out at once without any hesitation.

10486. You would not suppose that this outbreak of diphtheria which has taken place had happened in consequence of the antiquity of the buildings?—Personally, I do not think so, and I have never heard it suggested.

10487. About these inquiries that you make into the circumstances of the out-patients when they come, do you use more than one man to make inquiry?—No, only one.

10488. Do you find that sufficient; is he able to manage it all?—Of course he is able to do but little; but he makes a selection; he questions those people who from their appearance seem most likely to be able to pay, and then he follows the cases up to their homes, unless he gets a satisfactory reply from them; and even if the reply seems to be satisfactory he follows them up to the extent of the time at his disposal.

Lord Saye and Sele.

10489. I suppose your Essex property is almost valueless?—It is very greatly reduced in value. We have, unfortunately, two farms in hand that we cannot let; we should be very glad to get a tenant who would pay even our rates and taxes.

10490. If it were sold and cut up it might be of considerable value to the adjoining land-owners, especially if it is woodland?—It is not woodland, unfortunately.

10491. Have the corporation of the hospital the power of selling it?—With the consent of the Charity Commissioners; we should have to get the consent of the Charity Commissioners. We did, about two years ago, sell an estate in Essex, 268 acres, and about 37 acres of that were woodland; we sold it for 2,000*l.*, and were very glad to get the money.

10492. Did you, at that time, attempt to sell the remaining portion?—We have never put it up for sale.

Lord Monkswell.

10493. You say that your inquiry officer inquires into those cases where the applicant seems likely to be in good circumstances; but I suppose if a man came in rags his case would not be inquired into?—Unless there were something to attract attention to him.

10494. Practically, therefore, a man knows that he has nothing to do but to present himself with an appearance of destitution at the hospital, in order to prevent the case being inquired into at all?—I hardly suppose that a man would go through the form of clothing himself in that sort of way in order to gain admittance; I do not know, but I hardly suppose that.

10495. At all events you have not come across any cases of that kind?—No.

10496. You say there are three committees who practically govern the hospital; first of all the treasurer and four almoners, a committee of five; how many generally attend?—They are almost always all there; certainly nine times out of ten.

10497. How many, generally, attend the house committee, which is the next above them?—I should say an average of 15 or 16.

10498. Then it would hardly ever happen that those five would form a majority of the house committee?—No.

10499. Then, again, you have a general court of governors; that is supreme over both the committees that have been named; and I see, from Sir Sydney Waterlow's evidence, that the attendance at this court of governors varies very much, from 30 to 150, the quorum being 13; do you think that that court affords sufficient supervision, or indeed any supervision at all, over the proceedings of the two other committees?—Yes, I think it does, because they have notice issued to them with a statement of the various reports and minutes that will come before them for confirmation; and, as a matter of fact, the recommendations are often criticised.

10500. But I suppose a great many men who belong to the court of governors know very little about the circumstances of the hospital; in a large body such as that, that would happen, would it not?—No, they are almost all men who take an interest in the hospital.

10501. And

29 January 1891.]

Mr. CROSS.

[Continued.]

Lord Monkswell—continued.

10501. And who have been over it and know about it?—Yes.

10502. You say that the surplus over current expenditure goes to a reserve fund?—Yes.

10503. You do not fix any minimum amount that must go to the reserve fund every year?—No, all that remains after paying the current expenditure of the hospital; instead of enlarging the operations of the hospital, for a time the money is put aside, with this particular object in view.

10504. Then you would not enlarge the hospital unless you had a satisfactory amount, or what you consider a satisfactory amount, in the reserve fund?—I do not think the governors calculate upon enlarging their operations until they get this extended area, because they have rather more than they can do in their limited space at present.

10505. As to the comparative cost of beds you said that very much the same class of patients went to all of these eight hospitals that were spoken of; but is it not the fact that some hospitals would, as a matter of fact, have a good many more persons with a particular kind of disease than other hospitals, perhaps from the character of the surrounding neighbourhood, or something of that kind; and might it not be the case that owing to that particular class of disease that was prevalent in the cases occurring around the particular hospital, the beds there might cost more than in other hospitals?—Unquestionably that might be so; and that was one of the facts in my mind when I said that figures alone would not be a fair basis of comparison.

10506. With regard to this outbreak of diphtheria, you say that your surveyor inspected the hospital two months ago; what was, generally speaking, the nature of his report?—Generally speaking, it was that he could not discover anything amiss to account for the illness; but he pointed out that some of the appliances were not of the most modern type, and that they could be improved; and orders were at once given for the substitution of newer for the old appliances.

10507. But did he say nothing about the sleeping accommodation of the officers, or nurses, or students; did he not condemn some of it?—No.

10508. These ward assistants, I suppose, sleep in the hospital, some of them?—I think there are two who sleep out.

10509. As a rule they sleep in the hospital?—As a rule they do.

10510. Are the ward assistants put up in what you consider sanitary bedrooms?—Yes, I think so.

10511. Are not some of these places very low down, almost under the ground, and very damp?—No; the ward assistants sleep, some on the upper floor, and some on the third floor, and some on the second floor in the Nurses' Home.

10512. But is there no person connected with the hospital who sleeps in bedrooms that are partly below ground?—I think I know now what your Lordship is referring to. In the house set apart for the house physicians and house surgeons and resident staff, some of the male attendants slept below the ground, but that

(24.)

Lord Monkswell—continued.

house is at the present time being raised, in order that they may have bedrooms up at the top of the house; that is almost completed.

10513. Did they suffer from illness?—There was one attendant there who, in the last summer, had diphtheria.

10514. And might not that be traced to some extent to the insanitary nature of the bedroom?—I do not know.

10515. Was there any other case of illness of an attendant who had a partly underground bedroom?—No, none that I have heard of.

Earl Cathcart.

10516. Will you kindly specify what are the sanitary appliances that your inspector objected to, and that are going to be replaced?—What is being done now is the putting in of a different kind of waste trap, and putting anti-syphoning pipes.

10517. Those are for the sinks?—Those are for the sinks.

10518. And to the water-closets too?—No, not to the water-closets.

10519. The water-closets have not been objected to?—The water-closets have not been objected to.

10520. It is only in the sinks that this is required?—Yes.

10521. And they are just off the ward, I suppose?—Yes, in a sort of annexe off the ward.

10522. Is there anything else of a sanitary kind below ground that has been taken up?—No.

10523. Nothing has been suggested beyond that matter about the sinks?—Yes, he suggested some other things.

10524. What else?—I cannot charge my memory with all the details.

10525. What sort of things?—The better ventilation of some pipes, improved forms of trap, and additional inspection chambers.

10526. Underground?—Yes.

10527. And are you going to do that?—Yes, unquestionably; it is all ordered or actually in hand.

10528. And there is no danger while the operations are going on?—I believe not.

Earl of Arran.

10529. You have no reason to suspect the existence of any old bad system of drainage that has not been properly destroyed?—I should say not. In addition to this report from their surveyor, the governors, in order that there might remain no doubt about it, have called in a well-known expert to advise them generally upon their system of drainage. As the result of the inquiries made so far, there is no ground for thinking that drainage has had anything to do with this outbreak.

Earl of Lauderdale.

10530. Did you say that 23 nurses had been attacked with diphtheria?—Yes.

10531. Had all those been attending diphtheria patients?—No, we do not know that; we know that 16 had been attending diphtheria patients and were attacked by it; two ward maids and one servant attacked had also been in contact with diphtheria patients.

10532. That

29 January 1891.]

Mr. Cross.

[Continued.]

Earl of Lauderdale—continued.

10532. That together makes 26 who were attacked with diphtheria?—Yes.

10533. And there were 19 of the 26 who had been attending diphtheria patients?—Yes.

10534. And do you know that there were also some attacked by it who had not attended any diphtheria patients?—Yes, so far as we know.

Chairman.

10535. Have you never had a resident medical officer?—No, not over the whole establishment.

10536. The only medical gentlemen who live in the hospital are the house surgeons and house physicians?—Yes; there is also Dr. Norman Moore, one of the assistant physicians, but he resides there as warden of the college.

10537. You have nothing to do with the school?—Nothing at all to do with the school. The school is, in some respects, a separate establishment; the lecturers are appointed by the governors.

10538. The reason I ask that question about the resident medical officer is in reference to the admission of patients to beds. At Question 2440 I asked Sir Sydney Waterlow about the admission of patients to beds. He explained that there is a certain amount of sorting; and then he says, "Take, for instance, the 19th to 25th May; of the cases admitted as in-patients 75 were from the casualty department, 20 were accidents, 15 were sent over from the out-patient department, and 22 were admitted as the result of direct applications to the physicians and surgeons, and other medical officers of the hospital." Now I presume that that took place during the time that the officers were in the out-patient department, would it not?—That was in the out-patient room.

10539. During the time that the officers were at work in the out-patient department?—Yes; but I think I do not quite understand the question.

10540. You see that question and answer in 2440?—The house physicians and house surgeons are on duty all day; a patient may come at any time of the day and be admitted.

10541. What I want to get at is this: supposing a patient comes at five o'clock in the afternoon when there is no out-patient department going on, before you take him into the hospital I suppose some medical opinion must be expressed?—Yes.

10542. Who is that medical opinion expressed by?—The house physician or house surgeon on duty. There is a house physician and house surgeon on duty for a stated period; in fact, there are two, because there is a senior house physician and house surgeon, and a junior house physician and house surgeon; and it is the duty of the junior house physician and junior house surgeon during their period of duty to be always in attendance in the surgery so that any case coming may be immediately seen by them.

10543. Then those gentlemen determine whether a patient is a fit patient to come into the hospital or not?—Yes, they do.

10544. Are those men as a rule men with a certain amount of experience, or are they very junior men?—They are young men; but they are as a rule picked men.

Chairman—continued.

10545. Have you ever had a resident medical officer of some standing as an official at your hospital?—A good many years ago, 24 years ago, when I first went to the hospital there was a resident medical officer then styled the apothecary, but at that time of day we had no house physicians; and he had charge, in the absence of the physicians, of the medical cases in all the wards of the hospital. That system was altered in the year 1868; his services were dispensed with, and house physicians were appointed in his place.

10546. I wanted to ask you your opinion as to the plan of having a resident medical officer; but perhaps I might ask Dr. Norman Moore that question?—Yes.

10547. You have a number of house physicians and house surgeons in the hospital?—Yes.

10548. Under whom are they as regards discipline and general behaviour?—Under the treasurer as regards their general behaviour; as regards their work under the particular physicians or surgeons under whom they are acting.

10549. Supposing, for instance, that a sister said that one of the house surgeons was drunk in the ward?—I have never heard of such a thing.

10550. In the case of some very grave misfortune occurring, to whom could the sister go?—She could go either to the steward or to me.

10551. Have you the power of suspension?—No, I have not the power of suspension.

10552. Has the steward the power of suspension?—No, nobody has the power of suspension except the treasurer.

10553. Then the only thing would be to fetch the treasurer?—Yes, in such an extreme case as that; but I have no doubt that I personally should be able to settle the thing until the treasurer could be got there.

10554. But when you say that you could settle it; I understand that you have no authority to suspend?—I have no direct authority, but in such a case as your Lordship suggests of a medical officer being drunk, I should take the responsibility upon myself.

10555. I know it is an extreme case that I am putting; I want to know what would be done?—We should get the treasurer.

10556. But in the event of such an extreme case happening there is no official living on the spot who has paramount authority?—Not that authority officially committed to him.

10557. How often is the treasurer there; he told us five days a week, I think?—Yes, several days in the week; there are not many days in the week on which I do not see him.

10558. As a general principle, do not you think, in a large establishment like your hospital, it would be well to have somebody with such paramount authority?—I replied a little time ago to a similar question. I was careful to guard my answer, so that I might not seem to be speaking with reference to myself.

10559. You have a large staff of clerks, I suppose?—There is a renter, whose business it is to collect the rents and keep the accounts, and there are in the counting-house four other clerks besides.

1060. Then with regard to all the small accounts,

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

accounts, such as the weekly books and the weekly check upon the men who supply vegetables, and the petty cash books; do those go before the committee of almoners?—Yes; everything is checked in my office first of all, and then it goes before the almoners, and everything is signed by them before the bills are paid.

10561. It is laid on the table for them to examine if they please, you have told us?—Yes; but I did not mean to imply that there is no examination.

10562. It costs you about 1,100 *l.* a year in rates, you told us?—Yes.

10563. Have you ever been able to estimate at all, or can you estimate at all, how much you save to the parish by the number of poor that you assist?—No, I have never made that calculation; it would be to the City of London Union, not to the parish.

10564. That is what I meant; at any rate, it would be a very large amount, would it not?—A very large amount.

10565. And at the same time you pay 1,100 *l.* a year in rates?—We pay 1,100 *l.* a year in rates.

10566. Your accounts go to the Charity Commissioners?—Yes.

10567. Is there ever any criticism made on them by the Charity Commissioners?—Yes; some 14 or 15 years ago I should think, speaking as accurately as I can, they made some inquiry.

10568. But since that time no inquiry has been made?—No.

Earl of Lauderdale.

10569. Is there a fixed time at which out-patients have to attend at your hospital?—Yes.

10570. What are the hours?—The hours for what we term our casualty patients, are from nine to ten in the morning.

10571. And in the event of a patient coming after 10 o'clock, would he be seen by a medical

Earl of Lauderdale—continued.

officer?—Yes, if it were anything like an urgent case.

10572. And if not urgent?—He would be told to come again next day. If he objected to go away because of his having come after time he would be seen.

10573. Otherwise the hospital would be open for out-patients for the whole 24 hours?—It would be so.

Chairman.

10574. Is there any suggestion that you have to make to the Committee?—I do not think so; if your Lordships like to ask me any further questions I shall be happy to answer them.

10575. As regards the nurses and their food, and so forth, to whom would a complaint be made if a complaint had to be made?—A complaint by a nurse you mean? I have no doubt she would go to the matron.

10576. Supposing it were a matter connected with the discipline of the ward, the matron would settle it?—Yes; if she had any doubt about it she would come to me, and speak about it no doubt. I am a sort of general referee in the place.

Earl Cathcart.

10577. May I ask what your profession was before you went to St. Bartholomew's Hospital?—I am a barrister by profession.

10578. And you have been at the hospital 24 years?—Yes.

Chairman.

10579. You mentioned just now the treasurer and almoners' committee; what is the quorum of that committee?—There is no fixed quorum, but it is quite an exception that they are not all there, I should say certainly nine times out of 10 they are all there.

The Witness is directed to withdraw.

DR. NORMAN MOORE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

10580. You are the dean of the school at St. Bartholomew's Hospital, are you not?—There is no person bearing that style there, but I represent the official who is styled the dean of other schools. Our arrangement is this, that one member of the staff is the honorary secretary of the school, and represents it; there is no such person as a dean.

10581. Do you hold any other appointments in the hospital?—I am assistant physician to the hospital, lecturer on pathological anatomy, and I reside there as warden of the college; that is to say, as president of the resident students.

10582. Do you hold the diploma of the London College of Physicians?—I am a Fellow of the College of Physicians of London and a Doctor of Medicine of the University of Cambridge.

10583. Were you obliged to become connected with the Royal College of Physicians before you could be eligible for an appointment at St. Bartholomew's?—I should have been obliged to

Chairman—continued.

have been at least a member of the Royal College of Physicians before I could obtain the appointment of assistant physician at the hospital, but I was a member of the Royal College of Physicians many years before I received that appointment.

10584. Have there been any distinguished men who were anxious to become attached to St. Bartholomew's, and have been debarred because they did not hold that degree?—I never heard of one.

10585. You do not think St. Bartholomew's Hospital would be likely to lose a distinguished man because he does not hold that degree?—They can obtain it immediately if they are distinguished.

10586. How many medical students have you in your school?—It is a little difficult to state the exact number on any day, but about 500.

10587. Taking the entrances this year, and the men previously there, you mean that there

29 January 1891.]

Dr. MOORE.

[Continued.]

Chairman—continued.

are about 500?—All the men actually studying there at present.

10588. Do you find your medical school increasing in numbers?—No; I should not say it is increasing; it has maintained about that level for some time.

10589. Is that about as many as you could conveniently take?—No; I think we could conveniently teach a larger number than that; not very much larger, but a larger number.

10590. Then in regard to the residential college; how many students can you accommodate there?—Twenty-seven.

10591. Do you find that you can keep your residential college full?—Always.

10592. You do not reside in it, do you?—Yes; my house is in the middle of it.

10593. Have you the power of discipline over a student?—Yes; in the college.

10594. And then what do you do; do you suspend, or can you dismiss, or gate?—I know every student who lives in the college, and if his conduct was not satisfactory to me I should speak to him at once.

10595. But then what is the highest authority in connection with the school; is it yourself?—As regards the college, apart from the government of the hospital, I am the highest authority.

10596. Supposing it were a grave case, and you thought the man ought to suffer for it, would you report it to the hospital authorities?—I should get rid of him first, and I should not report to them unless he chose to dispute my ruling; then he could appeal to them if he chose.

10597. Who is the head authority of the school?—There is no person officially so described; but for anything referring to discipline, any one would naturally come to me, and I have certain powers. The head authority of course is the committee of the school; that is the governing body of the school, which consists of the physicians, surgeons, assistant physicians, assistant surgeons, and lecturers.

10598. Then would he be tried by them?—You asked me about the college, and about offences in the college. As regard the school, any offence against discipline or good manners would be heard by a committee called the discipline committee. If there was need for immediate action I should take that action, and I am authorised to do so.

10599. Are you generally in favour of schools being attached to large hospitals?—Yes, I am.

10600. And do you prefer the hospitals with the smaller schools to one central university?—I think if you compare, as far as one has the opportunity, the results of medical education in England, with the results in other countries, one has reason to consider that our system is a better one.

10601. Have you any acquaintance with the system at Vienna?—I have never been to Vienna, but I know the general system which prevails throughout both the Austrian and German empires.

10602. A witness here, a Mr. Broadhurst, spoke very strongly in favour of the Vienna system as opposed to ours?—I should have

Chairman—continued.

thought that he was entirely incompetent to form any opinion; he has never been a prominent teacher in an English school or had good opportunities of becoming acquainted with the teaching that is carried on in such a school at the present day.

10603. He was asked a question on the subject, by Lord Kimberley at No. 4111: "What are the results of the system? Is the result of the system that the practising surgeons and physicians in Vienna, or who have been educated in Vienna, are superior in knowledge and skill to those educated in England, or are they not?" and his answer is, "It is a very difficult question for me to answer." Then he was asked: "But on that turns the whole matter; how can we judge of such a system except by its results?" and his answer is, "But if the lecturers are so superior that there is nothing to compare with them in London, surely the result ought also to be better." From your experience or knowledge do you think that the lecturers are as good here as they are abroad, say, in Vienna?—Of course, in any university or any collection of teachers, there will at times be particular men who are superior to any others; but I am quite sure that the teachers of London will bear comparison with those of anywhere else. And there is this very important point in a medical education: that you are not merely training a man to lecture or teach, but you are training a man who is to go out into private houses and families and be trusted in a variety of ways; and, therefore, his moral training is of quite as great importance, and perhaps of greater importance, than the mere amount of knowledge that he acquires; and I believe that the general moral training in England is very much superior to what it is in any continental country.

10604. The training in our hospitals with schools is generally of a practical character, is it not?—Thoroughly practical.

10605. But do you think that by the system we have here we get as good lecturers as we should if we had a central university?—I should have said quite as good. There could not have been in Europe a better lecturer anywhere than Sir James Paget, when he was engaged in teaching.

10606. You mention one distinguished lecturer; but there are a great many lecturers required in one medical school?—Yes.

10607. And though a man may be a very clever medical man he may not be a good teacher, I suppose?—I will put it in this way: Whether you will have many good lecturers or not will depend on what rewards a man can obtain by becoming a good lecturer. The ultimate rewards of successful teaching are greater in London than anywhere else. Therefore there is no reason, *a priori*, to think that our teachers would be worse than those elsewhere; as a matter of fact, I believe them to be quite as good.

10608. You refer in that answer to other advantages beyond pay?—Yes; I refer not to the pay, but to the ultimate rewards.

10609. You do not hold then, according to that, that by having a central university you would secure better lecturers?—I have, no doubt, that if

29 January 1891.]

Dr. MOORE.

[Continued.]

Chairman—continued.

if you had a central university you would secure good lecturers; I do not believe that you would have any better lecturers than you have at present.

10610. Has it ever occurred to you that it might be possible to have a university for certain subjects, such as physiology, chemistry, and pathology; would there be any advantage in such an arrangement?—You ask me about three subjects which are on quite a different footing, one from the other. I think it would be very useful if students of medicine had been taught chemistry at public schools before they began their education. I think there might be something gained if there was a large central physiological laboratory; there might be I say. I think that pathology in its relation to the practice of medicine is more usefully taught as it is taught now; that is to say, in direct relation to the sick patients.

10611. A great laboratory would undoubtedly form part of a central university, would it not?—It would. I do not know that that is so urgently needed, because there are excellent laboratories at Cambridge and at Oxford; and the College of Physicians and the College of Surgeons jointly have established very expensive and fully fitted up laboratories on the Embankment; and the College of Surgeons itself has very large laboratories in Lincoln's-Inn Fields, so I do not think that there is at present any urgent public want.

10612. Then I am to understand that you are quite satisfied with the state and the prospects of medical education at present?—I do not mean to say by that that I do not think it is capable of improvement; any university that is really alive is always making improvements; but I think it is so satisfactory that it is sure to make the necessary improvements.

10613. You have been for some time connected with the out-patient department of St. Bartholomew's?—Yes.

10614. We have had the system explained to us of casualties and out-patients; did you, with your experience, find it worked well on the whole?—I think on the whole it worked well.

10615. And you were not enormously inconvenienced by the crowds?—No; I think there is a certain advantage for a certain time of one's career in having to see a very large number of people; a very important advantage.

10616. You mean to say because of the different descriptions of disease that you see?—Yes, that is one reason; there are several others.

10617. Perhaps you will give them?—Another is, that it trains a man into the habit of ascertaining accurately, not so much what is the matter with the patient, but whether he is very ill or only slightly ill; and that is a knowledge of the utmost importance to patients and to physicians. Then, of course, there is the necessity for making observations on a very definite system; it is impossible to see many patients unless it is done in an exceedingly systematic manner. These are the three chief advantages.

10618. Then the casualty department has advantages for the profession; that is to say, from an educational point of view, rather than for the

Chairman—continued.

public?—Yes, an advantage for the profession, and therefore for the public.

10619. In the answer to Question No. 804 (this is the evidence given by Mr. Hardy in regard to cases that were badly treated at St. Bartholomew's in either the out-patient or casualty department), I find this: "There are a large number of cases going for the general treatment of ulcers of the legs, and chronic rheumatism, and cases of that kind which cannot receive proper attention when being seen at the rate of 60 cases an hour, which seems to be necessary where the out-patient departments are so overcrowded as they are." Have you any remark to make upon that?—I should say that they were not seen at the rate of 60 patients an hour, and that no case of ulcer of the legs would be neglected; it is such an obvious thing that it could be seen. A case of chronic rheumatism may be an exceedingly obscure case which would take a very long time to investigate; and, of course, it is possible that a man of only small experience might overlook something which he ought to have noticed.

10620. That might occur elsewhere than in the out-patient department?—It might occur in the rooms of physicians, in their own house, of course.

10621. In No. 914 the same thing is referred to again. "You say that sometimes on a Monday a thousand out-patients would be seen at St. Bartholomew's, and you told us that there are a dozen doctors to see them; that would be about 80 for each doctor; about how long is the out-patient department open on a Monday?—(A.) It is open till they have finished seeing the patients; I think they close the doors at 10 in the morning. (Q.) And how long do they go on seeing them?—(A.) Till they are done; I think it is sometimes six or seven in the evening before they get away and have their medicine." Could you give us your experience; have you ever seen patients examined at that rate, 80 patients to a doctor?—I should doubt the accuracy of that statement altogether; but so far as that has any foundation, it refers to a former period many years ago, when the arrangements in the casualty department were certainly less perfect than they are now. No one would see that number of patients now. I doubt myself whether a thousand patients were ever seen on a Monday; I doubt whether ever much more than perhaps a little over six hundred. I was casualty physician myself for two years and a part of another year.

10622-3. You yourself, have you ever been put to such hard work as that?—The largest number of patients I ever saw when I was casualty physician in a morning was a little over three hundred.

10624. How many hours did "the morning" extend to?—It extended after nine till between 12 and one.

10625. And all that time you were doing nothing but seeing patients?—Nothing else. But your Lordship will observe that you are not prescribing for all those; you are selecting a certain number for the out-patient room. You see that a man, for instance, has a serious form of spinal paralysis; you give him an out-patient letter; that

29 January 1891.]

Dr. MOORE.

[Continued.]

Chairman—continued.

that need not take you more than two seconds; you are practised in recognising that. You see that a patient ought to be admitted; the order is a printed form, and you sign it; that need not take more than ten seconds. So that it is not as if you had to go minutely into that number of cases. But in any case nothing of that kind occurs now, or has occurred for many years, because the staff is enormously increased in that department.

10626. And I think you said that the department itself had been reorganised?—Entirely reorganised.

10627. Have you had opportunities of seeing what class of people come to these out-patient and casualty departments?—Yes.

10628. Do you ever see well-dressed people there?—I have, very very rarely.

10629. I do not mean to say that that is always a criterion of their circumstances; but should you from your own experience imagine that the free department of the out-patient and the casualty departments was much abused?—Of course I can only speak of St. Bartholomew's, and I have seen many thousand out-patients, I am sure over 100,000 myself, and I am confident that it is a very rare occurrence indeed for any one to come who could afford to get the advice of a physician; I do not say any medical advice; but if I were ill I should like to have the best possible advice.

10630. Were you in the out-patient department when the inquiry system was instituted, or since the inquiry system has been instituted?—I have been there both before and since.

10631. Did you find any appreciable difference in the numbers?—It is very difficult to tell. There is a large room, and on certain days it is pretty full; I should say that there is not any very obvious difference.

10632. Then are you one of those who are in favour of maintaining out-patient departments, or are you in favour, as one or two witnesses have been, of the abolition of them?—I am strongly in favour of maintaining them. I am quite sure that if they were not maintained you would do a most serious injury to the progress of medicine in this country. You want to have a tolerably easy access afforded to the out-patient room of a hospital, and that the selection there should be done by a skilled person; and in that way only can you insure serious cases of disease among the poor not being overlooked.

10633. Do classes take place in the out-patient department?—No classes take place in the casualty department. In the out-patient room, of course, teaching is regularly done. Shall I tell you how?

10634. Yes, if you please?—Speaking of my own out-patient room (and with everyone else it is practically the same), I go there at a quarter to 10 on two days in the week, and find there some patients. I have 24 clerks; those clerks come at half-past 10, 12 of them each day, when they arrive they find 12 patients (I have selected 12 of the most serious cases) seated on chairs behind a desk; each clerk takes a note of the case; he takes three-quarters of an hour to take a note; meantime I myself am seeing the other cases, or prescribing for cases which have come

Chairman—continued.

before. At a quarter-past 11 the 12 clerks will have taken notes, and 12 others who are in attendance, and any other students who like, come in; they all have to sit down, and I then take the note of the first case and read it aloud, and examine the patient myself, and discuss it with the clerk who took the note, and finally prescribe for it; and that takes till a few minutes before two o'clock. So that each case that has been examined by a clerk has been minutely examined, and I myself have prescribed for every case.

Earl Cathcart.

10635. Will you kindly state what is a clinical clerk?—A student who has reached a certain stage of his education; who has passed all his examinations in the first part of his education, that is in anatomy, physiology, materia medica, and chemistry; is appointed to take notes by the bedside or in the out-patient room, and is called a clinical clerk.

Chairman.

10636. Supposing that your view is right as to the benefit of these out-patient departments, and also as to the improbability of people going to the out-patient department who could afford to pay, do you see any advantage to be gained by co-operation between provident dispensaries and free hospitals, such as St. Bartholomew's?—As far as I understand what is meant, I understand it to be something like this: that there should be some selection by the medical men outside of the patients coming to a hospital. I think that would be injurious to the poor, because what you want is that the most competent person should decide whether the patient ought to be treated. The general average of medical men outside would necessarily not have the kind of knowledge possessed by those who are constantly studying and teaching their profession; and, in that way, important cases of disease might be overlooked, which would not be overlooked at the hospital, and which a physician would recognise at a glance as being cases of the very greatest importance, and which ought to be taken care of immediately.

10636*. Then, if the out-patient department were made merely a consultative department, you think, as I understand you, that that would not altogether meet the wants of the poor?—I am quite sure that it would lead to the overlooking of numbers of serious cases of disease.

10637. Have you had anything to do with provident dispensaries?—Nothing.

10638. With these great crowds of people that resort to the out-patient department is there no fear of infection being spread, because it must occur that sometimes there may be a person with an infectious fever, or something of that kind?—What is quite true of a theatre or any other assembly of people, of course is true of a room full of out-patients.

10639. Does that comparison quite apply; because the people who go to the theatre are well, whereas those who went to the hospital would not be well; is there not some risk in that respect?—No doubt there is some risk.

10640. I think Sir Sydney Waterlow told us that those out-patients who are found to have infectious complaints are isolated as soon as possible; that is so, is it not?—Immediately.

10641. And

29 January 1891.]

Dr. MOORE.

[Continued.]

Chairman—continued.

10641. And that in the case of fevers they are sent to the Fever Hospital?—Yes.

10642. Do you know anything about poor-law infirmaries?—A little; I have been into them occasionally.

10642*. Since you were a student, do you mean?—Yes; I never went there as a student, only since I have taken my degree.

10643. Do you think it would be an advantage if students were allowed to go there?—I am not quite sure about that. When a man is beginning the study of medicine, the important thing is that he should be carefully taught; so that whilst the infirmaries would of course, afford a great deal of instruction to people who were already informed, unless the medical officers were a great deal more competent to teach than they are usually, the student would not learn much by visiting the infirmaries.

10644. But still it would be right, would it not, to assume that if they were made use of for the instruction of students, such arrangements would be made that the instruction would be of the best kind?—I do not think that is certain, and I do not see how that could very well be made quite certain, because, after all, it would be the poor-law medical officer, and the union would never pay him in prospects; I mean that it would never pay him to the degree that a first-rate teacher of medicine would have to be paid. I think it would be very useful in this way: of course, in poor-law infirmaries, there are numbers of chronic cases, and if all those cases were examined post-mortem, then the post-mortem rooms of the workhouse infirmaries could be made most instructive places, and a great deal would be learnt from them; but I do not think very much that is not to be learnt in a general hospital could be learnt from the wards of a workhouse infirmary taken by themselves.

10645. But at the present there is a great waste of fields for instruction, is there not, because we have a very large number of patients in these infirmaries?—Yes, there are many patients there, of course.

10646. And if care could be taken that the instruction should be first class, would you favour the idea of students being admitted?—You cannot see any man sick or well without improving your knowledge of medicine if you examine him carefully, and therefore, of course, the more you can study sick men of any kind the better.

Earl Cathcart.

10647. On that very busy day of yours in the casualty ward, I think you said you had to see 300 patients in four hours; from nine o'clock to one?—About that time.

10648. That would make it rather over a patient a minute?—I explained how that was done; and I also should like to say again that that could not occur now.

10649. Now, have you got a club attached to your college?—No.

10650. How do the students live?—The students live as they would in a college at the university; they dine in hall, and have breakfasts and other meals in their own rooms.

10651. But you have nothing in the nature of a club as they have at Guy's?—No; but in the middle of the day any students of the hospital,

Earl Cathcart—continued.

whether resident or non-resident, can get luncheon in the college hall; and the students themselves have a society, for which we provide a room, where they can always go and sit; nothing to do with the eating.

10652. A reading-room, you mean?—A reading-room.

10653. As to the conduct of the students, their conduct is generally good, is it?—The conduct of the students is generally very good indeed; it will compare quite favourably with that of undergraduates at the university.

10654. Did you ever draw in your own mind any essential distinction between the Scotch system of teaching medicine and yours?—I have never studied at the Scotch universities, but I think that the Scotch system is admirably suited to that country, and has grown up out of the circumstances of the country. The system here is a little different. I think there is something to be said in favour of the characteristics of each.

10655. Wherein does the essential distinction lie between the two different systems?—I should say, first of all, that the English system costs the State nothing at all, all the medical schools resting upon their own merits. Under the Scotch system the universities are provided with considerable sums of public money. That does make rather a difference in the constitution of the schools. I thought that there was perhaps a little more catechetical teaching in Scotland, and I am inclined to think that it might be increased here with advantage; but that varies very much.

10656. I think it was suggested to us that in Scotland the teaching was more practical and less theoretical than in England; what do you say to that?—That would not be the case. You could not have heard any good teacher in London teaching in the wards without seeing that he was thoroughly practical. I think perhaps in Scotland the teachers are a little more inclined to question the students in the wards, and I think that that is an advantage.

Lord Thring.

10657. To go back for a moment to the school, how high are the lecturers paid?—The lecturers are paid by the school. In the handbook of the school are stated the fees that you have to pay to attend any particular lecture.

10658. But what I mean is are they paid by salary?—If 100 students attend a man's lecture he receives a definite fee in relation to them.

10659. Is he not paid a fixed salary?—If there were no students he would receive nothing; if one student he would receive one fee.

10660. There are two modes of payment; one mode of paying them is to carry all the fees of all the students into a common fund and pay the lecturer's salary out of that common fund; another mode is that each lecturer should be paid either the whole or a portion of the fees of all the students who attend him, and that if a portion only is paid the residue should go to a common fund. How are your lecturers paid?—Entirely on the system of fees; not at all on the system of salary.

10661. In other words, a lecturer receives the whole money from all the students who attend him?—That would perhaps give a slightly in-

F

accurate

29 January 1891.]

Dr. MOORE.

[Continued.]

Lord Thring—continued.

accurate idea, because every lecturer has to contribute to the common expenses of the school; but if you allow for that, what you state is exactly the case.

10662. And, as a general rule, how much does he receive?—It entirely depends upon his standing, and his fees.

10663. What is the largest sum that in the last year your best lecturer received?—There is no one whom I would for a moment describe as our “best” lecturer.

10664. I will alter my question and say, what was the largest sum given to any lecturer last year?—That I could not say.

10665. Is it 200 £.?—Probably the smallest sum received by any lecturer is about 100 £.; and I should say, speaking quite roughly, that no lecturer received as much as 700 £. last year.

10666. Then it ranges, according to you, from 100 £. to 700 £.?—I do not say that. It entirely depends upon the number of students that the lecturer has attending him.

10667. But if last year the largest sum received was 700 £., and the smallest was 100 £., the fees last year ranged from 100 £. to 700 £.?—Certainly, last year.

10668. That was the question I asked you. Then how is it arranged with regard to these lecturers; do they each tout for as many students as they like, or are the students sent to them by the college?—I trust that no member of the medical profession would “tout” for a patient or for a student.

10669. I will use another term. Are the students distributed by you, as the head of the school, among the lecturers, or can students go to any lecturer they like?—The lectures required to be attended by every student of medicine are prescribed by different examining bodies, and a student who wants to take the diploma of any particular examining body goes to the lectures required by that examining body. He goes to them exactly where he pleases; he might go to a different course of lectures in every hospital in London.

10670. I am asking with respect to your own hospital; I want to know the mode in which your teaching is managed; you have a certain number of lecturers; I want to know whether those lecturers have the option to take their own pupils, or whether the pupils are distributed among them by you as the head of the school?—No, neither is the case.

10671. What is the case?—A student comes to London, we will suppose, and wants to become a member of the College of Surgeons, or a licentiate of the College of Physicians; he obtains from the secretary of the examining board of each of those bodies the regulations; in those he finds that he must have studied for a certain period, and attended certain lectures; he then proceeds to take out those lectures at St. Bartholomew's, or wherever he pleases, and if he likes he may take half of them at St. Bartholomew's and half at Guy's; it entirely rests with him; we do not compel him, and the lecturer has no relation with him on the point; it entirely rests with the student or his father.

Lord Thring—continued.

10672. Then how is the moral training (to which you referred as being so pre-eminent a distinction in the school) conducted, and by whom?—It is conducted by the fact that the students in the school form a body like a college in a university where there is a considerable degree of *esprit de corps*, and where each student acts upon another, and where there is a good tone. In addition to that the students are personally known to their teachers, and come into close contact with them.

10673. I thought you said that there was no relation between the lecturer and the student except the teaching relation?—No, I said nothing of the kind.

10674. Then is the lecturer responsible for the moral training of his students?—He is responsible. He is not responsible to any special authority, but he comes into constant contact with the students and so necessarily influences them.

10675. Will you let me explain my meaning; I only want to know your system. Take the case of a college; I go to a college at the university, if I misbehave myself I go before the tutor, he is practically responsible for my conduct; if I have done very wrong, I go before the master, and so on. I want to know whether at St. Bartholomew's, your college or school is conducted on the principle that the lecturer, or some tutor, or yourself, or somebody or other is practically charged with the moral training of the students?—I should say that when you compare it to a college, the comparison is a perfectly good one, the only difference being that I think there is a much closer relation between the teachers and students of medicine than there commonly is between the undergraduates and resident fellows of colleges.

10676. In other words the relation is between the lecturer and the student?—Between the teaching staff generally, and the student.

10377. What is the teaching staff?—The physicians and surgeons are included; we do not necessarily call them lecturers.

10378. I do not quite understand?—I can explain to your Lordship. The teaching staff consists of physicians, assistant physicians, surgeons, assistant surgeons, some of whom may lecture, and also of persons who do nothing but lecture; such as the lecturer on chemistry, the lecturer on physiology. A physician teaches as he goes round the wards; he may in addition to that lecture on the practice of medicine or he may not, but he is a teacher whether he does or does not; we do not call him a lecturer.

10679. I do not see that any individual relation is instituted between any individual lecturer and his students, as there is between the tutor of a college and the pupils of a college; that is what I ask?—I should like to point out to you that there is. Every physician has clinical clerks; every surgeon has dressers; every student in the course of his career must be a clinical clerk for six months and a dresser for six months. When he is holding these offices he comes into almost daily contact with his physician or surgeon.

10680. Then, I understand you, that taking the clinical clerk, during the time that he is a clinical clerk, the gentleman under whom he acts as a clinical clerk conducts what I should call his moral training;

29 January 1891.]

Dr. MOORE.

[Continued.]

Lord Thring—continued.

training; that is what you meant?—That is one of many ways; I point out many other ways than that.

10681. Then I want to ask a question with regard to the higher officers of the hospital; they go round, I presume, at stated times, the visiting doctors?—Yes; the hours at which they go round are stated in the hospital handbook.

10682. And do they always go round at those stated hours?—Always.

10683. And supposing they do not, is there anybody who finds fault with them, or speaks to them about it?—But, as a matter of fact, they do go round at those hours.

10684. Then, with regard to the post-mortems, I think you said that you thought it would be a good thing that all the bodies in the infirmaries of persons that died of certain diseases should be examined; I suppose you do not think that is a practical question, because, of course, that could never be done?—I am quite aware that there is a prejudice against it; it would be enormously for the benefit of the nation if every single person were examined post-mortem, and it is only because we are ignorant and superstitious that that does not occur.

10685. Still, there is that prejudice existing. Do you examine all the bodies of the patients that die in the hospital, in your own particular hospital?—No, not unless their friends give leave.

10686. And when their friends give leave, and they are examined, then what is done; who is responsible for their being decently buried?—While they are being examined (they are being examined post-mortem, not dissected, your Lordship will understand), there is the particular officer who is responsible for the body.

10687. Who is that officer?—The Demonstrator of Morbid Anatomy, or Lecturer on Pathology.

10688. Does he take care after he has examined a body that the body is decently sewn up, and that there is nothing to shock the relatives?—He takes care that it is not mutilated or otherwise injured, so that it might shock the relatives; and the body is sewn up and so forth under the supervision of a beadle, and then replaced in a coffin and given to the relatives.

10689. The beadle is the only person responsible then for no offence being done to the feelings of the relatives?—The relatives can come and complain immediately.

10690. Whom would they complain to?—I suppose they would go to the steward.

10691. And is the steward a very subordinate officer, or is he not?—I should have said not very subordinate.

Lord Zouche of Haryngworth.

10692. With regard to the question of Lord Thring's about examining bodies, do you usually ask leave of the relations of people who die in hospitals for their bodies to be examined?—Always.

10693. And is it usually accorded, or is it generally refused?—I am speaking now quite roughly, because I have not referred to statistics, but I should say that about two-thirds of the

(24.)

Lord Zouche of Haryngworth—continued.

people gave leave; it may be a little less than that; it is not more, I think.

10694. Then, with regard to these poor-law infirmaries, who are the medical officers of the poor-law infirmaries; generally are they a body specially attached to those infirmaries, or are there visiting physicians and surgeons who go round them in the same way as in general hospitals; or how are the arrangements made?—I do not know very much about them, but I know that they have not got visiting physicians or surgeons; they have medical officers appointed by the poor-law authorities.

10695. Who stick to those poor-law infirmaries and do nothing else, do you mean?—I think they are generally engaged in practice, but that varies.

10696. I do not wish to institute a comparison between one body of medical men and another, but I take it from you that, generally speaking, the medical officer of a poor-law infirmary would not be quite so competent to discriminate between serious cases of illness which were presented to him for the first time as medical officers of a general hospital?—I do not think, if I may say so, that that is quite a fair way of putting it. A man who had been constantly seeing sick persons would be worth nothing if he could not tell whether a man was seriously ill or not; so that I think in that respect the poor-law medical officer might be quite competent.

10697. But if the idea which has been suggested was carried out, that all patients should go to a poor-law infirmary, or provident dispensary, or that kind of institution, before they come to a general hospital as out-patients, you think, as I understand you, that they would run the risk very often of having serious cases of illness overlooked, because those medical men to whom they would go first, would not have had quite the experience that a medical officer of a general hospital would, in discriminating between one case and another which were brought before them?—I do not mean that a poor-law medical officer would overlook necessarily a serious case; he would be quite certain, for instance, to recognise a case of inflammation of the lungs; but there would be cases of the utmost importance to the patient which a want of wider experience might prevent him from making out, and which a physician would at once recognise because he would have seen so many more, merely for that reason.

Earl of Lauderdale.

10698. Do you ask for permission to examine every dead body?—Every person; there is no patient who dies from whose body something important is not to be learnt.

10699. Therefore you ask the relatives in each instance?—In each instance. I think I may add that it is done with the very greatest regard for their feelings.

10700. And in two-thirds of the cases the relatives readily give their sanction to the examination, I understand you?—I should say roughly, about that.

F 2

10701. Might

29 January 1891.]

Dr. MOORE.

[Continued.]

Lord Monkswell.

10701. Might it not be worth your while to pay something small for leave to dissect the body?—We do not want to dissect the body; a post-mortem examination is what I am speaking of.

10702. Then I will say for leave to have a post-mortem examination?—I do not see why that should be done; it is of quite as great importance to the friends as to us.

10703. But the friends do not recognise the importance, and you do?—I have repeatedly seen the friends, and they have granted the leave when I have shown them the importance.

10704. In a very important case you generally see the friends and represent to them the importance of it?—I state the case as one would do in private practice.

10705. If you think it necessary to make any special appeal to them for leave to have the examination, they generally allow it?—Yes.

10706. In four cases out of five, should you say?—I should think about that.

10707. I observe from Sir Sydney Waterlow's evidence that it would seem that you and he were principally responsible for the moral discipline and training of the students; that seems to be so?—I have not read his evidence.

10708. He is asked at Question 2523: "For matters of discipline; that is, social behaviour inside the hospital, you are responsible for the behaviour of the students?" and he answers, "No; they are directly responsible to the warden of the college, Dr. Moore, who will come before you; but he communicates with me directly; he feels that any action beyond that which he is authorised to take has to be taken." The following question is: "What can he do; can he suspend from the service of the hospital; I am speaking only of students?—No; he cannot suspend; he can ask me to suspend. (Q.) He can report to you?—(A.) Yes; I see him very frequently." So that it would appear that the treasurer, at all events, thinks that you are the person who, jointly with himself, is primarily responsible for the discipline and moral training of the students?—I should not accept that. The answer, I think in that particular, is not a perfectly accurate one; he has not thought over what the arrangements are. There is this degree of accuracy in it, that no student could be absolutely excluded from the hospital except by authority of the treasurer; but that statement which you have read does not give a clear description of what really occurs.

10709. How would you describe what really occurs?—I should say that there is a discipline committee of the school to which all matters relating to the discipline of the school are referred. I am a member of that committee, and I generally act for the school in any communications to the authorities of the hospital.

10710. How many compose that committee?—It consists of all the persons lecturing in any particular session (the medical year is divided into two sessions) and certain fixed members; about half-a-dozen fixed members as well.

10711. How many in all would there be? you say there would be yourself and the half-dozen fixed members and the lecturers; how many would that be in all?—I can tell you better what

Lord Monkswell—continued.

number usually attend; six to seven or eight usually attend.

10712. Does the treasurer usually attend?—Never.

10713. If you wanted in a very bad case to go to the length of suspending or dismissing a student you would report it, I suppose, to the treasurer?—No; we should call the student before us and go into the case, and report to the committee of the school; the committee of the school would receive and discuss the report and decide. This student is not to attend further till such and such a time. It is only with regard to the question of physically ejecting a person from the hospital that we should refer to the treasurer.

10714. You would have to refer to the treasurer, if the student refused to go, to use physical force?—The hospital is the property of the governors and we could not eject him from that.

10715. But the treasurer would give an order under which you would be safe in not allowing the student to come into the building?—We should state that he was not to be allowed to attend; if he forced his way in the owners of the property would keep him out; we should ask them to do so.

10716. You have mentioned the committee of the school; why should the case, having come before the discipline committee, come again before another committee?—Merely that injustice may not be perpetrated; that there may be every possible means of deciding a case justly.

10717. Then, supposing a student thought he had been unjustly treated by these two committees, could he appeal to the treasurer?—No, he could appeal to the law courts.

10718. Then the treasurer could not reverse a decision of these two committees?—No; if we decided that the student was not to attend our lectures, the treasurer could not compel us to receive him.

10719. And supposing that you decided that his character was so bad that he ought not to be allowed to come into the hospital at all, what would you do then—rusticate him?—He would only have the right to come into the hospital in two capacities, either as a student or as a patient; if he ceases to be a student, if we remove his name, then the treasurer would naturally exclude him.

10720. And it lies with you, and I understand that the treasurer is wrong in saying that it lies with him to dismiss or exclude the student; it is you yourselves, the lecturing body and others, who can without the intervention of the treasurer strike a man's name out of the list of students, and thereby prevent him having any *locus standi* to enter the hospital?—Yes. I must add that the treasurer and the governors have power independently of us to exclude anybody; and if they wrote to us and said, So-and-so is not to be admitted as a student, we should be obliged to exclude him.

10721. And if the treasurer came to the conclusion that a student had behaved so badly that he ought to be dismissed, though you had not suggested his dismissal, he could go to the court of governors and get that done?—Certainly. I think

29 January 1891.]

Dr. MOORE.

[Continued.]

Lord Monkswell—continued.

think it was only a little confusion in his mind between that power and the other that led him to give the answer to which you have referred.

10722. Sir Sydney Waterlow said that he never had occasion to suspend a junior medical officer: "I do not remember a case of absolute dismissal," he said. That is rather strange, because we find in colleges that undergraduates are not so very infrequently rusticated; that rather looks as if your discipline were lax?—I do not remember any instance of a Fellow of a College being suspended, and the case of a junior medical officer is more analogous to that than to the case of an undergraduate.

10723. He draws a distinction, you mean, between junior medical officers and students?—Yes.

10724. Then I suppose students are occasionally told to leave, at all events?—That occurs every year. As a matter of fact, the discipline committee meets and makes a rule that no man shall stay who is not working; if he is not working he is sent for and told that if he has not passed his examination by a certain time he cannot attend further till he has passed.

10725. And I suppose sometimes he is told that he must not attend because his conduct is not satisfactory?—Yes.

10726. That has happened?—Yes.

10727. Sir Sydney gives the number of nurses and so on as 218; is that the number now?—I could not answer a question of statistics of nurses.

10728. I cannot find out from his evidence what the hours of the nurses are; he is asked at Question 2563, but all he does is to say what their hours are off duty?—The only point I am informed upon about the nurses is their education.

10729. You know nothing about their hours?—I cannot give the details.

10730. I suppose somebody will attend who can give us the hours?—I have no doubt that Mr. Cross, who is still here, can tell you.

10731. You know, I suppose, the fact that the poor-law infirmaries are filling up more and more rather at the expense of the hospitals; is not that so?—I see nothing in St. Bartholomew's to lead me to think so.

10732. If it was so, I suppose you would think it was rather a bad thing?—There are plenty of patients in England.

10733. But, now, with regard to students getting advantages in going to the poor-law infirmaries, could you not manage some system by which they might go round with a lecturer or some officer of a hospital who might instruct them?—I do not doubt that something might be done; but one has to remember that the students' time is limited, and that by working in one place he gets through more in a given time; particularly senior and advanced students would no doubt gain something by going to the poor-law infirmaries if they went with a properly-qualified instructor, which is a very different thing from a properly qualified medical man.

Chairman.

10734. According to what you said in answer to Lord Thring, just now, a student could belong to one or two schools in London?—If he liked.

(24.)

Chairman—continued.

10735. So that suppose a young man at your school commits a breach of discipline and your committee rusticate him, although he has the disgrace of being rusticated from your hospital, he could at the same time continue his course at another hospital?—I think he would have this difficulty. It is the general custom for the dean of a hospital to ask a man whether he has been anywhere else, and, if he has, to write to the dean of that hospital, asking about it; I should always pursue that course, and I believe that most of the deans of the schools do pursue it; they all intend to do it, and never intentionally omit it; they are all acquainted with one another and meet occasionally.

10736. With regard to the portioning out of the fees of the lecturers, which Lord Thring asked you about, I did not quite understand on what basis the calculation of the fees may be made. First of all there are the fees of the students?—The fees last year amounted, within 100 l. or 200 l., to a little over 14,000 l.

10737. Then out of the 14,000 l. what have you to do; what expenses have you to meet?—We have to pay the whole of the expenses of the school and the different lectureships.

10738. Can you tell me roughly what the expenses of the school would be?—Last year what we call the school expenses (I will explain that soon), amounted to something over 4,000 l.

10739. That leaves you 10,000 l. for distribution?—What I wish to explain in addition as regards that is, that a small part of that 4,000 l. is expended in paying certain junior teachers, who are paid very small sums and who are only in office for a short time, whose object is to help other people, for instance, in microscope work.

10740. What you call coaching?—No, not coaching, but where a large class has to be taken, and you necessarily have certain assistants to go round and see how it is going on; so that part of them might be teachers; then they have to be paid. Then there is the expense of all the servants, the expenses of the very large museum, of a considerable laboratory, all the working expenses of the lectures.

10741. Then you have to pay the lecturers?—Yes.

10742. And then there are the physicians or surgeons who go round and take the students with them in the ward?—They are paid too. The general rule is that everyone is paid who does teaching work, on two principles; partly in relation to the amount of work done, and partly in relation to his seniority, which is really in relation to the difficulty of his teaching.

10743. Could you tell us on what basis the calculation or division of this 8,000 l. or 10,000 l. is made among the lecturers and teachers?—If you take the Hospital Calendar you find a statement of the fees that are charged for every subject. If a student pays all the fees at one time, that is to say, if he pays a composition fee, a little is taken off each of them; they are paid in the proportion stated there, with some small exceptions.

10744. That is with regard to the providing of the 10,000 l.—Yes. Then the expenses are deducted equally from everybody; no payments are made till all the expenses have been paid.

F 3

10745. Then

29 January 1891.]

Dr. MOORE.

[Continued.]

Chairman—continued.

10745. Then you have a net 10,000 *l.* say ; on what basis do you make the division of the fees ; do you divide the amount into shares ?—It comes to such a division based on the principle that I stated. If the fee, say for a particular course of lectures as stated in the handbook, was nine guineas, if a student had paid the composition fee, the amount of deduction in that case would represent 5 *s.* ; so that the lecturer on that subject, *minus* whatever was taken off for the school expenses, would have received 9 *l.* 4 *s.*

10746. Then at your school each student pays for his lectures as he has them ?—No ; as a rule he pays a composition fee, but in that composition fee each lecturer's fee is considered to have a representative. Supposing, for instance, that a student died at the end of six months, and had only attended lectures on anatomy and physiology ; we should deduct 18 *l.* 8 *s.*, and pay back the rest to his relatives.

10747. We will take an instance of a class of 10 students. Supposing a lecturer has a class of 10 students, he would receive nine guineas less five shillings for each of them ?—Less five shillings and less whatever his share of the expenses was. Some lectureships appear to receive a large sum, the reason being that it is the custom always to appoint two lecturers ; for instance, I saw it stated in some evidence here that Sir William Savory had received a very large sum ; he was lecturer on surgery. That is quite an exceptional circumstance, his colleague died, and he was particularly requested by the rest of the school to continue the lectureship alone for a short time, so that he really received double.

10748. So that really the amount of fees that a lecturer receives depends upon the number of students in his class ?—Certainly.

10749. Is there any suggestion that you would like to make ?—No.

10750. About the residential college ; that is quite separate and distinct from the hospital ?—It is in the hospital.

10751. Then, is it maintained by hospital funds, or is it a commercial undertaking ?—No, it is a part of the property of the governors, and it pays, practically, its own expenses. Sometimes there is a very few pounds over, and then that goes to the next year. Practically there is no surplus.

10752. If, for some reason, you had been obliged to lay out a large sum, say on drainage, or had been obliged to close your rooms, would any deficit that there might be be met by the funds of the hospital ?—Yes ; the sum over is always under 100 *l.*

10753. It is not really a commercial undertaking ?—No.

Lord Monkswell.

10754. Is St. Bartholomew's a hospital where a London qualification of the College of Physicians or Surgeons is required ; in some hospitals we know it is necessary in order to be on the staff that you should have that qualification ?—In order to be assistant physician to St. Bartholomew's Hospital you must be a member of the College of Physicians of London.

10755. Do you think that that is right ?—Quite.

10756. You think that an Edinburgh degree would not do ; that it would not be enough ?—The membership of the College of Physicians and the fellowship of the College of Physicians occupy quite a distinct position from university degrees ; they are a sort of testimony to professional character, which you do not get in any other way, as distinct from mere professional knowledge. No one would be elected to the College of Physicians against whose character there was anything whatever.

10757. Have you anything to say on the question of general as against special hospitals ?—Yes ; I think that there is room for some special hospitals, but that it would be a misfortune if all diseases were sorted out into special hospitals, and that no doubt there are many special hospitals which had much better not exist. I would mention such a hospital as a Cancer Hospital ; a hospital like that is really injurious.

Chairman.

10758. Why ?—Because you cannot separate off cancer in that way ; it is not a real specialty. Cancer affects every organ of the body, and it is not to be regarded as a real specialty.

10759. And you think that it would be equally well treated at a general hospital ?—Very much better ; and I think even in special hospitals for the chest, which are perhaps the best examples you could take, you always find many patients whose lungs are not affected, or even whose hearts are not affected, proving that the staff find it dull to be absolutely restricted to one thing.

10760. That amounts to this, does it not ; take a chest hospital, advertising for funds because they are a chest hospital, and yet at the same time other diseases are admitted, that is obtaining funds under false pretences, is it not ?—I would not go so far as to say that. It is almost inevitable ; a man has got in ; he has had a cough ; it is supposed to be a chest case ; he is recommended and there he is ; he has some disease of his liver ; you could not turn him out in such a case.

The Witness is directed to withdraw.

Mr. WILLIAM HENRY CROSS, is re-called ; and further Examined, as follows :

Chairman.

10761. I WILL draw your attention to Question 2563 in the evidence of Sir Sydney Waterlow : " There are one or two further questions in respect to the nurses that I should like to put ; first of all, what are their hours of duty ? (*A.*) The sisters are off duty from 6 p.m. to 9 p.m.

Chairman—continued.

every other day ; from 2 p.m. to 10 p.m. once in two weeks ; and once a month from 4 p.m. on Saturday to 12 noon on the following Monday ; and on Sundays from 3 p.m. to 9 p.m. every alternate Sunday. The staff nurses have a rota of four weeks ; in their first week they are off from

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

from 6 p.m. to 8.45 p.m. twice in the week; in their second week from 6 p.m. to 8.45 p.m. once in the week; and from 2 p.m. to 9.45 p.m. once in the week; so that you see they get a half-holiday once in that week, besides an evening off. In their third week, from 6 p.m. to 8.45 p.m. twice in the week; in their fourth week they are off a whole day to 9.45 p.m. On Sundays they are off for the purpose of attending Divine Service, but as a rule they attend with the patients in the church of the hospital." Now, it appears by that that the sisters are off duty from 6 p.m. to 9 p.m. every other day; at what time do you expect your sisters to be in the wards?—The sisters should be in the wards by 8 o'clock in the morning.

10762. And at what time should the nurses be in the wards?—The day nurses come on duty at 7 o'clock in the morning.

10763. And how long are their working hours?—The day nurses are off duty at 9 o'clock at night; I am speaking of the ordinary nurses, not the special probationers.

10764. Then there are certain days, as mentioned in that answer, when they have two or three hours off?—Yes. I think there is one omission; in their fourth week they are off a whole day to 9.45; but in that fourth week they have one evening also.

10765. But now that is a day from seven to nine, when they are on the whole day?—Yes.

10766. What time do they have for meals?—They have had their breakfast before they go into the ward; the day nurses have their breakfast at 6.45 in the morning. They come out of their wards for dinner; and they can go to the home for a few minutes at about half-past 9 or 10 o'clock for some luncheon; soup is always provided. They have their dinner in two batches; one at 12 o'clock and the other at 1 o'clock.

10767. And how long is allowed for that?—They are about half-an hour or 35 minutes over their dinner. They have their tea in the wards, and then they stay on there until 9 o'clock when it is not their turn off.

10768. Then when it is not their turn off, they do not have any time off excepting for meals?—Yes.

10769. Is not the 10 o'clock going down stairs rather inconvenient; no doubt it is necessary, but are not the house surgeons and physicians going round the wards then?—No; it is not inconvenient in that way. They go over to the home to change their caps and aprons; they have got over the dirtier and more laborious part of their work by that time; they go to their sleeping rooms to change, and then there is this refreshment for them if they choose to have it.

10770. At what time do the house surgeons and physicians go round the ward?—They are generally round from about 10 in the morning till 12 or 1 o'clock; they have mostly done soon after 12, because the patients' dinners are served at half-past 12.

10771. At what time do the night nurses go off duty in the morning?—At 20 minutes past 9; they are expected to be in the home at half-past 9.

10772. And you said that the day nurses come

(24.)

Chairman—continued.

on at 7; so that for a little time you have double service?—Double service. The night nurses go on duty at 9 o'clock at night.

10773. They have a meal just before going on?—They have a meal before going on. Reference was made to the additional number of night nurses about to be provided, and I may say that we hope that such a re-arrangement of the work will take place that we shall be able to release all the day nurses from duty at 8 o'clock in the evening, instead of 9, so as to shorten their day by one hour. That arrangement is not quite perfected yet, but I have no doubt that it will be accomplished.

10774. Where are those extra nurses going to be provided for?—They are going to the treasurer's house.

10775. In certain special cases the surgeon will most likely call for a special nurse?—Yes.

10776. Have you got a number of nurses as a reserve for such cases?—Yes, there are some that the matron keeps unassigned to particular wards, so that she may be able to employ them on particular duties, such as your Lordship speaks of.

10777. Then, with these nurses that you keep as a sort of reserve, do you, in your hospital, have recourse to outsiders to take the place of special nurses?—No; I do not mean to say that such a thing never occurs; for lately, we have once or twice drawn from our private nurses' home, just borrowed a nurse for a day or two, but it is a most unusual thing; it is so uncommon as not to need consideration.

10778. You do not have to hire a special nurse from outside two or three times a week, say?—Oh, dear no!

10779. But still that nursing institution, I suppose, is a commercial business, is it not?—Yes, it is.

10780. Then, is the institute good enough to lend them to you for nothing?—It belongs to the hospital; so it is only taking out of one pocket and putting into the other; but really I do not think we have had five pounds worth of service out of them, in that respect, for the three-and-a-half years that it has been in existence.

10781. You find that the staff you have in reserve is sufficient for the special nurses you require?—Yes, we always reckon to have a few over for those purposes.

10782. Do the night nurses have any meal in the wards?—Yes, they take some food into the wards with them, usually eggs.

10783. No meat?—No meat.

10784. No herrings?—No. They have herrings for breakfast sometimes.

10785. They have what is termed "breakfast" for night nurses before they go into the wards?—Yes.

10786. And then they have what is termed "dinner" when they come out of the wards in the morning?—Yes; they come out of the wards at half-past 9 for their dinner; and then, after they have had their dinner, they can go out; and then they can have soup or cake, or some light refreshment of that kind, which is supplied for those who care for it; then they go to bed.

F 4

10787. And

29 January 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

10787. And then they get up in time for breakfast?—Yes.

Lord Monkswell.

10788. Will you look at Sir Sydney Waterlow's evidence, at Answer 2563; he says: "The sisters are off duty from 6 p.m. to 9 p.m. every other day; from 2 p.m. to 10 p.m. once in two weeks." I suppose that does not mean that the other sisters, the ones not on duty, work once in two weeks to 10 p.m., but merely that they must come back to the hospital at that time, and that on other days they must come back at 9 p.m.; 10 p.m., I suppose, has reference to the time that they must be within the gates?—Yes, but commonly they would not go to bed until about 10 o'clock. The sisters live in rooms attached to the wards, and so they are up and about until they go to bed.

10789. They can do what they like up to 10 p.m.; then they must be in the hospital?—Yes.

10790. But their ordinary day on duty is from eight in the morning till nine in the evening?—No; I was speaking of the nurses when I referred to nine in the evening.

10791. What about the sisters?—There is no defined hour at which they go off duty at night.

10792. What is their usual hour?—I should say they are on duty till about nine, but that hour is not defined.

10793. Then, again speaking of the staff nurses, he says that they are off from 6 p.m. to 8.45 twice in the first week; does that mean that they must report themselves at 8.45?—That is so.

10794. And sometimes they do not need to report themselves till 9.45?—Occasionally.

10795. Is 218 the number of your nursing staff at the present time; that is the number that was given by Sir Sydney Waterlow in answer to Question 2541?—There were then 161 "nurses"; there are now 166. There are now 28 sisters instead of 27, as there were then.

10796. How many night superintendents?—Three, the same as before.

10797. How many ward assistants?—Twenty-seven.

10798. Making altogether rather more than the number given by Sir Sydney?—Yes; the total number now will be 224.

10799. Is the ward assistant a female servant?—Yes; they are called ward-maids in other hospitals.

Chairman.

10800. You said that the nurses go over to the home to change their caps and aprons, at about 10 o'clock in the morning; is there a certain amount of menial work that has to be done by them, housemaids' work?—Yes, some people would describe it so; sweeping the ward and keeping it clean.

10801. What do the ward-maids do?—A great deal of cleaning.

10802. Do not the ward-maids then relieve the nurses of that sweeping and cleaning work?—To a very great extent, but still there are many things to be kept bright and clean about the place which a nurse does.

Chairman—continued.

10803. You are speaking of the utensils necessary for the doctors?—Yes, the nurse does those; and then there is the bed-making, which a nurse does.

10804. It is for that reason that you have a double service of nurses for those two hours between seven and nine in the morning?—Yes.

10805. In regard to your sisters, are they nurses who have proved themselves more efficient than others, or do the nurses belong to a different class from the sisters?—The sisters are all ladies. Of the nurses a very large proportion, certainly five-sixths, are what are commonly described as ladies. The class of people that we have engaged in nursing has very much altered within the last ten or a dozen years.

10806. That is universally the case; certainly within the last 12 or 15 years there has been great improvement in the nursing?—Yes, very great improvement; and the sisters now have for several years past been selected from nurses who have served their three years and obtained their certificates, and in most cases have distinguished themselves in their examinations, though of course that is not the first qualification for a sister; still regard is always paid to those who have successfully passed their examinations.

10807. Would you call your staff of nurses ladies who are a very superior class of domestic servants?—No, I should say more than that; I can give you a list made out for a couple of years, showing the classes from which they were drawn.

10808. You might give us that. I will first ask you this: you have lady pupils?—We have what we call special probationers; they are called lady pupils elsewhere.

10809. I think Sir Sydney Waterlow called them lady pupils?—I do not think so; if so, he has made use of a term that we do not use.

10810. I will take your definition; now, do those ladies merely come there for their training, and leave after their training, or do they sometimes stay on as nurses in the hospital?—A great many of them stay on as nurses in the hospital. Many people who want to become nurses, and who do not mind paying the fee requisite to be entered as a special probationer, for either three or six months, prefer entering first of all as "specials," so that they may have experience of the work they would have to perform. I should say that about half of those who enter as special probationers ultimately become ordinary probationers.

10811. How long is the probationership?—In the ordinary way for three years. A nurse is termed a probationer during the whole of that time, but if at the end of the first year she passes an examination as she ought to, she may be employed as a staff nurse in the second and third years.

10812. Then at the end of the three years you give her a certificate?—We give her a certificate.

10813. How long do you train her before you send her to the institute?—Three years; we do not send any over to the Private Nursing Home until they have been trained for three years and obtained their certificate.

10814. And is there any limit of their service in

29 January 1891.]

Mr. CROSS.

[*Continued.**Chairman—continued.*

in the hospital if they like to stay on?—No, they may stay as long as they like; but we find that they do not stay long; they move on, perhaps, to something better. We get some that stay four, five, six, or seven years; we have a very few that have been with us many years.

10815. In regard to payment, St. Bartholomew's is quite a free hospital?—Quite; there is no payment whatever.

10816. Can you now give us an account showing the position in life of some of your nurses?—I have a statement here showing that the ordi-

Chairman—continued.

nary probationers admitted during the last two years were the daughters of the following persons: an accountant, architects; auctioneers, estate agents, &c.; a bank manager, a baronet, a barrister, a civil engineer, civil servants, clergymen, clerks, &c., a colliery owner, farmers, an hotel proprietor, an insurance agent, manufacturers, medical men, merchants, military and naval officers, a nautical instrument maker, a professor of physiology and anatomy at Oxford; a publisher, a schoolmaster, a secretary of a public institution, solicitors, a stockbroker, and tradesmen.

Ordered.—That this Committee be adjourned to Monday next, at Twelve o'clock.

Die Lunæ, 2^o Februarii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
Earl CATHCART.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.
Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. ROBERT BRASS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

10817. YOU are a high official connected with St. Thomas's Hospital, are you not?—Yes.

10818. Will you tell us what your style and title is?—I am called the Receiver. My duties are to give notice to all the tenants of the amount of rent due at each quarter-day; to receive the rents when paid, and pay the cheques and money into the bank.

10819. How long have you held that position?—For 21 years; a little more than that.

10820. May I ask what your profession was before you took that position?—I was articled to an architect and surveyor.

10821. Do any other moneys come through your hands except the rents from the landed estates?—Yes; in fact, all moneys pass through my hands.

10822. Are you a salaried official?—Yes.

10823. May I ask what your salary is?—£. 600.

10824. And do the authorities give you a house?—No.

10825. You live outside?—I live outside.

10826. In addition to this 600*l.*, does the receiver get any commission upon the rents or appeals to the public for subscriptions or other sources of income?—Nothing at all.

10827. Just 600*l.* nett?—£. 600 nett.

10828. To whom are you responsible as receiver?—To the treasurer and governors. I was appointed by the general court of governors, and I am responsible to them for all amounts that pass through my hands.

10829. Do the treasurer and governors form some sort of a committee that you lay your books before?—Yes; there is a committee of almoners, consisting of four governors and the treasurer; they meet once a week. I have to examine all accounts presented for payment, and submit the same to the treasurer and almoners for approval; to draw cheques for such accounts and give notice to persons, whose bills are passed,

(24.)

Chairman—continued.

to come and call for the money, and to receive their receipts for the same.

10830. Then, as well as being receiver, you are paymaster, too, to a certain extent?—Yes, to a certain extent.

10831. Do you know what the quorum of this court of almoners and treasurer is?—Two is the quorum.

10832. And do they go through your books and initial them, and so forth?—Every month I have to make up my cash-books, and submit the cash account of the preceding month to the treasurer and almoners at their first meeting in the month; they check it and sign the book; that is each month.

10833. Then as soon as your account has been presented to the treasurer and almoners, and they have signed it and passed it, your responsibility ceases, I suppose?—Well, hardly that, I think, because till the end of the year, when the accounts are really audited, many little matters might arise. It ceases so far as this, that they have checked all the receipts and payments for that time, and know the outstanding arrears and things which will come in in another month; affairs are not really wound up till the end of the year.

10834. That I understand; but at the same time, as far as the amounts go that you have had through your hands, when the authorities see that those amounts have been received, and also are aware that other amounts may be outstanding, so far your responsibility ceases?—Yes.

10835. Because, otherwise, would not a year be rather a long time to elapse for the checking of small accounts?—Yes; they are all checked week by week.

10836. You are responsible, then, as I understand you, to that court of almoners and treasurer; will you tell us, please, how much is the annual income that St. Thomas's receives?—The annual income derived from estates—

G 2

10837. We

2 February 1891.]

Mr. BRASS.

[Continued.]

Chairman—continued.

10837. We will take country estates first; you have country estates?—We have property in London and in the country.

10838. Take the country, first, if you please?—Last year they amounted to 14,481 *l.* gross.

10839. That was the income?—That was the amount of rents that ought to be received.

10840. Are those properties spread over different counties?—They are spread over several counties. We have property in Middlesex, Berks, Cambridge, Essex, Hants, Hertfordshire, Kent, Derbyshire, Yorkshire, and Wiltshire.

10841. How are these properties managed; by local agents?—We have a land surveyor, who attends principally to the home counties, as you may call them. We have a local agent for Derbyshire and Yorkshire.

10842. One for the two, do you mean?—One for the two. From the rest of the counties the people come up twice a year, and pay their rents to me directly.

10843. Then has nobody any supervision over what we may call the rent collection?—Yes, the local agent has.

10844. I understood you to say that there was a local agent for Yorkshire and Derbyshire, and a land surveyor for the home counties; what about Wiltshire?—Our surveyor in London will go down, and also the almoners and the treasurer and myself will go down and visit the estates every few years; but generally, if anything arises, any question of any difficulty, our surveyor will go down and survey and report to me, and through me to the almoners, and if necessary to the grand committee, and then it is approved by the general court of governors.

10845. I have not gone into the matter of the grand committee or the court, because I understand we shall get that from somebody else. You are responsible to the almoners and treasurer, you say?—Yes, in the first place.

10846. Then the surveyor is the person who has knowledge of the land matters, and who practically supervises the estates?—Yes.

10847. With the exception of the counties of York and Derby, in which your estates are managed by a local agent?—Yes.

10848.—Have any of the almoners any knowledge of landed estates themselves?—Generally, I think. They may have property of their own, but not further than that.

10849. A man might be a very large owner in London of ground leases and that sort of thing, and be a very fit person to be the almoner of a hospital, but might not have knowledge of the management of estates?—Yes, that is the case; we have to depend in great measure upon our surveyor.

10850. Is he a salaried officer?—No.

10851. How does he get his remuneration?—He is paid by commission upon the duties he performs during the year; he sends in an account once a year on purpose.

10852. Made up of commissions?—It is not so much commission; it is principally costs for travelling, and so much of course per day for his own services, or clerks' that may be wanted, and for drawing out these reports, and general services in fact.

Chairman—continued.

10853. He is in fact what we could call paid by the job?—Yes, he is paid by the job.

10854. Taking last year, can you tell what the amount paid to him came to?—The whole expenses for the land surveyor and country agent, that is the one in Derbyshire, amounted to 596 *l.* last year.

10855. That was the whole amount of the cost of supervision of your estates?—Yes.

10856. But you could not include rent collection in that?—No; only in Derbyshire and Yorkshire are the rents collected by our land surveyor or agent.

10857. Would it be fair to say that the cost of supervision and collection of rents amounted last year to 1,196 *l.*?—Hardly.

10858. Your salary, that is to say, plus the 596 *l.* which you have mentioned?—But I have so many more duties to perform that it would not be fair to put my salary all down to the collection of rents.

10859. You do nothing but receive money, if I understand you rightly?—Perhaps I had better really read out what my duties are.

10860. If you please?—As I said, to examine all accounts presented for payment, and submit the same to the treasurer and almoners for approval; draw cheques for such accounts, and give notice to persons whose bills are passed to come and receive same; make up and balance all cash-books at the end of every month and submit cash accounts of preceding month to treasurer and almoners on the first meeting in the month, to be checked and examined by them; and I keep proper ledgers and draw up a complete account of receipts and payments every year to be audited by auditors, and I see that all the policies of insurance on the property of the hospital are kept in force; I accompany the treasurer and almoners on their views of estate, and draft report of same for approval; I attend also all meetings of the almoners and write minutes of the meetings, and attend to the various correspondence as well.

10861. Then, in fact, as well as being what is termed receiver, you are the responsible accountant of the hospital?—Yes.

10862. Can you give us any clear idea of what the cost of management of your estates comes to; 596 *l.* is the amount you have already told us for the land surveyor and the country agent?—With the exception of my services, that is really all; there is nothing else.

10863. Would you think that this is a fair division of your salary, to allot 300 *l.* a-year to your accountant duties, and 300 *l.* a-year to your rent-receiving duties?—More time is taken up in receiving the rents and in the correspondence, and in that way perhaps than in my duties as accountant.

10864. Is St. Thomas' a free hospital?—To all intents and purposes it is a free hospital; we have about 340 governors altogether, and they have letters of recommendation; but even if a case is recommended by a governor it does not follow that it would be admitted into the hospital at all; if any person applies casually to the hospital, and the case is a very bad one, it would be received before any recommendation of any governor,

2 February 1891.]

Mr. BRASS.

[Continued.]

Chairman—continued.

governor, so that, to all intents and purposes, it is a free hospital.

10865. In fact, the principal recommendation to the hospital is disease?—Disease; and the worse the case the better the chance of admission.

10866. Have you any paying beds in the hospital?—Yes; we have what we call St. Thomas' Home in connection with it; that is to say, there are two wards occupied by paying patients, and the receipts from there amounted last year to 5,600 *l.* gross.

10867. That comes through your hands?—That comes through my hands.

10868. Can you tell us whether you have any beds unoccupied for want of funds at St. Thomas' now?—Yes; we have quite 90 beds; three wards entirely unoccupied.

10869. The object of having paying beds was to get funds for the hospital, was it not?—Yes; primarily, certainly.

10870. Therefore, supposing that it were well off in funds, you have, I think you said, three wards, holding 90 beds, which would be available for the sick poor?—Yes.

10871. Is there any other hospital on the south side of the river near you?—Guy's is the nearest; Guy's is the only one near us.

10872. Do you ever have to send away any patients; I mean, to refuse admissions to would-be patients, because of the want of beds?—I should think so; a great many are sent away, no doubt.

10873. Then the accommodation for the sick poor on the south side of the river is lamentably deficient; would you go so far as to say that?—We could occupy the 90 beds well if we had funds.

10874. Do you know if there is an infirmary for that part of London?—There is the Lambeth Infirmary.

10875. And that, of course, takes in a large number of in-patients; you do not know its dimensions, I suppose?—I do not.

10876. Do you pay rates?—Yes.

10877. What amount?—The rates amount to 2,308 *l.* 6 *s.* 8 *d.*

10878. What parish is the hospital in?—In the parish of Lambeth.

10879. Have you had any opportunity of observing the class of patients that attend the hospital?—Not very much.

10880. Then I will not pursue that subject with you; you are obliged to close beds for want of funds you have said; you have landed estates in the country from which your funds come; you have already told us something about that; and then you have some town estates?—Yes.

10881. Will you kindly tell us about them?—The amount that according to the rental should have been received for 1889 for the parish of Southwark was 11,908 *l.* 12 *s.* 1 *d.*; from the City we received 11,133 *l.* 9 *s.* 6 *d.*; from Hackney and Clapton we receive 7,146 *l.* 18 *s.* 6 *d.*, and from Wapping we received 1468 *l.* 0 *s.* 6 *d.* That includes the whole of the estates from which we derive money.

10882. That makes the total of the London estates?—I will make the addition.

(24.)

Lord Thring.

10883. These receipts are net, are they?—No, gross; the London estates amount to 31,665 *l.*

Chairman.

10884. Has this estate very much increased in value of late years?—During ten years the London property has increased in value. In the year 1880 the Southwark property was 10,525 *l.* against 11,900 *l.* in 1889; the City property in 1880 was 9,624 *l.* as against 11,133 *l.*; the Hackney and Clapton property was 6,098 *l.* as against 7,146 *l.*; and Wapping was 1,013 *l.* as against 1,468 *l.* So that the London estates have increased in value. Then with regard to the country estates they have decreased. In 1880 the amount was 17,349 *l.* that we received for country estates against 14,481 *l.* for 1889; a loss of nearly 3,000 *l.*

10885. Then you have 5,600 *l.* gross a year from your paying patients?—Yes.

10886. And have you any other sources of income?—There are "gifts" to the hospital; that is moneys left by donors, certain sums of money which amount to 123 *l.*, principally moneys in the funds that we receive the dividends from.

10887. Small sums?—Small sums amounting to 123 *l.*; and then we received dividends from funds in the Court of Chancery, and also in the hands of the Charity Commissioners, amounting to 2,372 *l.*

10888. What is that, interest?—If we are compelled by any cause to sell any property the Charity Commissioners take that property and invest it for us, and allow us the dividend and interest upon it.

10889. Then is there any income from legacies?—Yes, I may say that the total income from gifts, estates, and property in public funds was 46,658 *l.*

10890. According to what you have told us it is more than that; you have 31,655 *l.* from your town property, 14,481 *l.* from your country property; that makes 46,000 *l.* odd, does it not; and then to that there is to be added the 123 *l.*, and the 2,372 *l.*?—Yes; it must be 48,658 *l.*

10891. That is including the 123 *l.*—And the property in the funds; and a small amount which we have from quit rents of 23 *l.* 19 *s.*

10892. That comes to a pretty reliable total of 48,658 *l.*?—Yes.

10893. Then you have the additional 5,000 *l.* odd from the paying beds?—I received last year in addition from donations and benefactions 3,283 *l.*, and from the sale of timber and underwood, 236 *l.*, and from alienation fines 122 *l.*

10894. What does that mean, alienation fines?—The governors are lords of the manor, and there are fines that are paid by tenants upon property changing hands from one to the other. Then "casual receipts," different small legacies, 250 *l.* Then I also received "cash repaid, being balance of account due in respect of expenses for carrying on farms." We have had farms in hand which we have cultivated ourselves; we have had to spend money upon them; and when we let the farms we received back 1,173 *l.* 17 *s.* 9 *d.*; so that that was an amount that passed through my hands last year; and we redeemed some land

G 3

tax

2 February 1891.]

Mr. BRASS.

[Continued.]

Chairman—continued.

tax in the Old Bailey, the official trustees of charitable funds selling stock to provide the money; that amount was 125 *l.* Then certain enfranchisements which the Charity Commissioners invested; they amounted to 32 *l.* These appear on both sides of the account. I received from the Law Fire Office for losses from fire 372 *l.* 10 *s.*; then also they allowed us a commission on the premiums, and that amounted to 49 *l.* 11 *s.* Then came the 5,600 *l.* from paying patients, which I have already mentioned. We received also small sums, amounting to 112 *l.* 9 *s.*, from what we call poor paying patients. Sometimes people come to the hospital, and perhaps they can afford to pay something; and afterwards when they get out they may send 5 *l.* or 10 *l.*, or something of that sort. That covers pretty well all the receipts last year. This (*producing a statement*) is a general statement of the receipts and payments for the year ending the 31st of December 1889.

Earl of Arran.

10895. May I ask you whether the 14,481 *l.* received from the London estates means the rental, or the net receipts, after expenses were paid?—That is the gross rental.

10896. Repairs to farms, and so forth, and the expenses incident to the landed estates had to come off that before the estate received it?—Yes.

Chairman.

10897. What is the net rent of the estates in the country?—On the other side of this account I have all the payments that have been made; that is the only way in which I can get at it. After having received 67,000 *l.* last year, and after paying for all expenses, rates, taxes, expenses on the estate, and so on, I had a balance of 40,040 *l.* to bring down for hospital purposes.

10898. That was the net balance?—That was the net balance for hospital purposes.

Earl of Arran.

10899. Could you tell us by chance what the deduction from the 14,481 *l.* was before you carried the net income from the country estates to the general account?—No, I could hardly tell you that off-hand.

Earl of Lauderdale.

10900. Your expenses of management come to 27,000 *l.*, is that how we are to understand it; that is to say, 67,000 *l.* minus 40,000 *l.*?—It comes to that.

10901. Your expenses of collection and putting this money, as it were, together, and accounting for it, amount to 27,000 *l.*; is that what you mean?—We make all sorts of payments, you know, besides those to which you have referred.

Chairman.

10902. Could you prepare us a statement showing what Lord Thring wants to know, the gross income and the net income from your country estates, and the same with regard to the town estates?—I understand you wish to know the total amount of rents that I ought to have

Chairman—continued.

received from the estates, and the amount which I have actually received?

10903. Yes?—Then with regard to all these extra amounts which I have received which have gone into hospital expenses, they appear on both sides of the account in a good many instances; so that though I have received 67,360 *l.*, yet I paid away out of that 27,320 *l.*, leaving, as I said before, a balance of 40,000 *l.* to be carried on for hospital purposes.

Lord Thring.

10904. I do not understand how you paid it away; you told us that you managed the estate yourself in some instances, and that in other instances it was managed by a local agent; you did not pay away the expenditure in those instances?—There is the heading "Payment on Account of Estates;" we had to pay rents and quit-rents, rates and taxes, St. Thomas's Church payments, insurance against fire, and other items which are mentioned under that heading. But those are hospital expenses proper.

Earl of Lauderdale.

10905. Those are the details of the 27,000 *l.*?—Yes.

10906. We want those details under three headings; that portion utilised for the purposes of collection and management of the estates in the country; that portion utilised for the management and collection in the case of the London property, and as a third heading, say in connection with the hospital itself?—

Lord Thring.

10907. May I ask what accounts have you presented to the auditors; in what form?—There is a copy of the account (*handing it in*) for the year ending 31 December 1889. It is rather difficult to exactly tell what the cost of the estates is; they are so mixed up with other things.

Chairman.

10908. Are not these things compared year by year?—Yes.

Lord Thring.

10909. Then, with respect to the building and repair expenses of the hospital, I wish to ask you about that?—That I have here.

Lord Monkswell.

10910. I should like to ask about the repayment of loans; is that a yearly charge?—Yes; we had to borrow 100,000 *l.*, which we did with the consent of the Charity Commissioners. That sum was to be paid back; 3,300 *l.* a year had to be paid back till the principal had been paid.

10911. And your balance-sheet for this particular year contains repayment of loan for two years instead of one year; 6,600 *l.* instead of 3,300 *l.*?—In this one case it does. We borrowed the money from the Commercial Union Insurance Office on mortgage of some of our principal estates. We were paying 4 per cent., and, having the opportunity of getting it from the Law Fire Office for 3 per cent., we changed the

2 February 1891.]

Mr. BRASS.

[Continued.]

Lord Monkswell—continued.

the insurance office, and in consequence of the delay in transferring the mortgage, the payment was deferred, which amount forms the double payment, viz., 6,600 *l.* made in 1889.

10912. I do not understand why you should make in one year the repayment for two years?—It was caused by the change of the office.

10913. It so happened, you mean, that two payments had to come into one year?—Yes.

10914. Now, your yearly payment is 3,300 *l.* a year?—Yes; that we shall keep on paying every year until this loan is paid off.

Earl Cathcart.

10915. You mentioned the diminution of your income between the present time and a certain number of years ago; would you say what the percentage amounts to of that loss of income; I ask you the question because we have had that from other witnesses, and it makes a sort of standard of comparison if we know the percentage of your loss; perhaps you will make a note of it, and give it to us afterwards?—I will.

Lord Saye and Sele.

10916. Do you pay a heavy ground-rent for your hospital?—No; we do not pay any ground-rent; it is freehold.

Chairman.

10917. Where was that freehold bought?—It was bought when the site was fixed for the new hospital. That would be about 30 years ago.

Lord Thring.

10918. I will tell you very clearly what I want; first of all, I will ask who superintends the repairs and the construction of new buildings in the hospital; is it yourself or an architect?—At the hospital our architect and surveyor, Mr. Currey.

10919. What I want to know distinctly is this: what has been the expenditure for the last 10 years with respect to repairs and buildings, giving me the average, the yearly amount for the additional buildings and structural repairs; and I should also like to know what is the salary of the architect?—I will make a note of that.

10920. Then with respect to the landed estates, I wish to know, on the one side, what is the gross income arising from the country estates, and, on the other side, what is the net income arising from them; similarly, with respect to the London estates; similarly with respect to any other sources of income?—I will do that.

10921. I want to know what the architect receives; and then I wish to know whether you yourself have any control over the expenditure; I mean, have you any power to say, or do you say,

Lord Thring—continued.

that such-and-such an item is too large, or that it ought to be altered; is that within your province or not?—No, it is not.

10922. You have no control at all?—No.

10923. And who would that control practically be vested in?—It rests with the almoners and the grand committee.

10924. Over everything?—Over everything; all these expenses have to be brought, in the first place, before the almoners, and they consider the matter and go through it thoroughly, and if it is a very large item it is reported to the grand committee, who have to sanction it.

10925. Then I understand that, practically, the almoners; that is to say, four gentlemen and the treasurer; is not that so?—Yes.

10926. Are entirely responsible, practically, for the whole expenditure of the hospital in every respect?—Yes.

10927. I will put an instance: suppose the architect wishes to spend 1,000 *l.* for a particular structure; that is revised or controlled by the almoners; is that so?—Certainly; and they recommend it to the grand committee, who approve or not.

10928. And how often do the grand committee meet?—Every month.

Earl Cathcart.

10929. But, as land agent, you recommend expenditure, do you not, on the landed property?—I do not profess to be a land agent.

10930. Who recommends the expenditure on the farms?—Mr. Trumper, our land agent; he advises on all matters concerning the country estates.

10931. He does not collect the rents?—No; I collect the rents.

Lord Saye and Sele.

10932. With the exception of Derbyshire and Yorkshire?—Yes, with the exception of Derbyshire and Yorkshire.

Chairman.

10933. How is that agent in Derbyshire and Yorkshire paid?—He is paid by a commission.

10934. What is that?—I think it is 2½ per cent.; for new buildings, and 5 per cent. for superintending the repairs and collecting rents over the two estates.

Earl of Lauderdale.

10935. I see you have got the payments in your accounts entered as "Payments on account of estates," and "payments for hospital purposes"; where does your salary come?—My salary is entered under the "Estates."

10936. The whole of your salary?—Yes.

The Witness is directed to withdraw.

2 February 1891.

MR. FREDERICK WALKER, is called in; and, having been sworn, is Examined, as follows:

Chairman.

10937. You hold the office of steward in St. Thomas's Hospital, do you not?—Yes.

10938. How long have you been in that position?—Forty-three years as steward, four years as treasurer's clerk previously.

10939. That is to say, for 47 years you have been connected with St. Thomas's Hospital?—Yes.

10940. In fact, that is about as long as you have been in business of any kind, I suppose?—No, I had 10 years' experience before that.

10941. In the hospital?—No.

10942. What was your employment before you came to the hospital?—I was on the Stock Exchange for seven years as clerk to a firm, and afterwards I went to India as a purser of one of the old East India Company's ships.

10943. Are you a salaried officer?—Yes.

10944. May I ask what the amount of your salary is?—£. 555 and a residence.

10945. Which includes lighting and firing?—No, no allowances; the 55 *l.* is in lieu of allowances.

10946. Is that within the buildings of the hospital?—Yes.

10947. Now would you be so kind as to tell us what your responsibilities and duties are?—The general management of the institution and the control over all the servants, seeing that all the goods are supplied in proper order, according to contract, checking all accounts, not practically admitting patients, because the medical men do that, but keeping an account of them when they are admitted: for instance, their name, age, occupation, residence, nature of their disease, and the result, the time they were admitted, and when they were discharged, and a general superintendence over the junior officers and servants.

10948. By junior officers, do you mean the junior medical officers?—No, they are quite distinct; although they communicate with me, still they are practically and they are really under the authority of the medical staff.

10949. To whom are you directly responsible?—The treasurer.

10950. Is he a resident officer?—Yes, he is now.

10951. So that while you are the general referee in the hospital; is that so; are you the general referee as it were?—Yes.

10952. In any case where you could not decide off your own bat, you would go to the treasurer?—Yes, to the treasurer, and the committee I am responsible; to the committee every week; but the treasurer is the head of the committee to whom I go.

10953. But you have an advantage which does not occur in every hospital, that the chairman of that committee lives on the spot?—Yes.

10954. So that in any case where you thought the responsibility was too great, or were in doubt how to act, you could take the treasurer into your confidence?—Most assuredly.

10955. This is, we were told just now, practically, a free hospital?—Yes.

10956. With the exception of paying beds?—Yes.

Chairman—continued.

10957. Is the out-patient department a free department?—Yes.

10958. Quite free?—Quite free.

10959. No restriction upon the number of any kind?—Yes, we restrict the numbers, because we do not provide for all the applicants. A good many of them are very slight cases, and they are sent away.

10960. When you say that they are sent away, are they not treated?—No, a certain proportion of them, a small proportion of them, are not treated. The mode is this: the applicants are allotted medical and surgical; the assistant physician selects those that are fit for admission into the hospital; and then from the others, he selects the worst cases for regular out-patients, and they have tickets, and can attend for six weeks; after that, they must have their ticket renewed, so long as it is necessary; then with regard to the remainder, a small number of them on the medical side are prescribed for, and have a ticket to attend for two days; the rest, which are supposed to be slight cases, and not necessarily wanting treatment, are sent away; they have an opportunity of applying again the next day.

10961. They are practically told that there is nothing the matter with them, and that they had better go away?—Yes, very much so; that applies to the medical cases. But with regard to the surgical cases they are all attended to; many of them are only just prescribed for once, and that is enough.

10962. Do you use the term "casualty," which is known in other hospitals?—Yes; there is a great difference in the use of the word; we only apply it to those who are not regular in-patients or out-patients. Those two classes are all entered in the books, and all particulars connected with them kept. In the case of the others, merely the name and the residence, and, in the case of a great many of them, that is very imperfectly kept; I mean, that we have a difficulty in getting their residence, but we put down the locality from which they come.

10963. Then you practically know from that book in which all these entries are how many attendances of different kinds there are at the out-patient department?—Yes.

10964. Because the number of new patients does not by any means represent the amount of work that is done by the out-patient department?—No, it does not.

10965. I daresay we shall have an opportunity of finding out how many out-patients there are?—There are about 25,000 in the year. The exact numbers are: out-patients, 23,290; renewed letters, 4,742; maternity cases, 2,240; vaccination cases, 261.

10966. Are those new cases or attendances?—New cases, out-patients; the attendances would be about 130,000; the exact numbers are 147,546.

10967. Exclusive of the 25,000, do you mean?—No; including them. The year before last there were 147,546 attendances.

10968. I will return to the question of out-patients

2 February 1891.]

Mr. WALKER.

[Continued.]

Chairman—continued.

patients directly; then, in addition to that, do you do a great deal of midwifery cases?—Yes; we attend over 2,000 out of doors. We have also an obstetric ward in the hospital, but not for confinements.

10969. Is there any limited radius to which you send your extern clerks?—Yes, within a radius of a mile.

10970. Can you tell us exactly how long ago it was when St. Thomas's Hospitals was built on its present site?—It was opened in September 1871.

10971. Previous to that, where had St. Thomas's Hospital been?—For nine years it was at the Surrey Gardens, in a temporary building, and before that at London Bridge. We were sent from London Bridge; the South Eastern Railway took possession in July 1862.

10972. You were practically moved on by the South Eastern Railway?—Yes; they acquired the grounds and the buildings for the purposes of their new railway; in making the bridge and the approach to the bridge for their new railway to Cannon-street and to Charing Cross; they came across the building.

10973. Do you know why the present site was chosen, or does not that come within your own cognisances?—There was great difficulty in getting a site; many places were viewed, but they were not found eligible, and this at last presented itself; and I fancy, amongst other things, regard was had to the very large open space from the river and the Archbishop's grounds on the other side, and that it was considered that for the requirements of this part of London it was necessary to have another hospital, Guy's and St. Thomas's being at that time close together on either side of the same street.

10974. Could you tell us about the cost of building the hospital?—I believe the cost altogether of the land and the foundations and everything was somewhere about 600,000 *l.*

10975. You do not, perhaps, know how much of that was laid out in the foundations?—Over 40,000 *l.*

10976. How was that expense met; was it met by the sale of land?—The sale of the old site and buildings produced 296,000 *l.*; then we had money in the Funds, and money saved during the nine years we were at the Surrey Gardens; and we were obliged to borrow 100,000 *l.* to make up the rest; and that we are now gradually paying off, a certain amount every year.

10977. Was this building built on the advice of the Charity Commissioners?—I do not know. A committee of the governors, with some medical officers visited a large number of the cities of Europe and inspected the various improvements in hospitals, particularly in Paris, and it was upon that, and the advice of that committee, that this mode was selected. If we had had a square space of course we should have put the buildings around it; but here they were only able to be placed side to side, which of course increased the expense of working it most tremendously.

10978. We were told just now that you had 60 beds vacant?—90 is the number.

10979. In addition to the number of paying beds?—Yes; that is two more wards.

(24.)

Chairman—continued.

10980. And if you were in a really flourishing condition there is no doubt they would be filled with free patients?—Yes. When we came here all the wards were gradually opened; but within a twelvemonth I had orders to close five, in consequence of the appeal which had been made to the House of Lords against the taxation of the hospital for parochial rates being given against us. There was a sum of three years' taxes to pay, and expenses—some 10,000 *l.*; and, in consequence, we closed those five wards, and they have been closed ever since, with the exception of two which were utilised about 10 years ago for the reception of paying patients.

10981. Do the paying patients really pay?—Yes.

10982. Do they yield a net profit?—Yes; because there is no rent to pay for the building, no taxes, and the two officers, myself, and the matron, work that department without remuneration.

10983. Have you ever been able to estimate the amount of income that you would require to be able to fill your beds?—We should want 6,000 *l.* or 7,000 *l.* a year in addition to keep them open.

10984. How many beds have you?—569; that includes the paying department and the empty wards.

10985. But occupied at this moment how many have you?—436; that is, not including the paying patients, 436 in the general hospital.

10986. And your net income is about 40,000 *l.*, is it not?—For hospital purposes I think it is only about 30,000 *l.*, or something over 30,000 *l.*; but that is not quite in my department.

10987. Perhaps the treasurer will tell us about that, will he?—Yes, or the receiver. It is 40,000 *l.*, the receiver states to me, I thought it was not so much.

10988. The 40,000 *l.* includes the 5,000 *l.* received from paying patients, does it not?—Yes, that includes everything that is received.

10988.* Therefore, in estimating the income, you would require to fill the beds; you would have to add what you receive for those occupied by the paying patients?—Yes, I include the wards occupied by the paying patients; supposing we opened the five wards, then we should want 6,000 *l.* or 7,000 *l.* a year more.

10989. Do you get money from the Hospital Sunday Fund?—No.

10990. That question would be better answered by the treasurer perhaps?—I know the fact that we do not receive money from that fund.

10991. I was going to ask this question: if you are short of funds to the amount of 6,000 *l.* or 7,000 *l.* a year, and have to keep some of your wards closed, would it not be wise to apply to the Sunday Fund?—It is considered that, as we have a large endowment, we should have no chance of getting a portion of that fund. At Guy's they made an application two or three years ago and got a grant, but last year it was so small that it was hardly worth asking for, only about 200 *l.*

10992. You do not appeal to the public in the way that other general hospitals do?—No, we never have done so.

10993. And your accounts, like those of the
H other

2 February 1891.]

Mr. WALKER.

[Continued.]

Chairman—continued.

other two hospitals, which are known as the endowed hospitals, go to the Charity Commissioners?—Yes.

10994. You are one of the three endowed hospitals?—Yes.

10995. Now will you tell us what the establishment and the constitution of your hospital is? What is the highest tribunal there is; is there a court of governors?—Yes, a president, treasurer, and governors.

10996. The whole body of governors?—Yes; they meet four times a year in general court; oftener if required.

10997. Then the next body below them; what is that?—The next body is what we call the grand committee, composed of 30 members, the treasurer being the chairman of it; and ten of those go off yearly, and are not re-eligible until they have been out one year.

10998. Are those also governors?—Yes.

10999. Could you tell us how often this grand committee meets?—Monthly; oftener when necessary; sometimes two or three times in a month.

11000. And then you have a weekly committee, have you not?—A committee of almoners; that is the treasurer and four governors; four from the grand committee.

11001. The treasurer is the chairman of that, I presume?—Yes.

11002. Then in reference to other officials, is there a secretary?—No; each department carries on its own correspondence.

11003. Would you kindly explain how the hospital is divided into departments?—The receiver attends to all matters connected with the property, town and country, and pays all bills after having them certified by me; that is those connected with my department. Then my duty is to receive all the patients and allot them in the wards, although that practically now is done by the medical men who have a list given to them each morning of the number of vacant beds in the various wards, to be filled; then seeing to the general working of the place, victualling and cleaning, lighting, and everything else, and the discipline of the place.

11004. With regard to the victualling, you do not make contracts?—The committee make the contracts; I draw out the contract and submit it to the committee on stated days.

11005. Do the committee open tenders?—Yes.

11006. And give the contract to a contractor?—Yes.

11007. And it is your duty to see that the article supplied is up to the sample?—Yes.

11008. That accounts for the duties of the receiver and the steward; is there any other department?—The matron has more particularly the care of the sisters and nurses; they are under her charge; although I have a general superintendence over them, they are more especially under her charge.

11009. Who are the house officers, like the house surgeons and physicians, under?—There is a resident physician and a resident surgeon, and the two branches are under those two gentlemen. They are both fully qualified; they

Chairman—continued.

are young; they are between 30 and 40. And then under them on the medical side, there are four house physicians, and a large number of clinical clerks; on the surgeon side there are four house surgeons, and a large number of dressers.

11010. Then are these two gentlemen, the resident physician and the resident surgeon, officers of the lay committee?—No; they are elected by the committee, and are under their orders.

11011. Do you mean the committee of governors?—Yes, the grand committee.

11012. Are they salaried officers?—Two of them are; these two seniors are, and they live in their quarters. There are 11, including the two seniors, who live inside the hospital.

11013. And they are responsible for the behaviour of the junior residents in the absence of senior physician or surgeon?—Yes; any complaint would come to me, and if necessary I should take it to the treasurer.

11014. But would the resident physician or surgeon report to you?—Yes; but I generally get notice of any complaint there is before he does that; the housekeeper always reports to me at once.

11015. But taking an extreme case; supposing that some young house surgeon refused to come down to see a patient, or conducted himself very ill in some way or other what would be done by the resident surgeon?—I should think he would report it direct to the committee; I should.

11016. But then the committee would probably not be sitting?—He would report to the treasurer at once.

11017. And what would he do?—Suspend him if necessary at once, the same as I should suspend any man under me.

11018. Then it would go before the committee of almoners?—Yes, and would be very likely to be investigated by the medical committee; that is the committee of the general body of medical men.

11019. And in dealing with this medical gentleman who had misconducted himself, would the almoners be guided by the direction as it were of the medical committee?—No, the medical committee, if they had anything to say, would report to the governors; they are equally servants of the governors, as well as these juniors; they are all paid officers.

11020. As you say they are paid officers I will ask you this: Are all the visiting staff paid officers at St. Thomas's?—Yes, they have a small fee, but they are all paid.

11021. Have you any committee at this hospital made up of the medical staff and of the governors?—Taking the house committee, which is composed of the committee of almoners and a few other governors, three or four of the staff are summoned to it when necessary.

11022. That is the first time I have heard of the house committee; what number may it be?—It has only been in existence for two or three years; it was thought desirable to appoint it. Some of them visit the wards which the almoners as a body have not time to do, and conduct all the other business weekly; and therefore for that reason it was formed, and they visit the wards occasionally,

2 February 1891.]

Mr. WALKER.

[Continued.]

Chairman—continued.

occasionally, and the medical staff are called in to assist them by their advice.

11023. But then, as I understood, I think from the receiver, all matters regarding accounts and the ordinary administration of the hospital and various reports from the matron or the steward or other high officials of the hospital, go before the almoners, do they not?—The treasurer and almoners; and of course there is a report from the almoners to the grand committee, because the almoners have not the power of carrying into effect everything; the grand committee are the body.

11024. But the treasurer and the almoners answer to the executive committee that there is in most institutions of such a kind?—Yes, they do.

11025. Now in the case of admissions to the hospital, I think you formally admit patients, do you not?—The resident physician and the resident surgeon really do it; they come to me after.

11026. Are you in a position to know where there are vacant beds for patients?—Yes.

11027. Because of your returns?—Because of the daily returns. Every patient who comes in is reported to my office, and every patient who goes out, and a daily list formed to show the exact number of beds vacant or filled in each ward.

11028. So that on a patient applying you can say whether there is a vacant bed for him, provided he is a suitable case?—These two medical men get a small list from each ward every morning telling them the number of empty beds and whom they belong to, which surgeon or physician.

11029. Do you ever make any inquiry where the in or out-patients come from?—The great majority come from the parish of Lambeth.

11030. Do you take cases of diphtheria at St. Thomas's Hospital?—Yes.

11031. All cases?—Yes; we had 88 last year; they are provided for in separate wards in the infectious block. Two nurses contracted it, but only very slightly.

11032. Do you take any other infectious cases besides those?—Scarlet fever occasionally, but very rarely, because directly a case applies and we find it is scarlet fever, we send it to one of the special hospitals; but it very often occurs after a patient has been in some time; they bring in the seeds of the disease with them, and do not show it perhaps for a week or two or three weeks sometimes; then we put them into our infectious block.

11033. As regards these two nurses, was there any inquiry made as to how they caught it; whether they caught it from attending patients?—It was from attending patients.

11034. That was beyond all doubt, was it, as far as could be ascertained?—Yes. They were very slight cases; they soon recovered.

11035. Is the health of the officials and the nurses who live upon the spot good upon the whole?—Yes.

11036. Now you understand all about the admission of patients; do you have to turn away many from the doors because you are so full?—Yes; we could fill the hospital if it was double

(24.)

Chairman—continued.

the size. Many very good cases are sent away because we have not room.

11037. We have been told by, I think, the treasurer of Guy's, that they had to turn many cases away from Guy's because they were too full, and that many of them very likely found their way to St. Thomas's?—Yes, that is very likely.

11038. At the same time you say that if you had double the room you could fill double the room?—Yes.

11039. And, therefore, with your large experience of 40 years are you of opinion that the medical relief of the sick poor is lamentably deficient on that side of London?—Very much so. The population round about us for three or four miles has increased enormously since we have been there. In the olden times at St. Thomas's, when the two hospitals, Guy's and St. Thomas's, were together and could make up a thousand beds between them, we had to compete for accidents, or to bribe the police to bring them to us, and ordinary cases which would not be looked at now as in-patients were admitted. For instance, bad legs; that may be very material to a poor man, but now the idea of taking in a bad leg would be perfectly ridiculous, the man would be only treated as an out-patient.

11040. With all your experience, do you think that in addition to the great growth of population that part of London has naturally become more unhealthy?—No, I do not think it has.

11041. Merely that the increase of population has naturally produced a great many more accidents?—Yes; and of course there are large manufactories that have sprung up of various sorts, and they produce a great many accidents.

11042. Have you ever known a case of a would-be patient coming to your hospital being sent away because there was no room and coming back because he could not get in anywhere else?—I cannot remember at the moment a case of that kind.

11043. Are they advised where to go when there is no room for them at St. Thomas's?—Well, we do not say, "Go to Guy's," or "Go to Westminster," but "You had better try some other hospital," or we advise them to go to the infirmary of their own parish.

11044. Now, as regards the in-patients and their food; is there one great hospital kitchen?—Yes.

11045. One for the whole of the blocks?—For all the blocks; but there are separate kitchens for other departments. For instance, the medical officers, they have a separate kitchen; and the nurses, they have a separate kitchen; and the St. Thomas's Home of paying patients, they have a separate kitchen.

11046. And are you responsible for the quality of the food being good, as steward?—Yes.

11047. Now supposing that somehow or other the quality of the food missed your supervision and bad food was served, would you get a complaint about it do you think from the wards?—Yes; and complaints come very readily if there is any chance of making one.

11048. Who does the complaint come through?—The sister of the ward.

H 2

11049. And

2 February 1891.]

Mr. WALKER.

[Continued.]

Chairman—continued.

11049. And then do you proceed to investigate it?—Yes.

11050. And then it is remedied or it is found that there is nothing in it?—Yes; we generally find it out before the food goes out of the kitchen; in fact when it comes in; and every now and then we reject something, and say, "This will not do; this is not up to the mark."

11051. But at the same time complaints do come from the wards from time to time?—Yes, they do, however careful we may be.

11052. And then they are investigated, and the matter either set right, or else you find that there is nothing in it?—Yes, it is brought to me, and then if there is any justification for it I at once send to the contractor.

11053. Now in regard to the nurses you have, I think you said, a sort of general supervision over them?—Yes.

11054. They are under the matron primarily?—Yes, under the matron primarily.

11055. Can you tell us what the salary of the matron is?—It is 200 *l*.

11056. Do you train your own nurses?—Yes, under the Nightingale Fund.

11057. Does that entail their living in the hospital during their period of probation?—Yes.

11058. Then the matron is responsible to you, is she?—No.

11059. To the court of almoners, the body of the committee?—Yes.

11060. Now in the case of a nurse misconducting herself what would occur; would the matron dismiss her?—No, she would suspend her and report to the treasurer and almoners.

11061. You take what are known as probationers?—Yes.

11062. Is there any arrangement by which the agreement may be terminable by either party; that is, the hospital or the probationer, up to a certain time?—The mode that is adopted under the Nightingale Fund is that they come in for training for one year, and then if they pass the examination they are considered qualified to become nurses, and they are drafted into the various wards or into other institutions; they do not go into private nursing; but it is for public institutions that they are trained.

11063. I do not quite understand about what you call the Nightingale Fund; will you explain that?—It was a fund subscribed for Miss Nightingale after the Crimean War, and she applied it to founding a fund for training nurses. It is administered by a small committee, of which Mr. Bonham-Carter is secretary; and they wanted a place where to commence it and where to work the system; and they commenced with us just before we left London Bridge, and they went with us to the Surrey Gardens, and when we came here we built a large block for them, and the nurses are trained there; and from this fund certain expenses are paid to the hospital.

11064. And I understand you to say that from that fund nurses are trained for other institutions besides St. Thomas's?—Yes.

11065. Are you in a position to speak about the hours of the nurses?—I think I am roughly; but I think I could send papers explaining it better.

Chairman—continued.

11066. Perhaps the treasurer could give us the paper when he comes?—Yes, I will mention it.

11067. In the same way as complaints of the patients' food are brought to you, would complaints of the nurses' food be brought to you?—Yes.

11068. Whom would they complain to?—To me. They would most likely go to the matron first, and then she would forward the complaint to me.

11069. How many matrons are there?—One.

11070. No assistant matron?—She has an assistant; we do not call her an assistant matron; she has two assistants, in fact.

11071. Then there are night superintendents?—Two night superintendents.

11072. The health of the nurses you said is good?—Yes.

11073. Could you put in a Paper giving us the wages of all these nurses and the superintendents and so forth?—I can furnish it.

11074. Have you a chaplain to the hospital?—Two; one resident, one non-resident.

11075. May I ask what salaries you give them; first to the resident one?—He receives 275 *l*.

11076. And a house?—Yes.

11077. And firing and lighting?—No allowances.

11078. But the house is in the grounds of the hospital?—Yes.

11079. And the other gentlemen, what is he called; sub-chaplain?—Assistant chaplain.

11080. He lives outside?—Yes, he lives a short way off.

11081. And what does he get?—£. 150; and then he is the Vicar of St. Thomas's parish, borough of Southwark, as well.

11082. As regards the Roman Catholic priest, have you a resident Roman Catholic priest?—No; they attend from the Convent just below us; they attend whenever they are required; in fact they come in every day at a certain time, and if they are required at any other time notice is sent to them.

11083. Have you got any Convalescent Home connected with your hospital?—No, but we have a Samaritan Fund, from which we send a large number to various convalescent institutions.

11084. Do you happen to know how much your subscriptions to convalescent homes come to in the year?—The amount of money expended from that fund is about 900 *l*. a year.

11085. That is not quite what I want to know; I meant to ask what your actual subscription to the various convalescent homes was?—I cannot tell you exactly, but it would be perhaps about 160 *l*. a year. Then, in addition to that, we have to pay for the maintenance of patients whilst at some of these homes; but that information I could also send. I have a yearly book which describes it all.

11086. Who administers the Samaritan Fund?—It is administered by the treasurer and committee of almoners, but I am the working officer.

11087. You, subject to the treasurer and the committee, administer it?—Yes.

11088. I have

2 February 1891.]

Mr. WALKER.

[Continued.]

Earl Cathcart.

11088. I have seen a nun very busy in the hospital; I suppose the nuns come in and out freely?—Sometimes they come in as ordinary visitors.

11089. There is no objection to a person of any religious denomination coming to the hospital?—No.

11090. There are two Home sisters I understand you to say. They look very sharp after the provisions, I suppose, one in the paying patients' kitchen and one in the nurses' kitchen?—There is one sister for St. Thomas's Home, and there is one sister, the matron's assistant, who looks after the nurses' kitchen. Then there is another sister at the Nightingale department.

11091. And they apparently take a very intelligent interest in the food, and would soon cry out if it was not up to contract?—Very soon.

11092. They seem to take a pride in having things nice and in good order?—Yes.

11093. Do you take any lock cases in the hospital, any venereal cases?—Very few, and those are females; we have one ward with only eight beds; we do not take males.

11094. Is there a rule excluding males?—No; I do not think there is any specific rule, but that has been the custom for some years.

11095. And how long has that practice existed of not taking male cases?—It was always the practice to take them when I came to St. Thomas's, and it was kept up till we left the old buildings.

11096. Do you know why the practice of taking male cases was given up?—I could not say exactly, but I believe it was considered that other diseases were of more importance, and that our space would not permit of our taking those cases.

11097. I rather judged from your reply to one question that you consider the buildings far too much spread over the ground, that it causes a great deal of extra labour and difficulty—They add very much to the expense, because, to mention one single circumstance, our furnaces between No. 1 and No. 9 are a quarter of a mile. That, of course, involves an immense amount of work.

11098. Is your kitchen centrally placed?—In the centre.

11099. That would mean an eight of a mile travelling with the dinner sometimes?—Yes, to some of the blocks. The quarter of a mile refers to the furnaces, which are in the basement, and not to the kitchen and food-lifts on the ground floor; the length of this corridor is 864 feet.

11100. If you were to construct another hospital you would not extend it as St. Thomas's Hospital is extended?—I should not myself.

11101. It would be more comfortable and convenient, I understand you to mean, in every respect, if the hospital accommodation were more concentrated?—Yes.

11102. I think that would be obvious almost to anyone. Now, in the case of every complaint, even if you think it frivolous, do you take that complaint before the committee?—No.

11103. You investigate and judge for yourself?—Yes.

11104. And if you think it a well-founded complaint you take it to the committee?—If it is a serious case; but sometimes a few words from myself will settle it.

(24.)

Earl Cathcart—continued.

11105. Do you see the meat yourself when it comes in, and the supplies?—Not always.

11106. Not frequently?—Yes, frequently.

11107. Then when you are not there who acts for you?—One of my assistants.

11108. If you find the meat bad you reject it?—Yes.

11109. Do you go into the market to buy other meat then?—No; we have had some better meat sent from the contractor; we have had time to do that.

11110. But you have the power to go into the market I suppose, and buy other meat?—Yes.

11111. You would punish the contractor more if you went into the market because you would put him to expense?—Yes, We often do that with milk; if it turns bad and sour we send out and buy the best we can get.

11112. Have you often complaints about the meat?—No, not very often.

11113. How often?—Our new contractor commenced a month or so ago; the very first day I refused some of his meat, and once again after a few days more. He has been careful since, and I have not had to send any back.

11114. He has since given you satisfaction, has he?—Yes.

11115. Did you reject that meat yourself, or did you reject on the report of your clerk and assistant?—No, I rejected it myself.

11116. Do you mix up the accounts of drugs and materials of that sort for the out-patient department with those for the hospital?—Yes.

11117. But would there be any practical difficulty in keeping those accounts separate; that is to say, the out-patients' department account and the hospital proper account?—That I have nothing to do with, it is the apothecaries' department; but there would be some difficulty; you could make an average.

11118. As a man of business of 40 years' experience I am asking you your individual opinion; would there be any practical difficulty in keeping the out-patient department account separate from that of the hospital proper?—I think there would not be.

11119. I ask the question because we were told at our last meeting that the real difficulty of having beds as to the unit and standard of comparison between hospitals, was that, in many cases, the out-patient department was mixed up with the hospital proper; but the accounts might be kept separate in your opinion?—It is generally mixed up with them in the yearly statements, I mean. I have tried to separate it, and have to a certain extent done so; but it is all guess-work.

11120. Do you think it would be better if those two accounts were kept separate?—I do not believe it would make any difference at all.

11121. But it would make a difference as far as making the bed a standard of comparison between the different hospitals in London?—Yes; but at present we arrive at that conclusion from all or almost all of the hospitals, reckoning it one department, reckoning the out-patient with the in-patient department.

11122. Then, as a man of business, you can see no practical difficulty at all in keeping those accounts

2 February 1891.]

Mr. WALKER.

[Continued.]

Earl Cathcart—continued.

accounts separate, provided it was arranged that they should be kept separate?—There would be some difficulty and some considerable trouble, no doubt, because it is all from one dispensary that the medicine is served.

11123. But still that is a matter of book-keeping detail which might be got over?—Yes, I think it might.

Chairman.

11124. I suppose you would render it more easy by having two dispensaries?—Yes.

Earl of Arran.

11125. Have you a large staff of assistants in your office?—Three, besides messengers.

11126. Is there any other staff of clerks besides those in your office?—No; the receiver and the treasurer's clerk are up in the counting-house in No. 1 block; he is called the treasurer's clerk.

11127. Does the matron appoint the probationers?—They are selected. They are all examined, and the matron, with the assistance of the committee of the Nightingale Fund, selects them.

Lord Zouche of Haryngworth.

11128. I think you have a treasurer at the hospital as well as a receiver and a steward?—Yes.

11129. I suppose he has a salary?—No, a residence.

11130. Are there any other principal officers of the staff besides the receiver and yourself and the treasurer? I suppose there is a secretary?—We have no secretary; each department conducts its own correspondence.

11131. You told us just now that you thought an extra expenditure of 6,000 *l.* or 7,000 *l.* a year would be required to keep all the wards open; I suppose you have gone into that matter, and that is your estimate as the result of having done so?—Yes.

11132. Do you think that that account could be saved in expenditure?—No.

11133. Have you ever entered into that question?—I do not see how it could be saved; we are as close as ever we can be in the expenditure in each department, and I do not know where it could be saved from. The increased expense of keeping patients in a large establishment like that is something enormous. Our staff now of working people is three times what it used to be.

11134. You do not think for instance any economy could be effected in the administration of the estates?—No, I think not.

Chairman.

11135. Let me supplement that question by this; do not you think that St. Thomas's Hospital by appealing to the public could get 6,000 *l.* or 7,000 *l.* a year?—Guy's appealed, and they were in the same position as we are, and they got 100,000 *l.*

11136. That was 100,000 *l.* in one appeal, but my question is, do not you think that St. Thomas's by appealing systematically could get 6,000 *l.* or 7,000 *l.* a year?—They might; we have never tried it.

Lord Thring.

11137. Is your opinion conclusive as to the food; assuming that you passed the food or disregarded a complaint with respect to the food, is that conclusive?—Yes.

11138. There is no appeal?—I do not know who can appeal.

11139. No one can appeal against your opinion on the food to the court of almoners, for instance; is that so?—Yes they might.

11140. Do they ever?—I only know of one instance in which it has been done, and that is just recently.

11141. But they can appeal?—Yes.

11142. And what was the result of the appeal; were you confirmed in your decision?—No, I was wrong; it was a matter of taste.

11143. Was that an appeal on the part of the contractor?—No, on the part of one of the sisters; she thought the article supplied was not quite good; I thought it was.

11144. And the court decided it was not?—The treasurer; he came at once and saw the article.

Lord Monkswell.

11145. Is the Lambeth Infirmary full?—It was a very short time ago; I have not heard recently.

11146. So that there would be no room there for a patient rejected on account of want of room at St. Thomas's; there is no means of getting him into the infirmary; there might not be room there?—I think generally they can take cases; they have taken a good many from us when we have dismissed them.

11147. You do not know whether there have been any cases of a poor person being unable to get in either at St. Thomas's or the infirmary?—Yes; I believe some have gone from us and have not been admitted at the infirmary.

Lord Clifford of Chudleigh.

11148. I understood you to say that the number of out-patients was limited; what is the method by which it is limited?—A certain number of letters are given every day.

Chairman.

11149. Are no out-patients admitted except those who come with letters?—Yes, they are what we call the casuals; they would be included under the head of "Casuals."

11150. I understood you to say that St. Thomas's, with the exception of the paying beds, is practically a free hospital?—Yes, so it is.

11151. But the answer you gave to Lord Clifford of Chudleigh rather led me to infer that out-patients are not admitted unless they have a letter?—The letter is the letter given to them by us when they are selected, that is what we call the letter, the out-patient letter. When they are selected this letter is given to them.

Lord Clifford of Chudleigh.

11152. I suppose that limit you speak of is not quite a hard-and-fast rule; if they were exceptionally serious cases you would admit a few more?—Yes.

Chairman.

11153. Is there anything you wish to add to your evidence?—No.

The Witness is directed to withdraw.

2 February 1891.

MR. WILLIAM ORD, M.D., is called in; and, having been sworn,
is Examined, as follows:

Chairman.

11154. Will you kindly describe to me what your position at St. Thomas's is?—I am one of the physicians to the hospital; I am joint lecturer on medicine, and I was (I suppose that is the reason why I have been asked to come here to-day) for 12 years dean of the medical school.

11155. Do you hold the qualification of the College of Physicians of London?—Certainly.

11156. How long have you been connected with St. Thomas's?—I entered St. Thomas's Hospital in 1852.

11157. That was as a student, I suppose?—Yes. I have been a lecturer there from the year 1859 on various subjects.

11158. And you have been dean of the medical school, you say?—Yes; for 12 years.

11159. Are you, on the whole, contented with the system of medical education in this country as it goes on at present; or, I will put my question in another way: it has been suggested to us that there should be one great central university for medical education, the clinical instruction being given at the hospitals; my question is whether you prefer that, or would you prefer the hospitals to have their own schools?—I think it very much better that the large general hospitals should have their own schools, that answer applying particularly to the study of the practical subjects of medicine and surgery. On the whole, I think it better that the very large schools should carry out instruction in all other subjects; but it would clearly be my opinion that, as things advance, the smaller schools should be grouped for the earlier subjects. In fact, taking it altogether, as a tolerably old hospital physician, I should not be sorry to see the whole of the teaching (I am now only speaking as an individual) of the earlier subjects taken from the hospital schools, and relegated to some central body.

11160. What advantages would accrue therefrom; would you thereby get more experienced lecturers, better lecturers?—You would get, in the first place, a greater uniformity of study. Perhaps it might be desirable; it is a matter of question. You would be able, I think, to organise study better; and, undoubtedly, in any arrangement of that kind you would be able to secure the services of the best men, because you would be able to give higher salaries, certainly, than could be given in the smaller schools.

11161. But is not that open to this objection, that you might have lecturers who were exclusively lecturers, and hardly practical men at all?—I hardly think that men who were not practical in any subject would be accepted now-a-days. The subjects are all practical; in all of them a large course of definite practical instruction would be necessary; and there would come in the advantage of such a central institution. It would give the greatest opportunities and facilities for practical study. Of course, you understand what laboratories mean; if a place is starved and weak its laboratories will be im-

Chairman—continued.

perfect; but if you had a large central place it would be perhaps a better thing in some respects than even our large hospitals, because with all their funds they are not too rich.

11162. Would the united funds arising from the fees of the students of all these hospitals produce a sufficient amount to pay these lecturers in an adequate way?—I am afraid I cannot answer that question.

11163. On what basis do you arrange the medical school at St. Thomas's now?—I do not quite understand in what way you mean.

11164. First of all how many students have you got?—Nearly 400.

11165. Is it increasing, or is it decreasing in numbers?—It has increased very much during the last few years; last year it was not quite so numerous, but we have had a very large increase during the last 15 years.

11166. And what is the fee that has to be paid?—One hundred and twenty-five guineas.

11167. That is for the whole curriculum?—Yes.

11168. Then do students join for the purpose of studying certain subjects at a less charge than that?—Yes; certainly.

11169. And what fees do they pay?—They pay in a diminishing ratio, according to what they want to do; but any man who pays 125 guineas will be able to pursue any kind of study that he wishes at St. Thomas's, so long as he lives.

11170. Do you remember what the income of your school was last year?—Between 8,000*l.* and 9,000*l.* It has been larger; it was larger in the year before. It varies, of course, like all other things.

11171. Can you find any reason for your number diminishing?—It was not so much a diminution of numbers as a variation in the way of payment.

11172. I thought you said that the number diminished last year or the year before?—Only the number of first year's men. It is very difficult to say why in any particular year there should be a variation. I did not feel any panic about that.

11173. Then in what way do you arrange the payment of lecturers and teachers of St. Thomas's?—In the first place the whole amount received from fees is carefully stated; then from that is deducted the amount due to expenses; and there is then a division of the profits, so to speak, in the proportion of two parts for lecturers and one part for teaching in the wards for the staff. The third which is put apart for the staff is divided in a certain ratio among them. That portion of the profits which is for teaching simply is divided into shares and the shares are calculated upon the basis of the actual hours of work; the actual amount of work done by each person.

11174. Will you tell us what sums these lecturers receive; what is the minimum amount

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman—continued.

and what the payments range to?—They range from one share up to six or eight.

11175. I mean how much might the most distinguished lecturer receive possibly, and how little might a junior receive?—I suppose a very junior one, with only a certain amount of work, say twelve lectures, would get from 40 *l.* onwards; and with regard to what a senior lecturer at present would get, I may say that my own share I think was 240 *l.* for the whole thing together last year; that is to say, for the lectures and “the practice” as it is called; it has sometimes been more and sometimes less.

11176. To what does “the practice” refer?—The teaching in the wards.

11177. But does not every medical officer in the wards get some honorarium?—That is from the governors.

11178. That is in addition to what he may receive in other ways?—That is 50 *l.* a year; it never exceeds that.

11179. That differs in different hospitals, does it not?—Yes; and the amounts have differed in our own hospital very much during the last few years. The amount was larger for the seniors formerly, and the juniors had none.

11180. You have mentioned that two-thirds of the whole amount received from fees go to the lectures and one-third to practice?—Yes.

11181. You have certain expenses to deduct before you make this payment?—Yes

11182. What sort of a sum is that?—The expenses this last year were about 3,000 *l.* out of 8,500 *l.*; but then those expenses were in part teaching expenses again, minor salaries to persons who had no shares. There are certain persons who not having shares have a fixed allowance. And then, of course, the expenses of a medical school are considerable now-a-days; we have constantly to be making improvements and buying new apparatus.

11183. And keeping up the apparatus?—Yes.

11184. Have you ever formed any opinion as to whether these schools attached to individual hospitals cause the working of the hospitals to be more expensive?—I should think it is the other way, because the young men attached to these schools are doing work which, if it were not done by them, would have to be done by paid people.

11185. I think it has been told us here that there is a great tendency for expensive instruments for purposes of experiments which might not come forward so much, were it not for the school, to be ordered by the governors; have you come across that?—I can only say that with regard to any work in the hospital in which I have ever been concerned the only thing that has been thought of has been the patient; there has been no intention, still less any carrying out of an intention, of experimenting on patients, or using apparatus for anything but the benefit of patients.

11186. I think you misunderstood my question; what I meant to convey was this: We will assume that an invention comes out; before that invention is perfected the hospital authorities are induced to make a purchase of the apparatus for

Chairman—continued.

the sake of experimenting with it; that is not the case, you say?—No, very far from it.

Earl of Arran.

11187. You are in favour, as I understand, of a central teaching university?—Well, of either one central institution or of several *quasi*-central institutions, to take off from the medical schools of hospitals the earlier teaching, as was advocated by Professor Huxley some years ago. I do not know that I could put my ideas nearly as well as he put them. He wrote a paper on the subject many years ago, which I always thought an exceedingly valuable paper, and one would be glad to see work done on those lines.

11188. In the event of such an institution being established, would one of the results possibly be this: that a student would study the same disease, so to speak, under different masters. As a layman, I do not like to speak about medical things, but I suppose there is a certain variety, a certain difference of treatment of the same disease, as it is treated by different teachers. Would such a central institution, therefore, give an opportunity for a student to study the same disease under different masters, and so get hold of a larger number of ways of treating the same case?—If there were such a central school established, it would not deal with disease; it would only deal with the preliminary studies, anatomy, physiology, chemistry, and so forth; so that any such possibility could not occur; there would be no patients.

11189. But would it afford any opportunity of sending a young man, who was beginning the study of medicine, to study the same disease under different masters; might it send him to go through the wards in one hospital, and then send him on to another to study the treatment of the same disease?—No, I do not think that would be a function of a central school of that kind; it would be a preparatory school, so to speak.

11190. Do you think it would be an advantage that a young man should study in that way if it could be carried out?—I think a variety of study must be an advantage; but I think it would be better left to the men. As it is at present the men who wish to learn study in London, they study in Vienna, and they study in Berlin.

Lord Zouche of Haryngworth.

11191. I suppose your idea would be to have this central school or university in combination with the existing medical schools that are attached to the large hospitals; you would not do away with the present medical schools attached to the large hospitals?—No; I think it should be worked entirely in harmony with them, and leave their hands free to deal with the students in regard to the practical study of medicine and surgery, as we have it over the water, afterwards.

11192. And you could not combine this idea of a central medical school with clinical work?—No, I think not. I see what your Lordship is driving at. Of course, one can see that a great scheme might be possible; but I do not think you would ever have that; if a scheme of that kind were tried to be worked it would be on the basis of the union of the hospitals in that direction.

11193. But

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Lord Zouche of Haryngworth—continued.

11193. But that you do not think very practicable?—No; but I have always been of opinion that the work of a place like St. Thomas's is to teach men medicine and surgery (I am only speaking my individual opinion), and that the more we are left free to do it the better. At the same time, let me make you fully understand that I think our work there is exceedingly complete in all departments, of course at great sacrifice of money.

Lord Thring.

11194. I suppose you would say that practically the clinical teaching at the different hospitals is on a par?—It will vary from year to year according to the men who are teaching; practically on a par, yes; if you take the average of ten years I should think so.

11195. But I fancy some of us have been thinking that there would be a sort of great school in which there would be a central body for the purposes of the early teaching, and that then the pupils should be distributed amongst the several hospitals for clinical teaching, and shifted from one to the other; I do not mean that it is practicable, but that is the sort of Utopian scheme?—I doubt whether that would be a good thing, because competition cannot be lost sight of as an incentive to activity.

11196. I quite understand that; and you think that the competition between the several hospitals is more beneficial on the whole to the public than any institution that could be conducted by any central body would be?—Competition and individuality, if I may say so; the sense of reputation. I do not mean to say that any one hospital is always thinking of any other with which it is competing, but it has at all events its own high qualities, which it seeks to keep up.

11197. As a fact, do many students go from one hospital in London to another, or do they always adhere to one hospital for their teaching?—A good many from other hospitals go round ours; I cannot say that our own men go round others, but I have constantly had men from other hospitals coming round with me; and when I used to visit this hospital (as I did for many years) on a Sunday morning, I had 20 or 30 people going round with me who came from all sorts of hospitals.

11198. Did they pay?—No; these came freely merely as guests. Of course if a man comes round regularly on the day appointed for visiting and teaching he has to pay.

11199. The 125 £., do you mean?—No; he may do that for something like 12 £. 10 s., and a great many do. We have Americans, Canadians, Australians, and Japanese coming to us.

Lord Clifford of Chudleigh.

11200. Are the preliminary teaching and the clinical teaching at St. Thomas's carried on with any particular connection between one another which would make it all inconvenient to separate them?—No.

11201. It would be quite indifferent then to the clinical lecturer at which school the student had gone through his preliminary training?—I should certainly say quite indifferent. We have a rule that no man is allowed to do any practical

(24.)

Lord Clifford of Chudleigh—continued.

work in the wards until he has passed the preliminary examinations; therefore you can see that there is a hard line drawn.

11202. But sometimes professors like to have students grounded in their own schools and their own methods, but there is nothing of that kind, I understand you to say, at St. Thomas's?—No, nothing; there would be no opening for anything of that kind. I may, perhaps, be allowed to observe that I think the present arrangements for the larger schools are extremely good.

Earl Cathcart.

11203. We were told that in the case of Sir Andrew Clark he was almost mobbed by students; some professors and teachers are much more run after by students than others?—Yes.

11204. Have you anything in the nature of a students' club at St. Thomas's, or what do you do in that way?—We have a students' club; it is in the basement of the building that you see opposite with a large chimney; it is conducted by a committee partly composed of students and partly of the staff.

11205. And the conduct of the students is good, as a rule?—Very good indeed.

11206. You have occasionally cases, I suppose, where rustication or even expulsion is necessary?—It is a very long time since we have had a case of expulsion.

11207. The conduct is, on the whole, very satisfactory?—Very satisfactory indeed.

11208. Is there a residential college for them?—No.

11209. They live in lodgings round?—Yes.

11210. Do they spend their evenings in this club?—No.

Chairman.

11211. It is merely a club where they can get their luncheons; and with one or two large rooms, I suppose?—Luncheons and dinner.

11212. Is there any other point in regard to the school that you would like to speak of?—No; only this: I should not like to be taken here as advocating the establishment of a central school. I can see its advantages, but I am not advocating it.

Earl Cathcart.

11213. We were told that the dislocation would be so great that the students attending the wards could not possibly attend the central school; that the central school, and the instruction there would be really before their medical ward education began?—Precisely; if the instruction there comprehended anything in surgery or medicine proper, I should object to it very strongly on that basis.

11214. We were told that the education in a central place of that kind would be preliminary to the ward education?—It would be very much like the education at a public school as a preparation for a university. I may say that there is a good deal of resemblance between our hospital schools in London and colleges in a university, Oxford or Cambridge.

I

11215. Do

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman.

11215. Do a number of your students come from the Universities of Oxford and Cambridge?—Yes; a large number.

11216. And have they studied medicine there before coming to you?—They have studied the preliminaries of medicine; the earlier subjects, anatomy, physiology, chemistry, and so forth. The arrangement at Cambridge, for instance, is that a large number of men take anatomy and physiology and chemistry in about two years after passing their Little Go. When they have completed all these subjects, and have passed in them, they come to the London hospitals, for the most part, and are distributed. There they have been spending two years; they will now have to spend three in consequence of changes in the arrangements of the medical council. Then they go back to Cambridge to be examined.

11217. Is that medical council a body composed from the Colleges of Physicians and Surgeons, or from the hospitals?—No; the medical council has its origin neither from any particular hospital, nor from any number; it is entirely a government affair; it is the general medical council.

11218. Is there any other point in connection with the schools that you desire to bring before us?—No, I think not.

Lord Clifford of Chudleigh.

11219. Do the students who come to you from the universities come with medical degrees?—No, they come to us generally after being two years at Cambridge, or a longer term at Oxford, because they have to take their degree in arts.

11220. The purport of my question was whether you attach any value to their teaching at the university in the way of shortening their time, or are they like students who come without any previous preparation?—No; if they have studied the two years there they will be accepted as second or third years' men, according to the time. And I may say in passing (I do not know that this is a matter of evidence, but it is a matter of remark) that, of course, it is an enormous advantage to the London schools that we get this accession of men from the universities, because they are older men, and they leaven the schools. That is the reason why I am able to speak so confidently of the good behaviour of the students. Since we have had so many university men the general behaviour and quality of our students has immensely improved.

11221. Does the London University send you students?—The London University does not teach; it only examines; therefore it cannot send anybody.

Chairman.

11222. The instruction at Oxford and Cambridge is very useful to medical students?—Very good indeed.

11223. Is there any restriction at St. Thomas's Hospital as regards the necessity of those holding the higher medical appointments in the hospital having the degrees of the London Colleges of Physicians and Surgeons?—With regard to the staff proper, if anyone wishes to be either a physician or surgeon, or assistant

Chairman—continued.

physician, or assistant surgeon, then, being a surgeon, he must be a fellow of the College of Surgeons; being a physician, he must be a member of the College of Physicians.

11224. Otherwise he would not be eligible if he were to apply for the appointment?—A few exceptional cases have occurred in which, there being an emergency, a man, for instance, on the medical side, at all events, not having the membership of the College of Physicians, was elected, on condition of his going up for it, and obtaining it within a definite time; and if he did not obtain it he would have to go back.

11225. Have you known any first-rate men who have been kept out of St. Thomas's Hospital because they had not these qualifications?—No, certainly not. I cannot see that there is any justification for a first-rate man not having the qualifications.

11226. Now, you have had great experience, have you not, in the out-patient department at St. Thomas's?—Yes, I have.

11227. Would you sketch out, roughly, the organisation of that department?—The out-patients are seen by the assistant physicians and surgeons; each of these sits in a room with his assistants, and generally has a room adjoining to which he can take patients for special examination. The people coming to him bring, what are called, letters; that is to say, sheets of paper, with the physician's or surgeon's name at the top; and these letters are intended to serve for six weeks, for six appearances; the patients attending once a week.

11228. Where are those letters procured?—The letters are procured at a different part of the hospital, at a certain hour in the day. All people applying for out-patient letters, as they are called, are gathered together and grouped. Of course they are grouped according to sex; they are grouped according to the nature of the ailment, being medical or surgical; and they are grouped again, in a minor degree, according to specialities. At the given time, the resident assistant physician and the resident assistant surgeon go round to these, and select those whom they judge to be most fit out of the number applying. They are restricted at present in the number of letters which they may give out; for each assistant surgeon or assistant physician they may give out only 15 or 18 letters; and these are given to the people who appear to be most in need. Having received these letters they proceed to the several departments, go on for the six weeks, and then they have their letters renewed for another six weeks if the medical officers think it desirable.

11229. Those are the assistant physicians and surgeons?—Yes.

11230. Do they have classes attending them when engaged in their work?—Yes, often a very large class.

11231. Some of those act as clerks and dressers, we understand; are those students taken from the average, or have they a certain amount of qualification?—They have no qualification of the nature of a degree; they are taken from the students as soon as they have got out of their earlier pupilage, of their scientific pupilage; their pre-practical pupilage, I may call it; but they are

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman—continued.

are definitely appointed by the whole medical body. No one acts as a clerk or a dresser without having a distinct appointment by the general body.

11232. Does this organisation of yours at St. Thomas's cause the patients to wait a very long time?—I do not think this organisation does; but the fact that people have to apply at a particular hour, and to be present at a particular hour, may, as in some other places, involve waiting. Of course if people have to come at one o'clock, and there are 60 who appear at one o'clock, they cannot all be seen at once; but there is no other difficulty.

11233. There is no method of inquiry into the circumstances of the out-patients at St. Thomas's?—No; the whole basis is the urgency of the disease.

11234. Have you formed any idea as to how the out-patient department might be still further restricted; I will not take the case of St. Thomas's, but speaking generally, I mean?—Well, the restrictions at St. Thomas's have been considerable. Some few years ago, when I was assistant physician, we used to give out 30 letters; you will notice that that is now reduced to 15 or 18. It does not seem a very logical proceeding, I admit, but it was a very practical proceeding, which reduced the letters to such a number as might enable the physicians in charge to do their work properly.

11235. Within a certain time?—Within a certain time; and, as your Lordship points out, with a certain limitation of the discomfort of the patients coming. I do not see anything else that can help us there; I wish I did. I am certain that the status of people is not to be regarded, so long as you take the people who are really bad and ill.

11236. When you say that the "status of the people" is not to be regarded, by that you mean, I suppose, that the charity is not abused?—I do not think it is in the least. We really get the worst cases of illness; and if they happen one or other to be a little better off than the rest it is very seldom because they want to save money. You will see occasionally a clerk, who could pay a doctor originally; he has been ill for a very long time and has exceeded his resources, and then the hospital becomes what I think it ought to become, and what I hope it will become more and more, a sort of consultants' room.

11237. I was coming to that soon; are you in favour yourself of out-patient departments in the abstract, as at present accepted, in the London hospitals?—Your Lordship uses the words "in the abstract"; I do not quite know what the question means.

11238. What I want to get from you is an opinion whether you think that more harm is done by the out-patient department to the people themselves, or whether that is met by the increased instruction in the practice of medicine to the students; because there is another side to the out-patient department, and some political economists think it is a demoralising thing?—I am quite aware of that.

11239. I should like to get your opinion upon it?—It appears to me that it might be possible
(24.)

Chairman—continued.

to increase the value, for the general public, of hospital out-patient departments if some sort of relation were established between hospitals and the other institutions around them. It is always very difficult to say whether harm is being done. I do not think harm is being done, but I think better good might be effected.

11240. To what particular institutions do you refer; provident dispensaries?—Yes. You will understand that in the view I have expressed I am probably taking a view that would not by any means be accepted by all my colleagues.

11241. I am not speaking about St. Thomas's Hospital, but of the general hospital world. You would like to see, then, the provident dispensaries made use of for the medical side, and the out-patient department a consultative department in any complicated case?—I think that would be an exceedingly valuable relation between the two.

11242. Have you ever found any difficulty in bringing about co-operation between the provident dispensaries and the hospital, or have you tried to do so?—I have never tried.

11243. Or has any attempt of that kind been made so far as you are aware?—The general principle has been set forth by a particular association, but I do not know of its ever having been practically tried.

11244. In regard to out-patients, you begin by given medical relief?—Yes.

11245. Do you think that that leads people to expect further charity in the shape of food and wine?—No, I do not think so; not with us.

11246. I mean as a rule?—No, I do not think so.

11247. Then I do not quite see what the objection to the present system is?—I made no objection to the present system; I said it was very good, but might be improved. I think we could do a wider good, but I did not say that I had an objection to it at present; if I gave you that impression I must withdraw it; I thought I had guarded myself in that respect by saying that I thought it very good, but that it might be improved.

11248. As regards the effects produced upon the population, do you mean?—And the usefulness of the hospital.

11249. Do you think then that at present a great number of the cases are so trifling that there is hardly time to look after the more difficult ones?—No, not at all. I mean that it would be a wider usefulness. If a man whose illness was not well understood, was examined by a consultation at the hospital, it would be better for everybody; for the physicians, for the patient, and for the students; it would merely give a greater opportunity of usefulness.

11250. You mean a much larger field of usefulness altogether?—Yes.

11251. Because it would collect from these various institutions the graver cases in addition to the cases that it already has?—Precisely so. That is in fact to a certain extent what has been going on of late years. Our cases in the hospital are more and more severe, and more serious than they used to be, through the filtration from the out-patients' room.

11252. Do you know if you collect any patients
I 2 from

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman—continued.

from the country; whether they are sent to you from the country for operations, for instance?—Yes, a good many come up from the country.

11253. Seeking rather the advice of a great London hospital with a great reputation, than that which they can obtain in their own country town?—Not only that, but a good many country doctors send up their difficult cases, using the hospital for consultation as it were.

11254. And then we come back to the individuality of the hospital, because these gentlemen have very likely been students there?—Yes, it only happened to me this morning to have one apply in that way.

11255. Is any charge made by the hospital for these cases coming from the country for consultation?—No.

11256. Or in the case of a case coming from the country for an operation and taking up a bed in the hospital, is there any charge made on the locality?—No.

11257. Is the class of patient very poor at St. Thomas's?—I am afraid I cannot tell you very much about that as regards the out-patients now; it is a good many years since I treated out-patients, and, of course, when they are in bed, it is difficult to say; I should think they vary very much.

11258. Have you ever heard of a suggestion of treating out-patients in the evening?—I have heard that.

11259. Do you think that would answer from a professional point of view?—I have never considered it; I do not think I should like to answer that question.

11260. Your hospital at St. Thomas's has lately been transplanted from London Bridge; there are in other parts of London other hospitals still very close to one another, and some of them with insanitary buildings; do you think that with advantage they might be transplanted to the country and placed here and there?—I think they are wanted in London.

11261. I do not mean to take them away altogether from people in London, but whether, owing to the insanitary condition of the walls, and so forth, they might with advantage be transplanted into a purer air, leaving some sort of head-quarter establishment, on a smaller scale, which would take the place of the London hospital?—I should have thought the better thing would have been to have pulled them down and rebuilt them where they were, and built the others as well. Of course, at the present moment, I think after all our accommodation for general cases is inadequate.

11262. Would you think so if the unoccupied beds, which we have been told by one witness are 2,000 in the various London hospitals, were able to be filled?—As far as I can judge, yes; of the general hospitals I am speaking.

11263. Then, taking the medical charitable relief and the medical poor relief, you consider that it is not sufficient?—I do not think that the number of general beds in London is sufficient.

11264. Supposing it was suggested to build more hospitals, might not something be done in the way of location. Take, for instance, one district I am acquainted with; that is Berners-

Chairman—continued.

street?—You have got the Middlesex there at the end of it.

11265. We have the Middlesex, we have University College, quite close; we have got an asylum of some kind round the corner; St. Mary's a very short distance off; that makes three general hospitals, to begin with; and then, I believe, there is a poor-law infirmary with 700 beds belonging to Marylebone. Then there is the Charing Cross Hospital within a mile; and then on the other side of the Thames we have got St. Thomas's and Guy's. Would you like a little more accommodation on that side?—It appears to me that it might be very valuable on that side.

11266. But the hospitals are crowded in some parts of London, are they not?—You mean that as buildings they are crowded together; not crowded as regards their wards?

11267. Not the beds, but their buildings, I mean?—Certainly; and the south side is not well provided.

11268. Therefore, supposing that you pulled down any hospitals in the northern part of London, because of their bad state, and that you thought about re-building them in the metropolis, would you think they should be re-built on their old site?—That is a thing I should rather leave to this Committee than express a strong opinion about it; but I do not think that the accommodation there is in excess of what the needs are.

11269. You mean that the accommodation in the north is not in excess of what the needs are?—No, I do not think it is; so that it does seem to me, though I cannot positively say so, that it would be a better thing to build new ones in the south than to transfer any one from its present position, or from a position approximate to its present position.

11270. In fact, while you consider that the accommodation north is not more than is required, you consider that the accommodation south is very much less than is required?—Yes; I do not know so much about the north, but I know that in the south they have been organising cottage hospitals and things in order to make up for these difficulties. I was down at Brixton a little while ago, urging the claims of a little hospital of that kind; and I think they are springing up a great deal round with great usefulness.

11271. Are those free charitable institutions, or part paying?—I am afraid I could not say; I have merely urged them on the ground of general usefulness; I do not know their subsequent rules.

11272. Now I should like to have your opinion on the point of general hospitals, as opposed to special hospitals; do you favour general hospitals as opposed to special hospitals, as a medical man, I mean?—Well, special hospitals are of various kinds. Of course there are certain special hospitals which seem to me very valuable and necessary, such as ophthalmic hospitals. I will take an ophthalmic hospital as one of a very valuable special kind, even though the general hospitals have their departments for that purpose. To a large extent also, special hospitals for diseases of the chest have their claims.

11273. Are

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman—continued.

11273. Are you as strongly in favour of hospitals of that description as you are of ophthalmic hospitals?—No, not taking them in the bulk; but they have this value, that they will take in, and can take in, people who need hospital help, and yet in a large general hospital would fill beds too long. For example, a man with consumption may fill a bed for months; we are having people here at St. Thomas's applying every hour, at the time every one of them more urgently ill than this man with consumption; and these are people that we ought to admit; so that we have a sort of regulation at St. Thomas's that we do not admit a case of consumption unless there be some sudden accident in connection with it; if a man has broken a blood vessel or anything of that kind for instance.

11274. A case of consumption may be chronic?—It may be chronic or acute.

11275. It might take months, or it might take only a fortnight?—Yes.

11276. And in the case of an acute case of that kind, you would admit it?—Yes.

11277. As a rule do you admit chronic cases at your hospital?—There are a great many chronic cases that we admit in order to allow us to make sure what they are. When we have made sure what they are, we deal with them according to the prospects of the case. We send out a large majority; or we treat them and get them better.

11278. Then, to continue my question about these special hospitals; there are some surgical ones; take cancer hospitals; what do you say to them?—I do not approve of them.

11279. You prefer seeing those cases in the wards of a general hospital?—Yes; there are many reasons for which I should think they would be better treated in the general hospitals.

11280. I should like to hear your reasons?—I do not know that I should like to give them.

11281. We can hardly form an opinion on the value of your reasons unless you give them. What is your principal objection to the special hospitals?—First, I have not a general objection, as you see, but a large number of special hospitals appear to me to be superfluous, because they are carrying on, with a limited scope, work that could be done just as well at the general hospitals, and certainly work that could be done very much better, very much better represented, if what was devoted to any particular special hospital were devoted to the establishment of a local general hospital with proper appliances.

11282. You mean that in these special hospitals the administration must be more costly than where you have a larger number?—Yes.

11283. And also that there is a loss of the teaching?—It is not only that; but I have already said that I think we might have more general treatment than we have; and by these special hospitals we say the sources of that; I think unjustifiably. I think they are more or less parasitic.

11284. I think it has been represented to us in evidence by one or two witnesses who have opposed special hospitals that they may be said to have done their work; that they were, perhaps, advantageous when medical science was not

(24.)

Chairman—continued.

so advanced as it is now; for instance, there was Moorfields, which was established some time ago?—Yes, before I was a student.

11285. But that now special wards exist in the general hospitals?—Yes; we have, of course, a special ophthalmic department here at St. Thomas's, both a ward and a special out-patient department, and a very fine one.

11286. And is the same amount of skill brought to bear upon special cases in general hospitals as would be brought to bear upon them in special hospitals in regard to an ophthalmic case or cancer?—Cancer is a particular disease which happens to be the puzzle of everybody; as to any specialty in cancer, it is pure nonsense.

11287. At the same time, there is a cancer hospital?—Yes; but with regard to any right to speciality, I mean. A man requires a special training to be a good ophthalmologist or laryngologist, but all well-educated doctors are much on the same level with regard to cancer, and therefore a cancer hospital may only be established in the interests of particular people.

11288. Take the question of the Orthopædic Hospital; have you anything to say on that?—It certainly would have some advantages, in my opinion; I am not a surgeon, and am therefore not so competent to answer.

11289. Now these special hospitals I believe have within the last few years been increasing rapidly?—Yes, certainly.

11290. Would you like to see any board, beyond the Government, whose function it would be to provide a license before hospitals could be founded?—To answer that involves thought; I have not heard of the suggestion before, or else I should have been prepared with an answer.

11291. I will put my question again in this way: there are a good many matters in which hospitals no doubt might consult one another; it might be convenient to have a board where delegates from various hospitals could meet together; would you like to give such a board the power of licensing hospitals; that is to say, consenting to the erection of a new hospital, or deducting where a new hospital should be placed?—I am not prepared to answer that; it is a question of very very large touch; I mean it is not merely a medical question; it is a very large question, and I should not like to give an opinion upon it at present.

11292. Have you ever considered the advisability of the admission of students to poor-law infirmaries for instruction?—Yes.

11293. And do you favour such an idea?—Very much.

11294. You consider that at present a large amount of teaching material is wasted?—Yes; most valuable material. I am afraid that in fact I have infringed the regulations unknowingly. I conducted examinations in them some years ago, I mean for a university, not knowing that it was forbidden. There is a certain kind of case that a student will not see in the general hospitals, but will see abundantly in the infirmaries, and see abundantly in private practice.

11295. Have students in a general hospital

I 3

any

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Chairman—continued.

any chance of seeing cases of measles or scarlet fever, for instance?—Not in most of them.

11296. If the student was allowed to go into the fever infirmary and the poor-law infirmary, he would have an opportunity of seeing them?—Yes; certainly.

Earl Cathcart.

11297. My idea is that the door of these infirmary hospitals has been lately opened, and therefore that some new regulations have been made with a view to instructions being given in them?—I believe they are making arrangements with regard to the fever hospitals, but I have not seen anything about the poor-law hospitals.

11298. You are of a very open and candid mind, and I should like very much to ask you what you think upon one certain class of cases; and we have just understood that those cases are excluded from St. Thomas's, and have been recently excluded, namely, male lock cases; now do you think it is advisable from a medical point of view, having regard to the interests of the population, that such cases should be excluded from the general hospital?—I do not think they are excluded.

11299. We were told so just now by the steward?—Then that could only apply, I think, to the primary cases, because naturally we get a very large number of diseases in the hospital which are essentially syphilitic in their origin.

11300. But are you in favour, as an experienced medical man, of driving these primary cases even back to the population by refusing treatment of them in the general hospitals?—I fancy they are treated in the out-patient department. You were asking the steward about the hospital itself. You see, a man with the first stage of the pox on him does not want to be in the hospital, it is only if he gets some bad form of sore or glandular swelling.

11301. In the out-patient department, could you treat a man who was laid up with two buboes?—I think if he had a couple of buboes they would take him in.

11302. There is in the abstract, is there not, a danger of driving these cases back into the population, so leading to infection and widespread infection?—I do not see that danger would arise there. They would be treated in the out-patient department if they were well enough to go about; they would not be driven back; they would be relieved and allowed to go, but they would not be suitable for admission to the wards.

11303. Unless you had special wards, as they have at St. Bartholomew's, I think?—That is another question; that is a matter of relative expenditure.

11304. You know that they are much more particular abroad about the treatment of these cases than in England. For instance, at Copenhagen, when I was in the hospital, out of 800 beds, 150 were occupied with syphilitic cases?—Probably they are not so advanced as we are. When I was a student at St. Thomas's, we had two whole wards, called respectively "Lazarus" and "Job," devoted to the care of those cases, besides a female one called "Magdalen."

Earl Cathcart—continued.

11305. How do you carry on your instruction of the students in that branch, if you have not lock wards?—We have the out-patients.

11306. Do you know anything about the Lock Hospital?—I do not know anything about it; but really I think the out-patients' room and a moderate amount of beds meets the necessity.

11307. But we were told that there were no male patients suffering from that complaint, though there were some female patients in your hospital?—There are no special beds set apart for them, but I am satisfied that they would be admitted if they were bad cases.

11308. To turn to another subject, have you yourself personal experience of the inconvenience of having the buildings so much spread about as they are at St. Thomas's?—No.

11309. I mean medically; there are no medical reasons, you think, against spreading out-buildings to such an extreme extent?—Your question rather assumes that they are unnecessarily spread; to that I should object.

11310. That was your steward's idea?—That was from an official point of view.

11311. But from a medical point of view you do not feel it to be an inconvenience?—No; on the contrary, the construction of that hospital was founded on the most elaborate investigation into the structure of hospitals in all parts of the world; it was preceded by the bringing out of a Blue Book distinctly intended to help all future hospital builders, and the principles developed in this Blue Book, which was got up by very good observers of various kinds, led to the construction of this hospital which has been generally regarded amongst medical men as one of the best at the time, of course not the best that ever could be had, but one of the best at the time.

11312. We were told by the steward that the distances were excessive, in one case a quarter of a mile, in another an eighth of a mile?—I dare say the distances are very great.

11313. But those objections are not medical objections?—No. You see the object was that in each storey there should be only one ward and that that ward should be in contact with the air on all sides and have perfect ventilation and as much light as could be obtained, and that there should be a due separation in the matter of distance between each block or pavilion and the next to allow of free currents of air between.

11314. We may take it from you that in your opinion that building is a typical hospital building?—I should say so certainly; and I should say more than that; I should say that it is regarded as such throughout the medical world,—that people come to visit it as a great thing of a constructive nature.

11315. Passing to another subject I saw a little boy in the country suffering from a gunshot wound, and the boy's jaws would not register, so that he could not eat; he had been treated in the country without much effect; he came up to St. Thomas's and Sir William MacCormac operated upon the boy and the result is that he will probably turn out to be a fine man. Now that is a typical case of the benefit to a country patient coming to a London hospital?—Yes. Of course there might be improvements, and there might

2 February 1891.]

Mr. ORD, M.D.

[Continued.]

Earl Cathcart—continued.

might be variations. There are Mr. Marshall's circular hospitals; but they could only attain a certain size; and if multiplied in the same way as St. Thomas's they would still have great distances between them; and probably the best hospital at present built in the world, the Johns Hopkins Hospital in Baltimore, covers a larger space in proportion to its height and accommodation.

Lord Monkswell.

11316. You talked about the hospital as having been built as the result of a Blue Book; I do not know anything about that Blue Book; how was it compiled; was it the result of a Commission?—Of an inspection. I think the Blue Book was compiled under the auspices either of the Privy Council or of the Board of Health.

11317. Of course you could find out and give us a reference to the Blue Book if it were thought desirable?—Certainly.

11318. It is an official Blue Book; it would be a Parliamentary Paper?—Yes; it is filled with diagrams of various hospitals. I think Dr. Bristowe and Mr. Holmes were the persons chiefly concerned in carrying it out.

11319. Perhaps you could put in a reference to the book so that if any Member of the Committee wants to see it he could find it himself; it must be amongst our Parliamentary Papers?—Yes, it must be.

Lord Clifford of Chudleigh.

11320. The evidence of the steward rather led me to suppose that the actual longitudinal structure of the hospital was due to the site; was that so?—I suppose it would be so; if we could have had a purely equilateral site, quadrilateral and equilateral, the buildings would not have been so far apart in a linear direction; but they would have had to be linked still, and the distances even then would have been great, I think.

11321. But they might have been built square?—In a square group. At Baltimore, for instance, they took *this* side and *this* side and a middle piece (*describing*); but then they have got 14 to 20 acres instead of our eight, I think it is, here.

Chairman.

11322. You are still on the staff of St. Thomas's, I understand you to say?—Yes.

11323. What occurs in the case of a nurse becoming ill; is there a nurses' sick ward, or is she treated in the general ward?—I do not know exactly what always occurs. I know that occa-

Chairman—continued.

sionally a nurse comes as a patient into my wards; but I do not know, as a rule, about it.

11324. I can get that from the treasurer, I suppose?—Yes.

11325. Who would they be treated by; by any practitioner into whose ward they happened to go, or by house surgeons or by senior men or junior men?—If they came into the wards they would be treated by the surgeon or physician of the ward; in his absence by the resident assistant surgeon or physician, and house surgeon or house physician.

11326. At any rate you would say that they got the very best advice they could get?—Yes.

11327. Could you tell us, or shall I ask the treasurer, how do they manage to keep the food warm that is carried from the kitchen to the extremities of the hospital?—It is very rapidly carried; of course it is not in the open air. You will understand that the whole place is warmed by hot water, and that the corridors are quite warm, and the things are packed off from the kitchen in a sort of trolley, and they are carried up to the wards in lifts.

11328. Do you know if they use the ward fires to warm the food?—I have never known that; I have seen the food arriving in the wards. It is a very short distance after all; it is a thing that involves not more than two or three minutes; I do not think much more than serving in an ordinary house really.

11329. But in an ordinary house they would probably have dishes warmed with hot water and so forth; at any rate you have not heard any complaints of that?—No, I have not. I should say the things certainly are warm when they come up. Your Lordship should know, I think, that there has been a great reform in the matter of feeding the patients and feeding the nurses during the last few years at St. Thomas's.

11330. When did it commence; about five years ago?—Yes. About five years ago we called in a famous authority on cooking, Mr. Buckmaster, and had all the food of our patients revised, and the methods of cooking revised very carefully.

11331. Is there anything else you would like to say to the Committee?—No, I do not think so. I am afraid I have occupied too much of your time already.

Chairman.

No; we are much obliged to you for your evidence.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 5^o Februarii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
LORD SAYE AND SELE.

Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. JAMES GADESSEN WAINWRIGHT, is called in; and, having been sworn, is Examined, as follows:

Chairman.

11332. YOU are the Treasurer of St. Thomas's Hospital?—I am.

11333. How long have you held that position?—I was appointed on the 25th of March last year.

11334. And before you undertook the active management of St. Thomas' Hospital, how were you engaged?—Part of my time was occupied in attending schools; district schools have been a hobby of mine; I have been connected with the North Surrey District School at Anerley since 1876.

11335. At the same time, though you have only been treasurer for less than a year, that is not your first connection with St. Thomas's, is it?—No, I joined the hospital, I think it was, in 1865. I became an almoner in 1874, and held that position continuously until my appointment as treasurer.

11336. Are there any particular duties attaching to the post of almoner?—You are supposed to assist the treasurer in dealing with the property of the hospital, and in any other matters which he may ask your advice upon.

11337. How many almoners are there?—There are four. I can, perhaps, give you a better idea of the duties by reading you the charge which the almoners receive upon appointment: "You shall attend at the hospital counting-house" on certain days (here it is printed Tuesday, but it is altered to Wednesdays now), "or at such other weekly meeting as may be arranged, to advise and assist the treasurer in the business of the hospital, when all tradesmen's bills, previously to their being paid, shall be audited by two of your body. You shall visit the wards occasionally to see and inquire whether any improper conduct prevails therein, and report the same to the treasurer. You shall audit the receiver's cash accounts on the first day of your meeting in every month. And you shall

Chairman—continued.

attend the treasurer when summoned for any purposes of the hospital."

11338. Then this committee of almoners and the treasurer form the executive of the hospital; is that so?—Yes, in the first instance.

11339. Are you an honorary official?—Entirely so.

11340. With a residence in the hospital?—With a residence in the hospital.

11341. Would you tell the Committee what your powers as treasurer are?—My charge is as follows: "As the superior officer, you shall have the control over all the other officers and servants in every department; and in case of complaint or the discovery of any abuses or misconduct, you shall forthwith endeavour to correct the same, and, if you should find occasion, submit the circumstances thereof to the almoners, the grand committee, or a general court; and in the event of any serious delinquency or offence you may in the meantime suspend the offender from his or her employment. You shall report to the grand committee all legacies and benefactions bequeathed or given to this hospital; and you shall receive the same, as well as all annuities, dividends, and interest on monies in the public funds, and other securities belonging to the hospital, paying the same to the receiver. You shall provide for all requisite payments by cheques signed by yourself and two almoners or other governors authorised by the grand committee, and shall order the receiver to give notice to persons whose bills shall have been certified for payment to come to the hospital counting-house to receive their money on such early day afterwards as shall be convenient to yourself. You shall confer from time to time with the grand committee as to the investment of moneys not required for the immediate purposes of the hospital. You shall, together with two other

K.

governors

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Chairman—continued.

governors to be appointed from time to time by the general court, stand possessed of all property of the hospital vested in the public funds. You shall direct summonses to be issued for all committees and general courts, at which and on other public occasions you shall, in the absence of the president, take the chair. You shall with one or more of the almoners, or of the grand committee and such of the officers of the house as you shall think necessary, view the houses, buildings, lands, and other property of the hospital previously to their being let, and report thereon to the grand committee for the better enabling them to let the same; and you shall take care that all the several properties are kept sufficiently insured, and that when practicable the several insurances be effected by the governors in your own name as treasurer, and a clause be inserted in the leases for payment of the premiums of such insurances from time to time by the respective tenants, in addition to their rents; and you shall generally exert yourself for the benefit and good of the hospital. These several duties, together with so much of the receiver's charge as may apply to your office, and is not hereinbefore specified, shall be considered as constituting your charge, which you are expected conscientiously to observe."

11342. Then that gives you some amount of authority in the hospital in the absence of the committee of almoners?—Yes, I claim absolute authority. Certain officers are appointed by me; others are appointed by the grand committee, and others by the general court.

11343. What are the officers who are appointed by yourself?—(*Reading from hospital rules*) "The sisters and nurses, and the other servants, shall be appointed by the treasurer." "The curator to the museum, the surgeryman, the dispensers, cooks, porters, and bathman, shall be appointed by the grand committee." Other officers by the court.

11344. And then do you also have the dismissal of those that you appoint?—Quite so.

11345. Are the agents of the estate under you as treasurer?—They are.

11346. To the extent of dismissing them from their posts?—No, I should say not; not without bringing it before the grand committee; I should certainly exercise the power of suspension.

11347. Then do the rents come through your office?—All come through the office.

11348. Through the treasurer's office?—Yes.

11349. Of which the receiver is an official?—Yes, the receiver is an official of it.

11350. We had something told us about the various committees by Mr. Walker, I think?—Yes. I was sorry that I was not able to attend on Monday; I had a very important meeting at the North Surrey District Schools on that day.

11351. Perhaps you would not mind telling us a little more on the same subject. First I will ask you what the highest authority in the hospital is?—The full court of governors.

11352. How often does that meet?—That is held quarterly, and whenever specially summoned.

11353. What is the quorum of that court?—Thirteen. Everything must be reported to them and confirmed by them.

Chairman—continued.

11354. For instance, the whole of the minutes are read to them, I suppose?—The grand committee's minutes are all read before that court.

11355. Then would that be a court of appeal in case of any official being dissatisfied with the treatment he had received?—Yes.

11356. The final court?—Yes, the final court.

11357. Then the grand committee is the next step, is it not?—All lettings and dealings with the property must receive the grand committee's sanction before they go to the court. In the first instance all those matters come before the treasurer and almoners, and are inquired into by them; then they are laid before the grand committee, when they are either accepted and passed on to the court of governors for confirmation, or referred back for further consideration.

11358. Then the grand committee is the body that is responsible for the estates?—Quite so.

11359. How many form a quorum of that?—Five.

11360. Then you have a house committee, have you not?—Yes; we have a house committee.

11361. Will you explain what that is?—The house committee consists of the treasurer and almoners, and six other governors, two of whom shall be retired medical officers on the consulting staff. The dean of the school, the senior physician, and senior surgeon attached to the hospital attend as consultants, but are not members of the committee.

11362. Is that the only consultative body in the hospital that has medical men on it?—That is the only one. The grand committee, I may say, has two members of the retired medical and surgical staff who are specially appointed.

11363. But I mean, is there any medical committee?—There is a committee of medical officers who meet when they think right; every week, generally speaking; all matters connected with the school come before them, and all appointments of students to offices in the hospital are considered by them, and sent to the treasurer and almoners for confirmation by the grand committee.

11364. To be actually appointed?—To be actually appointed; and then those officers, when sanctioned by the grand committee, come to me as treasurer and receive charges detailing their several duties. Some of those charges I have brought in my pocket with me, and if they are of any service to you I can read them; of course I do not want to protract the inquiry; but we have certain charges issued to these young men stating what their duties will be; they receive the charge from me and a copy is given to each.

11365. Those are the rules of their office, in fact?—Yes, they are the rules of their office.

11366. As regards the medical committee, would any matter of misconduct on the part of a medical officer be referred to them for their consideration, and be considered by them?—Yes; it would be considered.

11367. And upon their recommendation the almoners would act?—Any opinion expressed would assist the governors in deciding upon their action.

11368. You have, I think, 435 occupied beds?—Yes; the numbers have varied to a certain extent

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Chairman—continued.

extent. At the present moment we have only 359; they have varied from 379 to 344 each day in the last week. A week's return is made to me every week.

11369. What I meant to say was, your income allows you to have 435 beds occupied?—Yes.

11370. That is the maximum that your expenditure allows you to have occupied?—Yes; we do not get as many as that quite. This last week the daily numbers have been 360, 349, 366, 372, 344, 359.

11371. But you have a maximum of 435 occupied beds, and the total number of beds is 569?—Something of that sort.

11372. Of which a certain number are occupied by paying patients?—Yes; we have 42 beds reserved for paying patients; that is St. Thomas's Home paying patients.

Earl Cathcart.

11373. Are the guinea patients included in that number?—No; the guinea patients are in the ordinary wards.

Chairman.

11374. How many paying patients are there altogether?—We get very few of them; I do not think there is any limit put upon us by the Charity Commissioners.

11375. You have first of all St Thomas's Home for paying patients?—Yes.

11376. How much do they pay?—A minimum of 9 s. a day.

11377. Then in addition to the St. Thomas's Home paying patients, you have paying patients in the wards?—Yes; under the Charity Commissioners' scheme, what are called poor paying patients. I cannot tax my memory whether there is any limit upon us in regard to the number, but we practically do not get many. Last year we had about 120 l. received from that source.

11378. The object of having these paying patients is to provide funds for the hospital, is it not?—Yes.

11379. And another witness has told us that you received from St. Thomas's Home about 5,600 l. a year?—Yes, something of that sort; that is the gross receipts.

11380. And what amount of profit do you get from that?—I think we reckon we get an amount varying from 500 l. to 600 l. a year.

12381. If you had plenty of money all these beds would be open free?—Perfectly; that was the original intention.

11382. And do you agree with the estimate given by Mr. Walker, that it would cost 6,000 l. or 7,000 l. a year to open the rest of the hospital?—I think we roughly calculate that the cost per bed is about 92 l.; we have now three wards unoccupied; that would be 90 beds; and, of course, we have the 42 patients in St. Thomas's Home occupying wards, so that really practically we have got five wards empty.

11383. Five wards empty from want of funds?—Yes, from want of funds.

11384. You have had long experience of the hospital; do you think you would be able to fill the beds if you had them?—Yes, certainly.

(24.)

Chairman—continued.

11385. So that there is a lamentable want of accommodation for the sick poor in that district?—Well, I suppose there is, looking at it in that light. There is no doubt that we should fill them all. We cannot take in everybody; now and then cases do occur which one would like to take in if we had the room, but we are obliged to send them on to the infirmary.

11386. What is the size of your wards; what number of beds do they contain?—There are 28 beds and two in the small ward; there is a small ward to every large ward. Of course the small wards are very useful in this way: if a patient is too noisy to be kept in the main ward, or too seriously ill to be treated in the open ward, he is passed into the little ward for quiet, and so on.

11387. Then in times when you are put to great stress do you put more beds into the wards than you have usually in them?—Yes, occasionally we do; we put them down the centre of the ward; we sometimes get three or four beds in there.

11388. Do your medical officers remonstrate at all about that?—No, they do not at all. The fact is that, with 28 patients in a ward, we have a cubical space per bed of 1,800 feet, and sometimes the medical officers have said, "There is no harm to the patients; we have a very large amount of cubical space"; and the governors always say: "This was very carefully considered when the hospital was built, and we must call upon you to limit yourselves to the number authorised." It is sometimes a little difficult. The only time when it does arise is in cases of accidents. Each surgeon takes an accident week, and his particular ward is supposed to receive all accidents coming in during that week. If during the previous three weeks the cases coming to his ward have been of such a serious nature that they could not be discharged to make room for others, a few extra patients have been obliged to be retained in the ward.

11389. But may there not be vacancies in other wards which might be filled by the extra patients?—We never admit in accident week to any other ward than that particular surgical ward.

11390. But might there not be vacant space in other wards where such patients could be accommodated?—Sometimes it does occur that beds that are vacant in another ward are used, but the patients are credited to the particular ward which is the accident ward for that week, although they sleep in the other ward. We have a system of borrowing beds.

11391. Practically then, as I understand, you do send the patients into other wards in which there may be vacancies?—Yes. Sometimes it will appear on our weekly sheet that there are 35 or 36 patients in the accident ward; there are not five extra beds in that ward; they are sleeping out, but they are credited to that particular ward because they belong to that surgeon.

11392. That is for purposes of organisation, I suppose?—That is for organisation. Each surgeon takes a week in turn, and holds himself liable to be called on at any moment, day or night, for that week.

11393. So

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Chairman—continued.

11393. So that supposing you had a ward returned as having 35 patients in it, it would not be the case that they would all naturally sleep in that ward?—No.

11394. The ward would not be overcrowded by those extra five or six beds?—No, they would not be sleeping there.

11395. There was a question asked of Mr. Walker, at No. 11,085, in regard to convalescent homes; I asked him what your actual subscription to the various convalescent homes was, and his answer was: "I cannot tell you exactly, but it would be perhaps about 160 *l.* a year. Then in addition to that we have to pay for the maintenance of patients whilst at some of these homes." Does not the subscription cover that?—No, the subscription only gives the right to send; a weekly charge is paid.

11396. But you do not give any assistance to patients who leave your hospital, except to enable them to go to those homes, do you?—Yes, we do; we help them in other ways; we send them home in cabs, and we pay for their washing and we assist them to get clothes, and we assist them with instruments of various kinds, trusses, wooden legs and wooden arms, and often to enable tools to be taken out of pawn.

11397. Is there any particular fund that that comes out of?—Yes, the Samaritan Fund.

11398. Is that under you as the treasurer?—Yes.

11399. The clergyman does not manage it?—No; the only thing the clergyman is expected to do is to inform the steward of any cases that he may come across in the wards which, in his judgment, should be helped.

11400. You have a very large out-patient department?—We have.

11401. Do you make any inquiry into the cases at all?—No, we have no inquiry officer.

11402. Have you ever considered whether it would be advisable to have one?—It would be expensive and very difficult; we have often discussed it but we have never come to any definite conclusion upon it. I have myself since I have been treasurer spent a great deal of time in that department, and if I have noticed any particular individual whom I thought hardly the person to come there, I have, generally speaking, taken him aside and had a little talk with him. I have found people on one or two occasions from pure ignorance coming and trying to obtain assistance; but in most of the cases that has arisen in this way I have said to a man, "You are rather well-dressed to come here for assistance in this way," and he has answered, "Well, sir, I have got my best clothes on"; and I have found, generally speaking, that he has been under some local doctor and found himself not improving, and either at the advice of his doctor or upon his own desire has sought further advice.

11403. But have you got any particular reason to give why you think that an inquiry officer would be useless?—No, I do not say he would be useless, but I do not think there is any great amount of unfair advantage taken of our out-patient department. I often talk with our physician and surgeon as to what the position of

Chairman—continued.

these people is, and our physician and surgeon generally assure me that there is very little they can complain of at all.

11404. As regards the burial of patients, when friends come to the hospital and want to bury a patient, what arrangements are made about the coffin?—We put the body into a shell and the friends take it away; we do not bury it ourselves.

11405. But then does the hospital put the body into a shell?—We provide a shell, but the friends provide the future shell.

11406. Then, would it be left to the porter, or any official at the hospital, to secure the services of an undertaker, and thereby get a fee from the undertaker?—No.

11407. You think that does not occur?—I do not think so. Of course, when the patient comes in the friends have to sign a paper, as a rule, that they will remove the body.

11408. Have you any sanitary officer whose business it is to look after the building?—We have a clerk of the works.

11409. Is he a skillful man as regards buildings?—He has had a great deal of experience in it; he was foreman of a large firm of builders before he came to us; and, of course, our own surveyor, Mr. Cunrey, is constantly appealed to if anything occurs.

11410. Can you give us any idea what the cost of maintenance and repairs of that great block of buildings is?—No, I have not got those particulars; Mr. Brass has them.

Lord Monkswell.

11411. About the infirmary accommodation, do you know whether the infirmary accommodation is sufficient to provide for all the poor people who are sent away from the hospital, or not?—I could not say as to that.

Earl Cathcart.

11412. In your foundation your fundamental principle was to receive entirely free poor patients, was it not?—Quite so.

11413. Then, when you introduced the system of paying patients, which ousts the poor patients to a great extent, whose permission did you get to do that?—That of the Charity Commissioners.

11414. Upon your application?—Upon our application.

11415. We were told a very sad and solemn thing at our last meeting, namely, that more worthy and excellent poor people were sent away from your doors than those that were received; and it was suggested that that arose from the fact of a great part of your income being dissipated. Now was that income dissipated by means of extensive buildings?—It is difficult for me to answer that question. We built the hospital, no doubt, and we had to borrow 100,000 *l.* in order to build it.

11416. But more than 100,000 *l.* is represented, as far as one could judge from the accounts the other day; we only had a cursory view of them; there appears to be a large amount of interest paid?—I can give you the cost. We paid 100,000 *l.* for land; the cost of the hospital was 383,948 *l.*; the cost of foundation was 48,545 *l.*; the cost of furniture was 10,084 *l.*; the clerk of the

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Earl Cathcart—continued.

the works was 2,252 *l.*; architect's commission and charges in relation thereto, 10,500 *l.*; making a total of 555,326 *l.*

11417. But could you tell me shortly, because the public are really interested in that, how your very considerable income was dissipated; was it by building?—No, I do not think so.

11418. Then why is there that great dissipation of income which has been represented to us?—There is the diminution of income by the agricultural depression, the large amount we pay in parish rates, and the 5,000 *l.* which has to be paid to capital account each year.

11419. But that would not account for it all?—There are large sums of interest mentioned in the account on money borrowed; what was that money borrowed for?—For building the hospital.

11420. Then it was the very extended buildings which have caused this loss of income?—To that extent; we had to borrow 100,000 *l.*; otherwise the money was provided from our own funds.

11421. And the loss of income deprives the many poor people who are sent away of the sort of accommodation that they might have expected if it had not been for this dissipation of income?—We should probably have been able to occupy some beds doubtless, but we should not have had the style of hospital we have now got.

11422. But still does the style of hospital compensate you for having five large empty wards, each ward containing 30 beds?—I was not on the board at the time of the building of the hospital, but at one time it was suggested that one block should be left out; but ultimately I believe the governors in Court assembled decided that the better way was to complete the hospital.

11423. The question I am asking you now is simply the question that the public are asking out of doors; they want to know why these poor patients are shut out for want of means. With regard to the 1,800 cubic feet per bed that you mentioned, has it ever attracted your attention that in many cases they have been obliged to erect what I may call bronchial tents, that is to say barricades round the bed, to keep the cold air out in cases when they anticipate danger of bronchitis?—That is going on every day; but that has nothing to do with the cubical space of the ward; that would be so in any kind of ward. You will find in wards in small places a bronchitis tent used with a steam kettle in it; you would not like to put the damp atmosphere which that steam causes into a whole ward because one patient required it.

11424. Then with your large experience, is the hospital not on too extended a scale?—No, if only we had income enough, if we had not these large amounts to pay back. We are paying 5,000 *l.* a year back to capital account which is a large amount out of income.

11425. Then do not you think it is your duty to make some effort to be better off and to enable yourselves to accommodate the poor people who are waiting outside at your gates?—We did make an effort by obtaining the sanction of the Charity Commissioners to our occupying some of our empty wards with paying patients, in hope of increasing our funds.

11426. Would it not be right to say to the
(24.)

Earl Cathcart—continued.

public, "We made a mistake in our arrangements and we want funds to enable us to take in more poor patients; would not that be the right course to take?—Possibly it might; but on one occasion we did appeal to the public, some years ago now, shortly after the hospital was opened, when we placed the matter clearly before the public; we had a great struggle, but we did get 20,000 *l.*; but it was mostly subscribed by our own governors.

11427. Is it because the public have not confidence in your management that they do not come forward?—I cannot state as to that.

11428. It was stated that your buildings from one end to the other extend to a quarter of a mile, and that some times the dinners have to be carried an eighth of a mile; in your opinion, as a matter of fact is not that an inconvenient arrangement, to have so very extended buildings?—No, I do not think so. It is true that the land occupied by the hospital extends for a quarter-of-a mile, but the length of the hospital is only about 285 yards. It has been constantly put before us that we should do better to have everything cooked in one central kitchen and send it out in warm hot-water tins, as we do as regards the distribution of dinners; we do not find any difficulty.

11429. The kitchen is a central kitchen, and the radius is an eighth of a mile?—Yes, the kitchen is a central one; but the radius is only, on the average, 140 yards.

11430. Then you think there is not much to be done in the way of getting money from the public or from any other source to enable you to fill up these beds, when you have people clamouring at your gates for admission?—You see Guy's Hospital did their best to get 100,000 *l.*, and it took several years of very hard work, and they got some very large donations from very wealthy men, but they only got 100,000 *l.*

Lord Thring.

11431. Have you any personal control over the expenditure?—Well, I see every bill that is paid, and I am always inquiring whether this or that cannot be done cheaper, as far as that goes.

11432. You think that no further economy can be practised, as far as you can judge?—I do not think so; I think every care is taken, and everything done as cheaply.

11433. Do you superintend the contracts?—Every contract comes before me and is approved by the Court of Almoners before it is made.

11434. Have you got a mortuary?—We have.

11435. With respect to the bodies that you open, what rule do you observe with respect to them?—There is a special *post-mortem* room.

11436. Do you get the leave of the relatives to open the body?—Yes.

11437. And when the body has been opened what is done with it?—It is sewn up as quickly and perfectly as possible.

11438. Who sees to that?—The steward is responsible for that, and we have a man especially appointed for that work who does it.

11439. To your knowledge is it done decently, so as not to hurt the feelings of the relatives?—As far as I have been able to watch it, it is so. Now and then, of course, accidents do happen in
this

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Lord Thring—continued.

this sort of way: that there may have been a *post mortem* and after the body is closed, just before the relatives see it, something may exude from the mouth and there may be a disfigurement of the clothing; that is all; we never have any complaint of the condition of the body.

11440. But who is the really responsible person, the steward?—The steward.

11441. And he sees to it?—He sees to it.

11442. Then with respect to your nurses, how many nurses have you?—We have 115 nurses.

11443. And how many hours a day do they work?—The matron is coming, and I think she can answer those questions better.

11444. With respect to building expenses have you a regular architect?—Yes.

11445. What is his salary?—He gets 250 *l.* a year and two and a-half per cent. upon repairs.

11446. Can you tell us at all what the average expenses on repairs are?—They are about 2,923 *l.* a year, I mean taking an average of ten years.

11447. Is not that 3,000 *l.* a very large sum?—It is a very large place and there is always something going on; so much outside painting, and painting inside.

11448. Now with respect to that expenditure, have you ever gone into that to consider whether it is not too large?—We are always examining into that; it is always before our minds.

11449. And the result of your examination is that you do not consider that too large?—No, I do not think so; I do not think we could cut anything down; we never do a thing unless it is thoroughly threshed out by the treasurer and almoners.

11450. Who checks the architect's contracts; how is the actual working by the architect checked?—The architect prepares specifications, and we have a schedule of prices from the builder, which is periodically revised; and when the bill comes in it is checked by the clerk of the works, measuring all the work up.

11451. And do you employ the same builder always?—We have done so for some years.

11452. Never put it up to competition?—We did some years ago, but then we got schedules of prices, and this firm was much lower than anyone else.

11453. And you have retained them ever since?—Ever since; our architect believes we are doing wisely in so doing.

11454. How many hours a day are your house surgeons on duty?—They live on the premises; they are liable to be called for at any moment.

11450. But is not the work excessive; take the case of one of your house surgeons; is he not really something like 16 or 17 hours on duty?—No, I should not say so; I do not know exactly what hours they do keep. They go round the wards in the morning, and afterwards in attendance on the different surgeons and physicians; they are, of course, liable to be called for in the case of accidents.

11456. Take the case of your surgeon in the accident wards; he is there for a week, I understand?—That is the main surgeon, the full surgeon; he is not resident.

11457. What does he do?—He comes when ever he is called.

Lord Thring—continued.

11458. I thought you had a surgeon always on duty in the accident ward?—Not in the ward, but always accessible.

11459. How many hours would one man be really on duty?—I am afraid I can hardly answer that question.

11460. Would he be on 14 hours, or 15 hours, without intermission?—He would be liable to be called for; not employed all that time. We have a college house where they live, and have their own bedroom and sitting-room.

11461. Who is responsible for the fact whether the surgeons, to use an ordinary term, are not over-worked?—I think if it were the case we should not have the same intense desire to get these appointments; I think they are very keen in the competition for them.

11462. A man will overwork himself to any extent in order to get up in the world; I want to know whether you can or cannot tell me whether you think the surgeons are overworked, and if you think they are not, why?—I do not think they are at all.

11463. Then you think that a surgeon can keep his mind on the alert for 14 or 15 hours a day?—He is not on the stretch the whole time.

11464. You think it is all right, as I understand you?—Yes. We have two resident officers; there is one resident assistant physician and another resident assistant surgeon. We have two house physicians, we have four house surgeons, we have one resident accoucheur, and so on. But that is a kind of question that Dr. Sharkey, who will be here, can answer better than I can.

Chairman.

11465. In regard to this deficit that you have, a thing occurring not only at your hospital, surely it would be much better to appeal to the public for funds?—We might do so.

11466. But what is there against it?—I do not know that there is anything against it except the little chance of getting it.

11467. You never have done it?—We did it once and got 20,000 *l.*

11468. But do not you think that these hospitals are like any other business and must be advertised to a certain extent; that if you advertise tremendously you are more likely to get money left in wills and so forth?—We are fairly well known; always before the public I think.

11469. Then you do not think there is much use in advertising to let the public know that you want more funds to open the empty wards?—I should very much like to open the hospital; nothing would please me better.

11470. Are you under a disadvantage in this way; that many people who would feel inclined to give have the impression that being an endowed hospital you must be rich?—I think there is quite that public delusion.

11471. Then by advertising a great deal you could create a feeling, could you not, which might dissipate that impression?—Well, we might.

11472. But have not your governors considered that very carefully?—Every now and then it has been talked of, but no definite action has been taken

5 February 1891.]

Mr. WAINWRIGHT.

[Continued.]

Chairman—continued.

taken. I was asked when I was appointed treasurer whether it was my intention to do so; I said that I could not answer straight off, but I should much like to get the money if I saw my way to do it.

11473. As regards the staff appointments, the assistant physicians and surgeons, and so forth, are they limited in any way, or if a man is once on the staff, is he always on the staff?—He is appointed during the pleasure of the governors.

11474. Which means that he will be there as long as he conducts himself satisfactorily?—Yes, but there is a limit, in this way, that he must not be more than 60 years of age or have had more than 20 years' full service. Our senior surgeon is retiring at this moment after having served 20 years as full surgeon; he has not arrived at the age of 60.

11475. Have you suggested any reform since you have been in the hospital?—One is always looking round and suggesting improvements in little ways. I have had a great deal of experience in dealing with large institutions. For instance, in that large school to which I have referred, where there are 800 or 900 children, and I have done my best to bring to bear, for the benefit of the hospital, the experience that I have gained.

11476. You consider it necessary that in all hospitals there should be one person on the spot with a fair amount of authority?—Yes; I cannot conceive an institution without a head.

11477. In regard to the questions asked you by Lord Thring as to the bodies of patients after post mortem examinations, the steward himself does not go down to that?—No, he is responsible for it; we have a man who is called the post mortem man, who practically does the work, but it is under the steward's supervision, and if anything goes wrong it is referred to him.

11478. What class of man is the one you speak of as doing the work?—I cannot say; he has been with us some years.

Lord Thring.

11479. Is he a man at 1*l.* a week, or 2*l.* a week?—I think he would get 30*s.* a week.

Mr. ROBERT BRASS is again called in; and further Examined, as follows:

Chairman.

11493. WILL you tell us what the gross income of the St. Thomas's Hospital is. I will refer you to the figures that you gave us last time. In answer to question 10881 you say, "The rental that we received for 1889, for the parish of Southwark, was 11,908*l.* 12*s.* 1*d.*; from the City we received 11,133*l.* 9*s.* 6*d.*; from Hackney and Clapton we received 7,146*l.* 18*s.* 6*d.*; and from Wapping we received 1,468*l.* 0*s.* 6*d.*?"—Yes.

11494. Then at question 10883, Lord Thring asks: "These receipts are net, are they?" and the answer is: "Yes, the London estates amount to 31,665?"—It ought to be 31,657*l.* gross.

(24.)

Chairman.

11480. There is no nurse appointed to look after them, to see that they are well wiped?—No.

Earl of Lauderdale.

11481. With regard to the 20,000*l.* that you got by your appeal to the public, when was it that you appealed?—I think it was just after the hospital was opened in 1871.

11482. Did you appeal for any specific sum?—We appealed for 20,000*l.*

11483. And you got it?—We got it from our own governors.

11484. You have never appealed for more?—No, never since then.

Earl Cathcart.

11485. If you were full up in your hospital that would bring down the proportionate establishment charges, repairs, and everything else?—It would.

11486. I suppose you consider your building a sufficient advertisement?—It is a very large building, and, facing the House of Commons as it does, it makes a great feature in the neighbourhood.

Lord Monkswell.

11487. One question about discipline; I understand you are responsible for the discipline of the students?—Well, the dean of the school is responsible for the discipline of the students.

11488. I suppose he would come to you if he wanted to dismiss a student?—Yes.

11489. He could not dismiss a student without your authority?—No.

11490. Has he ever been to you to ask for any power to dismiss a student?—Not since I have been appointed.

Earl of Arran.

11491. Have you ever had any of your farms unlet?—Yes, we have two now.

11492. Have you ever considered whether they could be utilised for the supply of the hospital in any way?—We have talked that over, but the farms are so awkwardly situated that the expense of getting produce up and down to London would probably be too great.

The Witness is directed to withdraw.

Chairman—continued.

11495. Now is that the gross or the net income?—That is the gross income.

11496. Then what would be the net income from those estates?—The sums that we really received in 1889 for the city property, or what is called London property, amounted to 31,099*l.* 9*s.* 9*d.*; that was really the amount that we received.

11497. Those were the actual receipts?—The actual receipts.

11498. There being about 500*l.* or 600*l.* difference between that and the other figure?—Yes; that is accounted for from some of the income being in arrear; we should get it, perhaps,

5 February 1891.]

Mr. BRASS.

[Continued.]

Chairman—continued.

haps, this year; part of it was brought on from the last year. You may take that as the average that we receive yearly; we cannot always get in all the rents that are due by the time given to me to close the books for the year.

11499. Now, as regards the expenses of commission for collection and so on; is that deducted?—I was going to give you now the deductions. That is the net amount received in hard cash. From that amount I have to deduct 996 *l.* 3 *s.* 4 *d.* for rent-charges, viz., 483 *l.* 6 *s.* 8 *d.* to Bridewell Hospital, 483 *l.* 6 *s.* 8 *d.* to St. Bartholomew's, and 29 *l.* 10 *s.* for minor charges; we receive the money and pay it over to them.

11500. Then with regard to the expenses of collection, and so forth?—That goes in with the general expenses of collection; I have apportioned my salary at 250 *l.* for collecting the rents on the London property; and also the architect's and surveyor's expenses at 200 *l.*; these two amounts would represent the whole expense for managing and collecting the 31,099 *l.* 9 *s.* 9 *d.*

Lord Thring.

11501. The rent-charge is a deduction from the value of the property, really?—Yes, but I wanted to explain it in that way, because I show in this statement of receipts and expenditure the amount of 31,099 *l.* 9 *s.* 9 *d.*

11502. But the rent-charge really does not belong to you?—It really does not. The cost of collection and management of the town estates is something like 1½ per cent.

Chairman.

11503. Now with regard to these architect's charges; you have estimated them, I suppose?—His total charges are 315 *l.* 10 *s.* 3 *d.*; from that I have taken 200 *l.* for valuing property that comes out of lease in London, reporting thereon, and his attendance at the meetings; and 115 *l.* I have put as the sum charged to the hospital expenses.

11504. Now what does that 31,000 *l.* consist of; are they ground leases?—A great deal of it is from ground rents. We have property which falls in at times into rack rental, and it is through that our property has increased so in value during the last few years; property in the Borough, on which we were only receiving ground rents, are now letting at rack rentals.

Earl of Kimberley.

11505. You let them on leases?—Yes.

11506. Short leases?—Repairing leases for seven, 14, or 21 years.

11507. You have no property in hand?—No, I think not at present; we have sometimes had a house for a month, or it may be a twelvemonth, unlet, but as a rule we let them.

11508. And you do not expend any money yourselves in repairs, but make a bargain with the lessee?—Yes; Mr. Currey values for dilapidations at the expiration of the leases.

11509. So that there is no amount to be deducted for repairs?—We have a certain amount for workmen's bills for estates.

Earl of Kimberley—continued.

11510. In London?—Yes; it amounts to 732 *l.* 5 *s.* 9 *d.*, but these are for alterations of a special character.

11511. Then you have to make that deduction?—Yes, we have to make that deduction.

Earl Cathcart.

11512. Are the repairs contract repairs?—Yes, as a rule these alterations are contracted for.

Chairman.

11513. Are there any other deductions?—No other deductions.

11514. That makes about 2,600 *l.*?—£.2,178 9 *s.* 1 *d.*, which includes the 996 *l.* 3 *s.* 4 *d.* rent charges; deducting this amount the total charges in connection with the London estates may be taken as 3¼ per cent.

11515. Then do you pay income tax?—We deduct the income tax from the tenants, and the Government return it to us.

Earl of Kimberley.

11516. So that there is really no deduction. Did I understand you right that after you have paid income tax, or deducted income tax from the tenants, you get it back from the Government?—Yes.

Chairman.

11517. In answer to Question 10838, taking the landed estates in the country, you said, "Last year they" (that is the rents) "amounted to 14,481 *l.*" Is that right, or have you any correction to make?—The sum is 14,481 *l.* 8 *s.* 8 *d.*

11518. That is the actual sum received, is it?—No; that is the actual sum that I ought to receive.

11519. What did you actually receive?—I received actually 12,998 *l.* 16 *s.* 11 *d.*

11520. Now, what is to come off that?—Off that there are certain rent-charges, 233 *l.* 2 *s.* 8 *d.*; my proportion of salary, 250 *l.*; land surveyor's charges, 596 *l.* 7 *s.* 1 *d.*; and workmen's bills for the estate, 2,045 *l.* 13 *s.* 1 *d.* These are the whole of the deductions.

11521. Does that include Mr. Trumper's travelling expenses?—Yes; and it also includes his management of the farms we have had in hand. We have but two farms now in hand, of about 500 acres.

11522. Can you tell us what the acreage is of the country property?—The country property consists of about 8,750 acres; it may be a little more or less. Great pains is taken by Mr. Trumper in surveying and reporting upon the estates from time to time, and also in obtaining, as far as he possibly can, the best tenants for them; they are spread all over England, from Yorkshire southwards.

Earl Cathcart.

11523. You were good enough to say that you would give me what the percentage of loss on your agricultural estates was during the year?—I calculate it at between 9 and 10 per cent.

11524. I should have thought it was more than that; you have been exceptionally fortunate

5 February 1891.

Mr. BRASS.

[Continued.]

Earl Cathcart—continued.

nate if it is only 9 or 10 per cent?—That I take as between the two years 1888 and 1889; the difference in the rental is about 3,000 *l.*; there are 620 tenants altogether.

Earl of Arran.

11525. Six hundred and twenty agricultural tenants, do you mean?—No; the total number of tenants in country and London. In London we have 460, and the remainder are country tenants, many of them being cottage tenants.

Earl Cathcart.

11526. Your whole income derived from land and City property is how much?—£. 46,574 11 *s.* 3 *d.* gross.

Chairman.

11527. Can you tell me what the cost of maintaining this building opposite is?—Taking an average of 10 years it is about 2,900 *l.*

11528. That is what comes under the cost of repairs?—Yes, the cost of repairs for the whole of the building.

11529. Can you tell me what the gross rateable value is?—I have sent for it; I am not able to state it at this moment.

Lord Thring.

11530. What does "repairs" of the hospital include; does it include additions to the building?—Yes, if we have made any. I do not think we have made many additions; we have made alterations, but no great structural additions.

11531. It includes painting?—Painting, cleaning, and all sorts of repairs, such as are continually arising in a large place of that description.

11532. Not furnishing?—No.

11533. If you put up new lavatories, or anything of that kind, that would be included?—Yes.

11534. Or if anything happens to the roof?—We should make it good. It includes keeping the building in thorough repair, whitewashing, painting, and new floors at times. There is an immense traffic going on in the out-patient department and the corridors too; we have had to take them up.

11535. As you are talking about floors, have you found when you take up the old floors that there is a great accumulation of exceedingly nasty matter under the floors?—No, we have not found so. The floors are all tongued so that no dust can fall down between.

11536. Have you taken up any of the floors of the wards?—Yes, in some of them.

11537. And do you find in taking them up that the washing has not carried down very foul matter between the boards?—No, the floor boards are exceedingly well joined; there is a tongue between each board and the next, so that it is almost impossible for anything to get down.

11538. Of what wood are the floors?—Oak.

Chairman.

11539. How much interest do you have to pay (24.)

Chairman—continued.

upon the remainder of the loan?—The interest we paid last year was 1,175 *l.* 5 *s.* 11 *d.*

Earl of Kimberley.

11540. At what rate do you borrow?—At 3 per cent. now; we used to pay 4 per cent., but the last two or three years we have had it done for 3 per cent.

Lord Thring.

11541. About the floors, do you wash them, or do you dry rub them?—Dry rub them principally in the wards; they are polished.

11542. Therefore there is not liquid, except where there is blood?—Just so; and that blood is simply wiped up; it has not time to go through.

11543. Then you have oak floors tongued and dry rubbed in the wards?—Yes.

Chairman.

11544. I see in this balance sheet "Repayment of loan to the Law Fire Insurance Society, 6,600 *l.*"; that leaves you 33,000 *l.* odd to pay off?—Yes.

11545. You are paying at the rate of 3,300 *l.* a year; when you come to the end you will be all the better off by the saving of that interest?—Yes; each year we get better off by the payment of 3,300 *l.*

11546. That will enable you to open some more wards?—It will; at least we hope it will. By the time we have cleared this off we hope to be in a better position; no doubt the debt cripples us very much.

11547. Do you check all the accounts before they go before the committee of almoners and treasurer?—The accounts are sent up from the various departments, such as the steward's, the pharmaceutical and other departments; they are checked there as far as the quantities are concerned; when they come up to me the additions are examined and seen to be correct. I do that before presenting them to the treasurer and almoners, who, after careful examination, order them to be paid.

11548. Do you pay all the small bills in a certain week; is there any rule on that point?—No. Sometimes we are very short of cash; at the beginning of the quarter we pay off more than we do at the end of the quarter.

11549. You wait, in fact, till your balance is sufficient?—Till it is sufficient to pay the bills.

11550. Have you any amount of capital which you can sell out at all?—We have capital in the Court of Chancery, and also in the hands of the Charity Commissioners; but they will not allow us to draw it out unless we can show that we have got a better investment than 2½ per cent., or a good investment which they approve.

11551. Then your answer to my question is that you have no stock that you can sell?—None at all.

Earl of Kimberley.

11552. I suppose you have got money in the funds invested at 2½ per cent. in that way, and

L

you

5 February 1891.]

Mr. BRASS.

[Continued.]

Earl of Kimberley—continued.

you are paying 3 per cent. for borrowed money?—Yes.

11553. Does not that seem to you one of the most foolish arrangements that you could have?—I think so; we were paying 4 per cent. formerly for this loan, at which time we have had money in the hands of the Charity Commissioners, in the Funds, at $3\frac{1}{2}$ per cent.

11554. So that for a mere matter of red tape your hospital has been mulcted in 1 per cent. a year?—Yes.

Chairman.

11555. You still owe the Insurance Society 33,800 *l.*; have you enough money in the hands of the Charity Commissioners and the Court of Chancery to pay that debt now?—The money invested in the hands of the Charity Commissioners is 27,629 *l.*

Earl of Kimberley.

11556. How does that money arise?—From various causes. Sometimes a railway, for instance, will take a portion of our land away; the amount we receive for that is invested by the Charity Commissioners, and the dividend arising from that forms part of our income. We have also a further sum of 39,581 *l.* invested in the Court of Chancery.

11557. How did that arise?—From land very likely sold in the same way. I hardly know what the distinction is.

Chairman.

11558. Does that arise from legacies?—No, they are never invested.

11559. Could you tell us how much the legacies have averaged for the last few years?—You might take this last year; I think something about 3,000 *l.* a year, sometimes far less, sometimes more, but I think on an average 3,000 *l.* is the amount of donations and benefactions that we receive.

11560. But I mean legacies, actual money left, actual legacies?—Of actual legacies we have very few now. I think the general public make their legacies payable to the hospitals supported by voluntary contributions generally.

Earl Cathcart.

11561. Did it not leave you rather in a hole when you lost your law suit about the rates?—It did so.

11562. That was a loss of so much income to you; if you had foreseen that loss, probably you would not have embarrassed yourselves with so much building?—No, I do not suppose that we should. In the old hospital the rating was a mere nominal sum.

11563. And that loss your governing body could not have foreseen?—No.

Earl of Arran.

11564. Do you find when railways take your land that it results in a loss of income to the property, I mean to say, that the amount of interest which you can get on the money paid in compensation is less than the rent you got before for the property taken?—No, I should hardly think so because very often if we sell land it is sold so as to bring us in a rental

Earl of Arran—continued.

similar to what we have been accustomed to receive; we always endeavour if we can to obtain that.

Chairman.

11565. You told us the other day that your gross receipts were 67,000 *l.*, and your net income was about 40,000 *l.*; you have accounted for certain deductions; can you tell us what the rest of them are?—I have told you that the amounts that actually passed through my hands were about 67,000 *l.*; that is with the balance brought forward from the year before; 4,337 *l.* is brought forward from 1888. We always have a balance in our favour at the end of the year, for the simple reason that we pay our salaries at the old quarter day, and so we are obliged to keep a balance to meet those expenses.

11566. Then there are the charges you have mentioned on the two estates, country and town, and that amounts to about 6,000 *l.*?—Yes.

11567. What else is there?—The difference arising from the excess of payments over receipts in what we call the “extra expenditure” in the statement of receipts and payments that you have before you. For instance, you will find repayment of the Law Fire Insurance Loan, 6,600 *l.*; interest on loan of the Law Fire, 1,175 *l.* Ditto to Union Bank, 681 *l.*

11568. What is that; is that overdrawn account or what?—That was for interest for sums borrowed, like the 4,000 *l.*, which you will find on both sides of the account. Temporary Loan.

11569. Then I see the words. “Leaving 14,000 *l.*,” in respect of the loan from the Union Bank?—Yes; we have paid it off now. Then there is the interest on the purchase-money of the Evering-road property, Upper Clapton; we purchased some property, and that this was the interest from the time of purchase to the completion of the transfer; we received the rent, and had to pay the interest till it was properly conveyed to us; and you will see a payment of 153 *l.* for the Medical School; that is for scholarships and payments of that sort. Then on the other side you will find that in the case of the Law Fire Office there was a Commission of 49 *l.* 11 *s.*; receipts from poor-paying patients, 112 *l.* 9 *s.*

11570. Have you any idea how far that 112 *l.* met the expenses?—I should not think it would anything like meet them. I cannot tell you what proportion it would be; certainly that would nothing like cover the expense.

Lord Thring.

11571. What are those scholarships that you have referred to?—Certain sums of money have been left to us invested in the funds, the interest of which is spent in scholarships and medals for the best students. For instance, Sir William Tite left us a certain sum of money for a scholarship, which amounts now to about 27 *l.* a year.

11572. It is not hospital money?—No, it is trustee money that we received.

11573. You

5 February 1891.]

Mr. BRASS.

[Continued.]

Earl Cathcart.

11573. You know that the deduction for the assessment between the gross estimated rental and the net rental is uniform all over the parish?—With regard to the parish rates, there is a quarterly notice that was sent in (*handing in the same*).

Chairman.

11574. "Rateable value 8,000 *l*," I see here?—Yes.

Earl Cathcart.

11575. It was rated lower than 8,000 *l*.?—Originally it was higher; but since the appeal to the House of Lords the parish has reduced it.

Earl of Kimberley.

11576. Could you give in one answer the whole of the various sums that you have mentioned that make up the 67,000 *l*.?—The rental, town and country, was 44,098 *l*. 6 *s*. 8 *d*., and then there were gifts and other sums received, which are uncertain, making 6,369 *l*. 14 *s*. 9 *d*. Then there was cash repaid in respect of farming expenses, 1,173 *l*. 17 *s*. 9 *d*., and proceeds of sale of land, 125 *l*.; enfranchisements, 32 *l*. 9 *s*. 2 *d*.; Law Fire Office for losses by fire, 372 *l*. 10 *s*., and a half-year's commission from the Law Fire Office, 49 *l*. 11 *s*.; and then there is the amount received from St. Thomas's Home, and poor-paying patients, 5,714 *l*. 4 *s*. 8 *d*. There is the temporary loan of 4,000 *l*. of the Union Bank, the premiums of insurance repaid by tenants, 1,087 *l*. 19 *s*. 5 *d*.; then the balance brought forward from last year, 4,337 *l*. 1 *s*. 9 *d*.: making a total of 67,360 *l*. 15 *s*. 2 *d*.

Earl Cathcart.

11577. And what do you insure the building at?—£. 80,000. It is fireproof.

MISS ISABEL ENTWISLE, is called in, and, having been sworn; is Examined, as follows:

Chairman.

11585. You were formerly a nurse at St. Thomas's Hospital?—Yes, I entered there in January 1883.

11586. And how long was your service there?—I trained there, and I found myself hardly robust enough to remain constantly, so I was given the post of sister on the extra staff, to be called upon when required, to take charge of the wards in the absence of the permanent sisters during holidays or sickness. I left in September 1888.

11587. As a part of their duties, would that extra staff be called upon to act as what are called special nurses?—Not always, but occasionally; and in case of more nurses being required in the wards, especially at night, the extra staff is called on.

11588. How long did your training last?—About 14 months.

11589. During that time you were a probationer?—Yes.

11590. And after 14 months you were a trained nurse, were you?—No.

(24.)

Earl Cathcart—continued.

11578. And what the furniture?—I have not the figures by me for the furniture, but it is not any very large amount. You see the danger from fire is very little; nurses and others are always about.

Lord Monkswell.

11579. I understood you to say that you received a certain sum in respect of premiums of insurance?—We pay all premiums of insurance on all our buildings, and we charge our tenants for it, and get it back again; by this plan we are quite certain that all the premises are insured. We insure and get a separate receipt for each property.

Chairman.

11580. Where does your Samaritan Fund come from?—Quite separate from the hospital. They are donations given by the outside public, principally from our own governors, who take an interest in the place, and send 5 *l*. or 10 *l*. They have also a small sum derived from Randue's Trust, but the principal sum is got from donations.

11581. Is it generally on the right side of the account?—We keep within our funds; we use as much as we possibly can of it; we can always spend it.

11582. Supposing it is overdrawn?—We have to carry the deficit to the following year; it is kept entirely separate from your hospital books.

11583. What is the amount of the Samaritan Fund?—Our receipts last year were 769 *l*. 15 *s*. 8 *d*., and the disbursements 778 *l*. 13 *s*., so that we run as close as we possibly can.

11584. But you do not overdraw?—Occasionally we do to a very small extent.

The Witness is directed to withdraw.

Chairman—continued.

11590*. What was the next step?—I think at St. Thomas's they do not consider you trained till you have been three years on duty.

11591. But when you ceased to be a probationer, were you a staff nurse?—I went through all the duties, staff nurse, special nurse, night nurse, sister, assistant matron, and matron in the country.

11592. After the 14 months of your training, were you presumed by the matron of the hospital to be qualified to act as staff nurse?—Yes, and I acted as a sister. I had had some previous experience before I went to St. Thomas's.

11593. Did you find the hours excessive that you had to work at St. Thomas's?—I think, according to the time-table, they were very long, excessive; and, according to what we worked, they were longer still, and altogether the service was too exacting. The sisters work alternately in a long week 78 hours, in a short week 73½ hours; that is according to the time-table, but that is not what we actually worked. They

L 2

have

5 February 1891.]

Miss ENTWISLE.

[Continued.]

Chairman—continued.

have three weeks' holiday in the year; all work more than even these very long hours. Accident sisters in the male wards do not go out all the week. The doctors' rounds come once or twice a week out of their time off duty. They are called up in the night for operations if any take place in their wards. They are kept up after 10.30 p.m., if there is a prospect of an operation taking place. They go on duty an hour earlier in the morning if they are short of nurses through illness, or the staff nurse having a day off. Those are all extra to the hours I have mentioned. They are paid 30*l.* to 50*l.* per year according to length of service and experience. I do not think that there are many who receive 50*l.* at this present moment. Some clothes (uniforms) are given to them and some allowance for washing, but neither is sufficient. The whole responsibility of what happens in a ward during the day or the night is on the shoulder of the sister. Coming to the staff nurses, the day staff nurses at St. Thomas's work 78 and 73½ hours a week, and they have a fortnight's holiday in the year. They constantly work more than that. I do not think a fortnight would elapse without extra hours being added. Special nurses have 11½ hours each day of the week, that is 80½ hours in the week; but the work is not hard, and they are often given this duty as a rest to their feet after the rush of general duty.

11594. Do these arrangements exist at present, or have they been altered in any way, do you know, since you were at the hospital?—I do not know that they have been altered; in fact, I heard lately that they are exactly the same.

11595. To get these hours of duty in the week, what time would a sister begin duty?—A sister goes on duty at St. Thomas's at 8 o'clock; before that she has had her breakfast and made her bed and done part of her room; and then she goes on duty at 8 o'clock. At 12 o'clock she goes down to dinner, and has half-an-hour for dinner.

11596. Does she live in a room adjacent to the ward?—Yes, she does; a very good room.

11597. Is that some distance from the dining-room in some cases?—Yes.

11598. How long do you say she has for breakfast?—She has had her breakfast before she comes on duty; all the nurses at St. Thomas's have breakfast before they come on duty; they are not allowed in the wards till then.

11599. Then the sister has half-an-hour for dinner, you say?—Yes.

11600. That entails going to and from the dining-room?—Yes.

11601. That makes a deduction; it takes three or four minutes, I suppose?—Yes.

11602. So that that reduces the half-hour?—Yes.

11603. That takes us up to after dinner; then what time is tea?—The sister gets her tea about half-past four.

11604. Where does she take that?—In her own room, and the nurses in the kitchen of the ward.

11605. Then the sister is better off in that respect, I suppose; where is the kitchen of the

Chairman—continued.

ward?—The kitchen of the ward is just opposite the sister's room.

11606. Then that takes us up to after tea-time; that is a meal that she has at her own convenience in her own room?—No; she has to take it according to the time table, because the probationer left in charge of the ward has to go to her tea at five, so that if the sister does not get her tea before that she cannot have it at all.

11607. That takes till 5 o'clock; then what duties has the sister for the rest of the day?—The sister takes charge of the ward from 5 to 6, while the probationers are away, and she reads evening prayers then in the ward, and gets up the patients who want to sit up for the evening, and looks after them generally.

11608. What time are prayers?—Prayers are generally at half-past 5. At 6 o'clock the evening's work begins; the probationers come back then. At 8 o'clock is supper; that is half-an-hour.

11609. The instruction of the night nurses between 10 and half-past is generally the last duty of the sister before she goes to bed, is it not?—Yes.

11610. She gets to bed at what time?—On a regular night she leaves at half-past 10; if her surgeons or physicians are in the ward she cannot leave.

11611. In the ordinary way her day lasts from 8 in the morning till half-past 10 at night?—Yes; but she has two hours off duty during that time.

11612. Does that include the dinner-time?—No.

11613. She has her half-hour for dinner and half-hour for tea and half-hour for supper and two hours besides?—Yes; but of course if the doctors come into her ward during her two hours she has to come and go round with them.

11614. Then the nurses' hours, what are they?—The nurses come on duty at 7 in the morning, that is the trained nurses; the staff nurses, as they are called, are the trained nurses. And the probationers come on duty also at 7 in the morning. And the staff nurses and sisters take alternate evenings and afternoons to have their two hours off.

11615. And when do the staff nurses dine?—At the same time with the sisters, at 12 o'clock, and the wards are left for half-an-hour in charge of the probationers.

11616. In case there are any dangerous cases, would a trained nurse look after the ward as well as the probationers?—If the sister thinks that there is anything urgent she will send for her dinner and have it in her room, and not leave the ward.

11617. After dinner there is tea again for the nurses?—The staff nurse has her tea in the kitchen of the ward at half-past 4, and for her supper she comes down stairs at 8 o'clock.

11618. And is the time half-an-hour?—Yes.

11619. She has to travel from the ward to the dining-room?—Yes. It is almost better that it should be done in that way. If you have your meals close at hand you are liable to interruption; if you go away you are not so liable to it.

11620. But it is only half-an-hour; and therefore

5-February 1891.]

Miss ENTWISLE.

[Continued.]

Chairman—continued.

fore the same deduction must be made as in the case of the sisters for the time occupied in going to and fro?—Yes; some wards are near, and some are very far off in St. Thomas's.

11621. Do the nurses go up to their rooms before dinner?—Yes.

11622. Do they make their own beds?—They make their own beds.

11623. Do they perform any other menial services, or did they in your time?—In the wards they wash the tops of the lockers and scrub mackintoshes after operations.

11624. Do they scrub the floor?—No.

11625. Or do they clean inkstands, for instance?—The ward maids do that at St. Thomas's.

11696. You consider these hours excessive, you have stated?—Yes, because they are for seven days of the week.

11627. Did you ever make any remonstrance or complaint about the nurses' work?—No; because St. Thomas's is better off than any other hospital in London.

11628. That might be so; still that does not lessen the hours of work?—No; but when you are in the best hospital, you cannot complain.

11629. You think that they are overworked?—I think it shows that they are overworked, because many have to give up because they cannot stand the work in the wards for long, and they have to give up just when they are most valuable; you lose them because they are tired.

11630. Was this excessive work ever taken into consideration, or objected to by the physicians or surgeons?—I have never heard it done so publicly, but I have heard it said privately that they thought hospital nurses worked too hard; the doctors at St. Thomas's, I mean.

11631. Then if no complaint is made to the authorities of the hospital, have they reason to know that the nurses are overworked?—I think for a long time the nurses at St. Thomas's considered themselves very well off as compared with other hospitals; their lodging was so much better, their food was so much better, they were so much better cared for generally. At the same time they are all selected, strong young women; they have to be interviewed by the doctor beforehand; and yet I should think that if you got the numbers you would find that a great deal more than the proper percentage break down.

11632. A great number break down you think?—A great number break down.

11633. In fact, you think that that hospital is the best hospital as regards the nurses, and bad is the best?—Yes.

11634. Is that the particular thing you complain of, the over-work of the nurses?—Yes; I do not think it is sufficiently taken into account the trying nature of the work, the harrowing scenes, the death beds, the sorrowing relatives, the atmosphere of sickness and bad smells in which you live your life. Very often you are too tired to go away from the hospital when you are off duty. For a fortnight very often you do not go away from the hospital atmosphere.

11635. Is there any garden attached to the hospital?—Yes, a place to walk about in; a

(24.)

Chairman—continued.

terrace in front; but when you have been on your feet all day you cannot walk in the streets; you feel too tired.

11636. As regards the scenes in the wards which you speak of, that is more a matter of hospital administration; the nurses have nothing to do with the relatives, have they?—The sister of the ward has everything to do with the relatives.

11637. I was speaking of the nurses; what has the sister of the ward to do with the relatives?—They come to her to ask about their friends; or if a death occurs, or if it is a terrible operation, they are waiting at the ward during the operation; and if the patient dies it is your duty to see that the relatives are there; they never die alone if we can possibly avoid it.

11638. What steps would the sister have to take in an urgent case?—She would have to send to the gate to the porter to fetch the relatives in the night, or have to telegraph for them; let them know somehow. She would be blamed by the doctor if she did not have the relatives.

11639. But are not those duties that you have been speaking of duties that are almost inseparable from the occupation of nurses?—Undoubtedly they are inseparable from it, but it should be taken into consideration that in addition to all this hard work they have to go all through these terrible scenes as well.

11640. And what remedy do you propose; a greater number of sisters, shorter hours, or what?—It is extremely difficult, because the sister cannot be too long absent from her ward; it is impossible; she must know all that is going on. If she has too much untrained labour under her, she has very often to do a great deal of work which there is no necessity for a sister to do, because her probationers do not know how to do it. And the same with the staff nurse; the staff nurse has often to do quantities of things because the probationers are so inexperienced that they are not able to do them.

11641. Then, according to that you think that the probationers ought not to be employed in that way?—They must learn in the ward, because there is no other way for them to learn; but they must not be counted as nurses.

11642. You would like to see the number of staff nurses increased?—Yes. I think the wards require two staff nurses during the day.

11643. What staff nurses are in the wards now?—Always one trained staff during the day and one trained staff nurse at night, and the sister. There are three trained nurses in those wards of 30 beds, and the rest untrained.

11644. How many probationers?—Sometimes you get two probationers and sometimes three; sometimes they never have been in the ward before, and sometimes they have been in a hospital just a month, and know very little, and the sister and staff nurses are expected to teach them their duties, and it is very laborious work, teaching constantly, because they change them once a month in the wards.

11645. So that in the ward there is one off and another on, a sister, and two nurses, and two probationers?—Yes, or sometimes three probationers.

L 3

11646. Then

5 February 1891.]

Miss ENTWISLE.

[Continued.]

Chairman—continued.

11646. Then in addition to that you have ward maids?—Yes, for the kitchens; to clean all the kitchens and to help clean the grates.

11647. To do what has been described as the menial work?—Yes, and scrubbers to come and scrub things, and window-cleaners and floor-polishers. The cleanliness is beautiful.

11648. There are then five, or possibly six, people whose business it is to be in the ward in the daytime; now what about the night?—They have one staff nurse on during the night; that is all in those wards.

11649. And no probationer?—No, unless there is any special case; then a special nurse is sent up; that is ordered by the doctor.

11650. And do you consider that that staff of one sister, one nurse, and two or three probationers is insufficient in the day-time?—Yes.

11651. What amount would you like to see it increased by?—I would like to see all the wards at St. Thomas's that contain 30 beds have two day staff nurses and three probationers. They have now one day staff nurse and one night staff nurse.

11652. Then, as a matter of fact, in the day-time there is now only one staff nurse and two or three probationers?—Yes.

11653. And you think that they ought to be increased by one staff nurse?—By one staff nurse and one probationer; so as always to have two staff nurses and three probationers in a ward in the day-time.

11654. Had the probationers in your time to run with messages?—We would send them down occasionally to fetch the doctor in urgent cases.

11655. Does the ward maid do anything of the running about?—No; she has nothing to do with the nursing of the sick; only on the Sunday evening, in accident week, or something of that sort, you would get your ward maid to do that. The ward maid has plenty to do to attend to all the washing up of the crockery and all the dinner service for these 30 people, and to clean her kitchen. There is a certain amount of cooking done in the ward kitchen; tea, supper, and breakfast are prepared there.

11656. Does she assist in making beds at all?—No.

11657. Is that done by the nurses?—Yes. The sisters make their own beds generally; I always did; I do not know whether it is the rule.

11658. Do you think that these sisters, having the scenes of which you have spoken, which are inseparable from hospital life, become nervous and want more recreation?—They want more holiday, more rest.

11659. Three weeks holiday is not enough, you think?—No.

11660. Have they any plan of going out from Saturday to Monday?—Not often. It is very difficult to get your day off; you are supposed to have your day off once a month, but I never got it all the time; you have got to see that your staff has it.

11661. As regards the food, have you anything to say as to the food provided for the nurses?—No; it is quite as much as you can expect from a charity; you cannot expect luxuries;

Chairman—continued.

it was very good wholesome food and well served, quite right about that.

11662. Your great point is that, if possible, there ought to be more nurses?—Yes, and more trained nurses. St. Thomas's trains many more nurses than they require for themselves; they train them for lots of hospitals, and this is very hard work on the trained staff who are there.

11663. But the nurses at St. Thomas's are trained by the Nightingale Fund, are they not?—Yes, as to cost and lectures only. I have got the hours of the probationers here.

11664. I should like to have them; you are speaking now of what occurred in your time?—Yes, I am. There is the list (*handing it in*).

11665. The probationers are harder worked than the nurses, is that so?—No; they do not have such long hours; their ward work averages 65 hours a week. You see they are obliged to do classes, examinations, and lectures in their time off duty; and also they have got to make their beds and partly clean their rooms.

11666. You said that the food was satisfactory?—Yes. Sometimes if the probationers are on night duty (they are not very often, but there is a night time table for them on the list) they are called up in the day to lectures.

11667. Then as regards the special nurses, what are their hours?—The special nurses are on duty 11½ hours each day for a week, that is 80½ hours; that does not include their meals; that is real work in the wards.

11668. That is the actual time they are in the wards?—Yes.

11669. And does not include their dinner-time or their tea-time?—No, or their supper-time. But it is not hard work; it is very wearisome, because you have just perhaps one case to attend to; perhaps you are in a small ward and the patient sleeps a great deal; it is not hard work, but long hours.

11670. These are cases that require a nurse constantly with them?—They require a nurse always with them watching. The wards at St. Thomas's are arranged to hold 30; very often they run over this number in accident week to 35 or 40, but no extra nurses are assigned to those extra patients.

11671. Does that actually occur, because we were told by the treasurer that though they are on the list of the accident ward, those extra cases are treated in different wards?—They may go to sleep in other wards if you cannot accommodate them; sometimes you can have about five more beds in the ward (at the end, and in the bath-room, and down the middle), and even then you have to send out people, who are nearly convalescent, to sleep in other wards, to return to you and live in your ward during the day. You have to attend to their dressings and send your nurses to the other wards to make up their beds; you are responsible for 40 patients, for all their dinners, for all their medicines whatever they are, for their dressings, whatever it is that is prescribed by the doctor; the other sister is not responsible for it.

11672. You would like to have more assistance in the ward when those extra patients are taken?—As the nursing stands now of course I should,

5 February 1891.]

Miss ENTWISLE.

[Continued.]

Chairman—continued.

should; but if it were raised to the standard I suggest you could take the extra patients.

11673. That might be fair for the accident ward, but would not that be more than would be required for the wards which had not got 35 beds?—No, because you have so much to look up; all your dressings and bandages and splints and many things.

11674. Who is responsible for those?—The sister; she has to teach her probationers how to do it; and the staff nurse takes her turn at it; but you are expected to have all those things ready for the doctor, and you cannot attend to it in accident week.

Earl Cathcart.

11675. Your argument founded upon the sad sights and harrowing scenes that you see in a hospital would rather go to show that people who have not strong nerves had better not undertake those duties?—Those people never get through their probation.

11676. After a certain time they get acclimatised. If you went into a battle you would expect to hear the groans of the dying, and see legs and arms flying about in all directions; you would consider that part of the military business?—Yes.

11677. And so in regard to hospitals people get accustomed to these sad sights?—I do not think you ever get accustomed to them in one sense.

11678. We were told here that trimming lamps was a menial duty, but one nurse told us that it was really a scientific operation, because the surgeon was dependent very much at night upon the lamp, and if it were not properly trimmed it was a hindrance to the surgeon, and therefore she preferred to trim it herself?—Yes; that is a short and easy thing.

11679. And the same with regard to the cleaning of the inkstands?—Inkstands are not very nice work, they stain the hands; and if you have antiseptic dressings to do, you want very clean hands.

11680. But there are only two inkstands in a ward, are there not?—Sometimes there are three; but I think they are done by the ward maids at St. Thomas's.

11681. I understood that that work was done by the probationers, and that they rather liked the operation?—It varies in different hospitals.

Earl of Arran.

11682. I think you said that you did not get the one day a month off duty, as a rule, which you ought to have had?—No.

11683. Would it not fall to the duty of someone to see that you did get it?—Nobody ever did; and I do not know whose duty it is; I suppose it is somebody's duty to see to it.

11684. Because it must interfere with the health of the sisters?—The sister is responsible to the matron for her nurses, for their health, and has to report to her. Perhaps if it is left to you you might not be able to arrange it; you might have a very anxious ward which you could not leave, because it would be too much to leave only one trained nurse to take charge of. It is very important that she gets her day off.

(24.)

Earl of Arran—continued.

11685. Does the sister's room open into the ward?—No, there is a window that does, but it is kept closed, and the curtain drawn.

11686. With the same air as that of the ward?—It is a very nice lofty room with two windows, and as good air as you can get.

Lord Zouche of Haryngworth.

11687. You referred just now to the accident week; do we understand that accidents are taken in at a certain ward one day in the week?—No; each male surgical ward and each female surgical ward at St. Thomas's have their week for accidents; there are four male surgical wards, so that you see the week would come once a month for each ward. There are only two female surgical wards, so that their turn comes oftener; but they are not so heavy on the female side; their turn comes every other fortnight. When it is accident week in your ward you must take all the accidents that come that week to the hospital.

Earl of Lauderdale.

11688. Do the nurses suffer in health from being overworked, do you think?—Yes, I think they do; I think they ought to last in the hospital a great deal longer.

11689. Which of the three classes suffer most, the sisters, the staff nurses, or the probationers?—I think the trained nurses suffer the most. They are strong people, and yet get broken down in time; and then changes have to occur, and you do not get so experienced people in their place. It seems a pity to train persons and get them to perfection, and that then they cannot last, because they are worked too hard; worked out too soon. It is false economy to make one lot of people ill to make others well.

Lord Saye and Sele.

11690. Is there a chaplain?—Yes.

11691. Do you find him always accessible for religious consolation for the patients?—Yes; you always can go and leave a note for one of the chaplains. One of them lives in the hospital; you can go and leave a note for them and they visit the wards. At each ward they come once a week in turn, and read prayers once a week. There are some 16 wards at St. Thomas's, and there is very little time for them to read prayers; the doctors are in the wards a good deal.

Lord Monkswell.

11692. I think you said that the probationer's hours are 65 a week; did you give us the staff nurses hours?—The staff nurses work about the same hours as the sisters, or a little longer.

11693. And how long do they work?—The staff nurses work for 78 hours one week and 73½ another week; they have a long week and a short week alternately.

11694. They work therefore about 76 hours a week on the average, and the sisters too. If you had your two day staff nurses and three probationers and one sister to each ward of 30 beds, how long would everybody have to work?—It would be very difficult to make a table at a moment's notice. Mrs. Wardroper, the former

5 February 1891.]

Miss ENTWISLE.

[Continued.]

Lord Monkswell—continued.

matron, was very clever at it, and took a long time to work out the time table.

11695. You have not thought that out?—No; I have not given it sufficient study to answer the question, but I suggested that the sisters could not take their proper time off duty because they have not any trained person to leave in charge.

11696. You mean in point of fact that the sisters often work more than their time?—Yes.

11697. On an average?—Undoubtedly they do.

11698. Their time is 76 hours a week, but they in point of fact generally work a great deal longer, that is what you say?—Yes, they work longer.

11699. Do the staff nurses work longer?—Yes.

11700. What do you think would be the average number of hours of sisters and nurses; have you formed any impression; would you say that three or four hours a week was the ordinary overtime?—Certainly not less than that.

11701. And the sisters would be more over-worked than the staff nurses?—Yes, because they are liable to be woke in the night. The night staff nurse may come into the sister to consult her and ask her opinion about something. She is left alone in the ward; of course there is a night sister, but you never know where she may be in that huge building; the staff nurse might not see the night sister.

11702. Did you find in your experience that the sisters became more diseased than the nurses, and the nurses than the probationers; did you find any difference in that respect in the three categories?—Of course the probationers are untried; they may be too nervous for hospital work, and there may be many things about their health. The staff nurses and the sisters, I should think, were about equal in that point.

11703. The sisters having somewhat the harder work?—The more strain, the more responsibility.

Earl Cathcart.

11704. When I was at St. Thomas's I observed one of the reverend gentlemen most kindly engaged for a long time with a sick patient; is it not your experience that those reverend gentlemen are kind to the patients?—Very kind to the patients. I think there is a great deal of kindness to the patients at St. Thomas's, not only by the Church of England clergy but by the Roman Catholic priests and others.

11705. In this case he was in earnest conversation with the unfortunate patient, and that generally is the case, is it not, that they are attentive to the patients?—Yes, undoubtedly they are very kind. I have never seen any case of any kind of ill-treatment at St. Thomas's; they are very well treated.

Chairman.

11706. Were you generally comfortable in your room?—Yes, very comfortable.

11707. You speak very well of the hospital I understand as to accommodation for the nurses and meals and so forth?—Yes.

Chairman—continued.

11708. But you consider that the work is more arduous than women can stand?—Yes; especially as men now-a-days are calling for 56 hours a week.

11709. At the same time you did not call the attention of any of the hospital authorities to the fact that the hours were too long?—I think it is an established fact that the nurses are known to be very hard worked.

11710. Have you anything to add?—I have a little to say about the cooking for the patients. It is not very good, not equal to the Hotel-Dieu in Paris; no good soups or beef teas, or cooling drinks, or nice puddings. Until lately the nurses made the beef tea in the wards, but this was stopped recently on account of the expense; it was very good then.

Earl of Kimberley.

11711. Is the inferiority in the cooking more than can be accounted for by the inferiority of our soups altogether?—I think the whole of the food was more suited to people who were healthy than to sick persons.

11712. Good soup, we know, is not easily obtained in England; does not that account for the inferiority of the soup in St. Thomas's Hospital to that in the Hotel-Dieu at Paris?—I do not see why they cannot be taught to make it as good here.

Chairman.

11713. Did the patients complain at all about the food?—I found they would not drink beef tea sent up from the kitchen unless you added some that was made by the nurse. The puddings sent up to the children's ward were so bad that they were allowed to be made by the nurses with eggs brought by the patients' friends.

11714. Has that beef tea been spoken about?—It has been spoken about.

11715. Has no improvement been made?—Not any. Most of the sisters in the hospital told me since that it was bad still, and that there was no improvement.

Earl of Arran.

11716. Who would be the proper person to make the complaint to in the first instance?—The steward.

11717. Would the sister complain to the steward?—She would complain to the steward about the beef tea, because you draw all your supplies of food through the steward's office.

11718. Did it ever happen to you personally to have to complain?—I have complained.

Chairman.

11719. Nothing has come of it?—No, nothing has been made different; the whole cooking is inferior; it is not good enough. It is not that the food is not fair; the meat is good meat, but it is not prepared as nicely as a sick person should have it.

11720. Is there anything else you wish to speak of?—No.

[The Witness is directed to withdraw.]

5 February 1891.

MISS LOUISA GORDON, is called in; and, having been sworn, is Examined, as follows :

Chairman.

11721. You are the matron of St. Thomas's Hospital, are you not?—Yes.

11722. How long have you been matron there?—Since last April.

11723. And had you previous experience as a matron?—Yes, I had ten years previous experience.

11724. Where was that?—In Leeds; and as assistant in Liverpool for 4½ years.

11725. Were you trained in St. Thomas's?—I was trained at St. Thomas's.

11726. To whom are you responsible; do you consider to the treasurer?—To the treasurer.

11727. In the case of a difficulty occurring or having a complaint to make, you would go to the treasurer?—To the treasurer.

11728. May I ask how many nurses you have under you, of all kinds?—There is a staff of 115 in the hospital; 15 sisters, 13 day nurses, 13 night nurses, 2 night superintendents, 14 nurses in the infectious block; there is an out-patient nurse, a casualty nurse; 16 extra nurses; 34 or 35 probationers, and five assistant nurses for the children's ward.

11729. Did you hear what was said by the last witness about the hours of the nurses, and was that correct?—They are about 10 hours a day.

11730. Do those same regulations that existed then exist now?—They are on duty for 10 hours; they get a little relief.

11731. Do you consider that the relief is sufficient or insufficient?—Quite sufficient.

11732. I understand that no nurse goes into the ward before she has had breakfast?—No; all the nurses breakfast first.

11733. Then they have their dinner at 12?—The first dinner is at 12.

11734. They dine in two batches, do they?—The sisters and nurses dine at 12 and the probationers at a quarter to one.

11735. And the dinner for the first lot occupies half-an-hour?—Yes.

11736. Is that quite half-an-hour for the nurse to be in the dining-room, or is that the time when she is expected to be back in the ward?—She sits down at 12, and she does not leave the dining-room before the clock strikes the half-hour.

11737. Then she leaves the ward before 12?—Yes.

11738. She can do that, can she?—Yes.

11739. Do you think it a good rule to have the sister and the trained nurse away at the same time?—We have had a different arrangement of the dinner hours under consideration for some time.

11740. If that is the case I will not pursue the subject. Then about the probationers; we understand that the sisters have too much untrained assistance; have you anything to remark upon that?—The sister has a trained nurse and three probationers; there are always three probationers in the ward, not two; and one of the probationers has generally been under training about
(24.)

Chairman—continued.

eight months; there may be one who has only just entered; but we never have three untrained people in a ward. And then they always get extra help if necessary.

11741. Where does the extra help come from?—These 16 extra nurses.

11742. But are you ever so much pushed for nurses that you have to go outside for them?—Yes; we send out for nurses if we have not a sufficient number; we have had as many as 20 extra nurses, counting our own and the others.

11743. Have you had any difficulty in getting them?—Sometimes we get them quite easily; when there is a great deal of sickness there is more difficulty.

11744. Do you know why you have not more nurses; if you are always having to send out for them?—For exceptional cases we send out for extra help; but we have a sufficient staff for our ordinary work.

11745. You consider that the staff you have is sufficient for your ordinary work?—Yes.

11746. Then do you keep a number of extra nurses, out-of-doors nurses, on a list to apply to them, or do you telegraph to some institution?—We send to an institution.

11747. Do you find the nurses that you get from institutions good?—Yes, very good; we know the institutions we send to.

11748. Then of course that sending for these special nurses from outside leads to more expense to the hospital?—Yes.

11749. What do you pay them, do you know?—A guinea a week and travelling expenses.

11750. And what do you average, about three or four of these extra nurses in a week?—No, sometimes we have none; some weeks we have three or four.

11751. You consider that the hours as arranged for the nurses are not more than they ought to be?—They get a good deal of extra time off; they get two hours every day, and once a week they get from half-past one till six o'clock off duty, and they get a day once a month.

11752. When are the two hours allowed off duty?—Either in the afternoon or evening.

11753. Then are they at liberty to go out?—Yes. They have settled times; the sister and the staff nurse go out turn about.

11754. As to these staff nurses, you say that you have 13 day staff nurses and thirteen night; have you any changing about month by month with them?—No, not the staff nurses.

11755. Once a night nurse always a night nurse?—Yes, for a certain time, a year or two years.

11756. Has it ever occurred to you to try a month about, or three months?—I should not approve of that.

11757. Why?—Because if they change about
M in

5 February 1891.]

Miss GORDON.

[Continued.]

Chairman—continued.

in that way they do not have such good rest at night; I do not think it is so good for their health.

11758. You have only been at the hospital as the matron for a short time?—Since April last.

11759. Had any changes been made before you came, do you know, as to the number of hours of work, meal-times, and so forth?—I do not think so.

11760. Can you tell us anything about the wages. First, a sister?—A sister begins at 35 *l.* a year, and goes up to 50 *l.*

11761. And what does the night sister receive?—She receives 60 *l.*, she is called the night superintendent.

11762. Is there any assistant matron?—There is a matron's assistant.

11763. Is she senior to the night superintendent?—No.

11764. Has she the same pay?—Yes.

11765. May I ask what you receive?—£. 200 a year.

11766. And they give you a month's holiday?—Yes.

11767. Are there any pensions for the nurses; have you any connection with the Pension Fund?—No, we have not.

11768. You have no system like two-thirds of the salary being given as pension after a certain number of years' service?—None.

11769. Then when a nurse has been there a long time it is put before the committee, and it depends upon their opinion, on the merits of the case, what pension she will receive?—Yes.

11770. Can you form any opinion how long the nurses generally stay with you?—One has lately left who had been 40 years in the hospital, but about 10 years is the general time.

11771. They stay there a good deal longer than three or five years?—Yes.

11772. Would you not favour rather shorter service for nurses?—I do not think it is a good thing for them to stay too long.

11773. Have you any Nursing Institute from which you send out nurses?—No.

Earl Cathcart.

11774. Do you find that there are certain cases that are more fit to be nursed by men?—Yes, some of the cases.

11775. Delirium tremens?—Yes.

11776. What other cases?—In some cases the patients are delirious.

11777. What do you do then?—Get a porter.

11778. Belonging to your own establishment do you mean?—Yes.

11779. You do not get people from outside for that duty?—No.

11780. When the nurses go out they go out in plain clothes?—Yes, in their own clothes.

11781. They get very foot weary we have been told?—They do sometimes.

11782. But does that apply especially to St. Thomas's with those great distances that there are in that hospital?—I think every nurse, more or less, gets that.

11783. It is not peculiarly so in St. Thomas's, you think?—No.

11784. But the distances are very consider-

Earl Cathcart—continued.

able, a quarter of a mile from end to end?—Yes; but the nurses do not go a quarter of a mile.

11785. Do you yourself find it trying to go round so large a hospital?—I do not feel any more tired than I used to in other hospitals.

11786. What is your duty with regard to visiting the wards?—My charge is four times a week.

11787. That means the whole hospital?—Yes.

11788. So that you are going round the wards every day?—Yes.

11789. You do not complain of the extent of the building so far as your administration is concerned?—No.

11790. Where are the nurses quartered as a rule?—The probationers live in the Nightingale Home.

11791. Is that in the centre?—At the end of the building.

11792. And the ordinary nurses?—Their bedrooms are above the wards. The nurses belonging to each block live in their own block.

11793. And the sister has a nice room?—Yes.

11794. I had the pleasure of paying you a visit when I went round and poked into everything I could, and everything appeared to me remarkably clean and tidy and nice about the cooking arrangements, as far as the sisters and the home are concerned?—I think it is very comfortable.

11795. And about this beef-tea, have you heard any complaint?—The beef-tea is excellent; a specimen of it is sent to the treasurer every morning.

11796. You do not use Bovril here?—No.

11797. Or any of those preparations?—We have beef-tea made out of fresh beef.

11798. The complaint in regard to the cooking was in regard to the general cooking for the patients?—The patients' cooking is very good at present.

11799. What is the chef, a man?—A woman.

11800. And they are careful and particular about it?—Yes, the meat is very good.

Lord Zouche of Haryngworth.

11801. Have you had any complaints about their food?—No, never.

Lord Thring.

11802. Do many of your nurses break down?—Some of the probationers do, but none of the nurses, who have been trained; the probationers do sometimes.

11803. They sometimes go away?—If they are not strong enough for the work.

11804. With respect to your nurses, what sort of health have they?—We have had very little illness among the nurses this winter.

11805. Do you consider that their health is as good on the average as that of women who are not nurses?—They have had colds and sore throats this winter.

11806. I mean do they break down from over work after five or six years?—No, I do not think so. I have found very few nurses break down.

As

5 February 1891.]

Miss GORDON.

Lord Thring—continued.

As a general rule I have been very fortunate, I think, with the nurses I have come in contact with; they have been very healthy people.

11807. You think that the nursing occupation is not a specially dangerous one for women?—No.

11808. Do they break down from overwork often?—Not the nurses I have had to do with.

11809. You think, as far as your experience goes, that the nurses are not overworked?—No, the nurses at St. Thomas's are not.

11810. How many hours a day have they?—Of course the nurses are not working ten hours; they are sitting down a good part of the time; they must be on duty, but at certain times of the day there is not much to be done.

11811. They have not to clean the wards?—No.

11812. You think that the nurses at St. Thomas's are not overworked, and that their occupation as nurses at St. Thomas's is not likely to be injurious to their health beyond ordinary occupations?—No; I think all the staff nurses are very well indeed.

11813. Does that mean that the other nurses do suffer in health?—No; I mean that the staff nurses, those that have been trained, are very well.

11814. You think that as soon as the probationers get experience they are well able to fulfil their duty?—Yes; they are not overworked.

Earl of Kimberley.

11815. The survival of the fittest, in short?—Yes.

Lord Thring.

11816. You think that a probationer who has passed through her course of training and study, and got strength enough for that, can become a good nurse?—Yes.

11817. What average number of probationers break down; do a considerable number?—No.

11818. In other words, as the noble Lord said, is not the case of the probationer a case of the survival of the fittest?—Sometimes more probationers pass through our home than at others.

Earl of Kimberley.

11819. Does that mean that many of the probationers there break down?—No, not many.

Chairman.

11820. Are they medically examined before they become probationers?—Yes.

11821. Therefore if the surgeon finds they are not sufficiently strong they are sent away?—Yes, not passed.

Lord Thring.

11822. Of the probationers you have been acquainted with, in your experience how many per cent. break down; is it 1 per cent.?—I cannot say.

Earl of Lauderdale.

11823. Do you know what number of probationers left from ill-health last year?—No; I could see from the book how many passed through the home.

(24.)

Chairman.

11824. Have you any lady pupils?—They call them special probationers.

11825. Do they pay a premium?—Yes.

11826. Will you mention what your probationers are paid?—The probationers are paid 4 l. in clothing, and 12 l. in cash; 16 l. altogether.

11827. Is all the washing that is done for the hospital done on the premises?—None is done on the premises.

11828. The heaviest time for nurses in the ward is in the morning, is it not?—Yes, it is.

11829. And are your hours so arranged that the night nurses and day nurses overlap them?—Yes.

11830. At what time do the night nurses go out of the ward?—Nine in the morning.

11831. And what time do they go in?—Ten.

11832. And they have their breakfast before they go to the wards?—Yes.

11833. And they dine when they come out in the morning?—Yes.

11834. And what refreshment have they during the night?—They have two meals, tea or cocoa.

11835. Where do they take their meals?—We have a nice room called the kitchen, off the ward.

11836. Thendo they take their food with them, or is it sent up to them?—The night meals they take up with them.

11837. What do they have?—Tea or cocoa, with bread and butter and eggs.

11838. And they have the meals of breakfast and dinner out of the ward?—Their substantial meals out of the ward, one before they go on, and the other after they come off, and they have luncheon and tea in the night.

11839. They have that at their own convenience?—Yes.

11840. Have you the power of dismissing nurses?—I should report any case to the treasurer, and ask him about it.

11841. Would you suspend them from duty meantime?—I would suspend them, if necessary.

11842. Then in regard to the appointment of probationers what arrangements do you make; do you appoint them for a year or two?—They come on a month's trial, and if found suitable are bound for a certain period.

11843. And at the end of that month's trial, is that engagement terminable by them or by you?—The probationers are not allowed to give notice.

11844. But I mean at the end of the first month?—There is a month of trial on both sides.

11845. At the same time after that, up to the end of the year, they cannot give a month's warning?—No; but they may be allowed to withdraw upon grounds to be approved by the Committee.

Earl of Kimberley.

11846. They are very much in the position of apprentices?—They are very much in that position.

11847. Do they sign indentures?—They do.

Chairman.

11848. Does that apply to the staff nurses?—They are engaged for four years; they are practically under training for all that time.

M 2

11849. And

5 February 1891.]

Miss GORDON.

[Continued.]

Chairman—continued.

11849. And how soon after do you give them a certificate?—We do not give them a certificate; we register them.

11850. That is not the register of an association?—No, it is our own register.

Lord Monkswell.

11851. Do you mean that the nurses never work more than ten hours in any one day?—In an exceptional case they do.

11852. Did I understand that the hours are 70 hours a week; I thought I understood that they had half a day off?—They do once a week, and on Sunday they have a long time off.

11853. Then the hours would not be anything like 70 hours a week; something like 60 or 65?—In some of the wards they have two afternoons a week off, but always one afternoon.

11854. That would mean an average deduction of 10 or 12 hours off the 70?—Yes.

11855. Then your contention is that the nurses do not work more than 63 hours on the average?—One Sunday they get nine hours off, and one Sunday four.

11856. Then according to your statement they do not work on an average quite 63 hours a week?—No.

11857. Then do the probationers and the sisters work for the same time as the staff nurses?—The sisters go on duty at 8, and the probationers and staff nurses at 7.

11858. The sisters have rather less hours than the staff nurses?—Just the same.

11859. Do the nurses, the probationers, and the sister always get the leave promised them?—Yes.

11860. They always get this half holiday in the course of the week?—Yes.

11861. Even if the hospital happens to be particularly full of bad cases?—Unless there happens to be an exceptionally bad case, an operation on; it is an exceptional thing.

11862. Would it be made up to them if they did not get it at the proper time?—Yes, they would get extra time off.

11863. How long is it necessary to remain a probationer before you register a person?—A year.

11864. Do you register all probationers who do fairly well at the end of the year, or will some of them work longer?—We always register them at the end of the year.

11865. Do probationers, as a rule, go on the staff?—At the end of the year they go on the staff.

11866. They would generally go on the staff rather than leave?—Yes.

11867. You say that the cooking is good at present; how long has the present cook been there?—Ever since I have been there.

11868. What is her salary?—I do not know.

11869. You say that sometimes you take in

Lord Monkswell—continued.

extra nurses; I thought you always had about the same number of beds; why should you require extra nurses?—Sometimes the cases are more serious than at others.

11870. I should have thought there was an average of those serious cases?—Sometimes we have more of them.

Chairman.

11871. Is there a separate kitchen for the nurses?—One kitchen for the probationers and also one for the nurses.

Earl Cathcart.

11872. Taking the average nurses, which have the hardest work, the Leeds nurses or the St. Thomas's nurses?—The Leeds nurses.

Chairman.

11873. Then do you think that taking the hours and the food, and the accommodation in the home at St. Thomas's, that they are very favourable compared with what your experience has been in other places?—My experience is, of course, confined to St. Thomas's, Liverpool Royal Infirmary, and Leeds Infirmary. I consider on these points they are about equal.

11874. The Leeds Infirmary has been built lately?—Yes, 20 years ago; it is a very fine hospital.

11875. You think the staff at St. Thomas's are as well off as they can expect to be?—Yes; they have more time off duty than is usual.

11876. You said that the staff nurses have a fortnight's holiday in the year?—The holiday question is under consideration, and the hours for meals and the times of duty.

11877. Who is it being considered by?—The treasurer and I have talked of it so far; we hope to have it all arranged before the summer holiday.

11878. What time of the year do the holidays come?—They begin in May and go on till September.

11879. You were talking about the probationers breaking down; it is the fact, is it not, that nurses require to get acclimatised?—Yes.

11880. Do you have much sickness among the probationers?—We have had very little sickness indeed this winter; seven probationers only out of 34 during the last six months; five with sore throat.

11881. That is a very common ailment, is it not?—Yes.

11882. When a nurse is ill what becomes of her; are there rooms set aside for nurses?—No; as we have such nice private wards, I consider they can be better nursed, and are more comfortable in them than they would be in a sick room. We have a sick room in the Nightingale Home for probationers.

The Witness is directed to withdraw.

5 February 1891.

MR. SEYMOUR J. SHARKEY, M.D., is called in ; and, having been sworn, is Examined, as follows :

Chairman.

11883. Do they isolate diphtheria cases at St. Thomas's?—Yes.

11884. Are you one of the physicians attending the out-patient department now?—No; I am a physician now attending the in-patients, but I had been till last October attending the out-patient department.

11885. Has any change in the organisation taken place since you left that department?—I believe not.

11886. Then what system do you go upon in the out-patient department?—Would you like to know the arrangement from the time that a patient applies for admission as an out-patient?

11887. Yes; will you kindly tell us that from the time when he first comes?—Every day at a certain hour, 12 o'clock, the applicants for out-patient letters come to the hospital, and a certain number of them are selected as suitable cases; certain others that are trivial cases are supplied with medicine for a couple of days and discharged; and a certain number of others receive nothing. Those who have been retained as suitable cases for out-patient treatment then go down to the other end of the hospital, where they come regularly and see the assistant physician or the assistant surgeon, as the case may be; they come either once a week or once a fortnight, or as often as they are told by the doctor, until they are considered well. That is roughly the way that our system is worked.

11888. Does this apply to both medical and surgical cases?—No, it does not.

11889. To medical cases?—Yes, to medical cases.

11890. And with regard to surgical cases?—I believe every surgical case is attended to in some way or another.

11891. You specially know about the medical side?—Yes.

11892. Then do you say that a man may come every day when his case has been found suitable?—Not every day; once a week, or once a fortnight, as the case may be; he may get medicine for a week or a fortnight, even longer if it is thought desirable.

11893. Do you not give him a letter?—Yes, he has a letter.

11894. And that does for the three or four attendances?—Yes. On the letter which he takes in to the assistant physician the whole history of his case is put; and, in addition to that, at the top the diagnosis of the disease from which he is suffering, and at the side his prescription. Then he gives that up to the apothecary and gets his medicine, and the paper is given to him next time he comes; then he takes it, and if necessary, gets the prescription altered, and, so on; so that the paper is retained in the hospital, and we have a full account of the patient and his treatment, and he only gets the letter each time he comes.

11895. Does that same letter serve for an in-

Chairman—continued.

definite number of attendances?—Practically, it does; theoretically, it is limited; it is supposed to be for six weeks, but every medical man at the hospital has the power of renewing a letter if he thinks fit; and this is constantly done.

11896. What I mean is this: supposing a letter is given to a patient for only a certain number of attendances, and then that letter is set aside, and a new one is given to the same man, that would give the erroneous idea in the return, that there were two cases?—No; he does not get a new letter by applying at the same place as he did before, but the assistant physician directly gives him a new letter; that is a mere form; the case is not added as a new one; it is called a renewed letter in the returns.

11897. And by that means you can tell the number of new cases treated?—Yes, and the length of time that each person is treated at the hospital.

11898. Are those persons carefully counted?—Very carefully.

11899. Can you tell the number of new cases?—Yes; I can tell you the average number of cases in each of the three divisions that I have mentioned. The number of applicants per day averaged in the last year about 51, that is at the place where people apply for out-patient relief.

11900. These are new applicants, I understand you?—Yes, new. Then, of these about 23 are taken as permanent out-patients; that is to say, to be treated until it is thought desirable to discharge them. I should mention, perhaps, with reference to that 23, that the number is limited to 19 or 20; that is to say, in the instructions; but for fear that any cases should come above that number that really require relief, the person who gives the letters out has a right to give as many more as necessary; this generally amounts to one, two, or three, and makes a daily total of about 23. That shows that about three extra letters are given per day. Then the average of those who get medicine for two days has been 14 per diem; and the average of those not receiving relief has been 14.

11901. The latter have not any ailment?—Hardly any ailment; at any rate there is no serious necessity to attend them; and one has to take into account another consideration; that is to say, the possibility of the medical men seeing them. This is one of the changes that has been made in our hospital, I believe to very great advantage, that whereas formerly it was considered that the medical officer could see any number of patients, and it seemed to be impossible to give him too many, it has comparatively lately been recognised that a man can only work up to his best over a certain number of cases in a given time; consequently in our hospital the number has been reduced from an indefinite number to about 23 new cases a day, in addition to all the old ones.

11902. How

5 February 1891.]

Mr. SHARKEY, M.D.

[Continued.]

Chairman—continued.

11902. How long does the physician go on seeing the patients?—The patients are seen from about 1 o'clock (it varies with different men according to their rapidity) till about 4 or 5 o'clock.

11903. You were a good many years in this out-patient department?—Eleven.

11904. Then you had a good opportunity of taking stock of these patients?—Yes.

11905. Were most of those that came to you in a destitute condition, or very poor?—Well, I could hardly say that, because it is rather difficult to judge, but what I should say is that I do not believe, though I have been on the alert to see it, that the out-patient department is seriously abused in any way as regards the means of the people who attend it. They all seemed to me to be people who could probably very ill afford to pay for medical attendance, at any rate over any length of time; of course I do not mean, whatever system may be, that there are not some people who creep in who should be kept out; but my impression is as regards the out-patient department at St. Thomas's on the medical side, that it is very rare to have persons who can well pay for treatment outside.

11906. You are a physician in the wards now?—Yes.

11907. Do you find the same remark apply to the in-patients?—I should not like to give an opinion on that point; I have only been holding that position since October; but I have seen nothing to the contrary.

11908. When was this alteration made to which you alluded just now?—It was before I came on as assistant physician; it must have been 12 or 13 years ago.

11909. Since you have been there you have not had over-crowding in the out-patient department?—No, because we have rectified it in the manner described.

11910. Then have a great number of people in consequence of that regulation been refused assistance?—About 14 per day. The figures I have given you are really those during the years 1889 and 1890; the average of 1889 and 1890.

11911. Some of those 14 I thought were people who had really nothing the matter with them?—Hardly that. A person is supposed to something the matter if he takes the trouble to come and complain; but as far as anything tangible is concerned they were considered not to have much the matter with them.

Earl of Kimberley.

11912. When you have a surplus over the number that you think fit to admit, how do you determine which to admit, by priority of application or by the urgency of the case?—By the urgency of the case.

Chairman.

11913. Supposing that a very large number came, your out-patient department would be immensely overcrowded?—Yes, that is to say, not our out-patient department, but the department where application is made for out-patient letters.

Earl of Kimberley.

11914. Are you of opinion that the number which you now admit affords sufficient opportunity for instruction for the students?—Yes, certainly. I think that a larger number would make the instruction worse, because it would be impossible to spend the time that is requisite over it.

21915. In short, the thorough examination of a smaller number is far better than the cursory examination of a larger number?—I think so, in every way.

Earl Cathcart.

11916. Your out-patient department is near the door as you go in on the right-hand side, is it not?—If you enter at the central hall it is on the left, not immediately on the left; you have to go round and pass the dispensary.

11917. There is no sort of payment; they do not pay for medicine?—No, nothing.

11918. They bring bottles for the medicine?—They have to supply their own bottles.

11919. In case of an epidemic of cholera or anything of that sort, you would have to do whatever you could?—Yes, our arrangements are sufficiently elastic for that.

11920. You know nothing about the midwifery cases?—No.

11921. But there is a radius of a mile where poor women are attended?—I have nothing to do with that department.

11922. In point of fact we were told that it is so. With regard to the size of the wards, that does not apply to your out-patient department, but those are comparatively small rooms, if I remember them?—Yes, I should think that is almost the only defect in our out-patient department, the smallness of the rooms.

11923. They are small and low?—They are not low, but they are small.

11924. And dark?—No, I should not say very dark.

11925. They are a little unpleasant when all the out-patients are assembled, and they are crowded?—Yes; unless you leave the window pretty wide open as I did; then that introduces a certain amount of sickness among the staff.

11926. Do you find that the wards are too large or a proper size; what is your opinion of the construction of the wards at St. Thomas's?—I should think that it is exceedingly good.

11927. Have you examined many of these bronchial encampments, by which beds are surrounded to prevent the patients feeling the draught?—Yes, I have seen them.

11928. Is there an unusual number of those arrangements?—No, it depends merely upon what the patient is suffering from, and varies from time to time according to the number of cases of acute bronchitis.

11929. But occasionally in the wards you are obliged to make this sort of encampment?—Just as one would do in a private house for bronchitic cases, though one would not do so if the person had some other disease.

11930. When

5 February 1891.]

Mr. SHARKEY, M.D.

[*Continued.**Chairman.*

11930. When I said just now that some people I supposed had nothing the matter with them when they came, I was thinking of this: Mr. Walker answered a question of mine, and then he said, "The rest, which are supposed to be slight cases, and not necessarily wanting treatment, are sent away; they have an opportunity of applying again the next day. (Q.) They are practically told that there is nothing the matter with them, and they had better go away?—(A.) Yes, very much so." That is at No. 10961?—That is a lay opinion, I think; I do not think they are ever told that.

11931. You think that is not so?—No; I

Chairman—continued.

think there are patients who are sent away who require a certain amount of treatment; but it is very hard to define who is the right person to come to a hospital; independently of money matters, the question is, should there be a certain severity of disease. If anything of that sort be assumed, then these people are not cases requiring treatment.

11932. And you think from what you have seen, that your plan at St. Thomas's keeps down the number sufficiently well so as not to necessitate any inquiry?—I think the system answers well.

[The Witness is directed to withdraw.

Ordered,—That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 9^o Februarii, 1891.

L O R D S P R E S E N T :

Earl of LAUDERDALE.

Earl CATHCART.

Earl of KIMBERLEY.

Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.

Lord SANDHURST.

Lord SUDLEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. CHARLES TODD, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

11933. You are the Secretary, are you not, of St. George's Hospital?—Yes, and I am also Superintendent.

11934. How long have you occupied that position?—I have been in that position now for 20 years, and for 10 years before that I was assistant to the secretary.

11935. And to whom are you responsible as secretary?—To the weekly board.

11936. And have they in turn any responsibility to anybody?—They would be responsible to a quarterly court really. The weekly board manages the hospital, and quarterly courts are held to review their proceedings. I have had drawn up a short account of the system of management of the hospital; I thought it might be useful to the Committee.

11937. Are you resident in the hospital?—Yes.

11938. And are you a salaried officer?—Yes.

11939. At what salary?—400 *l.* a-year.

11940. When was your hospital founded?—In 1733.

11941. And is it a free hospital?—It is practically a free hospital. The governors and subscribers have letters, but as a matter-of-fact, out of the 4,466 patients whom we took in last year, only 840 brought in-patients' letters.

11942. Have you any paying beds?—No, none.

11943. And nobody pays anything at all?—No.

11944. Do out-patients pay anything?—No, nothing.

11945. What number of beds have you in this free hospital?—Three hundred and fifty-six.

11946. And can you tell me what the daily average of patients that you generally have in the hospital is?—The daily average last year was about 333.

11947. Out of a maximum of 356?—Yes. Sometimes we are quite full, but the number varies. In the summer, of course, we have

(24.)

Chairman—continued.

fewer patients ; and then, during the earlier part of last year when we had so much influenza, we had to close a couple of wards because so many of the nurses were attacked.

11948. What governs your admissions to the hospital?—The needs of the patients really ; the medical officers decide which cases are most suitable, on the illnesses from which they are suffering.

11949. But now in the case of a governor sending a patient with a letter, and a poor patient without a letter also being in the department at the same time waiting for admission, would the patient with the governor's letter have priority?—Yes, if the cases were of equal need. If one case was more pressing, the more pressing case would have the preference, but if they were about the same, the preference would be given to the patient having the governor's letter.

11950. Therefore, as a matter of fact, now-a-days, there is practically very little use in a governor's letter?—Not much.

11951. No use at all, is there?—There is just this use in them ; that in the event of subscribers sending patients with letters, if they are equally urgent with the other cases, they have the preference over the other cases.

11952. Have you any rule at your hospital as to patients not being admitted who have more than 10 *l.* a year income?—No. Some years ago that was introduced as a regulation, having reference to the out-patient department, but it was altered by a special court which was held very shortly afterwards.

11953. Were you there at the time?—Yes.

11954. Do you know why it was altered ; was it because it could not be carried into effect?—It was altered because it was thought a bad thing to do. It was quite disapproved of by many governors ; they thought that a hard-and-fast line like that was undesirable. The clause as drawn was that servants in situations receiving

N

12 *l.*

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

12 l. a year and upwards were not eligible as out-patients; but that would have excluded a great many persons of the general servant class who are quite eligible for treatment in any hospital. That was thought to be too severe a measure and it was withdrawn soon afterwards.

11955. 6. Do you admit many of the servant class into your hospital?—Last year we admitted about 16 per cent. who were servants, but 6 per cent. of those were out of situations; so that it was only 10 per cent. of those who were admitted who were in situations; but the others would certainly be eligible at any hospital.

11957. The masters of these servants, I presume, are governors?—Sometimes; not always.

11958. But do the masters ever pay anything for their servants?—No, but they very often send donations afterwards. Many servants of course bring letters from governors or subscribers, their masters or mistresses; but where that happens not to be the case it very commonly happens that the master of a patient sends a donation afterwards. Sometimes they take the trouble to come and enquire what has been the estimated cost of the patient's stay in the hospital. That of course I do not tell them; I simply say that we do not receive payment for patients, but are glad to receive any contribution which they like to make.

11959. What is the class of patients, do you think, mostly availing themselves of your hospital?—The labouring classes of all kinds.

11960. But whereabouts do they come from; you are not surrounded by a poor neighbourhood?—Yes, we draw patients from Battersea, Chelsea, Wandsworth, Hammersmith, Fulham and Walham Green; all those districts are enormously increasing.

11961. But with regard to all these patients coming from Battersea, Fulham, Wandsworth, and Walham Green, do they not pass a hospital or two on their way to St. George's?—They very often pass the West London to come to us.

11962. And that is a proof of the migratory habits of the people of London?—No doubt.

11963. That they seek a certain hospital which they happen to fancy?—Yes.

11964. Though they may be within a hundred yards of a hospital they will pass that by to go to a distant hospital?—For Battersea and Wandsworth, I suppose, we are rather nearer than St. Thomas's, by Victoria Station. Then, with regard to Chelsea and Brompton, Chelsea is a very large and, in great part, poor parish. Then Kensington, Hammersmith, Fulham, all these districts are enormously extending, and have during the last five or 10 years, immensely increased; numbers of houses for the labouring classes have been built there.

11965. Then Pimlico?—Pimlico also.

11966. Then you really are the hospital for the south-west of England?—Yes, I think so.

11967. But would not Westminster assist you too?—They are beyond us. Westminster takes patients from the neighbourhood of Westminster, and that itself is a very poor place.

11968. How many beds do you put in a ward as a rule?—Our wards vary because, the hospital was built some sixty years ago,

Chairman—continued.

when hospital construction had not been very carefully thought out. Some wards have as few as nine beds, some twelve beds, some fourteen. Then we have two wards thrown together, which, practically, makes them one, and they have twenty-three or twenty-five beds. Our new wing wards, which are the most recent, having been built about twenty-five years ago, have twelve beds each.

11969. What is the amount of cubic space allowed?—That again varies; in our new wing wards it is upwards of 1,500 feet per patient; in some of the other wards it is only about 1,100. I could have brought that information with me, but I did not anticipate your Lordship would ask me that question.

11970. Do your doctors ever complain about the wards being overcrowded?—No, they do not complain. Some of the doctors would like, and the matter is now under consideration, to have some few beds taken out of some of the wards so as to make the cubic space a little greater; but the results have been good, and there have been no complaints.

11971. Are those medical or surgical wards?—Chiefly medical; some surgical too.

11972. When I asked you just now the kind of people who came to your hospital you said that they were of the labouring class; but are they a destitute class as a rule?—A great many are; to a great many we give relief; we have a Samaritan fund from which we give relief to patients when they leave the hospital. In many cases we give relief to wives and families while the patients are in the hospital; the annual report would show that. We have a great many destitute cases. Some persons come in in such a state that we have to burn their clothes and give them a new set.

11973. But that is a common occurrence at all hospitals, is it not?—Yes.

11974. I understand you that you give relief to families as well as relief to patients?—Yes; from the Samaritan fund we sometimes give relief to the family while the father is in the hospital. You will see that set out at page 7 of the annual report.

11975. So that the great proportion of patients are those who could not possibly afford to pay for their own medical treatment?—Certainly, the great proportion; in fact none could really pay for treatment and nursing. Just a few might be able to pay the ordinary general practitioner, but they could not get the treatment or the nursing that their cases require. I may say that we have a convalescent hospital in Wimbledon where we have 100 patients; so that nearly all the cases in St. George's are more or less acute, and directly they cease to be so we cannot keep them because we have so many demands on our beds; we draft off a large number to our convalescent hospital, and the remainder have to go home as soon as they are fit.

11976. You say that sometimes you are quite full; do you ever happen to have to send away patients because you have not room for them?—Frequently, especially during the winter, I have often to pay cab fares for patients

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

patients who are not able to walk home again because we had not beds for them. Every now and then the house physician or house surgeon has to go round the wards to see if there is a patient fit to go home so as to make a bed for another case. That is not at all uncommon, especially during the winter; I myself have had sometimes to go and see the house surgeon and suggest to them that they must try and find somebody to go out in order to make beds for pressing cases which the doctors tell me they cannot refuse.

11977. Now, if there was any organisation of various charities one with another, would not that difficulty be met to a certain extent?—It might, but I do not think it could. I have frequently sent patients on to Westminster and to St. Thomas's because we had not room for them, but they have been crowded at Westminster and at St. Thomas's, and the patients have sometimes come back to us, and then I have had to send them home.

11978. Would you agree with a remark made in answer to a question by me, the other day, to the treasurer of St. Thomas's; would you say that, as far as your district is concerned, the sick relief is lamentably deficient?—It certainly is deficient; we could do well with more beds, and we wish we had them.

11979. And, from what you said just now about Westminster and St. Thomas's, that same remark appears to apply to other districts besides St. George's?—Yes; only the other day they sent a patient back from St. Thomas's because they could not take the patient in.

11980. And does that happen in the case of people who, as far as you can judge, are quite unable to pay anything at all?—Yes, and certainly where, from the nature of the case, the illness requires admission.

11981. You say you supply people with clothes, food, and money, the families of patients?—Yes.

11982. How do you find out about them?—We inquire through the Charity Organisation Society. No family of any patient is relieved until a satisfactory report has been received from the Charity Organisation Society. Then, also, the chaplain takes great interest in the patients, and often visits himself to find out the circumstances of the family; but no case receives any grant until there is a satisfactory report from the Charity Organisation Society or the chaplain that they are people in need. Then we have the clergy and the lay visitors to fall back upon in addition to the Charity Organisation Society.

11983. You do communicate, then, with the local societies on the matter?—The chaplain does it; he takes great interest in his work and often visits the patients after they have gone out.

11984. That is almost the sort of organisation I had in my mind when I said, could not the charities communicate with one another?—Well, they communicate with the other clergy of the district from which the patient comes.

11985. Your individual chaplain communicates with the other clergy?—Yes.

11986. Why should not the secretary of one

(24.)

Chairman—continued.

hospital communicate with other secretaries in the same way?—We could do that perfectly; we often do so on other subjects, but not with reference to the admission of patients.

11987. Not with reference to the relief of the poor?—No.

11988. Now, turning to another subject, what was your expenditure last year?—Our expenditure last year, for ordinary expenditure, was 27,364 *l.*; then there was a sum of 952 *l.* spent on extraordinary expenditure, so that the whole expenditure for the year was 28,316 *l.*

11989. What does the term "extraordinary expenditure" mean?—We have an artesian well in which a quantity of sand had accumulated; we had a great deal of trouble some 25 years ago when it was first sunk, and recently the sand was coming up because the pipes had been worn through, so that we had to clear it of sand and put it in repair. Then we had certain plans for alterations and improvements of the hospital which were under consideration, and they were lithographed, and the plans and lithographing cost a great deal.

11990. What else would be included under that head?—Any additions or important alterations of the hospital we should consider extraordinary.

11991. Not repairs?—No; we whitewash and distemper the hospital all through every three years; that is an ordinary expenditure. We close the wards one after the other; we do not close the whole of them at once, perhaps two or three of them at a time.

11992. Now, with regard to this income, whence come your funds?—From subscriptions and donations and dividends, and a large sum from legacies.

11993. Have you any land belonging to the hospital?—We have a few houses; the rents bring in 1,056 *l.* a year.

11994. That is London property?—All London property.

11995. No property in land?—No, none.

11996. Then as to your annual subscriptions?—Last year they were 6,651 *l.*

11997. And donations?—The donations were 1,746 *l.*; and, besides, we had a donation of 1,000 *l.* stock transferred to us.

11998. Then your legacies?—The legacies last year amounted to 27,781 *l.*

11999. Would you call that a good year for legacies?—That is quite exceptional. We had one legacy of 20,000 *l.* left us, which is a very rare thing to happen. £2,000 was deducted for legacy duty, so that we had 18,000 *l.*; that would leave us a sum of 9,781 *l.* derived from other legacies; even that is very large.

12000. What is your average from legacies?—In an ordinary year if we get 5,000 *l.* we think it good.

12001. You can count upon that?—We do not altogether count upon it, but we hope to get it.

12002. Still that would be about the average?—Yes.

12003. Those, of course, you look to for income

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

come?—Yes, except in the case of large legacies; we invest all the large legacies we can.

12004. But you do not tie them up to the endowment?—No.

12005. So that in the day of need you can sell any such investment?—Yes.

12006. Then do you receive money from the Saturday and Sunday Hospital Funds?—Yes; last year from the Hospital Sunday Fund we received 1562*l.* 10*s.*, and from the Hospital Saturday Fund 400*l.*

12007. Do you make up your accounts in the same way as the Hospital Sunday Fund direct, or do you only do that when you want a grant?—We only adopt their form when we want a grant. Ours is a very simple statement of receipts and expenditure; the governors have been anxious to have it so plain that anybody even those who do not understand accounts may understand it; it is made as simple as possible.

12008. To return to the expenditure for last year of 27,000*l.* odd, what do you put down for the maintenance of the patients out of that?—Everything is included; the provisions for the year were 8,799*l.*; that includes everybody, patients and household and nurses and servants.

12009. Then, with regard to the large legacies, do you count them with your income or do you put them to capital account?—We invest as many as we can of the larger legacies.

12010. But in saying that you have over-spent your income, what do you mean by that?—We, of course, are obliged to include the sum derived from legacies as part of our receipts for the year, and, if necessary, we should have to use it to meet the expenditure.

12011. Where does the Samaritan Fund come from?—From dividends and subscriptions; in the course of years some money has been saved and invested and some legacies have been received.

12012. In an average year, how much do you spend from the Samaritan Fund?—We get about 500*l.* a year, and generally spend it.

12013. Do you supply that from the general funds of the hospital if you are getting short of money?—No; then we have to reduce the expenditure.

12014. But out of that 500*l.* you find you can afford to keep some families whilst their relations are in the hospital?—Yes; you will see on page 7 of the last Report that we spent in 1889, 60*l.* in giving relief to the families of patients while they were in the hospital.

12015. Do you know how much it costs to keep your hospital in repair annually, as a rule?—Well, the repairs vary; in last year's accounts the general repairs are 1,209*l.*; in other years they would be much more. When the white-washing and cleaning year comes round, it is a considerably larger sum; it costs about 1,000*l.* to do that.

12016. Do you pay rates?—Yes.

12017. How much do you pay and how much are you rated at?—We paid last year in rates 365*l.* The hospital is rated at 1,334*l.* a year, and a house, which is really part of the hospital but which is called No. 1, St. George's-place, where the medical officers live, is rated at

Chairman—continued.

250*l.* a year; it is all, practically, one building, but they are rated as two.

12018. With regard to your weekly board, is that made up of professional men as well as lay governors?—Yes; it includes medical officers if they are governors; everybody subscribing five guineas a year or upwards, or giving 50*l.* or upwards in one sum, is eligible to be elected a governor. We have about 1,000 governors; all those governors, whether medical or otherwise, have a right to attend the weekly board.

12019. Then it is an open board?—Yes; quite an open board to all governors.

12020. Then does this open board transact the business of the hospital, or does it appoint committees?—Yes; it appoints committees. There is a finance committee which discusses all matters connected with the finances of the hospital, the tradesmen's accounts, all questions of investments or of selling out stock, and all questions of increase of salaries and reports to the board. Then there is a general purposes committee, which considers all matters concerning repairs or alterations or additions to the hospital, and receives tenders and accepts contracts for provisions; and if any question of management comes before the board it may be referred to the general purposes committee to inquire into and report on. In addition, there is a nursing committee, which has the sole charge of the nursing department. The nursing committee appoints and dismisses all nurses and probationers, and superintends generally all matters connected with that department. It makes an annual report to the board in the month of April every year, in which it enters fully into the question of the nursing department; it reports the number of probationers and nurses engaged during the year, and the number dismissed, and the reasons why they left; it reports the sick rate among the nurses during the year (I have a copy of the report here if you like to have it read), and it goes fully into all particulars concerning nurses. The superintendent of nurses reports to the nursing committee, and they appoint and dismiss all nurses. There is a chairman of the nursing committee appointed, who is frequently at the hospital three or four days a week, and is in constant communication with the superintendent of nurses.

12021. Then this nursing committee has full power, I understand?—Subject to the board, full power; they report to the board.

12022. Then the work of the hospital is done by these various committees?—They all report back to the board, and the board discusses the reports of the committees and accepts or refers them back as they see fit.

12023. Have you a medical committee?—Yes.

12024. Of whom is it composed?—All the medical officers; all the physicians and surgeons.

12025. Now, with regard to any complaints that there may be in the nursing department, those go to the nursing committee?—Yes.

12026. And complaints of the patients with regard to their food, for instance, to whom would they go?—To the board or to myself.

12027. Do you have many of them?—Very few; and I report to the board if there is anything

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

thing worth reporting. If there is any matter of complaint concerning a patient's diet I generally ask the first governor who comes in to inspect it, I myself having first of all inquired into the circumstances. We are so centrally situated that we have constant visits from our governors; there is rarely a day that passes without two or three coming into the hospital. The treasurer is constantly about, and other governors come up; so that it is not difficult to get an opinion.

12028. But then you have no power in your own hands to deal with it?—Certainly, if I was satisfied that the diet was not good I should at once see the housekeeper or steward about it; I should send for them myself.

12029. Do you ever get complaints from outside people who have had servants or friends in the hospital?—Scarcely ever; and if we do we insist upon the person, if possible, coming to the hospital to make his or her complaint to the board, and the whole thing is gone into at once.

12030. In fact, you rely upon the public to come to the hospital to make complaints if there is anything to complain of?—Yes; but in addition we have four or more governors appointed every month, whose business it is to go round the wards day or night and to inspect everything, to make all sorts of inquiries, and to make a report to the board whether they think things are satisfactory. They especially direct their attention to the diets and report every week to the board and make constant reports about the diets, nearly always favourable. Patients have every opportunity of complaining either to these governors or to the officers of the hospital.

12031. You mentioned contracts just now; who makes the contracts?—The general purposes committee is empowered by the board to accept contracts.

12032. They advertise for tenders, do they?—They advertise for tenders, and the general purposes committee receive the tenders, and has the power of accepting a contract by a special resolution of the board.

12033. Then who is responsible for the quality and quantity of the meat coming in being as required?—The steward.

12034. Is he under you?—Yes.

12035. What class of man is he; what salary does he get?—He gets 100 *l.* a year, and lives in the hospital.

12036. Do you do all the washing by contract, or do you wash on the premises?—No, it is all done by contract.

12037. Do you find that more expensive?—We could not do it ourselves; it is impossible, being situated at Hyde Park Corner.

12038. Now, you mentioned the nursing committee; who is the official directly under the nursing committee?—The superintendent of nurses.

12039. Does she hold the same position as a matron does in other hospitals?—She is called superintendent of nurses and matron.

12040. Then have you the same system as in other hospitals of sisters, trained nurses, and probationers?—Very similar, only we do not call

(24.)

Chairman—continued.

our head nurses sisters; we call them head nurses.

12041. Has there been much improvement in St. George's in the nursing in the last 10 years?—Yes, we are constantly doing something to make things better. Within the last 10 years we have built a separate sleeping apartment for every nurse, and now we give each her cubicle, whereas formerly they slept two or three together.

12042. Could you give us a return of what the hours of the nurses are?—Yes.

12043. I will first ask you what are the hours of the day nurses?—The head nurses come on duty at 7 in the morning and they go off duty at 10 at night; they have breakfast and lunch and tea and supper in their own sitting rooms; they go down to dinner in the nurses' dining-room at 4 o'clock. They have two hours leave every day, that is to say from 5 to 7 one day, and from 7 to 9 the other. They have three weeks' holiday every year, one day off every month, and from 4 o'clock p.m. to 9 o'clock p.m. once a month.

12044. Is there any time allowed for these various meals like breakfast, luncheon, tea and supper?—The head nurses, getting them in their own room, take their own time really; for dinner they have half an hour.

12045. Is that the time they are allowed to be out of their wards?—That is the time they are at dinner.

12046. If they leave the ward at 4 for instance, they have to be back in it at half-past 4?—It is more often a little after the half-past 4 before they come to their wards. The dinner of the head nurses is served at 4 o'clock, and they leave the dining room at half-past 4.

12047. A head nurse has a sitting room, I understand you to say?—Yes, each head nurse has her own sitting room and bedroom.

12048. Do either of those rooms adjoin the ward?—In the case of six of these head nurses they adjoin the wards, both bedroom and sitting room, and those are the most popular rooms; the bed-room is over the sitting-room. In the other cases the bedroom is at top of the house and the sitting-room attached to the ward.

12049. So that at night in some cases the head nurse is right away from her ward?—Right away from her ward.

12050. Now as to the day nurses, what are their hours?—They breakfast in the dining-room at half-past 6 in the morning; they are on duty in the wards at 7 o'clock; they dine from half-past 12 to 1 o'clock; they are allowed half an hour for that; and half an hour for tea; the tea goes on from 4.45 to 5.45.

12051. Where does that take place?—In the nurses' dining-room; and supper in the nurses' dining-room at half-past 9; they are off duty every other day from 6.45 p.m. to 10 p.m.

12052. You did not tell me what time their day ends?—At supper time unless they have gone off duty at the earlier hour of 6.45, as they do every alternate day. Every other day they are off duty from 6.45 to 10 p.m. They have two

N 3

weeks'

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

weeks' holiday in the year and one day's holiday every month.

12053. Is the health of your nurses good?—Yes, very good. The nursing committee reported in April 1890 that for the year 1889 the rate of sickness was $3\frac{1}{2}$ per cent.

12054. Have you had any deaths among the nurses lately?—In 1888 a nurse died from peritonitis. We have had no death since.

12055. But not from hospital diseases like typhoid or sore throat?—No, no nurses have died from typhoid or diphtheria for a long time.

12056. Do you take in diphtheria cases?—Yes, we take in diphtheria cases; we have three special wards set apart for them.

12057. You isolate those cases?—Yes.

12058. Has the matron any power to suspend nurses?—Yes, she has the power to suspend.

12059. Not to dismiss?—Not to dismiss.

12060. Supposing one of the nurses is ill, where does she go?—If she is ill she goes to the nurses' sick-room and is placed under the charge of the resident medical officer. We have a resident medical officer one of whose special duties it is to look after the sick nurses; and in the event of his wanting another opinion he calls in a physician or surgeon.

12061. Is he a man of a certain standing and age?—Yes; he is a man of middle age.

12062. Then with regard to these day nurses, do they do anything in the way of scrubbing or menial duties?—No, they do everything that is required for patients, and therefore they clean the patients' medicine shelves. Over every patients' bed is a shelf on which his medicine is placed, and that the nurse has to keep clean. They have to dust the wards, but they have no scrubbing to do beyond the patients' shelves.

12063. Or any burnishing?—Polishing pewter inkstands? The probationers keep them clean.

12064. You have ward maids?—We have them in all the wards.

12065. As regards special nurses for certain serious cases, have you any of them?—We have a large number.

12066. Could you supply them all from your own staff?—No, we have to get them many outside.

12067. Do you find difficulty in getting them?—We keep a list on our books of persons fit and willing to attend special cases; we send to them first, and then in the event of our wanting more we send to a nursing institution in our neighbourhood.

12068. What I want to get at is whether you find difficulty in getting nurses for special cases?—Sometimes we do; sometimes the superintendent of the nurses and myself have to consult what to do to get special nurses; that is not at all uncommon.

12069. What number of nurses have you on your staff?—Ninety-two.

12070. Then with regard to the night nurses, what are their hours?—The night nurses break-

Chairman—continued.

fast, or have their first meal after getting up at 9 o'clock at night; then they go on duty at half-past 9 o'clock till 9 o'clock the next morning.

12071. So that the first two or three hours of the day the duties of day nurses and night nurses overlap?—Yes.

12072. Is that the heaviest time in the wards?—Yes.

12073. Getting up the patients?—Yes, and attending to the breakfasts and early dressings, and things of that kind.

12074. And in the case of male attendants being wanted, do you keep a number on your books?—We apply to the Hamilton Association.

12075. Is that an association which provides male attendants?—Male attendants only; we have a few of our own besides, but we depend upon the Hamilton Association chiefly.

12076. As to the length of service of nurses, have you any idea how long they stay, as a rule?—Yes; the head nurses stop a long time. We have one head nurse who has been in the service of the hospital now for 20 years; another head nurse who has been in the hospital about 18 years; and others varying times. The ward nurses enter as probationers to serve for three years, and some few stop beyond their three years, but not many; they prefer to change in some cases, and in other cases they prefer to go to private nursing, or wish to get head nurses' or sisters' posts, and as there are not sufficient vacancies with us they have to go elsewhere.

12077. But as to these head nurses who have been so long with you, do they not rather belong to the class of old-fashioned nurses?—There is only one really; the others have all been trained by ourselves.

12078. You have a staff of probationers?—Yes.

12079. Those are nurses training?—Yes.

12080. How long do you think they ought to be in the hospital before you can consider them trained nurses?—They enter for three years. At the end of their first twelve months' training, if they are thought fit they are promoted to be ward nurses, and they serve in that capacity, doing day and night duty alternately during two years, making up the three; and then, if they stop, and some do, we are very glad to have them.

12081. But they have a right to a certificate after three years?—Yes.

12082. Have you lady probationers or pupils?—We have no lady pupils so called, but we have ladies that enter on the same footing as the other probationers.

12083. They are paid?—All paid.

12084. Have you an institute from which you send out nurses to private cases?—No, and we only train nurses for our own wards.

12085. Have you pensioners?—We have pensioners.

12086. Is there any rule laid down with respect to pensions?—No rule is laid down; each case is considered on its merits.

12087. From what you said just now I should gather

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

gather that the expense of the nursing has become less every year, because they stop a shorter?—On the contrary, the expense of nursing increases.

12088. Could you tell us what are the maximum and minimum rates of pay at your hospital?—Yes. With regard to the head nurses, there are at present two rates of pay; the two head nurses, who have been with us some time, were on a different rate of pay from that now existing. They now receive 40 *l.* a year and no allowance for washing. Then we have another nurse who also was on the old rate of pay; she receives 34 *l.* a year, and she, too, has no allowance for washing. We have eight head nurses receiving from 30 *l.* to 36 *l.* a year and 4 *l.* allowance for washing. We have six head nurses receiving from 24 *l.* to 28 *l.* a year, and 4 *l.* allowance for washing. We have a surgery or casualty room nurse receiving from 24 *l.* to 27 *l.* a year, and the same allowances, 4 *l.*, for washing; an out-patient department nurse receiving from 24 *l.* to 26 *l.* a year, and the 4 *l.* allowance for washing. We have 47 ward nurses, who take day and night duty alternately at intervals of about three months; their pay is from 20 *l.* to 23 *l.* a year, with the same allowance, 4 *l.*, for washing. We have four permanent night nurses, who have been with us for several years; two of these receive 29 *l.* a year and no washing, and two 25 *l.* a year, and 4 *l.* allowance for washing. Then we have 22 probationers, with 11 *l.* a year, and 4 *l.* allowance for washing.

12089. Have you altered the hours of the nurses at all lately?—Only a very little; we have given the day nurses lately another hour in the evening; they used to go out for two hours every alternate evening, and now they have three hours, until 10 o'clock. That gives them an opportunity of going to see their friends. If they wish to be in to supper they must come home by half-past nine.

12090. Are all the doctors on your staff paid?—None are paid.

12091. With the exception of the junior medical officers?—Except some of the juniors.

12092. The resident medical officer is paid?—Yes; and the obstetric assistant is a salaried officer; he has charge of the lying-in cases; some of the other officers, the registrars and junior officers, are paid, but none of the senior staff. I will put in a list of the salaries and number of the staff.

12093. Do you attend a large number of lying-in cases outside the hospital?—Yes; last year we had about 392.

12094. Are those treated by what have been called extern clerks?—Yes, under the superintendence of the obstetric assistant; in fact, several he has to treat himself.

12095. What has a woman to do if she desires to be attended from the hospital?—She comes to the hospital on a Thursday at 11 o'clock to see the obstetric assistant; he ascertains when she expects that she will want assistance, and then she has a letter given to her which she has to send to the hospital when she wants the doctor; when the letter comes it is decided who shall be

(24.)

Chairman—continued.

sent. A book is kept, with the names of the gentlemen qualified to attend.

12096. But in the case of a young man attending his first case would the obstetric assistant go with him?—Generally a senior man, or possibly the obstetric assistant himself would go with him.

12097. Who are those young men under; the medical committee?—Yes; they are pupils of the hospital.

12098. So that in case of misconduct or carelessness that would come before what body?—That would come before the board. It is written on the letters which these women receive that they are to come to the hospital at the expiration of a certain time to "return thanks"; and when they come they are closely questioned by the chairman what treatment they have had, whether they have any complaints to make, whether the medical officer made a certain number of visits, and also whether the doctor was present when the child was born, or, if not, as soon after as could be expected.

Earl of Kimberley.

12099. Are these women attended by having letters from the governors?—No, the whole department is free.

12100. Do you limit the number attended to the number required for the instruction of the medical students?—Yes; but they are supposed to come from within a mile radius of the hospital, and we limit them according to the number of doctors we are likely to have available.

Chairman.

12101. Have you a larger number of medical or surgical beds?—We have 205 surgical beds, and 151 medical beds.

12102. Has any idea ever been started of transplanting St. George's into the country?—No.

12103. Not that you know of?—Not seriously. Of course one knows that it has been talked of occasionally in the neighbourhood, but it has never been seriously thought of, or spoken of.

12104. Are there any dispensaries near at hand?—Yes, there are one or two provident dispensaries in our neighbourhood, which, I believe, get on very well.

12105. You said that the hospital is quite free, and that the out-patient department is quite free; are the out-patients unlimited in number?—No, we restrict them to 15 each medical officer each day.

12106. How many medical officers have you?—Some days two, some days three, some days four, according to the different special cases. The ordinary physicians and surgeons come four times a week, and to each medical officer there are only admitted 15 new cases; perhaps I may explain the system.

12107. Will you please do so?—On the days when out-patients are seen, the applicants are supposed to be in attendance before half-past 11; it is the business of the resident medical officer to go downstairs and see all the cases applying

N 4

for

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

for treatment, and from those applying he selects the 15 most serious cases for the physician and 15 for the surgeon; then, after that, a clerk goes down and registers their names, occupations, and addresses, and ascertains as far as he is able if they are suitable cases, under certain rules, for treatment. If he has any doubt about the position of the applicant, or whether he or she is suitable for treatment, he would mark the case E. (for "Enquiry") on the paper, and send it up to me, and I should make certain inquiries. If I wanted more information I should send the case to the Charity Organisation Society, but the patient would be seen on the first occasion. And then, if on the report coming back from the Charity Organisation Society it was satisfactory, of course the patient would continue under treatment; if the report from the society was not satisfactory, the book would be stopped, and the patient would see me.

12108. With your system of restricting the numbers in that way, do you turn away many people from that out-patient department?—Yes; we have to turn away several.

12109. You have to shut the doors and say you cannot admit any more?—We are obliged to say that all the tickets have been given, and no more can be seen; but the resident medical officer is very careful that if, among those who cannot be treated that day, there are any bad cases, they should not be sent away, and he himself takes them to the casualty room or surgery, and asks the house physician or house surgeon, as the case may be, to prescribe for them.

Earl of Kimberley.

12110. With regard to diet, supposing that a certain diet is prescribed; say, for instance, that fish is ordered for a patient, would the patient be sure to get it practically; I mean immediately afterwards the same day or the next day?—Yes; the next day. The physicians or surgeons come at one o'clock, after the patients' dinner, and any diet prescribed is supplied the next day. Anything immediately necessary would be supplied at once.

12111. You never had any case before you where fish had been ordered and the patient did not get it till two or three days afterwards?—No, I have not. There are 70 or 90 fish diets every day. No patient leaves without seeing the resident medical officer or myself, and every patient before he leaves is asked whether he has any complaints to make.

Chairman.

12112. Do you ask them whether they have had to give any fees to anybody?—Yes, we ask them that; but we can very often judge that nothing of the kind has passed, because it is evident that they are quite poor persons.

12113. You interrogate the patient whether he has had all the food that has been ordered, and whether there is any complaint that he has to make?—Yes; but, in addition, the governors nominated by the weekly board are going round the wards while the patients are there to ask the same thing; and all patients going

Chairman—continued.

out on a Wednesday are seen by the board; on Wednesdays we send out a large number of patients to our convalescent hospital or to their own homes.

Lord Saye and Sele.

12114. Is there any airing court at St. George's or any space for exercise?—Yes; at the back of the hospital there is a quadrangle where patients can walk.

12115. In the cramped space you have, where is the mortuary?—It is under a ward really, on the Grosvenor Crescent front; it is not near the houses; it is a large room with a ventilating shaft to the top of the hospital and gas lights in the shaft always burning to carry off any foul air.

12116. What ground-rent do you pay for the hospital?—Part of it is our own property, and the rest we hold at a peppercorn rent, from the Duke of Westminster.

12117. Who is an honorary treasurer?—Yes.

12118. What is the amount?—£. 5 4 s.

12119. Considering the very conspicuous position that the hospital occupies in the West End, it always looks a very dingy building; can you tell me when it was last painted outside?—Perhaps I may answer the question in another way. The question of painting the hospital has been under consideration for some time, and it would have been done last year only it was proposed to make certain additions and alterations to the hospital; they were considered, and eventually not allowed, by a special court of the governors, and so the painting stood over; but the painting I think, will be done this year certainly.

Earl Cathcart.

12120. We did not hear much of your medical school; you have one?—Yes; the dean of the medical school will be here to give you full information on that subject; I shall be happy to answer questions as to any particulars.

12121. There is one matter of some little importance; it was told us that a medical school entailed a considerable expense upon the hospital proper; the evidence I refer to is on page 255; it was the evidence of Mr. Brodhurst, and the question was question No. 3987. "In consequence" he says, "of the schools now being attached to the hospitals, the hospital management is in excess of what is needed for the poor; the food is too luxurious, the nursing is fit for Dives, and" (this is the part I want to call your attention to) "every new medicine and instrument, splint, bed, and knife must be tried for the sake of the students. Every surgeon orders whatever he chooses at the expense of the hospital; and if he has a taste for new implements he may exercise it to any extent." Now is that your experience at all, that these things are called for for the sake of the school in undue proportions as compared with what is necessary for the sake of the patients?—Every instrument of the kind has to be ordered by the weekly board; the surgeons cannot order anything; they have to apply to the weekly board for it.

12122. The statement I have just read was made by Mr. Brodhurst, and it never has been clearly

9 February 1891.]

Mr. TODD.

[Continued.]

Earl Cathcart—continued.

clearly contradicted; but it is not your experience, I understand, that undue expenditure is caused by application for novelties in that way?—I do not think that is the case, but naturally we get the best system of treatment we can for our patients, whether of medicines or surgical instruments.

12123. But if a medical man asks for anything the probability is he would get the thing he asks for?—Yes.

12124. It being well weighed and considered?—Yes.

12125. I happened to look into a map of London of the year 1767 and I found that your hospital was marked in fields; I suppose originally the buildings were of a homely character?—Yes, the hospital was established in what was then known as Lanesborough House; there was a little difference as to re-building Westminster Hospital, and a certain number of the governors withdrew from that and took Lanesborough House, which they converted into St. George's Hospital. They collected funds enough for two wings, and for some years the hospital contained 200 beds, Lanesborough House having been converted into the hospital.

12126. What is the greater part of your hospital, leasehold or freehold?—The greater part is leasehold, rented from the Duke of Westminster; the lesser part is our own freehold.

12127. Have you a long run of lease?—No; it has to be renewed from time to time.

12128. On reasonable terms?—Yes; there is a fine of 40*l.* payable before the lease is renewed.

12129. When you built your new buildings did that get you into debt?—That was 60 years ago, and I am afraid I cannot say much about what happened then.

12130. I mean was any debt of importance left?—No, I believe not. A few governors took the matter up very warmly, notably Mr. H. P. Fuller, and I think the whole was paid for at the time or soon after.

12131. The noble Lord in the chair asked you if there was ever contemplated a removal of the hospital into the country; has a removal anywhere been contemplated seriously?—Not seriously.

12132. Not in London?—No.

12133. But supposing you should outgrow that site, would it not be necessary to take some other, seeing that there is no room for extension?—We, at the present time, are seeking to get further accommodation for our nurses; we are now trying to get some houses where we can sleep nurses, in order to be able to increase our staff.

12134. The position is a noisy one, but otherwise healthy?—Yes, it is noisy, but wood paving has done a great deal to make that better.

12135. Do you have complaints from the patients on that matter?—No, they soon get used to the noise.

12136. The wards have a snug and comfortable appearance?—I think so; the patients seem very comfortable.

12137. What size of ward would you like to work a hospital with?—I think 12 beds to 14 is a good size for a ward.

12138. It is more comfortable for the patient,

Earl Cathcart—continued.

more easily warmed than a larger one?—Yes; as a matter of fact, many of our wards contain about 14 beds; in the wings, as I have already mentioned, we have thrown two such wards into one.

12139. What temperature do you maintain in your wards?—We try in cold weather to keep it up to 60° in the medical wards (we cannot do that in the surgical wards); we have had a heating apparatus put up so that in the medical wards, if necessary, the temperature can be increased.

12140. Have you any records of the temperature kept?—The resident medical officer has records from time to time of the temperature.

12141. Why cannot you keep up the same temperature in the surgical wards?—It is not advisable to have them too warm.

Earl of Kimberley.

12142. You do not mean that you cannot, but you do not think it necessary?—We do not think it advisable.

Earl Cathcart.

12143. It was suggested that there might be an interchange of patients between hospitals; that would excite some little jealousy, would it not, because other hospitals would think that you were picking out the best cases for the hospital; that is to say, the worst cases, for your own hospital and sending them the others?—If we have the opportunity we should send on to other hospitals cases which ought to be taken in, but which we could not receive.

12144. But there would be a jealous idea that you kept the patients that might be useful to your school, and sent on those that were less serious cases?—There might be.

12145. Have you found on the whole that this Hamilton Society for male nurses is a satisfactory society?—Yes, as a rule.

12146. They send you suitable people, do they?—As a rule.

12147. And you think it is advisable that men should be trained for a certain class of cases?—Yes, it is very useful.

12148. There are many cases for which women are not fitted?—Yes. Before that we had to apply to the Commissionaires; when there are men suffering from delirium tremens, or otherwise noisy and violent, they cannot be controlled by women. The Corps of Commissionaires used to do the work as well as one could expect; but they were not trained for it.

12149. But it is highly desirable to have trained men, because they can do their duty in a way that an untrained man cannot?—Yes, distinctly.

12150. Your midwifery cases are really educational cases, not so much in the way of charity; is not that so?—It is both; the educational value has to be considered, but it is in the way of charity as well.

12151. If you had not had a school you would not have attended your midwifery cases, would you; that is what I mean?—It is possible. Many of these people are so poor that they want help during their confinement.

12152. But I understood you to say that you did not make much inquiry?—All their statements

9 February 1891.]

Mr. TODD.

[Continued.]

Earl Cathcart—continued.

ments are registered, their names, the occupations of the husbands, and the addresses.

12153. Your out-patient department is very inconvenient; you go down some steps into an area, and in the area there is a kind of house built something like a chapel, and across a narrow passage are two sort of cabins, or rooms, where the medical men, I presume, are?—Yes, there are four consulting-rooms.

12154. And at the end of the passage there is the dispensary hatch?—Yes.

12155. Do you not find that space confined?—Yes, it is contracted.

12156. That is the case with all the out-patient departments, is it not, that the out-patient department is an after-thought, and was not provided for in the original construction of the building?—Our out-patient department was built about 23 years ago. Formerly we had no arrangements for the out-patients at all; they were seen in two rooms at the right and left of the hall door as you entered. Then we made some provision, and had an out-patient department, which at the time was sufficient.

12157. In your experience, in most of the hospitals in London the out-patient department is confined, is it not; it was not originally thought of in the construction of the building; is not that your experience from what you have seen?—In many cases it has been expressly built for the purpose. The London Hospital has a large out-patient department.

12158. We were told at our last meeting that at this great hospital opposite (St. Thomas's) the out-patient department is too small?—It has become too small, I daresay.

Earl of Arran.

12159. The nursing committee investigate all reports, I suppose, from the superintendent of nurses in the first instance?—Yes.

12160. Have they the power of dismissing a nurse before reporting to the board?—Yes.

12161. Then, having dismissed, they report the case to the board?—Any bad case they would report; otherwise they would not report to the board. They hire and dismiss the nurses without reporting to the board, except in some serious case.

12162. Where the bedroom of the head nurse is at the top of the ward, is there communication, supposing she was wanted; are there bells?—No; but we have a night superintendent on duty at night, and she takes the place of the head nurses. If the night nurses are in any difficulty they apply at once to her; if a patient is taken worse they apply to her, and she sends for the doctor. She goes round the wards every night three times, in addition to visiting the urgent cases.

12163. Have you a children's ward?—No; they are put in the women's wards.

12164. And you find that the best system?—We think so.

12165. You never have complaints of the children disturbing the other patients?—Very rarely; but if necessary we remove the child to a separation ward.

Earl of Arran—continued.

12166. You have never tried the system of having the children in one ward at night, and then in the day-time letting the people in the hospital see them?—I have heard from a governor who has a longer knowledge of the hospital than I have that originally they had a children's ward, but it was found desirable to give it up.

12167. Does the superintendent of nurses go round the wards daily?—Every day the resident medical officer goes round the wards, and also the superintendent of nurses.

12168. Is there a separate kitchen for the nurses?—Not at present; we are hoping to get one; at present there is only one kitchen, both for nurses and for patients and officers.

Lord Zouche of Haryngworth.

12169. Do you ever take in cases of measles?—Yes.

12170. Or scarlet fever?—Not scarlet fever. If a case of scarlet fever comes up we do not let it go away; we have an isolation room in which the patient is put, and we send for an ambulance and send the case to the Fever Hospital.

12171. Do you isolate measles?—No; except with regard to the children; children are moved away from the neighbourhood of the patient, perhaps out of the ward; and then we go on very well.

12172. Do you take in any other infectious cases?—Typhoid cases and diphtheria we take in; we isolate diphtheria cases in the diphtheria wards.

12173. Would you often have cases of diphtheria?—Yes, we take in a great many; last year we admitted 54 cases.

12174. Do you ever have a nurse taken ill with diphtheria?—We had no nurses last year attacked with diphtheria; the year before we had one, who had a diphtheritic throat.

12175. Have you not had any other nurses who have caught the infectious diseases at the hospital?—No.

12176. You have not had any epidemic of diphtheria?—No; the only thing last year was that they suffered a great deal from influenza.

Lord Thring.

12177. I think you replied to the Chairman that in cases of delirium you have a male nurse?—We move them to a separation ward and have a male attendant.

12178. And you do not allow a patient to pay for a nurse?—No, we provide everything free.

12179. Have you had any complaints from outside that they have in some cases paid?—No; if they have it was quite wrong. They are very often too poor for it to be necessary to ask them the question; but otherwise they are asked if they have given anything.

12180. If they have, it is contrary to the rules of the hospital altogether?—Yes.

12181. You have not heard of a case of a patient brought in and becoming delirious, his relatives saw him and paid for a nurse?—That has not been brought to our notice. I do not think it can have occurred.

12182. With respect to the provisions; do you

9 February 1891.]

Mr. TODD.

[Continued.]

Lord Thring—continued.

you boil your milk?—Yes, we scald it all the summer.

12183. That gives it a flat taste?—Yes.

12184. Have you had complaints of that boiled milk being very distasteful?—No, we have had no complaints. That has been our practice during the hot weather.

12185. With respect to jellies and articles of that description; do you make them in the house yourselves, or do you send out for them?—Some we make in the house ourselves, some we get from Gunter's.

12186. With respect to quite another subject; an architect for repairs; have you a superintending architect belonging to the hospital?—We have.

12187. How is he paid?—Five per cent. on work done under his superintendence, and 2½ per cent. on certain jobbing books in which the minor repairs are entered.

12188. Is he salaried also?—No, he is not.

12189. Then with respect to these committees; I think you told the Committee that there are about 1,000 governors?—Yes, about 1,000 governors.

12190. And they elect a series of committees, do they not?—Yes.

12191. How do they elect them?—By ballot.

12192. The governors have a meeting for the purpose; is that what you mean?—Out of those thousand a great number never come to the meeting of the board. We have an average attendance of 26 during the season.

12193. At your annual meeting you elect the committees?—At the Court of Governors in May a committee is elected to appoint certain officers; the finance committee, the general purposes committee, and the nursing committee are elected at the weekly board.

12194. That is, in fact, a board of the governors?—Yes, an open board.

12195. What number usually attend to elect these committees?—Generally we have an average attendance of about 26.

12196. And how many are there on each committee?—The general purposes committee is composed of 16 governors, the treasurers (*ex officio*), and two members appointed by the medical committee; the finance committee is composed of six governors, the treasurers, and the trustees; 10 in all.

12197. Then the nursing committee?—The nursing committee is composed of 10 governors and all the medical officers of the hospital who are governors; the whole strength of the committee is about 30.

12198. How often does the nursing committee meet?—Once a month; sometimes oftener.

12199. How many governors practically attend?—A varying number; sometimes only four or five; sometimes a dozen or more.

12200. And these gentlemen really attend to the business?—Yes; they are generally members in constant attendance at the weekly board as well.

12201. As I understand your nursing, it is practically not lady nursing?—We have persons of both kinds at the hospital; some who would be called lady nurses, and nurses drawn from the other class.

(24.)

Lord Thring—continued.

12202. Is the superintending nurse, commonly, what is called a lady?—Yes.

12203. And are your head nurses usually ladies?—Some are and some are not.

12204. But they are all on the same footing?—All are on the same footing; there is no distinction.

12205. Is two week's holiday, in your opinion, enough for the nurses?—We should be very glad to give them more, but at present our staff is small for the work required. The committee have even now under consideration the question of increasing the nursing staff; it is a question of accommodation; we are now negotiating in order to lodge out nurses whom we cannot accommodate in the hospital.

12206. When you send away cases, do you send them ever to the poor-law infirmary?—If you mean those refused in the out-patient department, we do not tell them where to go.

12207. I rather meant this: you told us that the beds were not unusually so full that you were obliged to send away some?—We tell them to apply to the relieving officer for orders for admission; the poor-law infirmaries will not usually take them in without; they must go first to the relieving officer.

12208. If they are of that class you tell them to go to the infirmary?—Yes; and sometimes I have written a note asking them to take them in at the infirmary without the usual order.

12209. As I understand, you really and truly relieve the poor rates by taking a good many pauper patients?—No doubt we do.

12210. I do not quite understand why you should not send those people who are evidently pauper patients to the infirmary, and take in a class who would not be pauperised?—Patients do not like going to the infirmaries.

12211. Do you think that patients who come to you, however badly off they may be, are anxious to avoid pauperism?—Yes.

12212. And in the cases which you have investigated that was the effect of your inquiry, was it?—Yes; every now and then we have to send cases on to the infirmary. We, first of all, have to advise them to go and see their relatives and get their consent.

12213. But you think that by taking in these people you avoid pauperising a deserving class?—No doubt.

Earl of Lauderdale.

12214. What is the amount of money you have invested at interest, or are receiving dividends from?—It now amounts to about 441,640 *l* of capital. The dividends last year amounted to 12,642 *l*.

12215. Did you say that you had any landed property?—None at all; a few houses, that is all, in London.

12216. Your dividends amount to 12,000 *l*. a year in round numbers?—Yes.

12217. And your expenditure is 28,000 *l*.?—Yes.

12218. And the difference is provided by subscriptions and legacies?—Yes.

12219. In the case of that legacy of 20,000 *l*. which you received last year, did you invest any portion of it?—The whole of it.

O 2

12220. Are

9 February 1891.]

Mr. TODD.

[Continued.]

Earl of Kimberley.

12220. Are there any special limitations as to your investments?—We invest in first-class debenture stock or Government stock, but have recently bought some colonial stock. We consider ourselves tied; we have our own law on the subject, based on the Acts empowering trustees to invest.

12221. Have you made rules by which you have debarred yourselves from investing in colonial securities?—No. We have quite recently altered the law so as to enable us to invest in colonial securities. If I may read this clause, it is pretty plain (it is page 27 of the Laws): "The current expenses of the hospital shall be defrayed as much as possible from the annual income of the hospital and from donations; and the surplus of such income, if any, and all other funds received on account of the hospital, and not required to be applied for its current expenses, shall be invested in Government or real securities, or in such funds as trustees are empowered to hold by Act of Parliament, or in permanent debenture, preference, or rent-charge stocks of first-class railways, or other companies in Great Britain, or in Colonial Government stocks, registered or inscribed in London, upon the recommendation of the finance committee, at such times and in such manner as the weekly board shall from time to time direct."

12222. That is your new rule?—Yes.

12223. Formerly these colonial and inscribed stocks were not included?—Quite so.

Earl of Lauderdale.

12224. When was this new rule adopted?—About two years ago we obtained power to invest in colonial securities, and since then we have invested.

12225. How much?—In the India $3\frac{1}{2}$ per cents. we have 18,270*l.*; in the India 3 per cents. we have 57,879*l.*; in Queensland $3\frac{1}{2}$ per cent., 48,459*l.*; in New South Wales, $3\frac{1}{2}$ per cent. stock, we have 30,000*l.*; in Victoria, $3\frac{1}{2}$ per cent. stock, we have 25,000*l.*; and in Canada, 3 per cent. stock, we have 35,000*l.*

12226. Making a total of how much?—£.214,608.

12227. Then you have got half of the amount invested in the colonial stock in the last two years?—Yes; we have sold out other stock to invest.

12228. By this new rule?—Yes, by this new rule, made about two years ago.

Chairman.

12229. Is any portion of that 440,000*l.* tied up for endowment; or can you spend the whole?—We cannot spend the whole; about 113,000*l.* is tied up.

Lord Thring.

12230. By Act of Parliament, do you mean?—No, by the testators. We have had one or two bequests left to us with the condition that we are only to use the income and not the capital. About 113,000*l.* is thus tied up.

Chairman.

12231. When the hospital was built it was not endowed with any particular sum of money, was it?—No, it was not endowed at all. The amount of stock we possess arises from legacies which we have had; during the last five or six years we have had two legacies of 100,000*l.*, which have been invested, and some of lesser amounts.

12232. Now before this five or six years you were in low water?—We used to have to sell from 3,000*l.* to 4,000*l.* a year stock to meet the current expenditure.

12233. How did you make up the amount of your income; did you ever appeal to the public?—Yes, we appealed on several occasions. In 1869, 1870, and 1871 we had special meetings; H.R.H. the Prince of Wales, the Duke of Devonshire, and others helped us; and since then we have made special appeals.

12234. Then you do not appeal, as a matter of course, two or three times a year?—We do not now these legacies have come in; we have not found it necessary to apply to the public in the way of a special appeal.

12235. Now you have a good deal in Consols?—Yes; we have 97,000*l.* in Consols.

12236. Supposing you were in the condition of most hospitals, without a gross sum like that, what is your most reliable source of income?—Annual subscriptions and donations, and the dividends, of course, and the legacies; really we have to depend on legacies.

12237. But your most reliable source is your annual subscriptions?—Annual subscriptions and donations.

12238. In your case are your annual subscriptions sufficient to pay the salaries and wages of of the establishment?—No, they are not, certainly.

12239. Therefore, the most reliable source of the income of any hospital in an ordinary position is really not sufficient to pay the establishment expenses?—I expect so, because our annual subscriptions are rather higher than those of most hospitals.

12240. Have you a person called a collector?—Yes.

12241. How do you pay him?—Four per cent. on all the subscriptions he collects, and one per cent. on all subscriptions paid direct into the bankers.

12242. Does he get any percentage on new subscriptions?—If he calls for them he gets one per cent., but he does not get a double or increased commission if he gets new subscriptions; we have not encouraged him to canvass.

12243. Why does he receive a commission if the money is sent straight on to a bank?—He has to give a receipt for the money and account for it to the treasurer, and pass it through his book.

12244. But the board thought it was not a good plan to encourage him to canvass for subscriptions?—Yes; on one occasion when we made a special appeal some governors were themselves good enough to undertake a house-to-house canvass; the late Lord Cadogan and others very kindly took it up; at that time the collector had a special commission given him, but ordinarily it is what I have stated.

12245. Are

9 February 1891.]

Mr. TODD.

[Continued.]

Chairman—continued.

12245. Are you well supported by the residents in that district?—We are not nearly so well supported as we could expect from our position; a great many residents in the neighbourhood do not subscribe.

12246. And at the same time perhaps, they send their servants to the hospital?—Yes, we have many servants sent whose masters or mistresses we know are not subscribers.

12247. Who passes the petty cash account?—The treasurer; he is generally three or four times a week in the hospital, but specially comes on Tuesday, the day before the board meets, to see my accounts and go over the business coming before the board on Wednesday.

12248. And does he always attend?—Whenever he is in town.

12249. And with regard to all the other books—the diets and the housekeeper's stock books and those various things—are those looked at and checked and so forth?—The superintendent of nurses reports when there is any deficiency in her stock, and inquiries are made concerning it. As to the provisions and things of that kind, they come before the finance committee every quarter, and then I have to account for any increased expenditure or increased consumption. I ascertain from the steward what the increase has been, and whether due to quantity or price.

12250. But are these books not examined by the board?—They are laid on the table and sometimes examined, but are not always looked at; there is too much to do very often at the board to do that.

12251. Then there are comparisons made as to the expenditure, quarter by quarter?—Yes; certainly.

12252. Have you got full power in the hospital in the absence of the committee; that is to say with regard to officials resident in the hospital, like house surgeons and the steward?—I, of course, am responsible for the general management of the hospital, and for its good order.

12253. But supposing that, in your opinion, some high official misconducts himself, have you authority to suspend him?—No; but I should immediately take action. In the case of a resident medical officer, house physician or house surgeon, I should at once communicate with the physician or surgeon of the week; they all live in the neighbourhood of the hospital; I am in communication with them, and if there were anything wrong, needing their interference, I should at once send for them or go to them. In the case of any other official, I should consult the treasurer, of course.

12254. But you have power over the servants?—I have power over the servants.

12255. And you can suspend them?—I can dismiss them. There are two or three higher class servants who must be dismissed by the board, but over all of them I have control.

12256. Do the board appoint servants?—No; I appoint, generally, the men servants, and report to the board, and the superintendent of nurses, the women servants.

12257. In the case of high officers, like the steward, does the board appoint them?—Yes.

12258. The board appoints and dismisses them?—Yes.

(24.)

Chairman—continued.

12259. I understand, from your evidence, that the greater part of your patients are very poor?—Many are very poor; of course they are not all of the very poorest class; I suppose they really are not so poor as they are in Whitechapel, in the neighbourhood of the London Hospital.

12260. Do you think that your charity is at all abused by people who could afford to pay for medical relief, making use of it?—Very little indeed, if at all.

Lord Thring.

12261. When you take in accidents from the park they stand in a different category?—Yes, quite.

12262. And those people make a donation?—Yes, they are generally very liberal.

Chairman.

12263. Do you keep returns of the attendances and new cases of out-patients?—Yes, every day, there is a return of the number of cases treated and the attendances.

12264. There is an out-patient doctor coming to give evidence, I believe?—Yes; he will be here to-day.

Earl of Kimberley.

12265. Are the lying-in cases confined to married women?—To married women; they must produce their marriage certificate.

Chairman.

12266. Do you take any lock cases?—No, we do not admit single women; we occasionally take in a man if the case is bad enough, not often.

Lord Saye and Sele.

12267. Is Colonel Haygarth honorary treasurer?—Yes.

Earl Cathcart.

12268. Do you treat those lock cases in the out-patient department?—Yes; they are treated there to a certain extent.

Earl of Arran.

12269. Arising out of the question of Lord Thring's about the milk, I will ask this: Do you boil the drinking water?—No, it is filtered. We have our own artesian well, and all the water that is used in the hospital is drawn from the artesian well, and all drinking water filtered.

12270. It is supposed to be a great preventative to any typhoid infection to boil water and milk?—Yes; but our water is found to be very pure; it is excellent.

Chairman.

12271. With regard to the quality of the patients, I asked Mr. Holmes, who was on the staff of your hospital, "You think there would be no hardship on the public if there were no out-patient department?" and he said, "Not the least;" that is at No. 670. Would you agree with that or not?—I do not suppose it would be any great hardship, because, of course, provision would be made somewhere else to treat these people; but we should find considerable difficulty

O 3

without

9 February 1891.]

[Continued.]

Chairman—continued.

without an out-patient department. These patients come up with minor injuries and they must be seen and treated afterwards. Occasionally the out-patient department has to be closed for repairs and cleaning, and we tell the out-patients in attendance that they cannot be seen for so many weeks; but patients are continually coming for minor illnesses and slight accidents; of course we treat as few as possible, but we cannot get rid of them altogether.

12272. You have no other hospital quite close?—No. If Mr. Holme's proposals were carried out, some other arrangement must be made for receiving and treating these patients.

Earl Cathcart.

12273. We were told that the out-patient department was very useful in cases where you were obliged to discharge patients not fully convalescent, from the hospital proper, and then they were told to attend the out-patient department till they were completely cured?—Yes.

12274. Therefore that is a way of relieving yourselves of in-patients who are not quite convalescent?—Yes.

Chairman.

12275. With regard to wooden legs and so forth, how are they supplied?—Out of the Samaritan Fund; if we amputate a patient's leg we usually give a wooden one.

12276. And are instruments and so on, supplied?—The amount expended last year in the purchase of instruments, trusses, and spectacles, and glass eyes, was 248 *l.*, out of which the patients paid 69 *l.*

12277. Do you take any notice of the Surgical Aid Society?—No.

12278. You are not subscribers?—No.

12279. You have a chaplain in your hospital?—Yes.

Chairman—continued.

12280. One or two?—One.

12281. And a chapel too?—Yes.

12282. The chaplain carries on correspondence, I understand you to say?—Yes; it is beyond his office really; only he takes great interest in his work, and communicates with the clergy of the district from which the patients have come.

12283. And do you find that these communications are very useful?—Yes; sometimes when we are helping a family he will go and see the family himself.

12284. He has nothing to do with the management of the Samaritan Fund?—No; the fund is disbursed by the board, but, of course, the cases are recommended by the chaplain.

12285. You have your own convalescent home?—We have our own convalescent home at Wimbledon.

12216. Has it been built out of the public money?—No; out of money left by Mr. Atkinson Morley, of Old Burlington-street, for the purpose; some 30 years ago he left us a large sum of money to build and endow a convalescent hospital. That money was to accumulate for five years.

12287. Then you do not pay anything out of the Samaritan Fund to the convalescent home?—Wimbledon is not suited for all cases; we send some to the seaside.

12288. For the maintenance of the convalescent home, I mean, you have nothing to pay from the Samaritan Fund?—No; but we do give half the balance of the Samaritan Fund at the end of the year.

12289. Is there anything else you would wish to tell the Committee?—No.

12290. Will you give a return of all the employés and the rates of pay?—Yes (*handing in the same*).

The Witness is directed to withdraw.

MR. H. H. CLUTTON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

12291. You were for some time engaged in the out patient department on the surgical side at St. Thomas's, were you not?—Yes.

12292. Dr. Sharkey was here the other day and he explained to us the system pursued at St. Thomas's, and I will not go through that again; but he said there was only a daily average of 51 who made applications as out-patients on the medical side?—Yes.

12293. Now can you give me any idea of the number of cases who apply on the surgical side or are sent over to the surgical side?—I do not think I can; they vary so much; one could obtain the average of the week, but Mondays and Tuesdays are very heavy days, and towards the end of the week there are comparatively few; but the total number I do not know.

12294. Could you get it and send it in?—Yes. The average number of new surgical out-patients selected for the assistant surgeon to see is 15 per diem; the average number left for the assistant house surgeon to see is 28 to 30 per diem; the average number of accidents, "casual-

Chairman—continued.

ties," throughout day and night, seen by dresser and house surgeon, and treated without admission, is 250 per week.

12295. Do you find the out-patient department at St. Thomas's crowded on the surgical side?—No; I should not say it is crowded.

12296. Quite enough for surgical teaching?—Yes, quite enough.

12297. And not so crowded that you cannot treat them properly?—No; I should say not. We limit the number that each surgeon has to see. There are only 15 new cases, as they are called, seen by me, for example, in the time that I am there; beyond that number, the more trivial cases are seen by the house surgeons; and then if they are found to have complaints which require the attention of one of the staff, they are made to come another day and see the assistant surgeon of that day. Take Monday and Tuesday; they are heavy days for patients; the number of patients is greater than any other day; and if there should happen to be one or more serious cases that have

9 February 1891.]

Mr. CLUTTON.

[Continued.]

Chairman—continued.

have not received a letter for that particular day, they are seen temporarily by the house surgeon and made to come on Wednesday, Thursday, or Friday, as the case may be. The difference between the two sides, medical and surgical, is simply this: that no cases are ever sent away on the surgical side, whereas I think you have obtained evidence that on the medical side cases are refused. On the surgical side we do not do that. It is found by experience that such cases are not seen by general practitioners outside; that is to say, they send them back again. They appear to have less facility in treating surgical cases; they require splints or dressings, or something of that kind. You see it is not medical treatment that they have from us; they have rather dressings and appliances, and that does not appear quite to be so much within the province of general practitioners as medical cases; at any rate that is a distinction that they draw, and they constantly are sending cases to us that you might think they would prefer to treat themselves.

12298. We have been told that the out-patient department starves the poor practitioner; but if, when they have cases actually coming from the hospital to them; they send them back to the hospital that does not bear out the statement that it starves poor practitioners?—That is what I wished to imply. If there should be a well-dressed person in my out-patient room, and he comes to me for treatment, he nearly always has a doctor's card, with my name on it, sent to me personally; a fact, I think, which rather shows that, so far as the surgical side of the hospital goes, the surgical out-patient room is used by the general practitioner for his advantage rather than the reverse.

12299. Does the general practitioner receive any fee in such a case?—I do not know that; that I do not enter into; but he prefers to send the case to the hospital, or else obtain advice from the hospital which one gives him by letter, if necessary. For example, I often have cases sent to me in the out-patient room with a letter from a surgeon outside who asks for an opinion.

12300. Then they use the out-patient department as a consulting place?—They already use the out-patient department as a consulting place.

12301. Would you like to see that more extended still?—Of course it takes up a great deal of time, and they are more troublesome cases; it takes longer, so that personally, from the trouble-point of view, I should not like it. But they are often times the best cases that we have to deal with for teaching purposes, and they also have a scientific interest.

12302. Now, with regard to the 15 letters that are given to you, that does not represent the number of applicants?—No, not on Mondays or Tuesdays.

12303. Where would the applications be made?—At one entrance of the hospital.

12304. The same place where medical applications are made?—Yes; they are seen by our resident assistant surgeon; the medical applicants by the resident assistant physician.

12305. You do not send anybody away on the out-patient surgical side?—No, we do not.

(24.)

Chairman—continued.

12306. Then supposing each surgeon has got his 15 cases, and other cases apply, who treats them?—They are seen either by the resident assistant surgeon, or the house surgeon; there is a casualty house surgeon, called assistant house surgeon, who is at that end of the hospital where these letters are given; and any surplus over and above those going to the assistant surgeon are seen by him temporarily for a day.

12307. With regard to the medical officers, are they heavily worked?—No, we have so many house surgeons now that they cannot be; we have four full house surgeons.

12308. I am talking of the cases seen by the casualty house surgeon?—That is what we call an assistant house surgeon; but he is not hard worked at all.

12309. I want to know whether there are a large number of people that come to be attended to by him?—No, not beyond the 15 seen by the assistant surgeon, the surplus is not large, except on Mondays and Tuesdays. The average number is 28 to 30, and these are mostly trivial cases, which if they had applied on the day of their accidents would have been treated by the dresser and house surgeon as "casualties," but coming a day or two after their accidents, are looked over by the officer who selects cases by the assistant surgeon.

12310. Therefore I understand from you that on the surgical side the pressure is no greater than it is on the medical side?—Well, the pressure is not so great; in many ways the applicants are fewer; otherwise we might possibly have trouble in seeing them all. The number of surgical cases is much smaller in the world at large than of cases for the physician's practice.

12311. At the same time, in a hospital there are more surgical beds than medical beds, are there not?—Yes; but my remark ought to be taken to apply really to the out-patient department, and not to beds; it is the beds for accidents that make a larger number on the surgical side.

12312. At the same time, you have enough surgical cases for teaching?—Yes.

12313. Can casualties be treated more than once on the surgical side?—Yes; because supposing it is merely a boy with a cut finger (that is a typical case that the casualty department is intended for), such a case has to be attended every day to be dressed; it is not a severe injury, but it is one that requires looking after, and the house surgeon and his dresser attend to that regularly, till it is healed.

12314. Do you keep any register showing the new cases and the attendances?—Yes, there is a book that is kept with all the new cards, and the subsequent attendances; that is entered by a porter at the lodge.

12315. Who does the accepting of these cases?—The resident assistant surgeon as a rule.

12316. And he tells them off to each surgeon, or assistant surgeon, as the case may be?—Yes, he gives 15 new cases to the assistant surgeon, and of the remainder some he refers to the house surgeon, and some may be told to come another day; it depends on the nature of the case.

12317. But you give this letter, do not you, and

O 4

9 February 1891.]

Mr. CLUTTON.

[Continued.]

Chairman—continued.

and this letter goes on till the man is cured?—Yes.

12318. So that each letter means a new case?—Yes.

12319. Then is there no limit to the time that the letter lasts?—They are supposed to last six weeks, and then the assistant-surgeon has to write, renewing it if he likes.

12320. But that is not treated as a new case, is it?—No.

12321. That is merely a renewal?—Yes.

12322. Then your practice is the same on the surgical side as it is on the medical side?—Yes.

12323. Would you like to see the out-patient department done away with, or are you in favour of it?—I am strongly in favour of it from every point of view. I think, from a surgical point of view it fulfils a most important function with regard to the public, quite irrespective of our school; in fact, I think the general practitioners in the neighbourhood would be very sorry to see it done away with; they make a great deal more use of it than you would imagine, on the surgical side.

12324. Then do you think there is no possibility of the out-patient department starving these poor practitioners?—I do not deny the possibility of injustice in certain cases, but I think there is more outcry than is really justified by the facts of the case, and I think you might easily bring evidence the other way from the general practitioners themselves; that is to say, that a few men give evidence on one side, but I think you may get evidence on the other.

12325. How long have you been in St. Thomas's?—I was appointed in 1878, and I was acting for two years before that; practically I have had experience for 15 years.

12326. From the opportunities you have had of seeing these people, do you consider that they are mostly the very poor who come to you?—Yes, I should say that they were very poor, the majority.

12327. That the charity is not abused?—I do not think it is; I have often been asked. I have a good many, not only students watching practice, but a good many recently qualified practitioners, who come there after they have left the school, and continue to attend in the out-patient's rooms to learn more of their work; and those men have often remarked to me, "So-and-so ought not to attend here; they are sufficiently well-off to be able to pay"; but it generally turns out they are people who have a card from a doctor and have been sent to the hospital.

Earl Cathcart.

12328. Then the poor practitioner is more frightened, according to you, than hurt?—That is my own view of it.

12329. Do you find that the space allotted to you for the purposes of your out-patient surgical department at St. Thomas's is sufficient?—The amount of room that I have personally is not large enough, on account of the students, not on account of the patients.

12330. But when the students and the patients are all there together with yourself it gets very stuffy, I suppose?—Very uncomfortable indeed; I have very often 45 or 50 students there.

Earl Cathcart—continued.

12331. And you are obliged to keep the window open all the time that you are at work?—I am obliged to.

12332. And how do you account for it that when they built that magnificent building they did not allow more space for the out-patient department?—It was thought that the school would not obtain the size that it has done.

12333. We had the same evidence on the medical side of the out-patient department, that the accommodation was not sufficient?—That is quite true, but it applies not only to the hospital but to the medical school; the building is not large enough.

12334. The out-patient buildings are often insufficient in the London hospitals?—I fancy from what I have seen of the out-patient rooms it is only of comparatively recent years that the out-patient room has been used so much for teaching purposes, and I take it that that goes together with the outcry as to the number of poor people who come to out-patient rooms.

12335. The truth is you mean that the students get mixed up with the patients?—Yes.

Lord Monkswell.

12336. Have you formed any opinion about the medical schools, as to whether there are too many, and whether they ought to be attached to hospitals or whether there ought to be a central university?—I hold very strongly that the large hospitals are very much better with the schools.

12337. Do you think that there are more schools than there ought to be in London?—No, I do not think so. I think that the individual teaching that the students get in that way is better than they can ever get from a central establishment.

12338. Cannot they get a certain sort of teaching, not clinical, but teaching by means of lectures, better at a central institution?—You mean as in Edinburgh, where the lecturer of anatomy, Professor Turner, has 400 men to teach. I think that is not so good as ours; it seems to me that a man who has to teach 400 students must devolve the major part of it on his assistants, and that the assistants are not so good as our teachers. I am not comparing our teachers with Professor Turner, but I think that the teacher here comes more into personal relation with the pupil than he can possibly do at a large class such as Professor Turner has, of 400 students. That is what I gather you mean.

12339. But are there not now very large classes at our lectures too when they are given by very distinguished persons; do not students voluntarily attend those very large classes rather than the smaller ones?—I do not know that it is so. In what subjects do you mean? I do not know of any instance in what are called our medical schools of any class attaining to the 400 taught by Professor Turner.

12340. Do you know anything of the Medical Teachers' Association. We were told by Mr. Brodhurst, a fellow of the College of Surgeons, that a central medical school was advocated by the council of the Medical Teacher's Association; do you know anything about that association?—I do not know anything about it at all.

12341. There

9 February 1891.]

Mr. CLUTTON

[Continued.]

Lord Monkswell—continued.

12341. There have been several witnesses before us who have suggested the advisability of having a central medical school and even a medical university in London?—A medical university would not necessarily imply a teaching university. The London University, for example, may be taken as an instance of a university in which there is an examining body but no teaching.

12342. Is there no teaching at King's College at present?—The London University has no relation to King's College Hospital; it is not an integral part of the university.

12343. But I thought they had laboratories?—Yes, I think so; but I do not think that at the present time they are associated with the London University as an integral part of that university; not in the same way as a college at Cambridge is a part of the University of Cambridge; I do not think it is comparable to that at all.

12344. Then do you not see the necessity of having any central school with any teaching of any kind; if you have a university in London at all you would say it should not be a teaching university?—Before all things I should have the university one for granting degrees at any rate; and it is to my mind a doubtful point whether it might not be an advantage to have some of the preliminary subjects which are now

Lord Monkswell—continued.

taught by our schools taught by such an institution, but not anatomy and physiology; I mean some subjects like chemistry, botany, and comparative anatomy. Those subjects might well be taught to students at a central school before they come to the hospital; but I think anatomy and physiology would be better taught at the hospitals.

12345. You think then, as I understand you, that the present system might be modified by having a central school for teaching those subjects?—Yes; but not for teaching anatomy and physiology.

12346. Excluding anatomy and physiology, the other preliminary subjects might be taught better by a central school?—Yes; partly because while every student has to take up anatomy and physiology they are not all bound to take up botany and comparative anatomy; and therefore you would only have a small proportion from each school that would require those subjects.

12347. Everybody you say has to take up chemistry?—That would very likely have to be taught at the schools.

12348. Then you are rather doubtful whether it would be an improvement to have chemistry taught at the central school?—Yes, I am rather doubtful about chemistry.

The Witness is directed to withdraw.

MR. THOMAS WHIPHAM, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

12349. You are the Dean of the Medical School at St. George's?—I am.

12350. Would you tell us what number of students there are in that school?—About 140.

12351. Is that an increasing school, or decreasing?—It varies; sometimes a few more, sometimes a few less; there is not much difference.

12352. What is the fee paid by the students when they enter for the whole curriculum?—The whole fee is 125 l.

12353. And then with regard to pupils who enter for a shorter time, they pay a ratio, I suppose?—That depends upon what the student has done before. There is a special arrangement for the Universities of Oxford and Cambridge; the men who have done a certain amount of their scientific work are allowed to deduct a certain proportion. There are always special entries; men, *ie.*, who enter for a special course on chemistry, pathology, or whatever they may require.

12354. They pay a special premium?—They pay a special premium.

12355. Then the whole of these fees together make up the income of the school?—Yes.

12356. And about how much is it?—It is about 4,500 l., or something of that sort: under 5,000 l.

12357. That is quite apart from the hospital?—That has nothing to do with the hospital at all.

12358. That is paid by the students, and managed by whom, by a committee?—By the Medical school committee.

(24.)

Chairman—continued.

12359. Out of those fees are paid fees to lecturers and teachers?—And expenses generally.

12360. Are the expenses a large proportion, or not?—As far as I know, they are about 2,000 l.; about 2,000 l., roughly speaking.

12361. That means that the rest is left for the teachers?—Yes.

12362. Can you tell us on what principle the division is made?—For hospital practice each of the full staff takes about a seventh, and the assistants about half that proportion. Dr. Owen, who is in attendance, will be able to tell you the exact amount he receives.

12363. Do you approve of the system of medical education as it is at present, with the schools attached to the hospital?—Yes, to a certain extent. Of course, I speak as to the representative of one of the smaller schools; I think that the actual practical part of the profession must be taught at the hospitals; but I think the scientific part, physiology, for instance, in the teaching of which a very large amount of apparatus is used, and an instrument costing perhaps 20 l. or 30 l. is used to demonstrate an experiment that may be obsolete to-morrow, should be taught at a central school.

12364. With regard to these apparatus, does the school pay for them, or the hospital?—The school.

12365. And then it would be the case, would it not, that if you had a large central body, with large funds, you would be able to pay lecturers higher

9 February 1891.]

Mr. WHIPHAM, M.D.

[Continued.]

Chairman—continued.

higher fees?—Yes; there would be perhaps two or more lecturers on physiology instead of many; and we should get a man who would devote his whole attention to it.

12366. You would be able to secure the very best talent that there was?—Yes; and he would be able to devote all his time to it. Now a man has to teach physiology in the medical school, and has to live besides.

12367. But he would be a lecturer by profession entirely, not a practising physician or surgeon?—That is a matter that I could hardly go into.

12368. I mean would he confine himself to lecturing, or have practice also?—The central school would make it worth his while probably to give up the actual practice of his profession.

12369. Do you think that might apply to all the schools, or to the smaller schools only?—My own idea is that it should apply to all the schools.

12370. Would you like to have a branch of the University of London to undertake the work?—I should like to see some arrangement whereby it could be taught centrally. If the London University is equal to it, there is no objection to the London University at all.

12371. Is there any restriction at St. George's as to appointing officers to the staff who have not got the qualification of the College of Physicians or Surgeons?—The Surgeons must be fellows of the College of Surgeons: the Physicians, members of the College of Physicians.

12372. And they must obtain that qualification before they are appointed to those posts?—Yes.

12373. Do you think that any good men are excluded by such a system of protection, as it were?—No.

12374. Because they can get the distinction if they are competent, you mean?—Quite so; it is open to all. If a man can pass the examination he can get it; if he cannot pass the examination he ought not to be on the staff of the hospital.

Earl Cathcart.

12375. Such a lecturer as is in contemplation, who would give up practice, would have to keep himself *au courant* with all the medical literature of the age, and medical magazines, would he not?—Not necessarily in general medicine or surgery, but in only his own subject.

12376. He would have to keep himself abreast of the times, I mean. Have you any other duties apart from your duties as dean of the school in connection with the hospital?—Yes; I am one of the physicians.

12377. And that occupies a great deal of your time?—Yes.

12378. What sort of time; are you in the hospital every day?—Almost every day; perhaps one or two days in a week I am not there.

Lord Thring.

12379. I do not quite understand your answer about the fact that a man could not be fit to serve in your hospital who could not pass an examination; because take the case of an oldish man;

Lord Thring—continued.

20 years ago, we will say, I could have passed an examination in classics, but I could not pass that examination now; and is not the same the case with a physician?—For teaching and for the treatment of patients I do not think the examination is any too severe now.

12380. But when a man gets old he cannot pass an examination, and yet he may have all the knowledge requisite, may he not, for his profession?—We are obliged to test knowledge now-a-days by examinations.

12381. A man may be a very good doctor indeed, and yet not able to pass the examination now that is required to pass the College of Physicians?—Then he cannot be up, I think, in all modern improvements.

12382. Does it not involve a certain knowledge of language and other subjects which do not directly bear on the practical exercise of the profession of medicine?—The examination for the membership of the College of Physicians, or the fellowship of the College of Surgeons does not.

12383. They are simply practical examinations, are they?—Simply practical examinations in professional subjects.

12384. And you say that any good practical doctor can pass the examination for the College of Physicians or the College of Surgeons?—A man of ordinary abilities, if he works hard, can certainly pass that for the fellowship of the College of Surgeons.

12385. But that is not my question. I have worked hard in my youth, but I should not expect to pass any examination now. I go into a profession and acquire a practical knowledge of that profession; I have forgotten a great deal of my book work, and yet may be a good practical lawyer or practical physician I should have thought without having to pass an examination?—A man who has not passed these examinations is not fit to carry on all the work that medical officers of a hospital have to do.

12386. The question I ask you is this: I take an Edinburgh doctor, the best of the Edinburgh doctors (I do not know the gentleman's name); do I understand you to say that a good Edinburgh doctor who has a large practice in Edinburgh can without any additional reading or any additional labour *ipso facto* pass the examination for the College of Physicians or the College of Surgeons by reason of the knowledge he has acquired by practice?—Yes.

12387. Then he does not require any book knowledge?—I understood you to mean that he retains his knowledge of what he learnt when he was at Edinburgh.

12388. Surely you must understand what I mean. There is an enormous difference between the practical knowledge of a profession and the book knowledge which is necessary to enable you to enter that profession. After a time you forget the book knowledge, and you could not pass an examination, although you are perfectly fit to exercise that profession. I want to know if a doctor or a surgeon who, according to the recognition of the place he is in, is able to practise as a doctor or a surgeon, can without further reading and without further labour pass the examination of the College of Physicians or Surgeons;

9 February 1891.]

Mr. WHIPHAM, M.D.

[Continued.]

Lord Thring—continued.

Surgeons?—No, certainly he would not if he has not kept up his knowledge.

12389. Then it is clear that he may be quite capable of practising in London, and yet not be able to pass the examinations?—Yes; he might be capable of practising in London.

12390. Then it follows that if he is a very eminent doctor you must, sometimes, lose a very eminent doctor by requiring that specific qualification?—What is sometimes lost sight of, I think, is that the hospital is for the education of the students as well as for the treatment of patients.

12391. The doctor has not got to educate the students in the book-knowledge of the profession, has he?—Certainly he has.

12392. He only educates them in the practical knowledge of the profession, not the book-knowledge?—In the book-knowledge, too.

12393. Do I understand that a doctor, who has a large class of clinical students, educates them in book-knowledge?—Certainly. He has to lecture on medicine, possibly, or pathology. The lectureships come almost in rotation.

12394. Are all the doctors at your hospital obliged to lecture?—Not absolutely obliged to, but as a matter of fact almost everybody does so in turn.

12395. Is that the case with most hospitals?—So far as I know.

Earl of Kimberley.

12396. Do you think that eminent physicians and surgeons who are eligible, having got the London qualification, for your hospital, but who obtained that qualification a long time ago, could pass that examination now?—Not without reading the details that they require; a man would want to refresh his memory in order to do it.

12397. Then what do you suppose you gain by those rules?—We elect the men young.

12398. But what do you gain by your rules; what is the object of them?—To get the best men.

12399. No; the object of your rule is to confine your choice to a certain class of men who happen to have received their qualification in London, by which means you exclude able men who have not; what is the object of that?—I do not quite see what you mean.

12400. I cannot put it much plainer; you confine your election to those who have obtained a qualification in London, by which means, as I take it, you exclude a certain number of other able men; what is your object in that; what is the reason?—No reply.

12401. Is not the reason simply this: to protect the London doctors from competition outside; is there any other reason?—I do not know that that is so.

12402. What is the reason?—We have had Edinburgh men here in London on the staff of hospitals.

12403. Do you mean that you have had men who have taken the trouble to take the degree here; it is not every man who can do that; is it that you are afraid that the electing body might elect men not sufficiently qualified?—That would
(24.)

Earl of Kimberley—continued.

be a reason for protection, both for the hospital and for the school.

12404. At the same time, you admit that there might be men of very considerable eminence who had not the qualification?—Yes, certainly.

12405. Do you think that the danger of your electing body electing improper persons outweighs the objection that you exclude a considerable number of very eminent men?—Yes, I think it does.

Earl Cathcart.

12406. Sir Andrew Clark suggested that a Scotch practitioner was handicapped; that for the M.D. degree in Edinburgh the examination was entirely practical, in London scientific; and for that reason it may be assumed that the Scotchmen are handicapped; do you agree with Sir Andrew Clark in that respect, that the Scotch M.D. examination is entirely practical, and the London examination theoretical and scientific?—I should say that the examination for the London degree is more scientific than the Edinburgh; but there is a practical part of the London University examination, because candidates are examined, practically, in the wards of a hospital.

Earl of Kimberley.

12407. I think what you were referring to in your answer was the qualification given by the College of Physicians and College of Surgeons in London, and you were not referring to the university degree of M.D. in the University of Edinburgh, as compared with the University of London?—Yes. I referred to the qualifications given by the London colleges.

Lord Monkswell.

12408. It has been suggested to us that the reason for excluding from hospital appointments all those who have not the London qualification is that you have a certain guarantee of character in those who have the London qualification that you do not get in those who have any other qualification; do you agree with that, that you may be quite certain that in the case of the man who has got the London qualification his character has been thoroughly inquired into and investigated, and that that is not the case if he has a qualification from somewhere else?—I have no acquaintance with the arrangements in Edinburgh and Dublin, but I should doubt very much whether there was not quite as much inquiry into the status and position of students in Edinburgh and Dublin as there is in London.

12409. I suppose a man would not only have to read up for the examination who wanted to get the London qualification in the College of Physicians or Surgeons but he would have to pay a considerable amount of fees?—They are not particularly high in the College of Physicians; I do not know what they are at the College of Surgeons.

12410. £. 40 or 50 l.?—I should think not so much. The College of Physicians' fee for its membership is 30 guineas.

Chairman.

12411. Do your duties take you to the outpatient department at all?—One day a week.

P 2

12412. You

9 February 1891.]

Mr. WHIPMAN, M.D.

[Continued.]

Chairman—continued.

12412. You have been connected with the out-patient department for a long time, have you not?—Yes.

12413. Do you find it more crowded than it was?—Ours was always crowded. I do not know that it is more crowded than it was.

12414. Are they a poor class of people?—Yes, a good many of them.

12415. In such a condition that they are unable to pay the fees to their own medical men?—I should think a very large proportion are unable to do so.

12416. And if there was no hospital out-patient department they would have to go to the poor-law infirmary?—Yes, I think so.

12417. Then do you agree with what Mr. Holmes said here; I asked him at No. 670: "You think there would be no hardship on the public if there were no out-patient department," and he said "Not the least"?—No.

Chairman—continued.

12418. Do you think the out-patient department is very hard on the general practitioner?—I do not believe it is very hard upon him. I think every now and then a case may find its way into the hospital out-patient room that ought to be under the general practitioner; but then there is this to be remembered, that many practitioners send us up patients for consultation; those patients of course paying them all the while.

12419. Do you think that as much advantage is taken at present of the out-patient department of the hospital for consultation as should be?—Yes, I think so; the general practitioners have it entirely in their own hands to send us such cases as they think proper.

12420. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

MR. ISAMBARD OWEN, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

12421. THE last witness said that you could explain to us the system on which the apportionment of fees to the lecturers and teachers is made; I do not want to ask the fees of any particular individual, but will you give us the maximum and the minimum?—After the current expenses of the school are paid, a certain number of our lecturers and teachers are paid by fixed salary; and when those payments are made the residue is divided among the lecturers who hold the older lectureships, according to a fixed per-centage. Each member of the staff, as a clinical teacher in the wards, also gets a per-centage of the profits.

12422. What is the maximum that a man may get?—I should think at the present time few men on the staff of St. George's would get much more than 100 *l.* a-year from the school; the expenses have been very heavy of late years.

12423. And the minimum?—The minimum might be about 30 *l.*

12424. Would a man who receives 30 *l.* be a clinical teacher?—As clinical teacher he would have that; if he held a lectureship it would not come to so small an amount.

12425. But then some of them, I understood you to mean just now, are clinical teachers and lecturers?—Yes, we are all clinical teachers; and nearly every member of the staff holds a lectureship also; it is a matter of chance that one or two of the staff may not hold a lectureship.

12426. Then would a man get two shares being a lecturer and clinical teacher as well?—Then he would get two shares, the lecturer's share being larger probably than the clinical teacher's share.

12427. If he is one of the senior men, would he also get a fixed salary?—The fixed salaries are attached to the newer lectureships, and some of the newer lectureships are held by men not on the staff at all.

Chairman—continued.

12428. Therefore a man can possibly get more than 100 *l.*?—Of late years I doubt whether any one's share in our school has much exceeded that; we have had many expenses to meet; new rooms to rent and fit up; and altogether the profits of medical schools of late years have not been very great.

12429. Have you ever applied to the hospital for funds for your medical school?—The hospital a few years ago reduced the rent we pay for the school.

12430. Was it owing to the increase of the numbers that you required new rooms?—Owing to the increase of subjects that have to be taught and the advance of science which needs more elaborate teaching.

12431. As your expenses advanced the number of students remained about the same?—Yes. The number of London pupils altogether has rather lessened of late years, owing to the advance of the Edinburgh school and the Cambridge school; they have taken a certain number away from us.

12432. Is St. George's called one of the smaller schools of London?—We might be called one of the smaller schools.

12433. You are not the resident medical officer, are you, at St. George's?—No; I am senior assistant physician.

12434. And in that capacity you have to do a great deal with the out-patient department, have you not?—Yes.

12435. Would you tell us what the system of the out-patient department is?—No letters of recommendation are required for the out-patient department. It is open to anyone to apply, and out of the whole number who apply each day the resident medical officer selects 15 to send into the physician and 15 to send into the surgeon. Out-patients, I should say, are seen four days a week. The selection is made almost entirely on medical grounds; that is, those who receive tickets are the 15 who appear to be most severely

9 February 1891.]

Mr. ISAMBARO OWEN, M.D.

[Continued.]

Chairman—continued.

severely ill; but the resident medical officer will exclude any who appear not to be fit subjects to receive charity. He makes inquiry into their means if they are not obviously poor people.

12436. Are they refused a first treatment in those cases?—If they are urgent cases they are directed to go up to the surgery, where they will be seen by the house physician or house surgeon, and will receive such treatment as is necessary for the urgency.

12437. How do you make inquiries?—The clerk if he sees any reason to suspect that an applicant is not really a poor person, makes inquiries of him as to what his position in life, and what his income, and what his family circumstances may be, and if there is any doubt about the case he refers the matter, I believe, to the Charity Organisation Society.

12438. Do you find that inquiry difficult to carry out or not?—I have no personal knowledge of that part of the work.

12439. After a man is passed as an out-patient what goes on?—He is then seen by the assistant physician or assistant surgeon; his case is examined into and he is prescribed for; he then continues to attend for a month.

12440. Do you give him a ticket?—He has a book and a paper; a ticket in fact; and at the end of a month the assistant physician or surgeon has to write a form of renewal to the ticket, and that can be continued for four months; but except in very special cases treatment is not continued for more than four months.

12441. It is not required longer?—It is not required in many cases.

12442. When they go to the out-patient department whom do they first see there?—The person whom they really first see is the porter, but the first responsible person they come in contact with is the resident medical officer.

12443. And he is the one that passes them off into the surgery or to the out-patient room?—Precisely; he passes them to the out-patient rooms, and if there are any over whose cases require it, to the surgery.

12444. Have you any idea whether the surplus beyond the number who get letters is very large?—The surplus depends a great deal upon the season of year and upon the weather; sometimes there is no surplus; sometimes we do not have the 15 applicants, but at other times there may be as many as 50 applying; 50 or 60 would be the outside number, I think, who would apply on any given day.

12445. Then your out-patient department is not a crowded one?—On some days there would be what I suppose you might call a crowd of applicants, but on others there is not.

12446. Have you enough surgical cases for teaching?—Yes, we have as many cases as the medical officers can properly deal with either for treatment or teaching.

12447. The 15 cases are the new cases of course?—Yes.

12448. And there is the recurrence of the older cases; there are several people under treatment already?—Yes, they do not come into the 15, but they continue their treatment.

12449. But they take up the time of the (24.)

Chairman—continued.

medical officers?—Each medical officer has an assistant who sees a considerable number of the old cases under his superintendence.

12450. How many new cases and old cases would you see at St. George's in a morning?—By the assistant physician 15 new cases would be seen, and, possibly, 30 or 40 old; more than that, I should think; probably, an average of 40 old ones; and probably a similar number by the assistant surgeon.

12451. Those are for just the one officer?—With his assistant.

12452. That is to say, therefore, two men would be seeing that number?—Yes.

12453. How long do they have for the work; at what time do they come, at 12 o'clock?—We begin to see them at 12 o'clock, or between that and half-past.

12454. How long does it continue?—It rather depends upon the severity of the cases, but I should say that on an average it takes about two and a-half hours.

12455. In fact you just go on till you have done the work?—We just go on till we have done the work.

12456. And you consider that beyond these new cases and the old cases which you know about there is a very small surplus that has to be sent away?—A very small surplus of cases that require hospital treatment.

Earl Cathcart.

12457. And how many students might you have besides the 110 patients?—Our out-patient rooms at St. George's will only accommodate a limited number; the physician's out-patient room one can hardly use for more than six or seven students at a time; in the surgeon's out-patient room, not so much space is required; it will accommodate 20 or so.

12458. You are not talking of the waiting hall, but of the small inner room?—The small inner room.

12459. It must be very stuffy with that number of people there, sometimes?—The accommodation is exceedingly insufficient; we are very cramped for space at Hyde Park Corner.

12460. It is quite obvious that the accommodation is insufficient. Have you any rendezvous or club or place where the students may go when they are off duty?—Yes; we have opened in the school a smoking and a refreshment room for them.

12461. Where they can have luncheon?—Where they can have luncheon.

12462. And dine?—At first dinners were provided, but it was found that the students did not come there to dine.

12463. Do they go there in the evening?—No, it is shut at five.

12464. Then you have no resident house of any kind where you have rooms for them?—We have no resident house; most of our students live a considerable distance from the hospital, and a good many are living at home with their friends.

12465. In the suburbs and all round?—In the suburbs and western districts.

P 3

12466. Has

9 February 1891.]

Mr. ISAMBARD OWEN, M.D.

[Continued.]

Chairman.

12466. Has the number of out-patients always been restricted in this way since you have been at the hospital, or was there an alteration made?—As long as my knowledge of the hospital extends it has been restricted; at least I cannot remember that it was ever otherwise, and I have known the hospital since 1871.

Lord Zouche of Haryngworth.

12467. What is the commonest form of disease that you have to deal with in the out-patient department?—Chronic coughs are a staple of our practice in the medical out-patient room; that is probably the commonest form of complaint.

Lord Monkswell.

12468. Have you any remarks to make on the subject of the medical schools?—Yes, I have thought a good deal about it. I do not think there are too many in London.

12469. You would not like to see them concentrated at one university?—Certainly not.

12470. Take for instance physiology, chemistry, and natural history; Sir Andrew Clark said there should be two or three great schools to teach them; what is your view on that?—Physiology, chemistry, and natural history, in my view, ought not to be taught in a hospital school at all. But there is a third alternative to the scheme of having a central teaching body in London, for it is my opinion that if these subjects can be taken away from the hospital schools they can be taught with very great advantage outside of London altogether by the provincial university colleges. I believe they can be taught there with much greater success than in any crowded central institution in London.

12471. Why; on what grounds do you form that opinion?—In the first place the classes would be smaller in these provincial centres, and the men would come more into contact with their teachers. In the second place a central science teaching institution in London would of necessity be pretty much of a professional school; and I think it is a very great advantage to a man that he should learn what science he has to learn, not in a professional school conducted upon a restricted curriculum, but in a more open institution, where sciences are being taught in their entirety and for their own sake. I think it is important that a man should not only learn the modicum of a science that he requires for a medical examination, but that he should have some means of understanding the extent of his own ignorance of the science. Furthermore, I think it would be difficult if we had a central teaching body in London to provide any rudimentary hospital practice for the men attending it; and I consider that a medical student from the outset of his career ought to be brought into contact and familiarised with the general aspects of disease. I think that he ought to attend a hospital, to some extent, from his earliest days, and that would be very difficult to arrange for if he were being taught science in a central institution.

12472. You think that is a reason, then, for affiliating the schools with the hospitals as they are now?—Well, it is rather a dilemma. By affiliating the schools to the hospitals, as at present, I think scientific teaching is at a great dis-

Lord Monkswell—continued.

advantage. By choosing a central institution in London, and crowding all the students into it, I think the early clinical teaching must not a little suffer. But by decentralising medical teaching and carrying on the early stages of it in the provinces, as well as in London, I believe that all the necessities of the case could be met.

12473. But in comparatively small provincial centres, how are you going to get the very first talent?—Some of the colleges in provincial centres are endowed to an extent which is not likely to be the case in any London institution.

12474. But do not you think that a man would prefer to have a smaller sum to teach in a large school in London, where he could have hundreds, and perhaps thousands, of students to teach, rather than go to a college in the provinces where he could get perhaps a little more money, but not so much in the way of education?—That might be the case; but I was speaking of what would be good for the students. I think there would be no difficulty in obtaining the services of exceedingly able teachers in the provinces to form the staff. Some of the provincial colleges are very strongly manned at the present moment.

12475. You think you would have sufficient talent to man all the provincial centres you would wish to see established?—I believe there would be no difficulty about it. One provincial college, the University College of Cardiff, has already entered upon the scheme.

12476. Do you know anything of this council of medical teachers that Mr. Brodhurst told us had passed a resolution in favour of there being one central university or medical school?—I must confess I never heard of it until now.

Lord Saye and Sele.

12477. Are vacant beds kept for emergencies in your hospital?—We have no special system of keeping beds vacant, but there is always an endeavour not to fill the hospital to such an extent that there should be no beds left vacant for emergencies.

12478. In the event of an urgent case coming in at night what would happen?—If the hospital were full we should put up an extra bed.

12479. Would it be left to the hall porter whether to take in the case or not?—No, by no means; the house surgeon or house physician would be called at once to any case that was brought in.

Earl of Kimberley.

12480. I think if I understood you rightly you would have no objection to a teaching London university at which a portion of the medical education should be given, provided it was concurrent with the teaching in the provincial colleges where the provincial colleges were qualified to teach?—Quite so; a London teaching institution would be required as much as the provincial ones.

12481. But you would deprecate the exclusive teaching of a London institution?—Yes.

12482. Some of the provincial colleges, such as Owen's College, and others which might be mentioned, would be quite competent to teach students,

9 February 1891.]

Mr. ISAMBARD OWEN, M.D.

[Continued.]

Earl of Kimberley—continued.

students, and there would be no advantage in compelling the student to come to a London institution; that is your view?—Quite so.

12483. But as regards what you have said as to the advantage of a general education being combined with a professional education, that of course would be afforded if a teaching university existed in London?—Except that any scientific teaching body in London would be almost certainly swamped by medical students; the tone would become too professional.

12484. But do you think that there would be any real difficulty in such an institution, supposing that the London University should, as the result of what has been going on lately, undertake the work of a college; do not you think it would be strong enough to insist upon this general education being combined with special scientific education?—Perhaps I have not made myself clear on this point. What I meant was simply that we require of medical students a certain modicum of knowledge, say of chemistry. Now at present the student learns his modicum of chemistry in a purely professional school where no more chemistry is taught; he learns his modicum of chemistry, but he has no means of acquiring a knowledge of the proportion which his small amount of chemistry bears to the vast amount of chemistry which he does not know.

12485. Ought not that defect to be remedied by the existence of a teaching body which would not confine itself absolutely to the mere professional aspects of knowledge?—Yes, if the number of students who were studying merely for the professional examination were not sufficient to swamp the other men who were pursuing chemistry for its own sake.

12486. But is it possible to meet that difficulty from the nature of the case, in regard to any such central institution in London?—It will be certainly a difficulty inherent in any central scientific teaching body in London.

12487. I understand what you are afraid of, and what undoubtedly might take place, is that the number of medical students would be so predominant that it would be really a medical institution?—Yes.

12488. And in the smaller colleges the danger of that would not be so great, you think?—Not so great.

Chairman.

12489. You are the senior assistant physician, you have told us?—Yes.

12490. Have you ever had to complain of the state of the walls, or the possibility of increased unhealthiness from defective walls?—No, I have never found any defects in the walls of the hospital.

12491. I mean as regards the possibility of danger?—I have never seen anything that would lead me to suppose that they were in any way unhealthy.

12492. Do you believe that the food and the care of the sick in the wards is satisfactory?—Yes; I believe the hospital to be a very well managed one.

Ordered, That this Committee be adjourned to Thursday next, at Twelve o'clock.

(24.)

Earl of Kimberley.

12493. I understood from you that the average number of out-patient cases, both new and old, might be taken at something like 50 or 55?—I am making rather a guess at that, because as I do not see all the old patients myself I have no accurate means of saying.

12494. But it might be about that?—It might be about that.

12495. And the examination of them takes from two to two and a-half hours?—Yes; it might be more. The average would be about two hours and a-half.

12496. That would leave about three minutes for each patient; do you consider that that would be sufficient?—There are two of us seeing these patients there, I myself and my assistant.

12497. The assistant would dispose of a certain number of cases himself, would he?—He would dispose of the old cases which present no particular difficulty, the cases which are going on well.

12498. So that in point of fact it is a longer time than the time I mentioned that is given to each patient?—Certainly; as far as my own time is concerned, it is often almost entirely given up to the new cases.

12499. And you think that there is sufficient time to go into each case?—I make it sufficient; I stay as long as is necessary.

Chairman.

12500. There is no limit of time for closing?—No limit of time for closing.

12501. Is your assistant a qualified student?—He is generally a qualified medical man, and he has to hold that post of assistant house physician, as it is called, as a step towards becoming house physician; he is as a rule a properly qualified medical man.

12502. Then you have classes in this place, the out-patient department?—Yes, I teach the students as I attend to the cases.

12503. They are there for instruction?—Yes.

12504. They never treat cases?—No; no one is allowed to prescribe except myself and my assistant.

Earl of Kimberley.

12505. Do you think that the out-patient system is valuable as a means of instruction?—I do not see how education could be carried on without it; it is the only opportunity a student gets of seeing the cases which will form nine-tenths of his future practice.

12506. Our attention has been called to cases in the poor-law infirmaries; we have been told that certain cases there, especially chronic cases, it is desirable should be seen by medical students; is that your opinion?—Yes; I think very great advantage would be gained if they could be seen by them. I must add that under the present regulations of medical education it would be rather difficult for the students to find time to go to the poor-law infirmaries, but it would do them a great deal of good if they could.

Chairman.

12507. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

Die Jovis, 12^o Februarii, 1891.

L O R D S P R E S E N T :

Earl CADOGAN (*Lord Privy Seal*).

Earl of LAUDERDALE.

Earl CATHCART.

Earl of KIMBERLEY.

Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.

Lord SANDHURST.

Lord SUDLEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. ROBERT BRASS, is re-called ; and further Examined, as follows :

Chairman.

12508. YOU want to correct a statement, I think, that you made the other day about the way that your income from landed estates had fallen in the last 10 years?—Yes. In reply to Question 11523, which question was: "You were good enough to say that you would give me what the percentage of loss on your agricultural estates was during the year?" my answer was, "I calculate it at between 9 and 10 per cent." At the time I had running in my mind the allowances we had made to some of the tenants during the year; in a few instances we had allowed 10 per cent. that year; but I have gathered that really your object was to ascertain

Chairman—continued.

the loss we have sustained, say for an average of 10 years.

Earl of Kimberley.

12509. The reduction of your income, taking it 10 years ago, as compared with what it is at the present time?—I have calculated it now, and I find that it is between 20 and 21 per cent. There is another question which you asked me about, the gross assessment of the hospital. I find it is assessed at 9,600 £, and the rateable valuable at 8,000 £, and we pay 2,308 £.

The Witness is directed to withdraw.

MR. FREDERICK CLARE MELHADO, is called in; and, having been sworn, is Examined, as follows :

Earl of Kimberley.

12510. LORD SANDHURST is Chairman of the Middlesex Hospital, and, therefore, he has asked me to examine you. You are, I think, the Secretary of the Middlesex Hospital?—Secretary-Superintendent.

12511. And what salary do you receive?—£ 300 per annum, with board and residence at the hospital.

12512. How long have you held that position?—I have been secretary-superintendent for three years; but, previous to that, I was assistant secretary for nine years.

12513. And to whom are you responsible; what authority in the hospital?—To the weekly board and to the court of governors.

12514. How often does the weekly board meet?—Once a week; every Tuesday.

12515. Can you tell us how the weekly board is constituted?—The constitution of the hospital is formed by a body of governors, and they appoint, annually, a committee of their number, which they style the weekly board, which is (24.)

Earl of Kimberley—continued.

composed of 24 members. The governors meet once a quarter.

12516. That is, the whole body of governors may attend?—The whole body of governors meet quarterly.

12517. How many generally attend the quarterly meeting?—Fifteen to 30; it varies very considerably.

12518. And at the weekly board what attendance do you usually get?—From 10 to 12; and the quorum is three.

12519. Are any of the medical officers in the hospital members of the weekly board?—None.

12520. Not even if they are governors?—No, they are not eligible to sit on the weekly board.

12521. Can you tell us when the Middlesex Hospital was founded?—In the year 1745.

12522. How many beds are there in it?—Three hundred and seven beds.

12523. And how many are usually occupied?—The average is about 250 to 260 daily. I might, perhaps,

Q

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

perhaps, be permitted to mention that though there are 307 beds, there are only 290 devoted to medical and surgical cases; and that also includes 34 beds for cancer cases; so that the average should be taken on the 290 beds really.

12524. Are your funds sufficient to enable you to have the whole of the beds occupied, if necessary?—No, they are not.

12525. What number of beds are you obliged to leave vacant?—Well, we do not exclude patients on account of not having sufficient funds to provide for their accommodation.

12526. In point of fact you use the whole of your beds, if there are applicants in sufficient number to require them?—Certainly.

12527. Will you explain what your duties are?—I control every department in the hospital, and am accountable only to the weekly board and the court of governors. I attend all weekly boards, quarterly courts, the medical committee, and all sub-committees.

12528. What powers have you over the staff of the hospital?—The resident staff, do you mean?

12529. Any portion of it; have you the power of dismissal of any of the servants?—Subject to the approval of the weekly board only. I should suspend an officer or any servant if occasion required, and would report to the next meeting of the weekly board; and the dismissal would remain in their hands.

12530. Does that control of yours extend to the nursing establishment?—No, the nurses and female domestic servants are under the lady superintendent of nurses.

12531. And she has the same power of suspension as you have, probably?—Yes.

12532. Subject to the confirmation by the weekly board?—Yes.

12533. Do you deal with all kinds of diseases at the Middlesex Hospital, or have you any limitation?—Practically all, except infectious cases, such as scarlet fever and those cases.

12534. You deal with diphtheria?—Yes.

12535. Have you a separate ward for diphtheria?—No.

12536. Has there been any inconvenience or evil result found from the diphtheria cases being kept with the other patients?—They are very sparingly admitted into the general wards of the hospital.

12537. But you have no separate ward, as I understand, to which you can admit them?—No.

12538. Then do you limit the number of diphtheria cases which you admit?—Yes, they are limited.

12539. Are they isolated in any way in the wards?—That depends. If an operation is required on them, they would be sent into a special ward and kept until they were fit to go back into the general ward.

12540. But, on the ground of infection, is there any isolation?—No.

12541. Have you ever had any spread of infection of diphtheria from cases treated in the general wards?—No.

12542. Have your nurses ever contracted diphtheria?—I think the last case we had was as

Earl of Kimberley—continued.

far back as eight years ago of a nurse contracting it from a patient.

12543. I understand that the system of administration is that the governors meet once a quarter, the committee once a week; and that you manage the hospital, subject to them generally?—Yes.

12544. Is there any other point with regard to the general system of administration which you would like to mention?—The weekly board, which meets every Tuesday, delegates portions of its work to sub-committees. They have a standing sub-committee which has been recently instituted, called the board sub-committee, and that meets immediately before the weekly board to enable them to dispatch their business a little quicker than they otherwise could.

12545. What does that sub-committee deal with?—It examines all the books of the hospital, all the weekly account books, my own disbursements and those of all the other officials in the hospital; it examines the attendances of the honorary medical and surgical staff, and a number of books, a list of which I could give you if you wished it.

12546. Perhaps you had better read the list?—First of all, there is the Samaritan Fund book and report which is kept by the chaplain of the hospital (he has the control of the Samaritan Fund; the chaplain's petty disbursements; the secretary's disbursements; the house steward's petty cash book and vouchers; the house steward's weekly stock book; the consumption of gas register, the weekly alcohol return; housekeeper's petty disbursements; the weekly stock book of the housekeeper; the institute petty cash book; the in-patient medical attendance register; the out-patient medical attendance register; the registrar's attendance register; the daily return of patients and vacant beds; the weekly return of patients and deaths; the daily distribution of nurses return; the night porter's book; the college gate book; and the engineer's records of steam pressure in the engineering department.

12547. Who manages the finance of the hospital?—The weekly board and the treasurers. They have a finance committee, which does not meet very frequently.

12548. What are your funds derived from?—From dividends, annual subscriptions, donations, alms-boxes, rents, a grant from the Hospital Sunday Fund and Saturday Fund, and legacies.

12549. Could you tell us what your receipts are under these different heads?—Would you wish me to give them for any particular year, or would you wish me to give you the average?

12550. Will you give the figures for last year, and then the average for a certain number of years?—Last year we derived 6,367 *l.* 13*s.* 6*d.* from dividends; from annual subscriptions we received 2,851 *l.* 14*s.* 6*d.*; from donations we received 6,538 *l.* 7*s.* 7*d.*; from alms-boxes, 234 *l.* 13*s.* 3*d.*; from the Hospital Sunday Fund, 2,083 *l.* 6*s.* 8*d.*; from the Hospital Saturday Fund, 411 *l.* 15*s.*; from rents, 1,951 *l.* 1*s.* 9*d.*; from incidental receipts, 196 *l.* 5*s.*; making a total income of 20,634 *l.* 17*s.* 3*d.*, which I may say is one of the best years that we have had for a very long time.

12551. What

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

12551. What would be the average total, taking a certain number of years; any number you think proper?—The average of our income, under ordinary circumstance, would be about 16,000*l.* I could give you the exact figures if you would wish them.

12552. Will you put them in?—Yes.

12553. What are your rents derived from?—They are derived from freehold and leasehold property.

12554. How did you become possessed of that?—Those freeholds and leaseholds have been left to us from time to time by way of legacies; we have never invested in land.

12555. Are you obliged to apply your legacies to current expenses, or are you able to fund any portion of them?—Up to three years ago we were obliged to utilise them for the current expenses of the hospital; but during the last three years we have been very fortunate in receiving some considerable sums by way of legacies, which have enabled us to meet our expenses, and, taking an average, would cover our drawing on capital for the last 10 years.

12556. Would you tell us now what your disbursements are?—The expenditure for 1890, the gross expenditure, amounted to 27,117*l.* 4*s.* 10*d.*, which included an extraordinary expenditure of 2,584*l.* 8*s.* 11*d.*; our average expenditure is about 23,000*l.*, or a little more.

12557. The “extraordinary expenditure,” I suppose, was for improvements?—For permanent improvements. We have an extraordinary item nearly every year for buildings of some sort, or improvements of some sort.

12558. Therefore it would seem that you have a permanent deficit?—Yes, we have.

12559. Then how is that met, if, as I understand you to say, you are not obliged to use your legacies now?—It has been met by legacies during the last few years; but we have a capital account which we had drawn upon up to within the last few years.

12560. But I understand this very last year there was, speaking roughly, 20,000*l.* of income and 23,000*l.* of expenditure, apart from the extraordinary expenditure?—Quite so.

12561. That would leave a debt of 3,000*l.*?—Our excess of expenditure over income last year was 6,482*l.* 7*s.* 7*d.* But the legacies we carry to capital; we do not include them in our income account.

12562. I do not still understand how you covered the 6,000*l.*; out of what fund?—By utilising the legacies.

12563. So that with the legacies you have sufficient to meet your deficit?—Yes, and a surplus; only we charge our excess of expenditure over income to capital; we capitalise all our legacies; we do not include them in our income account.

12564. In point of fact, therefore, you have no deficit?—We had no deficit last year.

12565. You mentioned the Samaritan Fund; is that separate from the other funds of the hospital?—It is quite distinct; a distinct account is kept of the Samaritan Fund.

12566. What is it used for?—It is used for

(24.)

Earl of Kimberley—continued.

assisting patients who are destitute; for providing them while they are in the hospital with certain requisites, such as tea, butter, and sugar, which all the ordinary patients are required to find; and for sending them to convalescent homes and paying for their maintenance at these convalescent homes, their railway journeys there and back, and any other assistance that they may require.

12567. Have you any convalescent home connected with the hospital?—No, we have not.

12568. What is the amount of your Samaritan Fund?—Last year we received from dividends 142*l.* 0*s.* 4*d.*; from a ground rent, 9*l.* 6*s.* 10*d.*, and from annual subscriptions, donations, and alms boxes, 75*l.* 13*s.* 11*d.*

12569. Is that sufficient to enable you to provide all the patients with tea, and sugar, and butter, who could not possibly provide those things for themselves?—It is sufficient for that purpose, but it is not sufficient to send them to convalescent homes, and maintain them there. We closed our year last year with a liability of 110*l.*, in respect of subscriptions to convalescent homes.

12570. Do you subscribe to the convalescent homes?—Yes.

12571. And from what fund do you make those subscriptions?—From the Samaritan Fund.

12572. How are the patients admitted; by letters, or in what way?—Our hospital is practically a free hospital; we admit all patients. Last year we admitted 3,109 in-patients, and 38,800 out-patients.

12573. I will come to the out-patients presently; but I am now speaking of the in-patients. May anyone apply?—Anyone.

12574. Then on what system are they selected?—They see one of the admitting officers, and he deals with their case; if it is a case for admission he refers them to the resident medical officer, who admits all patients to the hospital at a certain hour every day.

12575. But supposing that you have more applications than you have beds available, which I suppose must happen sometimes, in what way are they selected?—The most urgent cases are selected.

12576. Have you any limitation as to the means of patients?—No, we do not make any very special inquiry into that; the admitting officer uses his own discretion about admitting a patient.

12577. But supposing that you have a patient applying whose case is not a case of urgent need from an accident (when I conclude you would admit any patient), and you find that he is perfectly able to pay for his own medical treatment, would you require any payment, or would you exclude such cases?—No, we should not require any payment; we do not receive any paying patients at all into our hospital. If the admitting officer considered that the case was not a suitable one to be admitted into the charity he would refer the case to me, with a memorandum, and I would inquire into the circumstances of the patient;

Q 2

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

patient; and if I thought he was in a position to pay for his treatment he would be sent away.

12578. So that there is at present a limitation to prevent cases which are obviously not cases for charity being admitted?—Yes, certainly.

12579. Who is the admitting officer; is he the resident medical officer?—Yes, he is the resident medical officer.

Chairman.

12580. Over surgical and medical beds, both?—Over both medical and surgical.

Earl of Kimberley.

12581. Are many patients rejected for any reasons, or are you able to accommodate most of the applications?—As a rule, we are able to admit a good many of the applications that are made; but at certain times of the year we have a great pressure on our beds. For instance, during the last two months we have had to send away patients, I do not think I should be wrong in saying nearly every day.

12582. Do you refer them to any other institution, or suggest that they should go to the poor law infirmary?—That is a question which the resident medical officer could answer better than I could.

12583. With regard to the out-patients, would you explain the system of admission of out-patients. Perhaps, first, you can give us the average number that you have?—The number of new cases for the last year was 38,800.

12584. How many would be admitted, as a rule, daily?—I should think that, counting the new and old cases, there was an average of over 300 applying daily.

12585. And they would be all treated?—They would all be seen.

12586. You have no limitation therefore of the number, except the limitation of time?—No, practically none.

12587. Do you enquire as to the circumstances of the applicants in the case of out-patients?—The same system is adopted in the case of the out-patients as in that of the in-patients, with regard to the circumstances of the patient. They all pass through either the Casualty Surgical Officer, or the Casualty Medical Officer, who is immediately under the resident medical officer.

12588. But have you any regular system of making enquiry, or is it merely that in case the medical officer sees someone whose clothes seem to show that he is pretty well-off, he makes some enquiry?—No; we have no other system than that which I have described.

12589. To revert for a moment to your finance, what proportion of your income do you consider you can best rely on. Your rents of course are steady?—Yes, the rents. The annual subscriptions do not vary in the course of ten years more than, it may be, 50*l.*; and with regard to our donations, we can pretty well rely upon those; and the grants from the Hospital Sunday Fund do not vary very much; the amount was increased last year.

12590. Your legacies of course are uncertain?—Those are very uncertain.

Chairman.

12591. You can strike an average, cannot you, of the legacies?—Yes, the average of legacies for the last 10 years amounts to about 17,111*l.*; but in that average is included 131,243*l.*, which we have received during the last three years; so that that is what has sent up our average so considerably. It is principally owing to one large legacy which we received last year.

12592. But excluding this very large legacy which you have received in the last twelvemonths, could you not strike an average of between 10,000*l.* and 12,000?—It would be under that.

Earl of Kimberley.

12593. Apart from that one large legacy, do you find that they tend to decrease, or are they much the same?—It is impossible to say.

12594. Looking at the matter as a whole, do you find you receive over a period of years something of the same amount of legacies, apart from this great legacy?—Yes; I should put it as under 10,000*l.*

12595. That you might fairly reckon on 10,000*l.* or something under 10,000*l.* a year?—Yes, taking an average of 10 years, possibly.

12596. You have, I suppose, a medical committee in the hospital?—Yes.

12597. How does the medical committee communicate with the governors?—The medical committee meet every week, and they send up their recommendations through their minutes to the weekly board on Tuesdays, and their recommendations are then considered by the weekly board, and either adopted or referred back for consideration, or in some cases rejected.

12598. Who makes the contracts for food?—The weekly board.

12599. And is there a steward who manages the food?—Yes, a house steward.

12600. If complaints are made of the patients' food, to whom do they come in the first instance?—A complaint would be made to the sister probably if it was in the case of a patient, and she would report it to the lady superintendent if it was a serious one; or if it was only some trifling complaint, the sister would immediately send to have it rectified.

12601. To the steward?—To the steward.

12602. But if it were a serious one?—If it were a serious one she would complain to the lady superintendent, who would then report it to me.

12603. And then you would deal with it?—I should deal with it; that is in cases of serious complaint.

12604. And you would report it to the weekly board?—Yes.

12605. Have you often heard complaints?—Very seldom in regard to the food.

12606. I was speaking of the food. Are there other complaints made frequently?—In what respect do you mean?

12607. You said that you had not often complaints in regard to the food, you seemed to imply that there were complaints as to other matters?—There are always trifling household complaints that one gets.

12608. But serious complaints I mean?—No serious complaints.

12609. How

12 February 1891.]

MR. MELHADO.

[Continued.]

Earl of Kimberley--continued.

12609. How do you do your washing?—We have a laundry on the premises.

12610. Now I will ask you some questions about the nursing; can you tell us what the nursing establishment is?—Yes. The lady superintendent has the sole charge of the nursing department, and the female domestic servants, as I have already mentioned; and there is under her a night superintendent, who relieves her from her night duties at nine p.m. every night until nine a.m. the next morning. There are nine sisters, one to each floor, in charge of two wards; there are 50 staff nurses; 12 nurse probationers (the number varies), and 15 lady probationers, and we employ special nurses and male attendants from the outside as they are required.

12611. Can you tell us what the salaries are that are paid to the matron and the nurses?—The matron receives 130 *l.* per annum with board and residence.

12612. The sisters?—The sisters receive 30 *l.* per annum and their uniform and board and lodging; and they are entitled to gratuities after having served a period of time in the hospital.

12613. Any pension?—And a pension.

12614. How long must they stay before they are entitled to a pension?—They must stay 20 years before they are entitled to a pension.

12615. Do many of them stay as long as that, or longer?—We have three retired nurses at the present time receiving pensions.

12616. Then the staff nurses, what do they receive?—The staff nurses, of course, commence as probationers, and they receive for their first year 12 *l.* per annum as probationers, and if they pass the medical committee at the expiration of their term of probation they at once receive 18 *l.* per annum; and they increase by 2 *l.* per annum until they reach the maximum of 24 *l.* They are also entitled to a gratuity and a pension after a period of years.

12617. Then your probationers are engaged for one year only?—Only one year before they come to be staff nurses.

12618. Is that considered a sufficient period of training?—Yes, it has always been so.

12619. Do you give them any certificate when they pass examinations?—Yes, they are entitled to a certificate after three years' service in the hospital. Perhaps I should have mentioned that every probationer has to engage to serve in the hospital for three years.

12620. But if she is found to be unsatisfactory, at what period do you discharge her; I am not speaking of one obviously unsatisfactory, but how long would you consider a fair trial for a probationer?—That would be within the year of probation.

12621. Would she have any power within the year of discharging herself?—Only under very exceptional circumstances.

12622. She signs an agreement, in fact, as an apprentice, I may call her, for three years?—Precisely.

12623. What is the class from which you draw your nurses; are they what may be termed ladies, or are they of a lower social position?—The probationer nurses are usually drawn from the domestic class, I think.

12624. Has there been any change in that

Earl of Kimberley--continued.

respect of late years; have you any ladies at all?—Yes, we have 15 lady probationers.

12625. I was speaking of those on your regular staff?—We have one sister only who is a lady nurse.

12626. With regard to these 15 lady probationers, what is their position, are they probationers for the time to learn only?—They come to learn nursing at the hospital.

12627. Do they pay you anything?—They pay a guinea a week.

12628. How long do they remain?—For a year.

12629. And then, at the end of the year, do they pass an examination?—No, there is no examination; we give them a certificate at the end of that time to say that they have gone through a course of training of one year in the hospital.

12630. What are the matron's duties?—We call her the lady superintendent. She has the entire control of the nursing department.

12631. Does she engage the nurses?—She engages the nurses.

12632. Subject to any control, or at her own discretion?—She engages them, subject to the approval of the weekly board.

12633. Can she dismiss or suspend them?—She can suspend them, but not dismiss.

12634. Is there a sub-nursing committee of the governors?—Yes; a nursing committee has been recently appointed.

12635. I suppose that complaints would be referred, in the first instance, to them from the matron?—If the cause of complaint took place in a ward, it would go to the lady superintendent; but any matter that she wished to have investigated would be referred to the nursing sub-committee.

12636. But, supposing that a complaint was made by a nurse, and that she was not satisfied with the matron's decision, would she have a right to appeal to the committee?—Undoubtedly.

12637. Have you had many complaints from your nurses?—No, we have not; none at all within my recollection.

12638. Does the matron visit the wards every day, or what rule is there?—Every day. She goes round every ward every day and sees every patient every day.

12639. And at night, what does she do?—She also makes a round at night.

12640. What are the hours of the sisters?—The sisters come on duty at 8.30 a.m., and they go off duty at 11 p.m.; they are actually on duty about 11 hours daily, because they have passes for two hours five days a week, and that, with the time occupied in meals, reduces the daily average to about 11 hours.

12641. Those are the sisters, I understand you to mean, engaged in the day nursing, because some of course, I conclude, are told off for the night?—No; the night superintendent looks after all the wards during the night. The sisters go off duty at 11 and do not come on till the next morning.

12642. No sisters are employed at night?—No sisters are employed at night.

12643. Then what holidays do the sisters have?—They have three weeks annually.

12644. Then the staff nurses; will you give

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

us their hours?—The staff nurses come on duty at 7.30 a.m. and remain on duty till 9 p.m., that is 13½ hours; about 10 hours a day on actual duty, because they have passes for three hours on three days a week.

12645. And what holidays?—Sixteen days annually, and, in addition to that, a whole day in each alternate month. I ought to have mentioned that the same applies to the sisters; they have a whole day every month.

12646. You make a distinction, I observe, with regard to the holidays between the sisters and the staff nurses; the sisters have three weeks and the staff nurses 16 days?—Yes.

12647. Is not the staff nurses' work as severe as the sisters'?—No; it is not so responsible a position. The sisters have to look after two whole wards, containing something like 35 beds or more in some instances.

12648. Do you think 16 days in the year sufficient relief for the staff nurses?—They have a whole day once a month besides.

12649. Then the probationers, have they the same hours as the staff nurses?—The lady probationers have shorter hours, but the ordinary probationers have the same hours as the staff nurses.

12650. They have the same holidays, have they?—The same holidays, after they have completed the first year.

12651. What is the case in the first year?—They do not get any holiday till they have completed one year.

12652. Is not that rather a severe system, because we have been told that at first those who have been unaccustomed to nursing duties suffer more than those who have been acclimatised, to use the phrase?—It has never been found necessary to give any holiday during the first year.

12653. Do you find that many probationers break down, and have not health enough for nursing work?—No, I cannot say that they do.

12654. A certain number of nurses, of course, must be sick; can you tell us at all how many you usually have off duty from ailments?—The average is a little over two of the nurses, and less than one of the lady probationers daily.

12655. Have you had any deaths among your nurses?—In the last 20 years we have had nine deaths.

12656. Could they be said to be from illnesses contracted in the hospital?—I can tell you exactly. In 1870 we lost one sister of a male medical ward, she died of typhoid fever, probably contracted in attendance on a patient. One nurse we lost in 1870, who died from pyæmia. In 1872 we lost a sister from heart disease. In 1874 we lost a nurse from typhus. In 1880 we lost a nurse from bronchitis. In 1881 we lost one from typhoid fever. In 1881, the same year, we lost a probationer from scarlet fever. In 1883 one from typhoid fever, and in 1885 a nurse from scarlet fever. That makes up the nine deaths during 20 years.

12657. Have you had much of typhoid fever in the hospital?—Amongst the patients, do you mean?

Earl of Kimberley—continued.

12658. Yes?—I do not know the exact amount we have had; not much.

12659. Have you had any such amount as may be attributed at all to defective sanitary arrangements?—No; our sanitary arrangements are first rate.

12660. When the nurses are ill where are they treated; in a separate ward?—We have a ward for sick nurses, and all sick residents; sometimes we ward them in the general wards; but we have an isolation ward for sick nurses if their cases require it; but an ordinary case would be treated in one of the general wards.

12661. Could you tell us the hours for meals for the day nurses?—The breakfast of the day nurses is at 7 a.m.

12662. For how long?—Half an hour. The lady probationers' is at 8 a.m.; the day nurses' dinner is at 11, and the sisters' and probationers' at 11.45; and the lady probationers' at 12.45. The tea is at 4 and 4.30 p.m. for the day nurses and probationers, and from 4 to 5 for lady probationers.

12663. And how long is allowed for the dinner?—Three quarters of an hour.

12664. Is the lady superintendent present at any of these meals?—No; we have a house-keeper who presides at all the meals.

12665. Now, with regard to the night nursing, what are the arrangements for that?—The nurses come on duty for a month on day duty, and for a month on night duty, alternately. The night nurses come on at 8.45 p.m. till 9 a.m.

12666. Do you know at what time they begin to clear up in the wards and wash the patients; how early in the morning?—The ward maids arrive as early as 5.45, and they immediately commence to assist the night nurses in getting ready for the day.

12667. They begin the washing of the patients at about six o'clock, I suppose?—Yes.

12668. The ward maids do, I suppose, what may be termed the menial duties?—Well, they assist in the menial duties.

12669. Do the nurses perform any of those duties, such as sweeping and cleaning?—They do sweeping and dusting, but the ward maids do the dirtier work, such as washing up, and they get the patients' breakfast ready, and so on.

12670. What meals do the nurses have during the night?—They are provided with rations when they go on duty at night; they have tea, coffee or cocoa, bread and butter, and an egg during the night.

12671. Do they cook it in the ward?—Not in the ward, in the annexe to the ward, in the kitchen.

12672. And when they go off duty in the morning have they a meal then?—Yes, they have their dinner.

12673. Now, why is it that you have none of your most responsible nurses, none of your sisters to take night duty?—We have a night superintendent nurse, who is constantly going round the hospital.

12674. That is only one to go round a very large number of beds; but what is the ground on which you apparently differ from other hospitals we have heard of, and do not employ your most responsible nurses and sisters in the night work?

—The e

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

—There is never so much work to do in the night.

12675. Do you think it is satisfactory to hand the patients over entirely to what one may term second-class nurses during the long period of the night?—Well, there are always two staff nurses on each floor during the night, who are made responsible before the sister goes off duty; but we have not accommodation for providing a double supply of sisters.

12676. Will you explain; you speak of the accommodation; what is the accommodation that the sisters have?—The sisters live on the floor of the wards; they have a room on the floor of the wards, while the nurses all live together in a separate establishment, called the nurse's home.

12677. Outside?—It is adjoining the hospital, but it is quite a separate building, and they all have separate cubicles.

12678. What is the advantage of the arrangement of having sisters who do only a portion of the work in the hospital, and the other nurses outside; would it not be more reasonable that the sisters should live outside?—If any case of emergency happened during the night, the nurse on duty could summon the sister immediately.

Chairman.

12679. Do not the sisters' rooms look into the wards?—Yes, they have a window from which they can see into the ward and see what is going on.

Earl of Kimberley.

12680. Then what is the position of the night superintendent; is she on a similar footing with a sister, or is she reckoned as a staff nurse?—She takes the place of the lady superintendent during the night.

12681. What is the night superintendent's pay?—£50 a year, with board and lodging.

12682. And what holidays does she get?—She gets a month.

12683. I forgot to ask you what holiday the lady superintendent has?—She has a month to five weeks.

12684. And when she is away, who takes her place?—The night superintendent.

12685. Is she able to control the nursing establishment, both by night and day, when the lady superintendent is away?—A competent lady probationer, as, for instance, the sister who is now in charge of the institute, takes the place of the night superintendent, both during her own holiday, and also when she is doing the duty of the lady superintendent.

12686. What is the institute?—That is an institution from which we send out trained nurses; it adjoins the hospital. We provide the public with trained nurses who have spent at least three years in the service of the hospital.

12687. And that institute is presided over by a sister?—By a sister.

12688. And she is entirely engaged on that work?—She is entirely engaged on that work; and she lends certain assistance to the lady superintendent when required to do so.

12689. If you require additional nurses beyond your ordinary staff, how do you procure them?—We procure them from outside sources sometimes, or we should utilise any of the nurses in

(24.)

Earl of Kimberley—continued

the institute if they were at home and unemployed, but for special cases we get in male attendants from the outside, and also female nurses.

12690. I will ask you more about the institute in a moment. Have you ever had any complaints from the nurses of their health suffering from the length of the hours?—No.

12691. And you have had no difficulty in maintaining discipline amongst the nurses?—The lady superintendent, I believe, has had none.

12692. Have you any male attendants employed in the hospital; male nursing attendants, I mean?—No, not in the hospital; if we require them we have to obtain them from the outside.

12693. But you have to obtain them occasionally from the outside?—Yes, frequently.

12694. Do you go to any institution^s for that purpose?—We get them from the corps of commissionaires as a rule, there is one attendant that lives close by, a man whom we regularly employ, who is accustomed to the work.

12695. With regard to the institute, could you tell us exactly what the system there is; have you a certain number of nurses on a register?—We have 19 nurses in the institute at the present time, all of whom have received their training in the hospital.

12696. Living in the institute?—Living in the institute.

12697. When not employed, that is to say?—We have none at home at the present time.

12698. But some might be unemployed; they would then live in the institute, as I understand you?—They would then live in the institute.

12699. Do they pay towards the institute, or what is the system?—They are paid a salary and a commission upon their earnings.

12700. What is the salary?—They get 26 *l.* a year, and for the first year that they are in there they get 10 per cent. on their earnings; the second year they get 15 per cent. on their earnings; and the third year they get 20 per cent. on their earnings. In addition to that they are entitled to the same privileges as the hospital nurses are; they are entitled to receive a pension after a period of service in the hospital, and they are also entitled to a gratuity.

12701. Do they have a holiday?—Yes; they get three weeks, I think it is, annually.

12702. What does the outside public pay for a nurse from this institute?—Two guineas a week for ordinary cases, and three guineas in exceptional cases. The ordinary cases are those that we principally supply them for.

12703. You have a constant demand for them, I understand?—A constant demand.

12704. Has this institution long been in existence?—Only since 1887.

12705. Does it pay its own expenses alone, or do you derive any surplus from it for the hospital?—We have been deriving a profit, but that profit does not go to the funds of the hospital; it goes to the fund that built the institute.

12706. Have you as many nurses as you can accommodate, or would you be able to increase their number?—We have accommodation for a few

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

few more at present, and we are hoping that we may ultimately be able to extend the building.

12707. How are these nurses selected, are they all nurses who have passed through the hospital?—They must be; they are not eligible unless they have served three years in the hospital; it was five years till recently.

12708. At the end of the three years have they the option to go to the institution or become staff nurses, or on what system are they selected?—If they make application to the lady superintendent and she considers that they are suitable for public nursing, she transfers them to the institute, with the approval of the weekly board.

Chairman.

12709. Just to clear up one or two points in your evidence, I will put a few questions to you. In regard to this quarterly court, how is it assembled; do you advertise it in the newspapers?—Yes, due notice is given in accordance with the laws.

12710. So that every governor who looks at any newspaper has a chance of seeing it at any rate?—Yes, and in addition to that we send out notices.

12711. At the same time, you very often have an attendance as small as 15?—Yes.

12712. Then in regard to the medical committee, the medical committee, you said, does not have any member on the weekly board?—No.

12713. But, at the same time, supposing a question arises in which the medical committee's opinion might be worked out to a useful end by the weekly board, a sub-committee is appointed, is it not?—Yes, the medical committee would nominate delegates to meet delegates of the weekly board, and they would make their report to the weekly board.

12714. And they would take evidence, or do whatever might be necessary in order to report?—Yes, they would take evidence if necessary.

12715. I think you gave the committee to understand that you left beds vacant for want of funds; that was not your intention, was it?—No, I did not mean to convey that.

12716. What really occurs is this, is it not: that no doubt the income derived from interest and from the other sources you mentioned, is not sufficient for the wants of the hospital?—Just so.

12717. And then, to make up the requirements of the hospital, you have to draw upon your capital?—Yes.

12718. That capital cannot be withdrawn without the sanction of the quarterly court, can it?—No.

12719. At the same time, in regard to the funds of the hospital, have you any capital that you cannot sell out?—Yes, a portion of the capital is entirely devoted to the cancer fund, and that is locked up, a portion of it, in Chancery, so that we cannot touch that at all.

12720. How much is that?—It amounts to 47,133 l.

12721. Is that all that you have got locked up, which you cannot touch?—No, we have put aside also a sum of 25,896 l. 7 s. to form a per-

Chairman—continued.

manent endowment fund, which it was resolved some years ago should not be touched.

12722. So that when you get down to within the 47,000 l. you cannot sell anything more?—No.

12723. Have you, during your service with the hospital, been very close to that point?—No.

12724. Not within 20,000 l.?—No.

12725. Not within the last five years? Then as regards the treasurers and the finance committee, you said that the finance committee does not meet very often; but is any step in the finance ever taken without the unanimous consent of the two treasurers?—Never.

12726. And the treasurers and the members of the finance committee are members of the board, are they not?—Yes.

12727. Is every legacy that you receive funded or not?—It is funded, capitalised immediately.

12728. I think you said just now that you had a deficit; you had to meet that out of capital which maintains the hospital going?—Yes.

Earl of Kimberley.

12729. With regard to your medical officers, do you require that they should have the London qualification as physicians and surgeons, or may the governors elect any qualified medical officer?—No, they must be qualified according to the requirements of the Colleges of Physicians and Surgeons.

12730. They must have that qualification, you mean?—They must have that qualification; you are referring to the honorary staff?

12731. Yes; but I suppose it applies to the whole?—To the whole of the honorary staff, but not to the resident staff.

12732. Has it never occurred to the governors that you might exclude competent men by that limitation, physicians or surgeons who might have obtained the Edinburgh or the Dublin qualification, but who might not be willing to pass an examination late in life to obtain the other qualification?—I will just read you the qualification, according to the laws, if I may be permitted to do so.

12733. If you please?—"That a candidate for the office of surgeon shall be a fellow of the Royal College of Surgeons of England, and shall not have practised as an apothecary, or as an accoucheur, for at least three years before the declaration of vacancy, nor shall he so practice during his continuance in office;" and for a physician, "That a candidate for the office of physician shall be either a fellow or member of the Royal College of Physicians of London." That applies to honorary physicians, and honorary surgeons; that law does not apply to the resident officers, house surgeons and house physicians.

12734. They may be elected if they have a qualification, whatever the qualification may be?—Undoubtedly; their qualification is not required to be as high as that of the honorary staff.

12735. Are any of your medical staff paid?—Yes, certain officers are paid, but none of the honorary staff are paid.

12736. What salaries are paid to the resident staff?—None, except to the registrars and the pathologist;

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Kimberley—continued.

pathologist; they are the only paid members of the staff.

12737. But the resident medical officer, what has he?—He receives 200 l. per annum.

12738. Is he the only salaried medical officer in the establishment?—The only one.

12739. I think you were beginning to say that some of the medical officers have to pay?—There are four house physicians and three house surgeons, and they each pay a fee of ten guineas on their appointment.

12740. Are they entirely engaged in the service of the hospital?—Entirely.

12741. And resident there?—And resident there.

12742. For how long does a resident medical officer remain; is there a limitation of time?—The resident medical officer is a permanent officer; there is no limit of time in his case; but the house physicians and house surgeons hold office for six months, and they can be re-elected to other offices and appointments.

12743. Then are they re-elected every six months?—No, they only hold one office for six months.

12744. You mean house physician, or house surgeon?—Yes.

12745. But at the end of the six months what takes place?—They become eligible to hold one of the house appointments other than that which they have just relinquished.

12746. To whom does the ten guineas go; does it go to the hospital, or to the medical school?—It goes to the physician or the surgeon, as the case may be, under whom the house physician or house surgeon works in the hospital.

12747. Do you take any what are usually called lock cases in your hospital?—Yes.

12748. Do you take any that present themselves, without limitation?—There is a limit to the number of cases that we take; we do not take more than two into one ward; we have a separate ward devoted to female venereal cases.

12749. You have other hospitals in your neighbourhood; for instance, the University College Hospital is very near to you?—Yes, it is not far.

12750. Have you any other hospital not very distant?—Charing Cross is not very far.

12751. But University College Hospital is very near?—Yes.

12752. You have a medical school?—Yes.

Chairman.

12753. With regard to your alms-boxes, have they increased or not in the last year or two?—They have increased very considerably.

12754. On what system do you put them out; where do you put them?—We put them in the workshops and business establishments in the neighbourhood; and they are collected quarterly.

12755. Then, in regard to the pension, I think you told us that a nurse could be pensioned after 20 years' service; is there only one class of pension, or are there two?—Sisters receive a pension after 20 years' service of two-thirds of their wages; after 15 years, if disabled by accident or sickness incurred on duty, not less than one-half of their wages.

(24.)

Chairman—continued.

12756. Then, as regards the agreement between the nurse and the hospital, as to serving for three years, supposing the case arises that a nurse wants to leave, it is taken into consideration especially, and the agreement is cancelled if necessary, is it not?—That is so.

12757. Would you suggest having more nurses if there were more accommodation?—I think it would be desirable if there were more accommodation.

12758. I understood you to say that no death had occurred since 1885 amongst the nurses and probationers?—That was the last.

12759. Then in regard to the nurses' dinner, the matron dines with the officers?—Yes.

12760. But at the same time does the house-keeper dine with the nurses?—She has her meals in the refectory; I do not know that she has them at the same time that the sisters and nurses do, because meals are going on all day long.

12761. But she has the same dinner?—She has the same dinner; but I am inclined to think that she has it served in her room.

12762. And, as it happens, just at this moment, is she a lady or not?—Yes.

12763. As regards sending out nurses to the public from the institute, is the rule for the number of years that they must have served in the hospital five years, with a minimum of three, or is three the actual time?—Three years is the actual time now; it has been reduced from five to three, where it is thought that the nurse is qualified to undertake the work.

12764. Is it not the case that the rule is five years, and if there are exceptional cases they can be taken into the institute in three years?—Yes, that is what I intended to convey.

12765. Have you ever known of any physician or surgeon being excluded from the service of the hospital because of not having the London qualification?—They would not be eligible to become candidates for the honorary appointments unless they possessed the London qualification.

Earl Cathcart.

12766. Will you please tell us for what profession you were educated before you came into the hospital?—For no profession. I was in the City for two years before I came to the hospital.

12767. As a clerk?—Not exactly as a clerk; I was in an office, a wine merchant's office.

12768. You were unconnected with hospital business?—Yes.

12769. Now, your buildings are of cheap construction, are they not, with nothing in the way of architectural ornament, or anything of that kind; plain and simple buildings?—Yes; the hospital proper.

12770. Was it built for a hospital?—Yes.

12771. How many years ago?—It was built in the year 1745.

12772. Consequently it is a very ancient construction?—Very.

12773. Do you find, for administrative purposes, that the arrangements are convenient?—We have made what improvements we could to it from time to time. Of course it is difficult to adapt an old building to the requirements of the present time.

R

12774. But

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl Cathcart—continued.

12774. But the medical men do not complain that the construction of the building impedes the cure of the patients?—No; I have never heard a complaint of that sort.

12775. The average size of your wards I take to be about 15 beds; I think you mentioned two as holding about 30?—The front wards hold 20, and the back wards hold 15. If you struck an average throughout the whole building it would be about 15.

12776. What is your idea of the size of a ward for convenient administrative purposes; how many beds; what would your idea be of a modern ward?—I should think that from 15 to 20 beds would not be an undue size.

12777. You have no difficulty in keeping up the temperature to 60°?—No; I do not think I have ever heard of any difficulty.

12778. Do you use a tell-tale clock for the porters, or other people in the service of the hospital?—We do for the engineer.

12779. But for nobody else?—No.

12780. With regard to the out-patient department, is that one of convenient construction?—Yes; it was reconstructed only a few years ago, in 1884.

12781. That is built out from the other?—It is adjoining the building.

12782. And there is ample space for teachers, for students, and for the out-patients?—Well, we could do with more, but still it is all we can get.

12783. Then you are really out-growing your out-patient department?—Undoubtedly.

12784. Do you find that a convenient system which you have mentioned of having the tea made of tea provided by the patients themselves?—It is made in the wards; they only have to provide tea for themselves.

12785. We have been told by witnesses from another hospital that the arrangement is very inconvenient; that the tea is all mixed up together in little parcels, and that when it comes to be poured out nobody can tell what the material is or what the flavour is?—Each patient is provided with his own utensils, and the tea is made quite separately for each patient.

12786. In a separate teapot?—In a separate teapot.

12787. In the London Hospital, we were told, all the little packets of tea were put into one pot, and they made a very disagreeable brew; but that is not the case with you?—No; that is not the case at our hospital.

12788. Why should it be required of the patients to provide it now that tea is so very cheap; when it was 5s. a lb. it was another thing, but now that it is so very cheap would it not be desirable to provide tea for the patients?—That is done in cases where they are not able to pay for it.

12789. But I mean generally; it is merely a question of expense, is it not?—Yes.

Earl of Kimberley.

12790. Why should you select one particular article of food, and that one of the cheapest; you might as well require them to supply themselves with meat, might you not?—The reason for it is that it is not included in the diet sheet.

Earl of Kimberley—continued.

12791. I am supposing, of course, that they should only have it in cases where the medical officer allows it; but supposing he thinks they ought to have it, is there any reason why you should not supply it?—It is a question of expense.

12792. But the expense is very small. Is it not a curious thing to select one article of food, and that a very cheap one, and require the patient to supply that?—As a rule they can generally pay for it.

12793. But they might be able to pay also for a portion of their meat or their bread. It seems a very singular thing that in a charitable establishment one of the ordinary necessities of life should be made the subject of payment by the patient to the exclusion of other necessities; and what possible ground can there be for it?—I do not know that that has ever been brought before the weekly board.

12794. Is it not really a survival of a totally different state of things?—I think they have always had to do it.

Earl Cathcart.

12795. It really is from want of consideration, is it not. At the time when tea was 5s. a lb. it was well understood that it was an expense for the hospital, but now that tea is cheap, it would be a more convenient plan to arrange that the tea and sugar should be provided for the patients?—Yes, that may be so.

12796. You mentioned butter, did you not; but that may not be absolutely necessary?—Yes.

12797. Now with regard to the laundry, you find this laundry a very great advantage, no doubt?—Yes.

12798. And it is economical?—Yes, distinctly.

12799. Have you all the modern appliances to save labour?—As far as our accommodation permits we have.

12800. And you wash for how many patients?—There are always 250 to 260 patients to wash for, besides all the household washing.

12801. I saw the other day a most perfect laundry for 800 patients, and they told me it was worked with the greatest economy and advantage, and you could understand that from your experience?—Yes.

12802. With regard to the male attendants, you mentioned getting them from the Corps of Commissionaires; but you know, and I know from experience, that Tommy Atkins does not always make a first-rate nurse; he is a very kind fellow, but does not always make a first rate nurse. Do you think that the commissionaires are unsatisfactory as nurses?—I am not prepared to answer that question; but they are only, I think, as a rule, employed in *delirium tremens* cases.

12803. But you do employ them frequently, do you not?—We do.

12804. Did you never hear of the Hamiltonian Institution for providing trained male nurses?—I have heard of it.

12805. But you have not thought of employing that institution?—It is left to the lady superintendent to select any particular institution,

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl Cathcart—continued.

institution, to which we should send. We have one regular male attendant, who lives close to the place.

12806. At our last meeting we were informed that at St. George's, when they wanted male attendants, they employed the Hamiltonian Society to great advantage. You mentioned going outside for female nurses; where do you go to when you want those extra female nurses?—I am really not prepared to answer that; it is a question that the lady superintendent could answer. We have employed male nurses from the Hamilton Institute once or twice, and should do so again in case of need. But we prefer those who are near at hand, and have been frequently employed and, to a great extent, trained by ourselves.

12807. Are the ward maids in the nature of charwomen, or do they live in the home?—They live outside and have their meals in the kitchens adjoining the wards.

12808. They are in the nature of charwomen?—Yes.

12809. You mentioned a nurse who died of pyæmia; pyæmia is a sort of curse of hospitals; how came that nurse to die of pyæmia?—It is so many years ago that I do not remember; I could give you the date of it; it was back some time ago.

12810. But there must have been some special circumstance attending the death of that poor nurse; because pyæmia is not a usual form of death?—It was in 1870 I find.

12811. With regard to the night nurses at your hospital, we were told that at the London Hospital there were two sisters on duty at night, and that each of them went round half of the hospital, and that they were at the call of the night nurses. That is very much your system, it seems to me, because you have one night superintendent, and that you have found sufficient?—Yes, we have always found it so.

12812. It is the fact, is it not, that the sister in charge of the ward likes living near the ward and having her room adjoining the ward?—Yes.

12813. And that if for any reason she is moved away from that room, she is very unhappy about it; she likes to be near her ward?—Yes; I think our sisters would feel it very much if they were moved away.

Lord Zouche of Haryngworth.

12814. I think you mentioned that you set apart a portion of your capital for the cancer wards?—The money was left to us to endow those wards, or partially endow them.

12815. Are those wards in the nature of an asylum for cancer patients?—Yes; they are kept there for life; when once they get on the cancer foundation they can remain there.

12816. And that capital, which you said was about 47,000 £, cannot be sold out?—No.

12817. And the permanent endowment fund, 25,896 £, cannot be touched either to cover the yearly deficit?—No.

12818. And that goes, I suppose, to the general purposes?—Yes.

Lord Thring.

12819. The cancer fund is a settled fund, it neither increases nor diminishes, I suppose?—We have legacies left to it from time to time.

(24.)

Lord Thring—continued.

12820. You do not apply any portion, I mean of the cancer fund to other purposes of the institution?—The cancer wards do not maintain themselves; we have to supplement them from the general funds of the hospital.

12821. With respect to the patients who die, have you got a mortuary?—Yes.

12822. Who superintends the mortuary; supposing there is to be a post-mortem examination, who is responsible for it?—The pathologist conducts all the post-mortem examinations.

12823. That means a doctor?—Yes.

12824. And what rank of doctor is he?—He is a fully qualified practitioner.

12825. But is he one of your highest doctors, or a man from the outside?—A man from the outside.

12826. When the bodies are opened who is responsible for their being decently sewn up, and prepared for burial?—We have a mortuary attendant, who is under the immediate orders of the resident medical officer.

12827. And what description of man is he, a workman or what?—The mortuary attendant is an ordinary porter.

12828. And then when the body is sewn up is it put in a shell by the porter, or what is done with it?—He has the assistance of a nurse, who sees that the body is properly put in a shroud.

12829. That is what I wanted to know; one of your nurses sees that the body is so sewn up, or otherwise dealt with, as not to hurt the feelings of the patient's relations?—That is always very carefully attended to.

12830. By a nurse?—By a nurse.

12831. And if any complaint were made who would that go before?—It would go possibly to the resident medical officer first, then it would come to me.

12832. But you have never had any complaint from relatives as to the bodies of patients being dealt with without due consideration?—No, I have not.

Earl of Lauderdale.

12833. What is the amount of your capital fund; I mean the whole together?—The gross is 252,786 £ 6 s. 3 d.

12834. That was at the 1st of January?—Of this year.

12835. Is that an increasing amount now; what was it 10 years ago?—It was only 173,000 £ 10 years ago.

12836. And five years ago it was something between those two sums?—Yes.

12837. Then it is an annually increasing amount?—Well, you see we got the bulk of this in the last three years; 131,000 £ has been added in the last three years.

12838. Up to that date had it been an increasing amount?—No, it had been a decreasing amount.

12839. Your capital had been decreasing yearly?—Yes.

Lord Monkswell.

840. How many governors have you qualified to attend quarterly meetings?—Some hundreds.

12841. Do you think that the quarterly meetings form any sufficient check on the proceedings of the weekly board under those circumstances. You say that 15 attend out of several hundreds;

R 2

ings

12 February 1891.]

Mr. MELHADO.

[Continued.]

Lord Monkswell—continued.

they are nominally the highest body; do you think that they exercise any sufficient control?—You see the hospital being a corporation, they have a check on any capital being sold out.

12842. That is about the only control in point of fact which they exercise, is it not?—Well, all matters are subject to their control, of course.

12843. I suppose some of these several hundred governors know very little about the hospital?—There are a largish number that take a great deal of interest in it; they do not always attend the meetings; sometimes we have large meetings.

12844. Are all the weekly board members also of the court of governors?—Yes.

12845. Then it might very easily happen at the quarterly meetings that the members of the weekly board would greatly outnumber the other governors?—It might so happen.

12846. If an average of 10 attend the weekly meetings, and if also only 15 governors attend at the quarterly meeting it would clearly be so?—Yes.

12847. What are these alms-boxes; are they only boxes in the hospital put up for the patients to place any contributions in?—They are in workshops and business establishments in the neighbourhood.

12848. Do you put up boxes in the hospital for the patients to put in what they like when they go out?—Yes, there are always boxes in the hospital.

12849. What do you get from them?—£. 20 to 30 l. a year.

12850. What do you call "Incidental Receipts"?—From the sale of kitchen stuff and rags, and various small items. There is an amount also of 94 l., I think, balance of the school account.

12851. Is that in respect of anything you sell?—No, we have an account with them; you see we have to maintain the buildings of the medical school.

12852. In fact you have a surplus?—Yes; this was the balance of that account, a small item.

12853. If I understand you rightly, you are allowed a certain amount out of the general fund to spend on the medical school, and sometimes you do not spend it?—The general fund has to maintain the medical school.

12854. I do not know how you put down 94 l. among the receipts?—It is the balance of their account. We have an account with the medical school; that was the balance due to the hospital at the end of the year. There are certain scholarships and prizes that the hospital give to the school, and this was the balance of that account at the end of the year.

12855. Then sometimes, I suppose, it might be the other way; you might have a balance the other way?—Yes.

12856. In point of fact, I suppose, it comes to this, that you make a sort of estimate of what the medical school will cost you; if it is less you put down that balance among the receipts, and if it is more you put it among the expenses?—Under agreements, which have been entered into from time to time, certain payments are

Lord Monkswell—continued.

made by the school to the hospital, and certain payments are made by the hospital on behalf of the school. Last year the balance of the account happened to be in favour of the hospital.

12857. Did you ever know a case of the admitting officer referring a memorandum to you as to whether a patient was a proper patient to be admitted on the ground that he was not poor?—Yes, it has happened; it does not happen frequently, but it has happened.

12858. Then what do you do if such a thing happens;—Investigate the case as far as I can; I ascertain what the man's means are.

12859. You send somebody to his house, I suppose, to find out who his relations are?—No, I simply take the word of the patient.

12860. You see the patient; you do not make any further inquiry?—We have no means for investigating outside the building.

12861. You ask the patient what his position is; and all about it?—Yes.

12862. What are you rated at?—£. 784; our parochial rates amount to 200 l. a-year.

12863. Do you pay ground-rent?—We pay a ground-rent for the hospital of 15 l.

Lord Saye and Sele.

12864. Do you systematically advertise for donations and subscriptions?—Yes.

12865. Weekly?—Daily.

12866. Have you a collector, and, if so, on what terms?—A collector is employed for the collection of annual subscriptions, and he receives 5 per cent. commission on subscriptions which are collected through him.

12867. You have had very large grants made you from the Saturday and Sunday Funds; 2,000 l. from one, and 400 l. from the other; I suppose it was in consequence of your showing that you were unable to meet the expenses?—I think they took into consideration the amount that we spent on the management. I do not know how they base their figures to make their grants, but I think that it is on that account; and also on account of our not always being able to meet our expenditure.

12868. If you had shown that your accounts were in a satisfactory state you would have had a much smaller grant?—A smaller grant.

12869. Are the patients required to bring towels and sheets?—Towels, but not sheets.

12870. Nothing whatever of that sort?—No. They are obliged to provide a change of clothing.

Earl of Arran.

12871. Is there a chapel belonging to the hospital?—In course of construction there is.

12872. Is there a resident chaplain?—Yes.

12837. And I suppose the Roman Catholic clergyman has access to any patient who wishes to see him?—At all times.

Chairman.

12874. Are steps taken to make a list in each ward of the Roman Catholic patients, and patients of other denominations than the Church of England?—Yes, there is a register at the entrance to every ward, a list kept of the Roman Catholics and patients of every other denomination than the Church of England.

12875. So

12 February 1891.]

Mr. MELHADO.

[Continued.]

Chairman—continued.

12875. So that as far as you can you see that they are attended by their respective ministers?—Yes.

12876. How much does the chaplain get?—£200 a year.

12877. What are his duties?—His duties are to read prayers in the wards, and to hold services in the wards, and to visit the patients, and to hold a service in the board room on Sundays, and to administer the Samaritan Fund, and to attend each meeting of the weekly board.

12878. Does he have to produce his vouchers like any other official of the hospital?—Yes.

12879. Does he make any inquiries as to the condition of the patients?—Yes, he does so.

12880. Now as regards these amounts that Lord Saye and Sele asked you about, which are received from the Hospital Sunday Fund, and the Hospital Saturday Fund. You received upwards of 2,000*l.* from the Hospital Sunday Fund, and you said that if you had made up your accounts so as to show that you were short of money you would have got more, or if you had made them up so as to show that you were very well off you would have got less. But you have to send in your accounts, we have been told, on a system which is provided by the Hospital Sunday Fund; that is so, is it not?—Exactly.

12881. So that however much you wished to cook your accounts you could not do it?—Impossible.

12882. As regards the male attendants, is there any nurse in this block of wards where those cases are isolated?—Yes, an outside nurse, not one of our staff nurses. It all depends upon the case that is being treated.

12883. But what I want to arrive at is whether there is a qualified female nurse as well as a male attendant?—Yes, there is.

12884. There have been a good many alterations and changes made lately in the hospital, have there not?—Yes, there have been some.

12885. And since this inquiry began?—Yes.

12886. You did not tell us the number of ward maids?—There are 10 I believe.

Earl of Kimberley.

12887. What is the total number of nurses?—Eighty-seven, including lady probationers.

Earl of Arran.

12888. Did you say that the lady probationers were engaged for a year?—Not always; they come for six months sometimes.

12889. Do they ever remain for more than a year?—Well, I believe they have occasionally; but it is not usual for them to come for more than a year.

12890. And they do not engage for longer service afterwards in the hospital; they merely come for educational purposes?—Quite so.

Chairman.

12891. With regard to these ward maids, do they lodge in the hospital or out?—Out.

12892. What is the reason of their lodging out?—Because we have not accommodation within the hospital for them.

12893. That is to say, because there is no room

(24.)

Chairman—continued.

for them. Then as well as ward maids, have you scrubbers?—Yes.

12894. Who do the heavy work?—Yes.

12895. So that the ward maids do the housemaids' work, only they live outside?—Yes, the housemaids' work in the wards.

12896. And also they are sent on messages to the dispensary, are they not?—Yes, they do that work.

Lord Thring.

12897. What are the floors of the hospital made of?—Most of them are deal floors. On one floor we have teak floors laid down.

12898. And how are the deal floors fitted?—On the ordinary beams, I believe.

12899. Are you aware whether, when you take up those floors, it sometimes happens that you find exceedingly disagreeable refuse under them, the result of the washings?—The only floors that we have had up very recently are those in the special wards, and those were not in very good condition underneath, and we have replaced them with more solid floors on a concrete foundation.

12900. Does not a deal floor, in itself, absorb from washing a good deal of noxious matter?—It would, I believe. We are very anxious to get teak floors throughout the hospital.

12901. And to renew them?—Yes; we should not renew them with deal floors.

12902. And you would tongue them?—Yes.

12903. And then you would not scrub them, but you would dry-rub them?—Yes; dry-rub and polish them.

Earl Cathcart.

12904. But you would never lay down a floor in these days without that floor being pugged underneath?—No; they would be specially prepared.

12905. In all good buildings, floors are what they call "pugged," that is, with concrete?—Yes.

Earl of Lauderdale.

12906. What wages do your ward maids get?—Seven-and-sixpence a week and their board.

12907. Do you provide them with their sleeping accommodation; do you pay for it?—No, we do not.

Chairman.

12908. Could you tell us what the cost of the occupied beds at the Middlesex Hospital is?—Yes, 87*l.* 12*s.* 1½*d.* is the annual cost of each occupied bed.

12909. In making that calculation what do you include; could you tell us that?—I take the total expenditure for the year, and deduct from it the cost of the extraordinary expenditure, that is to say on maintenance, improvements or anything of that sort, and then deduct the cost of out-patients; that has been made up by estimate before.

12910. And in that way you think you get at the cost per occupied bed?—Yes.

12911. You take the whole of the expenditure?—Yes.

12912. That includes what you pay for rates?—Yes.

12913. And rent for those houses out of the hospital?—Yes.

R 3

12914. What

12 February 1891.]

Mr. MELHADO.

[Continued.]

Chairman—continued.

12914. What do you estimate that the out-patient department costs?—£ 2,620 a-year, as near as we can get at it.

12915. I suppose you could not get at the real cost of the out-patient department without having a separate dispensary?—It would be quite impossible.

12916. If you had a separate dispensary that would facilitate it?—It would facilitate it, but then there are officers who do work in the out-patient department who are also employed in the hospital.

12917. But still do you happen to know, whether for the Hospital Sunday Fund purposes the estimated cost of beds is made up on the same basis for each hospital?—I believe so; they do not supply us with any data to go upon.

12918. Of course any estimate of the cost of beds must be taken for what it is worth, not only in your hospital but in any other?—Yes; it is very difficult to make a comparison.

12919. In the memorandum made up by the Charity Organisation Society, which I have before me, the cost of an occupied bed at St. Bartholomew's is put down at 89 *l.* (of course taking it for what it is worth); St. Thomas's, 99 *l.*; Guy's, 73 *l.*; at St. George's (as to which we had evidence here the other day) it is put down as about 75 *l.*, and you say it is 87 *l.* at the Middlesex Hospital?—Yes.

12920. That of course is considerably more than the 75 *l.* at St. George's; have you any particular reason to give why your cost should be greater than the cost at St. George's?—It all depends upon what basis they make their calculation on. I do not know what they have included or excluded of their hospital expenditure.

12921. Have you any particular department of your hospital which is more costly than in other hospitals?—We have the cancer wards.

12922. Would those materially add to the cost of your beds in making out the return?—We reckon that they cost about half as much again as an ordinary bed; perhaps not quite half as much again.

12923. Nothing is refused to these cancer patients?—Nothing is refused.

12924. They come in as soon as they can get in, and they stay there till they die?—Yes.

12925. And with regard to out-patients, as far as experience goes, do you find it impossible to take the cost of an out-patient except by estimate?—Except by estimate.

Earl Cathcart.

12926. Did you ever hear of the Board of Superintendence of the Dublin Hospitals?—No.

12927. It is a species of Government Department, and they estimate the average cost per bed upon a regular system, and they do not seem to find any difficulty in making the calculation. You seem to think it is difficult to calculate the cost per bed, owing to the out patient department?—You see our dispensary would be one of the greatest difficulties in the way.

12928. But there would be no practical difficulty, would there, in having two dispensaries?—It would be far more costly because the

Earl Cathcart—continued.

same head dispenser supervises the out-patient as well as the in-patient dispensary.

12929. In Dublin they divide it under maintenance and establishment, and exclusive both of buildings and of furniture for such buildings; but you have never heard of this Dublin Board of Superintendence?—No.

Chairman.

12930. Carrying out that idea of the Dublin Government Department, would it not be better in your opinion if all hospitals managed their accounts on the same basis for purposes of comparison?—I think it would, if it were practicable, but you see it would be quite impossible for us to know the cost of the out-patient department unless we had a separate dispensary.

12931. I am not speaking about the out-patient department, but about the cost of beds. Of course, if these estimates drawn out by the Charity Organisation Society, or any other estimates, are not based upon the same system, they are quite valueless for comparison?—Quite; we have always felt that.

12932. Have you ever considered whether it would be possible to have any central Board of control for hospitals, not a Government Department?—I think it would be advantageous in some respects; it might protect our out-patient department, and would serve as a check on the growth of the special hospitals which deprive the general hospitals of a considerable amount of support.

12933. Have you ever thought at all how it could be carried out?—I cannot say that I could submit any scheme.

12934. At the same time, as a general idea, you approve of it?—Yes.

Earl of Arran.

12935. You have been making considerable economies in the management, from what I understood you to say just now. For instance, with reference to the dietaries you have been able to provide the diets at a much lower cost?—We have made a great saving in our provisions during the last year owing to a new method of serving the beef tea to patients; that has effected a considerable saving.

12936. And in other items of the diet also?—Yes, meat and bread are the chief. We made a saving of 400 *l.* on meat, and over 60 *l.* on bread.

12937. And yet the diet is equally good and satisfactory to the patients, is it?—In every respect.

12938. And also to the medical men?—Yes.

12939. What is the new system which you allude to?—It is the method on which the beef tea is made. It used to be made in boilers in the kitchen, and we have recently put up a new apparatus for cooking it, and it is done in that way. There is careful supervision over the meat that is put in.

12940. I think you told us that the amount of saving in bread amounts to over 60 *l.*?—67 *l.*; and in meat 400 *l.*

12941. Is that a patent apparatus of which you have just spoken?—No, there is no patent about it.

12942. It

12 February 1891.]

Mr. MELHADO.

[Continued.]

Earl of Arran—continued.

12942. It is one invented by the hospital, or one that was invented outside?—It is one in use at the London Hospital, I think.

12943. Is there any name that you know it by?—No.

12944. Do you cook by gas?—Yes, the whole of our cooking is done by gas.

Lord Monkswell.

12945. You said that the estimated cost of the out-patient department is 2,600 *l.*?—2,620 *l.*

12946. How many out-patients are there in the course of the year?—The new out-patients were 38,800 last year.

12947. On what principle do you make up your accounts, so much per week for each new out-patient or what?—No, we calculate it at 1 *s.* 4 *d.* for each new patient.

12948. I see that Mr. Hardy, when he gave his evidence, said he was told (it certainly was some years back) by the treasurer of St. Thomas's, that he thought each regular out-patient costs 2 *s.* 3 *d.*; that is in his answer to Question 12127?—It is very difficult to say

Lord Monkswell—continued.

what an out-patient costs, because it is impossible to separate the in-patients and out-patients.

12949. Do you go on the principle every year now of calculating that each out-patient costs 1 *s.* 4 *d.*, having once found that to be the cost?—No, we make certain estimates of the cost of the department; the repairs may be more in one year than in another.

12950. Do you not simply say, "We have so many more out-patients this year than last, and that will be so many more times 1 *s.* 4 *d.*?"—No, it is calculated on the expenditure as estimated.

Chairman.

12951. I think you desire to add something to your evidence?—Yes. May I be permitted to explain a statement made in the earlier part of my evidence? It is with regard to the nurses who have died in the hospital. In the list that I read out to the Committee there was no nurse who had died of diphtheria in the hospital during that period of 20 years.

The Witness is directed to withdraw.

MR. EDWARD A. FARDON, is called in; and, having been Sworn, is Examined, as follows:

Chairman.

12952. You are the Resident Medical Officer at the Middlesex Hospital, are you not?—Yes.

12953. May I ask are you a servant of the Board?—Yes.

12954. What is your salary?—£. 200.

12955. And board and lodging?—And board and lodging.

12956. Would you briefly tell us what your duties are as Resident Medical Officer?—I have a general medical supervision over the hospital so far as the sanitary arrangements are concerned, the ventilation, and the warming, and the other sanitary arrangements; I am responsible for all the admissions into the hospital, and I also have the medical care of the nurses and servants of the hospital, unless their cases are sufficiently serious to make it necessary for them to be put in a ward, and then they come under the care of one of the staff.

12957. That is to say, of one of the senior physicians or surgeons, in whose ward they happen to be?—Yes; and I exercise generally authority over the house physicians with regard to their work in the wards in the absence of the physicians, and keep a general supervision over the wards in medical matters.

12958. And how long have you been in that position of Resident Medical Officer?—Twelve years nearly.

12959. The principal part of your duties in the day time is in the out-patient department, is it not?—Not now; I have been relieved of that some months ago; I used to have to see out-patients daily; I did for about 10 years or so.

12960. Before I come to that question of out-patients, I should like to know how is the Middlesex Hospital situated; are there a large number of other hospitals and dispensaries in the

(24.)

Chairman—continued.

immediate neighbourhood?—Yes, a great many. I have a list of them, and I have here a map on which the different hospitals and dispensaries in the neighbourhood are marked (*producing it*).

12961. Will you explain the map?—I have taken a circle of one mile round the hospital. The red marks are general hospitals, the green specials, and the dispensaries are marked with a round dot.

12962. Will you give us a list of these places that you speak of within a radius of a mile of the Middlesex Hospital?—There are eight general hospitals, that is, hospitals admitting all general diseases.

12963. May I ask, before you go further, what your authority is for this?—I get it from Churchill's Medical Directory for this year.

12964. And these statements have probably been sent by the authorities of the various hospitals themselves?—Yes, and no doubt they have been revised by them. The eight general hospitals of which I speak are these: Charing Cross Hospital, with 180 beds; King's College, with 220 beds; Middlesex, with 307 beds; University College, with 207 beds. All those hospitals have medical schools attached to them. Then there are in addition, the London Temperance Hospital, with 66 beds; the Homœopathic, with 94 beds; the French Hospital with 50 beds, and an Italian Hospital with 25 beds.

12965. Those are general hospitals?—Those are general hospitals.

12966. Now are there any special hospitals?—Yes, I have a list of special hospitals; I have confined this also to an area of one mile from the Middlesex Hospital. There are two hospitals for Diseases of the Skin; one the St. John's Hospital in Leicester-square, with 30 beds, and

R 4

the

12 February 1891.]

Mr. FARDON.

[Continued.]

Chairman—continued.

the other the British Hospital for Skin Diseases (that is, I think, situated in Poland-street or Great Marlborough-street), which has 12 beds. Then there are two Orthopædic Hospitals, one of which is called the National Orthopædic, and the other the Royal Orthopædic; the National Orthopædic has 38 beds and the Royal has 50 beds. Then there are three hospitals for the treatment of epilepsy, paralysis, and other nervous diseases; the National Hospital in Queen's-square with 175 beds; the West-End Hospital has 10 beds; and then there is a hospital for paralysis and heart disease in Soho-square, with 26 beds. Then there are four hospitals for diseases of the throat and ear; there is the Throat Hospital in Golden-square, with 21 beds; the London Throat Hospital (I think it is in Portland-street) with four beds; the Central Throat Hospital, with 17 beds, and an ear hospital in Frith-street, with 10 beds. Then there are two hospitals for children; one is the hospital for sick children in Ormond-street, with 175 beds, and the other is the hospital for hip disease, a disease mainly confined to children, with 80 beds. Then there is, in addition to these, a male lock hospital, with 20 beds; a British Lying-in Hospital, with 25 beds, and St. John's Hospital for Incurables, with 50 beds; an establishment for gentlewomen in Harley-street, with 25 beds; St. Peter's Hospital for Stone, with 24 beds; St. Saviour's Hospital for Cancer, with I am not sure as to the number of beds quite, I believe about 20 beds; and there is also a small lock hospital in Margaret-street, St. Agnes Hospital, which has about six beds.

12967. That makes up a total of what?—That makes up a total of, I think, 26 special hospitals, and eight general hospitals.

12968. How many beds altogether?—I think it is about 2,050 beds in special and general.

12969. That gives considerably over 2,000 beds in 34 establishments within one mile of the Middlesex Hospital?—Yes, within a radius of a mile.

Earl of Arran.

12970. Inclusive of the Middlesex Hospital itself?—Yes.

Chairman.

12971. Then in addition to that there is the Poor-Law Infirmary, with 700 patients?—Yes; there is the Marylebone Workhouse, that takes a lot of sick people; there is the St. James's Workhouse in Poland-street; there is the St. Giles's Workhouse, and the workhouse in Mount-street, Grosvenor-square, the St. George's.

12972. Are these also within a mile of the Middlesex Hospital?—Yes; they are coloured brown on the map.

12973. But the Marylebone Infirmary is some distance from there?—Yes; the sick infirmary is not in the Marylebone parish.

12974. That has 700 beds?—Yes.

12975. And takes people from that parish?—Yes.

12976. Now do you know if these are voluntary hospitals, or do any of them receive payment?—Many, I believe, receive some contribution from the patients.

Chairman—continued.

12977. And all apply for subscriptions?—They all appeal for support from the public, so far as I can gather; I have checked these institutions.

12978. That is to say they all appeal for support to the public except the poor law?—Yes.

12979. You said that there were dispensaries, too?—Yes.

12980. How many are there of those?—There are seven general dispensaries. There is the Bloomsbury Dispensary; the St. George's and St. James's Dispensary; the St. George's, Hanover-square; the St. Marylebone General Dispensary; the St. Pancras and Northern; and the Westminster General. Then there is a public dispensary in Stanhope-street, Clare Market.

12981. Do those dispensaries apply for subscriptions to the public?—Yes, all of them; they are supported by subscriptions; but then, as far as I can gather, their patients have to contribute something or other to get the benefit of the attendance and medicine.

12982. Then does that include also the Poor Law dispensary?—No, nothing to do with the Poor Law at all.

12983. We have been told that the dispensaries are practically out-patient departments; is that so?—Yes, their departments are practically out-patient departments. Then there are some special dispensaries as well. There is one for consumption in Margaret-street; then there is the Metropolitan Ear and Throat; and then there is one dispensary for the speech and ear, and then there is the St. Andrew's Eye and Ear Dispensary; the London Skin Hospital, and the Western Skin Hospital; two more skin hospitals.

12984. Now with all this enormous amount of accommodation for the sick, and assistance by way of out-patient department, do you ever have to send away people from the Middlesex Hospital, because there is no room for them?—Yes.

12985. I mean those wanting beds in the hospital?—Yes.

12986. So that you, like other places, could accommodate more people if you had the room?—Yes, no doubt about it.

12987. Then is your out-patient department very crowded?—Yes, it is crowded; I think that there is quite as much done there as the accommodation will afford, in fact rather more; it is inconveniently crowded.

12988. You have no restriction at all, have you, in your out-patient department?—None whatever.

12989. Will you tell us on what system that department is organised?—The out-patient department is practically free to any necessitous person who likes to apply, but they must do so within certain hours, unless the case is one of urgency requiring very immediate treatment. They are roughly divided into medical and surgical cases. There are others, which I will speak of presently, of a special nature. The medical and surgical cases are seen at half-past nine or ten o'clock in the morning by two officers respectively; one is called the casual surgical officer, and the other the casual medical officer. These are elected from men who have passed their examination; they are senior men and, as a rule, they have held already resident appointments

12 February 1891.]

Mr. FARDON.

[Continued.]

Chairman—continued.

appointments in the hospital; and they are provided with accommodation close by in the college, and they have an honorarium which enables them to live without further expense to themselves. As far as the medical cases are concerned the medical officer sees them all.

12990. Who sees them in the first instance to determine whether they are medical or surgical cases?—That is done by the nurses. We have a nurse there who has been there for many years, and has had great experience, and when a person comes in she says "What is the matter?" "I have a cough;" she would put him on the medical side. Another says, "I have a bad leg," and she puts him on the surgical side. It is very rarely that a mistake is made by the nurse; if one is made it will be rectified when the doctor sees the patient. The medical officer sees all those medical cases, and those evidently in need of a prolonged course of treatment he sends on to the assistant physician who sits in the afternoon of every day, and they are kept under his care as long as it is necessary for them to attend. Then if he meets with any case which he thinks of sufficient severity to need its admission into the hospital, that case is referred to the medical officer for admission, and the others he treats himself. They probably are trifling cases that may be done with in one or two attendances. Then the casualty surgical officer chiefly attends to trifling injuries and surgical ailments that may happen to come to his notice; and he in like manner sends on anything he thinks it desirable to send on to the assistant surgeons, to the out-patient surgeons, who sit also every day. Then, later in the day, patients suffering from surgical ailments are able to come and see the surgeon of the day who happens to be sitting, and take his advice.

12991. Those are what have been termed by some people the old cases?—Yes, or new ones. Then, also, there are a number of special departments in connection with the out-patient department, and patients are at liberty to come, during the hours specified in a public notice which is exhibited outside, and apply for relief if suffering from a particular disease.

12992. Do the assistant surgeons have classes in the out-patient department?—Yes; in fact in all the out-patient departments students are encouraged to attend them.

12993. You said just now that all the "necessitous" poor can come to the out-patient department; what do you mean by the necessitous poor?—Those, we understand, who cannot afford to obtain medical relief for themselves.

12994. Do you take any steps to find out whether their statements are true as to that?—Not much; occasionally, if I have been impressed by the appearance of patients, so that I thought they were not suitable for a hospital, I have made some enquiries of them personally myself; but in the majority of instances, when I have done so, I have found that they were quite deserving cases; it is very rarely indeed that I have detected any gross abuse.

12995. What I meant was you have no inquiry officer?—No, we have no system of inquiry.

12996. Do you think that an inquiry officer

Chairman—continued.

would be worth his pay?—No, I do not think it would be possible with the number of out-patients we get for any one man to make a sufficient number of inquiries to arrive at a correct judgment on the different classes of cases that come before us, for it is impossible to make a standard in the way of wages.

12997. And, from your observation, you think the out-patient department is not abused?—I think not much. I think as far as the circumstances of the people that come there are concerned that could afford medical relief, the abuse is almost trifling; and that the greater part of what abuse there is exists among the wives and children of people in receipt of good wages. Such wives and children do undoubtedly attend the out-patient department in large numbers; but then they have not the command of the purse, and I very much doubt whether they would be able to get the money from their husbands to go and see a doctor. But there is a certain abuse of the out-patient department in this way, and I do not know how you are to check it; the extremely trifling nature of the complaints that come, which, of course, take up the room and take up the time.

12998. Do you find the greatest rush of out-patients to be in the winter time, or in the summer time?—There is not any marked difference. Of course, we get a different class of complaints in the winter from what we do in the summer, but there is not any very marked difference.

12999. The waiting-rooms, or whatever they are, are they warm?—Yes.

13000. Then you do not find people come there to use it as a club, in fact?—No, I do not think so.

13001. Do you teach yourself?—No.

13002. Are you of opinion that the out-patient department is useful for teaching purposes?—It is extremely valuable; I do not think you could exaggerate the value of it for teaching purposes.

13003. Now this very extensive out-patient department of yours, which is quite free, with practically no inquiry, does that tend to what is termed, starve the poor practitioner, do you think?—I do not think so. Of course I have no direct evidence upon that point; but I think one would hear of it if there was a general opinion amongst the practitioners in the neighbourhood that such was the case. I know that the hospital is very often used by the practitioners who practise among this class of patients to send on difficult cases that they have trouble with.

13004. You mean that they use it as a consultative department?—Yes, that they use it as a consultative department, and also to pass on a case that is beyond their power of dealing with, for any adequate remuneration; a case requiring a good deal of care, or an injury requiring a good deal of dressing; cases in which it would be quite impossible for a surgeon outside to provide the patient with dressings for anything like what he would get in the way of remuneration; and also in some of the longer cases where they have to be provided with cod liver oil, quinine, iodide of potassium, and some of the more expensive drugs,

12 February 1891.]

Mr. FARDON.

[Continued.]

Chairman—continued.

drugs, it would be quite impossible for the practitioner to supply them for the amount which the patient could afford to pay.

13005. Do you think that the using of the out-patient department for consultative purposes might be more extended than it is at present?—I think it might be, and with very great advantage. I think that is a field that might be cultivated.

13006. In what direction do you think?—I am quite sure that any practitioner in the neighbourhood, who liked to come to the hospital and inquire on what days certain classes of cases are taken, if he had such cases, and liked to come up to the hospital with them, or send them up with a note to the surgeon in charge, would be able to get an opinion, and he might come himself and see the practice, to his own great advantage, I think.

13007. That you think would be a matter for organisation?—Yes.

13008. You said just now that you very often had to send away patients from Middlesex Hospital for want of room; what do you do with them; do you advise them to go anywhere?—It depends upon circumstances. If I find that they are practically destitute cases, not family men, but single men or women living in lodgings, I generally refer them to the relieving officer, and I give them a certificate stating the nature of the case, and that I think they ought to be admitted into an infirmary. If they are cases that can wait a few days, I perhaps give them some medicine, and some idea of when there is a prospect of their being admitted. Occasionally, if they have been very severe cases, I have communicated with another hospital in the neighbourhood, and asked if they could be taken in there, before sending them down.

13009. Would it be possible to have any sort of organization by which inter-communications could be made so as to know whether there were vacant beds, and also to organize the consultation in the out-patient department?—I think that the consultation in the out-patient departments might be organized amongst the hospitals; but as far as the vacant beds are concerned, I do not think you could carry that out. They vary so from hour to hour that it is only by immediate and special enquiry upon each case, I think, that a matter of that kind could be dealt with.

Earl Cathcart.

13010. We were told that at St. Thomas's, very frequently the poor practitioners send up patients with cards or notes; that occurs at your hospital also, I gather from you?—Yes.

Earl of Arran.

13011. I think you stated that when the nurses' ailments were sufficiently serious they were treated in the wards of the hospital?—Yes.

13012. But can they choose the ward that they go to?—No, not by right; but if a nurse was to express a hope that she might be put in such-and-such a ward I should try and do it.

13013. Do you consider that the Poor Law Dispensaries would be useful for the purposes of

Earl of Arran—continued.

teaching if they were affiliated in some way to the hospitals?—Yes, if they were affiliated to the hospitals; that is to say, if they were officered by the same medical officers as the hospitals, they might be.

13014. When you say Poor Law Dispensaries, you mean Poor Law Infirmarys, where there are beds?—Yes, that would be very useful, indeed. The parish doctors, I think, see out-patients at some convenient place, but I do not know of any organized Poor Law Dispensary that is confined to out-patients. If you mean the infirmaries, they are very valuable for teaching.

13015. But they are not used for that purpose at present?—No, I do not think they are.

Lord Thring.

13016. Do you consider that your school is any expense to the hospital?—Perhaps the Dean of the school might answer that question.

Earl of Kimberley.

13017. What amount of time does it take in the day to examine your out-patients?—It varies according to the number; do you mean in my own individual case?

13018. At what time do you begin, and at what time do you end the examination of the out-patients?—Do you mean all the departments together?

13019. Surgical and medical together?—It begins at about half-past nine in the morning, and goes on till five in the afternoon.

13020. Is that a fixed limit?—No, it goes on until it is finished.

13021. What number would be examined on an average in that period?—On an average, I should think, about 300; some days there are rather more.

13022. That must give a very short time, does it not, to examine each case?—But then many of them are not new cases, you see but old cases of which the nature is very well known.

13023. How many new cases?—The new cases would be about 100 in a day.

13024. And how much time do you think is generally given to each case?—It depends so very much on its nature.

13025. Take an average, or can you say what would be the shortest time given to a new case?—A medical case you may see sometimes in two or three minutes.

13026. Do you think that is enough?—That depends very much upon the nature of it. Suppose the patient comes and says, "I have diarrhoea;" you inquire, "How long have you had it?" "It has only just come on this morning." "What have you had to eat?" "Pickled pork." You form a conclusion at once; in two minutes you can treat it.

13027. You can deal in a minute-and-a-half with a case like that?—Yes; but then there are other cases that may take half an hour.

Earl Cadogan.

13028. Are there any that take so long as that?—Yes, certainly, more especially, I might say, surgical cases.

13029. I conclude

12 February 1891.]

Mr. FARDON.

[Continued.]

Earl of Kimberley.

13029. I conclude that I may fairly assume that you do not require all these cases in the out-patient department for instruction of the students in the hospital?—No.

13030. As far as the object of instruction is concerned, would not it be better if there were only a limited number of cases?—Yes.

13031. And those probably of a more serious nature and examined very carefully?—Yes; we do that to a limited extent, because all these medical cases that form the bulk of the out-patients are seen by the casualty medical officer in the morning, it is only about a third of them that are really sent on to be treated by the assistant physicians, all the others are treated by himself; it is that third that comes before the pupils.

13032. Then we may assume that those who come beyond that number are defensible only on the ground of charity?—Yes.

13033. Do not you think that such charity is likely to have a bad effect in pauperising the population?—I can hardly answer that question; it has become so common that people seem to accept hospital relief without feeling that they are pauperising themselves.

13034. Do not you think that is a very unfortunate result?—Yes, I think it is.

13035. Without asking you for a decided opinion, I gather that you would not be averse to the system pursued in some hospitals of limiting the cases in the out-patient department to those necessary for instruction, with this exception, that cases of urgency might always be sent?—Not at all adverse to it. The only difficulty is to have a machinery to guard against any case being sent away that ought not to be sent away.

13036. How is the nurse selected; who makes the preliminary inspection; is she especially appointed?—Yes. This present nurse has been there I think for 30 years nearly; a nurse is selected suitable for it.

Earl Cadogan.

13037. She performs no other duties?—No.

13038. Her duties are limited to the out-patient cases?—To out-patient cases. We have three nurses in the out-patient department; she is the chief of them.

Earl of Kimberley.

13039. Children are admitted into the hospital?—Yes.

13040. Are they treated in separate wards or in the same wards with other patients?—We have one ward for little boys suffering from surgical diseases, but the little girls are put in the general wards; and in the medical cases they are put in the general wards.

13041. Do you think the system of having them mixed with the other patients is better than the system of having them in separate wards?—No, I much prefer them in separate wards because they are apt to be disturbing to the other patients.

13042. You rather incline to the view that they are disturbing to the other patients than to the view that it is an advantage to them to

(24.)

Earl of Kimberley—continued.

have children in the ward to make it more cheerful?—It all depends on the age. If children are eight or ten they do not disturb the ward, but little infant children do disturb it very much.

13043. You have, as we know, special cancer wards?—Yes.

13044. Do you think that cancer should be treated in special hospitals or should it be treated in separate wards of a general hospital?—I think it can be treated in a general hospital. I see no necessity at all for a special cancer hospital unless you have a special hospital for the reception of absolutely incurable cases; but any case capable of being treated surgically should be in a general hospital.

13045. Then should you be against special hospitals generally, or would you make exceptions?—I should make exceptions.

13046. Ophthalmic hospitals, what about them?—Certainly not against Ophthalmic hospitals; eye cases treated in general hospitals should have special wards.

13047. Are there certain diseases where special study is very desirable?—I think as far as a special study is concerned it can be carried on under more favourable conditions in a general hospital where there are suitable arrangements for the treatment of those cases than in a special hospital.

13048. Is there not this danger that the general principles of the hospital would be apt to prevail as regards the special ward, and there would not be the same opportunity for the study of the particular disease that there might be in a special hospital?—I do not think that that danger is great, and I think it would be more than counterbalanced by the advantage resulting from the greater association of what are called special diseases with the general hospitals. If a disease is specially talked about and put into the category of what are known as special diseases, it seems to take it out of the ken of the general practitioner; he thinks it requires some special treatment; he does not take the pains to inform himself as to that disease and to study it as he would do if it were treated in a general hospital.

13049. That is from the point of view of education; that I quite understand; there is this danger, that the general system of education pursued in schools by students, would be limited if the diseases were not treated in a general hospital?—Yes; I think you ought to have associated with every general hospital special departments; but I think it is a bad thing to have a multiplication of special hospitals.

13050. Do you think special children's hospitals desirable?—I think separate children's wards in general hospitals better.

Chairman.

13051. In regard to the out-patients, at what time does the out-patient work begin?—Nine o'clock, some of it.

13052. Do you happen to know who the official is who comes at nine o'clock; is he a general practitioner?—A member of the staff. On two days a week an assistant surgeon sits at

s 2

nine

12 February 1891.]

Mr. FARDON.

[Continued.]

Chairman—continued.

nine or half-past nine. Then there is the physician in charge of the children's department, who comes at nine o'clock, and the ophthalmic surgeon comes at nine o'clock, and on two days a week the obstetric physician comes at nine.

13053. So that two or three of these departments are worked concurrently?—Yes; they are.

13054. Will you tell us what the staff employed is?—There are three assistant surgeons and three assistant physicians in charge of out-patients. There is a surgeon in charge of the throat and ear department; there are two physicians in charge of the diseases of women; another physician in charge of children; and there is an ophthalmic surgeon and two dental surgeons. That is the staff that has the care of the out-patients.

Earl of Kimberley.

13055. And when the surgeon or physician goes round the out-patients he is attended by some students?—A surgeon or physician has dressers or clerks attached to him.

13055*. Are any of the slight cases ever handed over to the advanced students?—No; they are always dealt with by the casualty surgical officer or the casualty medical officer.

Chairman.

13056. Then seeing that two or three of these officers might be sitting at the same time, to calculate from the number of the patients, and say that each case occupies a minute and a-half gives an erroneous impression?—Yes, certainly, because many cases may be being seen at the same time.

Earl of Kimberley.

13057. About the midwifery cases, I conclude you treat a certain number of those out of the hospital?—Yes, within a radius of a mile.

13058. Have you a physician accoucheur whose duty it is to attend to them?—Yes.

13059. And then, I suppose, your students help in it?—Yes.

13059*. In the case of a student going for the first time, is he accompanied?—We have a resident in the hospital called the obstetric house-physician. His duty is to look after the ward for the reception of diseases peculiar to women, and to keep a general supervision over the midwifery department; and it is his business to accompany the student on his first two or three cases.

13060. On what system are the cases selected?—They apply.

13061. Do you admit all the cases, or limit their number?—No, there is no necessity to limit the numbers. There are other hospitals in the neighbourhood which also do the same thing, and we do not have at all too many applying.

13062. I suppose that with the large number of hospitals that there is in this district, every poor man can get his wife attended gratuitously?—Yes.

13063. Has not that a distinctly pauperising operation?—Yes, it has partly, but it is also unavoidable. One of the matters that a medical

Earl of Kimberley—continued.

student has to get a certificate for before he can present himself for examination is that he has personally attended 20 labours. With all these medical students preparing for examination it is necessary you should have some labour cases for them to attend, so that a hospital is bound to provide for them. You guarantee that the medical student shall have the opportunity of satisfying the demands of the curriculum, and you must find him labour cases.

13064. But then you only require a number of cases according to the number of your students?—Yes.

13065. And you do not find that you get more of these cases than you require?—No.

13066. Then you would not approve of cases beyond that number being attended in this way?—No.

Lord Monkswell.

13067. With regard to the midwifery cases, we have been told that a mob of students go round; and one witness said that as many as four or five went, and he had to turn them out of the room. That is improper, no doubt; but what is done to avoid such things occurring?—Supposing that a student is called to a case which presents a difficulty so as to necessitate operative interference, then it is his duty to communicate with the physician accoucheur and the obstetric house physician; and when the physician accoucheur goes down to see the case, he takes with him, very likely, someone to administer the anæsthetic, and he would also take the opportunity of taking the men who were told off to attend midwifery cases, for them to gain experience.

13068. But they would not come on the scene, I suppose; till the woman had been given the anæsthetic?—I could not promise that; you see there is very often only one room.

13069. Could they not be kept outside until the anæsthetic had been given, to avoid any shock to the woman?—I think the physician would take care that his patient ran no risk. I never heard of any harm arising.

13070. You have never heard of ill effects from students crowding in?—I am sure that the physician would not allow it if he thought it would do harm.

13071. Have you turned your attention at all to the question of medical schools; whether the present system might be improved?—I think the Dean, who will follow me, will give information about that.

13072. I do not want information as to what is the case now, but I should like to know whether you have formed any opinion as to whether medical schools could be managed differently from what they are now with regard to medical education?—Yes, I have.

13073. Do you think there are too many schools?—No.

13074. You will not agree, then, with Sir Andrew Clark, who thinks that two or three educational centres should be established to teach preliminary subjects—chemistry, natural history, and the like, and that that teaching should (as I understand him to say) be taken away from the hospitals?—Yes; I should be in favour of those purely

12 February 1891.]

Mr. FARDON.

[Continued.]

Lord Monkswell—continued.

purely scientific matters being taught at a central institution, such as chemistry, physics, biology, and other purely scientific subjects.

13075. Then you think there ought to be only a few educational centres for those purposes?—Yes.

13076. You do not approve of the idea that the schools should be altogether dissociated from the hospitals?—I think that would be very injurious, indeed.

13077. Have you any idea on the subject of a central board of control simply for the management of hospital matters?—I think it might result in benefit in this way: securing the uniformity of management and administration, and so result in economy; I do not think it would add very much to the efficiency.

13078. Then would you be in favour of having a central body in the nature of a medical faculty under which all schools should be placed with a representation for each hospital, say, on that medical board?—The education of the students is already controlled by the general medical council; that probably contains sufficient machinery for that purpose.

13079. You think that would be quite sufficient?—Yes.

13080. And, as far as that goes, you do not see your way to improving the present system of general control?—That is quite apart from any question of a teaching university, the difficulty of an ordinary student in London obtaining a degree.

13081. You are in favour of having a teaching university in London?—There should be some facility for a student obtaining his degree in

Lord Monkswell—continued.

London; equal to the facility of obtaining it in Edinburgh or Glasgow.

Earl of Kimberley.

13082. That involves the question whether you are to bring down the level of the education in London to that of other places; some people say that it would be a bad thing to do that?—I do not think you would have to bring it down very much.

13083. The London University degree is considerably more difficult to obtain than the degree of M.D. of Edinburgh, is it not?—Yes; it is more difficult to obtain.

13084. And it is a very vexed question?—Yes.

Chairman.

13085. About these midwifery cases, do you call the midwifery students extern clerks?—Yes.

13086. Do these men in the Middlesex Hospital live on the premises?—They live in a house belonging to the hospital; the hospital finds them quarters.

13087. This physician who takes a class with him, consisting of two men, I understand, to a case of some complication, is a responsible man, is he not?—Yes.

13088. Is he a paid physician?—No; he is an honorary physician.

13089. Does he reside in the hospital?—No.

13090. Then he has to be sent for?—Yes.

13091. How many extern clerks are there?—Two at a time.

The Witness is directed to withdraw.

MR. ALFRED PEARCE GOULD, is called in; and, having been sworn, is Examined, as follows:

Earl of Kimberley.

13092. You are Dean, I think, of the School at the Middlesex Hospital?—Yes.

13093. And I conclude that the whole management of that school, and the finances of it, are quite separate from the hospital?—Quite.

13094. How many medical students have you?—During the last twelve months we have had 127 new entries. That includes 55 general students, or students who come to us for the whole, or very nearly the whole, of their medical curriculum; seven dental students who come for the part of the medical curriculum which all qualified dentists have to pass through; and 65 occasional students, many of them from Edinburgh, many from Canada, Australia, New Zealand, some from provincial medical schools, who come for a short time, usually for three, six, or twelve months' further work in hospital, sometimes after, more commonly before, taking their final examination. It varies owing to this fluctuating number of occasional students, but from 250 to 300 students are in attendance at any one time in our school.

13095. What fees do they pay?—The fee for the whole medical curriculum is 100 £. if paid on entrance, 110 £. if paid in instalments.

(24.)

Earl of Kimberley—continued.

13096. And the full curriculum lasts for how long?—It lasts for four years; but if a student takes more than four years, and is really working, he is allowed to stay on without further fees.

13097. Do your fees cover your expenses?—Yes; of recent years the school has been improving in numbers, and, therefore, in finance. The fees have been 5,000 £., and the expenditure altogether about 2,000 £., rather more; so that there has been nearly 3,000 £., or about 3,000 £., for division.

13098. For division amongst the teachers?—For division amongst the teachers.

13099. How do you divide it?—It is divided up into 600 shares; 360 of those shares are distributed among the lecturers in the medical school, and 240 are distributed among the three senior surgeons and the four senior physicians of the hospital; they are clinical fees; payment for the clinical instruction, as apart from the systematic lectures given in the medical school.

13100. What would be the maximum amount received by anyone as a lecturer or teacher at the hospital on the present footing?—If it happens that the same officer holds a good lectureship,

12 February 1891.]

Mr. GOULD.

[Continued.]

Earl of Kimberley—continued.

tureship, and a full physiciancy, or a full surgery in the hospital so that he gets a portion of both the lecturer's fees and clinical fees, it may amount to as much as 350 *l.*, or even 380 *l.* in the year; all expenses of a lectureship are borne by the lecturer.

13101. And what would be the smallest sum received?—The minimum is ten guineas, which is the sum granted to one or two lecturers who are guaranteed that amount; those are lecturers on special subjects such as comparative anatomy, psychological medicine, and matters that are outside the ordinary curriculum.

13102. I conclude that the sums that are distributed constitute the whole remuneration?—Entirely.

13103. There is no other payment?—No other payment.

13104. Do you consider that the number of beds and of patients which you have, especially the number of beds which you have in a small hospital, such as the Middlesex Hospital, affords sufficient scope for clinical instruction for your medical students?—Yes, it affords quite sufficient scope for our present number of students.

13105. I do not know whether you remember an effort that was made some years ago to amalgamate the school of University College Hospital with that of the Middlesex Hospital?—Yes.

13106. Were you at the time connected with the hospital?—I was a student at University College at that time.

13107. I think you will remember enough of the attempt that was made to know that the ground upon which the attempt was made was the nearness of the hospitals which would render it possible to have one school, and the advantage of having a larger scope both for lecturers and students?—Yes.

13108. Do not you think that if amalgamation between any two hospitals which are near enough can be effected it would tend to improve the instruction, from the facility of having lecturers of a higher kind?—It depends a little upon the particular circumstances of the two hospitals. At that time I think (20 years ago, perhaps) it would have been a good thing. I do not think the case is quite so strong now; because at that time the Middlesex Hospital had a very much smaller number of medical students and University College had a larger number of medical students than now; so that the students at University College were in serious need of greater clinical opportunities and the Middlesex students had an over-abundant supply. Now at the present time we have nearly as many students, I think, as we can accommodate, and the number of students at University College has fallen, and they are not so sorely pressed as they were. Then the buildings of the medical school of the Middlesex Hospital at that time were very far below the character of the buildings and plant at University College; but within the last ten years there has been a very considerable improvement in the building and plant of the Middlesex. So that the advantage which each could give to the other is not so great now as it was then.

Earl of Kimberley—continued.

13109. Should you be in favour of dissociating from the medical schools of the hospitals any portion of the curriculum and teaching it by a central body?—I think that we could improve medical education in two or three particulars in that direction. I think, for instance, it would be an immense improvement if we could separate chemistry and physics from the medical curriculum as such altogether, and make it a necessary part of the preliminary training of medical students before they come to medical schools. One of the great drawbacks we have to contend with is that so many students come to us without any knowledge whatever of science or scientific methods. They have been trained up in ordinary schools and have acquired a little classics, a little mathematics, and so on, but have no knowledge whatever of science and scientific methods. If they could be grounded in chemistry and physics,—a little biology would be a great advantage also,—and especially if they could be familiarised with scientific methods, the whole medical curriculum would be easier and more beneficial for them, and it would relieve us of what we have no special fitness for teaching.

13110. How do you think that could be done?—I think the best way of doing it would be for the general medical council to insist upon chemistry and physics being a part of the necessary preliminary examination that all medical students must pass before they become medical students.

13111. Where could they pass such an examination?—They could obtain it in many places; for instance, at the local examinations of Oxford and Cambridge, the London University, at the Apothecaries' Hall, which has a special preliminary examination for this purpose, and at the preliminary arts examination of the College of Preceptors. And there are many institutions where chemistry and physics are well taught in London, South Kensington, School of Mines, University College, King's College, and no doubt if this were done the schools throughout the country would provide instruction in chemistry and physics. In many of the large towns in the country there are already good facilities for obtaining such instruction: Manchester, Birmingham, Bristol, Liverpool.

13112. Such a scheme as you suggest would not apply to anatomy and physiology, for example?—No, I should be opposed to that.

13113. You think they could not be taught well apart from the practice of medicine and surgery?—Yes, apart from the practice; but they cannot be taught well by lectures only; they must be learned practically, especially anatomy; I am thinking more of it now. I think it would be a disadvantage to have one or two central schools, especially one great central school, where anatomy was taught by one lecturer. Anatomy must be learnt by students individually at their practical work, and that can only be done by dividing up the great number. There are some 500 men entering in London every year; they must be grouped into smaller numbers

12 February 1891.]

Mr. GOULD.

[Continued.]

Earl of Kimberley—continued.

numbers, and put under special demonstrators and tutors for that purpose.

13114. The same with regard to physiology?—Yes; a large part of physiology, for instance, histology, the actual structure of the tissues of the body, must be learnt by each one individually, and can only be learnt in that particular way. They must be grouped into smaller classes, and then, I think, there is great advantage in the personal influence that teachers can bring to bear upon their pupils. There is one other point, viz., that I think it is a great advantage that anatomy, certainly, should be taught by a surgeon or physician, at any rate by one who has a keen personal interest in the application of it to the practice of surgery and medicine. If you had one or two large central places where anatomy was taught, you would be sure to have the chairs held, not by surgeons or physicians, but by what are called pure anatomists; and my own feeling is that that is not good for medical students. It might be good for the science of anatomy, but not for the medical students.

13115. You would not like to see the theory disassociated from the practice?—No; I think anatomy is best taught by a man who has to practice surgery or medicine.

13116. But I rather gather that you think that best for those who are to be taught; for the science itself, do you think it is best?—No, I do not think it is for the science itself; because a man who is at the same time practising surgery and teaching anatomy has not the time to prosecute independent anatomical research to any very large extent. Men who have a great gift for research will prosecute it under the most tremendous difficulties, and a great deal of anatomical research has been carried out by men under those circumstances.

13117. You think that the advantage which might be derived in that direction would be counterbalanced by the disadvantage of disassociating the practical surgeon or physician from the teaching?—I think that would be a great disadvantage.

13118. To turn to another matter. With regard to the out-patient department, which is very large in the Middlesex Hospital, do you approve of the system pursued there, or do you think it needs any alteration?—I should like to speak only of the surgical side, because that is all that I am personally familiar with. No, I do not think it wants any serious alteration.

13119. Is the number of surgical patients more or less than the medical?—Much less.

13120. Can you tell us at all about what the average of new surgical out-patients a-day is?—I see them twice a week. This is the list that Mr. Fardon gives me: The number of surgical out-patients in 1890 seen without letters, was 8,417; and with letters, 3,830. That includes not only the cases that would come to me and my colleagues as assistant surgeons, but all little accidents that would come into the surgery. But of my own experience I can say that my new out-patients vary from six a day (that is an

(24.)

Earl of Kimberley—continued.

unusually small number) up to 24 or 25; that is a very unusual number for me to have.

13121. How much time would you give as a maximum, do you think?—I always give two and a-half hours on two days in the week.

13122. You are not limited as to time?—Practically, I am limited on a Tuesday, because the room which I use is occupied by another physician at 4 o'clock; I go at half-past one, and I vacate it at four, or else I inconvenience him. On Friday I always stay after four, because no one is coming after me.

13123. If it so happens that on this day, when you are limited as to time, you have a larger number of patients, can you give them the necessary attention?—Yes; the day before yesterday, for instance, I was 40 minutes past my time, and the colleague who succeeded me had to begin his work in another smaller room; on other occasions I have to go into the smaller room, and he occupies the larger room.

13124. In some way you think you manage to attend to the work without detriment to the patients?—Yes.

13125. But a little more accommodation, if possible, at the hospital would be convenient?—It would be convenient.

13126. That is a question of space, I conclude?—Yes.

13127. It has been represented very often that this system of out-patients tends to pauperise the population, to bring a considerable number of people to the hospital who might very well be attended at their own expense; does your experience bear out that view?—Not to any very large extent. I think that to a small extent it is true, speaking again only about what happens on the surgical side; I feel sure it is not so to a large extent.

13128. Do you make any inquiry at all as to the circumstances of the patients who present themselves?—Occasionally one does. It is a very common thing to have to ask in surgical cases what the occupation of the patient is; so that one gets to know in that manner. There are other cases where surgical appliances, trusses for instance, are required, and one constantly has to find out something of the circumstances of the patient just in a rapid manner.

13129. Now if the patient was obviously able to provide himself with a truss, would you require him to do so?—Yes, certainly; we have no means at the hospital of providing out-patients with trusses; I cannot do that. What happens in the case of the majority of the people who come to me wanting a truss is that I send them to our hospital surgical mechanic who supplies them at special hospital rates, just a few shillings; and the majority of the patients manage to pay it. When I find people are very poor indeed, then I give them a letter on the Charity Organization Society, and the Charity Organization Society then investigate the case, and if they think right, supply it or deal with it according to their own system; but we have a book of those forms in the room, and I am constantly using it. Then cases do come which cannot be adequately dealt with

s 4

in

12 February 1891.]

Mr. GOULD.

[Continued.]

Earl of Kimberley—continued.

in either of those ways, and then they are met by private charity.

13130. You will occasionally have an urgent case where such a surgical appliance is required?—Yes.

13131. What do you do then?—If the patient cannot afford it one can generally get it from some private source.

13132. The hospital does not provide it?—Not for out-patients; it does for in-patients.

13133. I suppose if any other appliance is required for out-patients the same rule is observed?—Yes. I have for instance had special splints provided by the patients; ordinary wooden splints, which are very cheap, are provided by the hospital.

13134. If from the inquiry you make you think that the circumstances of the patient are obviously such as not to make him an object of charity, the case not being a very urgent one, what do you do?—I have spoken to people and said, "You are not a fit case for us; cannot you go to a doctor?" But they are very few, and they have generally answered in this way: "I have been attending a doctor for a long time till my means are exhausted," or (and this is not at all uncommon) "I have been sent by a doctor." Many of the people in better circumstances who come to the out-patient room have been sent by a doctor.

13135. Those come consultatively?—Yes, they want another opinion.

13136. Do a good many come in that way?—Yes.

13137. Have you any limit in regard to the time that you keep them on the books?—No.

13138. You keep them on the books for that year, or until you are of opinion that nothing further can be done?—Yes.

13139. For your cancer cases you have a separate medical staff?—There is a special out-patient cancer department. It was thought that a hospital so peculiarly identified with the treatment of cancer as the Middlesex, ought not only to have wards but should have an out-patient department where people waiting to come into the wards, and others could get help; and so there is an out-patient department, to which a small number of patients come; it is under the care of one of the surgeons or assistant surgeons. The cancer wards are under the care of the three senior surgeons.

13140. How are the patients admitted for cancer?—Any patient suffering from cancer on sending up, on a special form provided by the hospital, a certificate giving the name, the age, the address, the seat and the nature of the disease, signed by a medical attendant, is at once put on a rota, and is sent for when a vacancy occurs.

13141. In those cases do you reject a patient that can pay?—No inquiry is made.

13142. And no patient is asked to pay?—No; but we never get patients who are in a position to pay (I am speaking from general knowledge); the cancer patients are undoubtedly most urgent cases.

Earl of Kimberley—continued.

13143. What number do you accommodate in the cancer wards?—There are 26 female beds and eight male; 34 altogether.

13144. Upon what grounds are they divided in that manner, 26 and eight; is that part of the conditions of the endowment?—I cannot answer that question. It is an old endowment; I believe the wards have been founded in memory of specially generous donors.

13145. And founded for women or men respectively?—Founded for women or men respectively. For instance, in the case of the male cancer ward, a large sum of money was collected by Dr. Greenhow, and is was opened in memory of him, and called the Greenhow Ward.

13146. Do you find the number of applicants for the cancer ward increase much?—No; the number of applicants is not so large as you would imagine. Although it is advertised in all reasonable ways in all our reports, and so on, it is not yet sufficiently widely known that it is absolutely free to all cancer patients. I think there is very prevalent an impression that it is only open to cancer patients who have been previously under the treatment of the staff of the hospital or have been recommended by them.

13147. The statistics show undoubtedly an increase of cancer in the general population, do they not?—Yes.

13148. And, therefore, it would be natural that you should have a greater pressure?—Yes.

13149. In your view is it desirable that there should be special cancer hospitals, or do you prefer the system of a separate ward for cancer cases in the hospitals?—I think a special department for cancer in a hospital is better. May I explain about the cancer department, that we only occasionally get patients admitted into that department who are fit subjects for any operative treatment of cancer. Those are admitted at once into the general surgical wards. A large proportion of our surgical cases, a very important proportion of them, are cases of cancer. In what we call our cancer wards, we have the advanced cases of cancer, incurable by operative measures. Occasionally a palliative operation may be performed.

13150. In fact it is an asylum?—An asylum; they come in there just to end their days; and as such it does an incalculable amount of good.

13151. Now with regard to other special hospitals, do you think that they are desirable, or would you only think they were admissible in certain cases?—I think that special departments of general hospitals are very much better than special hospitals.

13152. Would you make no exception to that; for example, an ophthalmic hospital?—It is really extremely difficult to give a very categorical answer to that. It is a difficult question to decide. I would not like to be pressed as to one speciality or another speciality precisely; but certainly, speaking generally, special hospitals have not been so useful to medical education and medical practice as the special departments in general hospitals.

13153. In

12 February 1891.]

Mr. GOULD.

[Continued.]

Earl of Kimberley—continued.

13153. In fact, you would be against the multiplication of special hospitals?—Yes, I should, certainly.

13154. Though they might be admissible in particular instances?—Yes; the Ophthalmic Hospital at Moor Fields is a striking case in point; and other special hospitals I might mention which were founded at the time when general hospitals would not open special departments. General hospitals have grown wiser.

13155. Do you think children are best treated in a general hospital or in a special hospital?—I do not think there is any material difference between the children's ward of a general hospital and a children's hospital. There is this advantage in a special hospital for children, that if you have a large children's hospital, such as the Great Ormond-street one, or the East London one, the members of the staff get a very great experience in treating children; whereas if it is a small ward in a general hospital no member of the staff in the hospital gets a very large experience; and that applies to the nurses as well as to the medical men. With that exception I do not think there is any advantage.

13156. Probably both systems ought, with regard to children, to exist side by side?—Yes, I think so.

13157. It would be very undesirable that children should not enter the general hospitals, and at the same time there is scope for some special children's hospitals?—Yes, to a limited extent. I do not think there is any scope for small children's hospitals.

Lord Saye and Sele.

13158. What kind of age are the students?—They must be 16 when they enter, and the majority of them are from 18 to 22 when they enter; some are older than that.

13159. At what stage of his education would a dental student be allowed to perform an operation?—Do you mean a dental operation?

13160. A dental operation?—All the dental education of dental students is done at the dental hospital; we do not teach them dentistry, but anatomy, physiology, and some medicine and surgery, but all their dental education is obtained at the dental hospital. Guy's is the only medical school that has a complete dental department; the other medical schools give what we call general medical instruction, and the especial dental instruction is obtained at the dental hospital.

Lord Monkswell.

13161–2. Do you consider that the Medical Council has sufficient control over the various medical schools, or would you prefer some other form of central control, or would you give the present council more power?—The present council has considerable power over medical education. It can determine precisely what preliminary education shall be necessary for all medical students; it can determine what lectures the students must attend before they can go up for their qualifying examinations; it can send visitors to the medical schools.

(24.)

Lord Monkswell—continued.

13163. Can it determine the standard of examination?—Yes.

13164. Entirely?—Absolutely; it has control of the register, and so can refuse to recognise degrees as registerable unless they fulfil certain requirements.

13165. Is the Medical Council entirely a representative body, or how is it constituted?—Only to a small extent, and only within the last few years has it been made representative of the profession at all. There are certain Crown members and representatives of the Universities of Oxford, Cambridge, and London, &c., the Colleges of Surgeons and Physicians, the Apothecaries' Hall; and now recently there have been what are called direct representatives chosen by the suffrage of the profession.

13166. Then hospitals are not represented as hospitals on it?—Not at all.

13167. Would you desire to have them represented on the Medical Council?—That is really a question which I have never thought over. There is, as you are aware, a scheme for remodelling the University of London, and a part of that scheme is to have some representative faculty, which is to have considerable influence on the medical schools. Of that I should approve.

13168. Does not that include the representation of hospitals?—Of the medical schools. All the teachers of all the London medical schools would together form a faculty, and have the power of sending a certain number of representatives to the senate and appointing a board of studies.

13169. Do you mean that you think that ought to supplement to a certain extent the present Medical Council?—No; it will do rather different work, because it will simply have to do with the London University, whereas the general medical council has to do with all medical qualifications of students.

13170. Might not those two bodies conflict; a medical council and a medical faculty as well, under the London University?—The Medical Council is quite a distinct body from the London University. It is distinct from it, but it has power over it. It might refuse, for instance, to recognise the London University degrees if the senate of the university were to make such changes in its examinations as to bring them below what the Medical Council consider the necessary standard; an impossible supposition.

13171. Might not the Medical Council, on the other hand, say that the standard ought to be less severe?—They do not mind that; so long as the examinations come up to a particular standard they are registerable.

Earl of Kimberley.

13172. If any arrangement of that kind should be found possible, would it not be necessary, in fact, for the College of Surgeons and the College of Physicians to become directly connected with the university?—I think so.

13173. And in that way, if it could be arranged, a faculty, such as you mentioned, could be appointed?—Yes.

T

13174. Which

12 February 1891.]

Mr. GOULD.

[Continued.]

Earl of Kimberley—continued.

13174. Which would control, in fact, the whole medical education in London?—Yes.

Earl Cathcart.

13175. Have you any means of keeping the students together when off duty?—We have a residential college, not one large enough to take anything like our present number of students.

13176. That is close by, is it?—Close by, on the hospital ground.

13177. How many can you accommodate?—We can accommodate 30.

13178. Can you say what the charge is; it is from 18 s. to 30 s. a week at Guy's, I think we were told?—Our present mode of charging is to charge for rooms and a man's dinners in hall; we charge not by the week, but by the term of three months; 16½ guineas for the better rooms, and 14 guineas for the smaller rooms at the top of the house.

13179. And what have you in the way of a club for the non-residents?—They have in the medical school what we call a common room, where they have papers, and can write letters and smoke.

13180. And have luncheon?—We have a luncheon-room where they can lunch and have tea in the afternoon.

13181. But they do not dine there?—A good many of the men dine in the middle of the day, and do use it as their dining-room therefore.

13182. And you find that sort of club accommodation a very great advantage?—A great advantage.

Lord Zouche of Haryngworth.

13183. What is the connection of the general medical council with the College of Physicians or the College of Surgeons; have they any authority over them in any way?—Only over their examinations. The general medical council has one supreme function, to guard the medical register, to guard the entrance to it and to strike off men who are guilty of unworthy conduct.

13184. The membership or fellowship of the College of Surgeons or the College of Physicians is, of course, quite distinct from the degree given by the London University?—Perfectly distinct.

Lord Thring.

13185. Does your school entail, either directly or indirectly, any expense on the hospital?—Yes, it entails directly a very small expense. I will give you the whole figures. It gives a grant of 25 l. a year towards the museum; then the museum is the property of the hospital; 25 l. a year towards the library, and the library too, although the books are bought, with the exception of this 25 l. worth, by the school is the property of the hospital; and it gives a prize of 21 l., competed for annually by the students. Then in addition to that, the school buildings have been paid for by sums of money lent to the school by the hospital; interest at the rate of 3 per cent. is

Lord Thring—continued.

paid upon the loan, and the loan is repaid at the rate of 5 per cent. on our gross total reckoned as complete thousands only. So that with our present income of 5,000 l. we pay off 250 l. of the capital account every year.

13186. Then it is not the fact that the buildings are really an expense to the hospital?—There is another point to be mentioned, that the buildings are kept in repair by the hospital; they do all the repairs, and the school contributes towards it 3 per cent. on gross receipts, about 150 l. a year.

13187. Do the repairs amount to any considerable sum beyond the contributions?—Yes, they amount to 100 l., or, in some years, to 150 l.

13188. But putting it in general words, 100 l. or 200 l. a year would represent the whole expense entailed by the school on the hospital?—Undoubtedly; and then on the other side must be put the amount of work done by the students of the school for the hospital. The nursing and other things would be more expensive if the school were not there.

13189. What control have the governors of the hospital over the school; have they any?—The hospital was there long before there was a school, and the school could not be founded without the permission of the governors originally.

13190. I mean, what is the control supposing any of the doctors misbehave themselves or do not attend?—The hospital, as such, would have no control over the failure of the lecturers to attend; but it has entire control over the staff, over its own honorary staff. If a physician or surgeon failed to attend the wards it would be then the duty of the governors of the hospital to attend to it.

13191. Then, as a matter of fact, the governors have full power over the medical staff so far as they belong to the hospital, and you have full control over the school and the medical staff, so far as regards the internal discipline out of the hospital?—Yes.

Earl of Kimberley.

13192. You were asked whether the London degree is not quite distinct from the Colleges of Physicians and Surgeons, but in one sense it is connected, that is to say, the London degree is a qualification in itself; the possession of a London degree would entitle a man to practise?—Yes.

13193. What is necessary only is that the qualification should be up to the standard required by the general medical council?—Yes.

13194. That is to say, the London degree is sufficient to qualify a man to obtain leave to practise?—Yes; any qualification or any degree that admits a man to the medical register qualifies him to practise.

13195. It is not a mere honorary degree?—No.

13196. It is a degree which carries with it certain results?—Yes; and medical graduates of the University of London in some cases hold nothing else.

13197. A legally

12 February 1891.]

Mr. GOULD.

[Continued.]

Lord Thring.

13197. A legally qualified medical practitioner in the Acts of Parliament means a man who has taken a degree in a certain university or other body which is recognised by the Medical Council?—Yes.

Lord Zouche of Haryngworth.

13198. But a man may become a member of the College of Physicians or Surgeons without

Lord Zouche of Haryngworth—continued.

having taken a degree in the London University?—Yes; they are absolutely distinct.

Chairman

13199. Is your number of surgical out-patients very much in excess of the number you require for teaching purposes?—Not at all in excess.

The Witness is directed to withdraw.

Ordered,—That this Committee be adjourned to Monday next, at Twelve o'clock.

Die Lunæ, 16^o Februarii, 1891.

L O R D S P R E S E N T :

LORD ARCHBISHOP OF CANTERBURY.
Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.
Lord CLIFFORD OF CHUDLEIGH.
Lord SANDHURST.
Lord SUDLEY (*Earl Arran*).
Lord MONKSWELL.

THE LORD SANDHURST, IN THE CHAIR.

MR. RICHARD THORNE THORNE, M.B., F.R.S., is called in; and, having been sworn, is Examined, as follows :

Chairman.

13200. You are an official of the Local Government Board, are you not?—I am.

13201. Will you kindly tell me what your particular functions are in connection with the Local Government Board?—My office is that of Assistant Medical Officer to the Local Government Board.

13202. In connection with a hospital with which we have made some inquiries, St. Bartholomew's, it appears that the authorities had occasion to think that the drainage system was in very bad order; and I think it was admitted that some sort of report was made by an official of the hospital, and at the same time an additional report for the benefit of the treasurer was drawn up by yourself?—That was so.

13203. What was that report?—Perhaps you would allow me just to explain how I came to make that report. The treasurer asked me if I would consent to make an inquiry into the sanitary circumstances of the hospital, in so far as these might have affected an outbreak of diphtheria amongst the nurses. I told him that I could not do so officially, but that as an old Bartholomew man, and having been connected with the hospital, I should be very pleased to do so as a personal matter between himself and myself; and he then told me that I could make any inquiries that I chose. As he was under the impression that some of the sanitary circumstances might have had to do with the outbreak, I naturally inquired into that point first. I have not completed the inquiry, but I have made an investigation into the sanitary state of the two nurses' homes, and of the three principal ward blocks, and I sent Sir Sydney Waterlow a provisional report, telling him that it was provisional only; and I marked even the covering letter "private," in view of the condition under which I had undertaken the investigation.

13204. And did you come to the conclusion that the drainage of the nurses' home was

Chairman—continued.

defective?—The principal nurses' home is so far perfect, that I think it would be hardly possible to find any establishment in London, the drainage arrangements of which, and the sanitary circumstances of which, are better.

13205. What was the next place you mentioned?—The second nurses' home is an old building, where a great many attempts have been made to put the drainage into good order at very great expense, but there were certain faults there which I advised should be dealt with. But I might say, as regards both those homes, I have provisionally expressed the opinion that their sanitary circumstances can have had nothing whatever to do with the outbreak of diphtheria amongst the nurses.

13206. There was a third place you mentioned?—With regard to the three principal ward blocks of the hospital, I had two criticisms to make there. Some 15 years ago, at the cost of many thousands of pounds, the governors erected so-called sanitary blocks at the end of the wards, with the object of getting the closets and lavatories and baths aërially distinct from the interior of the wards. I did not think, on examining them, that this object had been properly attained; but a very small alteration, one mainly affecting the internal wood work, will, I think, entirely remedy that.

13207. You consider, in fact, that the principle was good, but that the detail was faulty?—That is precisely so. The same criticism applies to certain disconnecting shafts, which were made at the same time and into which the drains from these sanitary projections open. There the aërial disconnection, which ought to be made, is by no means attained; but it will be a very trivial matter to put it into perfect order.

13208. But, at the same time, would not this defect that you have mentioned have a very prejudicial effect upon health?—I hardly think so, because all the drains coming down into this

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Chairman—continued.

disconnecting shaft come from the sanitary projection, which has abundant means of cross ventilation quite independently of any air in the wards themselves. Then there was one other defect connected with what are called the nurses' sculleries. In each of those there is a closet which has not been aërially disconnected from the scullery, which I think ought to be done; and that really concludes all the faults that I found in those three buildings.

13209. Then these are the recommendations which were embodied in your report?—Those recommendations as to this matter have been embodied in my report, and I have been informed that instructions have been given to remedy all these matters forthwith.

13210. Now have you been able to form in your mind any opinion as to how this diphtheria could have made such headway in this particular hospital?—I have considered the matter. But I am rather anxious not to express an opinion upon that; and for this simple reason, that in order to do so with any authority one has to know, in the first place, the exact time when the nurses were attacked, how these nurses were engaged, what wards they were engaged in, which home they slept in, and especially whether they had had to do with diphtheria patients. Now this involves a great deal of detailed enquiry in a large hospital like St. Bartholomew's, and a meeting of the senior staff was at once called with a view of getting all these data out. I have not yet received the materials enabling me to form a final judgment on the point; but I have gone so far as to say that I feel absolutely convinced that any of the sanitary defects connected with the ward buildings can have had only the most trivial, if any, influence upon this diphtheria outbreak.

13211. Then with regard to what you said just now, do you suppose, at least is it your deduction, that the nurses did not contract it from the places in which they slept themselves?—I feel absolutely positive of that. I would again say that I speak provisionally. But I might just add one thing. There have been 26 members of the staff who have had diphtheria. Now, 19 of those had actually been engaged in nursing diphtheria patients. If any faulty sanitary circumstance affecting the hospital, as a whole, had brought about this diphtheria, it would hardly have limited itself in this way to an incidence almost wholly upon the few persons who were actually engaged in dealing with the diphtheria patients; there would have been some general diffusion of it amongst other members of the staff, and amongst the patients.

13212. At the same time, is it not very rare that a nurse, with proper precautions, such as are easily taken in a hospital nowadays, contracts diphtheria from a patient?—Not if the nurses carry the children about. In adults, I believe diphtheria is mainly communicated by bringing the diseased fauces of the child into near proximity to the mouth and nose of the person who contracts it. And I may say, again provisionally, that since at St. Bartholomew's Hospital they have had lady nurses, these ladies, to a large extent, out of kindness and compassion for the children, have been in the

Chairman—continued.

habit of carrying these diphtheria patients about, and in that way practically inhaling the exhalations from these children's mouths; and I may add that the experience of St. Bartholomew's is not exceptional. I have not gone into the matter yet, but this morning I opened two reports of the Metropolitan Asylums Board, the hospitals of which, in point of sanitary construction, are perhaps unique in the world, and I find that one Medical Officer gives a list of 27 cases in one year of what he calls super-added throat illness. I refer to Dr. Sweeting's Report on the Western Hospital. He says, at page 33 of the 1889 Report, "No less than 27 cases of scarlet fever developed symptoms of diphtheritic throat illness, of whom 18 died."

13213. Were those patients?—Those were patients. He also adds, that, amongst the staff, one assistant nurse and one ward servant contracted diphtheria, and five of the staff were laid up with tonsilitis. Now, in adults, tonsilitis in connection with diphtheria is probably very much the same disease. So that although the two cases are not quite parallel, yet I think there is evidence that persons, even adults, who come into close contact with diphtheria patients run some substantial risk, and the special risk at St. Bartholomew's I think I have, provisionally at least, explained.

13214. Do you happen to know whether the diphtheria cases were mostly those of children at St. Bartholomew's?—That I could not state definitely as yet; but it always is so. The special incidence of diphtheria is on the age from three to fifteen years, adults only contracting it, as a rule, by such almost immediate contact with the sick as I have referred to.

Earl Cathcart.

13215. Speaking generally, St. Bartholomew's Hospital lies, I think, about north and south. I want to get at the blocks; for practical purposes it is about north and south, is it not?—I daresay it is.

13216. You enter through the west block into a quadrangle formed by this entrance block and three other blocks?—That is so.

13217. Then we will call them the North ward block, the East ward block, and the South ward block; those are the ward blocks?—Yes.

13218. The entrance block is used for administration purposes, I take it?—Yes, I believe entirely so.

13219. With apparently a very large room which occupies the greater part of the upper floor of that entrance block?—Yes, the first floor.

13220. Now which was the block in which you said the nurses' home, which was in a good condition, was situated?—It is in neither block; it is a row of houses fronting one part of Little Britain; behind the south wing.

13221. That is where the nurses' home is?—The principal nurses' home.

13222. And the clerk's house is not far from there, is it?—It is in just the very opposite direction. Your Lordship has not got the points of the compass right, I think. The entrance is through

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Earl Cathcart—continued.

through the north wing, and it is this north wing which is the administrative block.

13223. Then the nurses' home, which is you say in a good sanitary condition, is situated towards the west in that line of buildings; there is a brick line of buildings on the west?—I should like to show your Lordship the plan (*describing it to his Lordship on a plan*).

13224. Where is the nurses' home which is defective?—The one that I spoke of as being partly defective, would be immediately to the south of the south wing, abutting upon Duke-street.

13225. And where do the drains gather together?—They gather together to the south-east and again to the north-west.

13226. In which wing are the cubicles situated?—At the top of the south wing.

13227. And where was that infectious diphtheria ward?—On the other side on the same floor.

13228. On the other side of the cubicle block?—On the other side of the same wing in which the cubicle block is situated.

13229. That is to say in the south wing?—Yes.

13230. The cubicle block was situated in one end of the wing and the infectious ward at the other?—Yes.

13231. And that is where the nurses were first of all taken ill?—I could not tell you that. As I explained just now, I have not got those data.

13232. Do you think it was a prudent and judicious thing to put the cubicle ward for nurses on the same floor, and in the same wing as the infectious ward, for the most infectious cases?—If there had been a choice of space I certainly should not have recommended it.

13233. Does it not appear to you rather an error in judgment to have placed the nurses in cubicles on the same floor as a highly infectious ward; on the same level of that wing which is appropriated to the most infectious cases?—I can only say that, given any alternative, I should not have advised it.

13234. But if you heard that these nurses have been hurried out of these cubicles in a great hurry you would reasonably suppose that it was thought not to be a good position for them?—I have no doubt that the spread of diphtheria led to their being hurried out; but I have not yet made out whether there was any special incidence on the nurses who slept in one or the other place; and I do not like to tie myself in advance to an opinion on that point.

13235. Where were these cubicle ward nurses hurried to?—I could not tell you; I have not got that out yet; I do not go into St. Bartholomew's Hospital, at times, for eight months at a stretch, and therefore I am not thoroughly conversant with its working.

13236. But having the great advantage of your presence here, it is natural that their Lordships should wish to ask you a few questions bearing on this matter which you might elucidate. If you have no knowledge of your own you must please say you cannot answer the question. Now bearing on the illustration you have given of what takes place in other hospitals, it was

Earl Cathcart—continued.

stated to us that at St. George's Hospital last year they had had 54 cases of diphtheria, and that they had had no nurse attacked during the year. St. Bartholomew's has not had three times that number, and yet 26 members of their staff have been attacked, 19 of whom, as you mention, were in personal contact with infected patients; now does not that appear to you an enormous disproportion between the state of affairs at St. George's and the state of affairs at St. Bartholomew's?—It obviously is a disproportion.

13237. And would it not suggest itself to your mind that it is not necessary to go to the man in the street, but anybody judging from those facts might suppose that there was something wrong generally with the drainage of St. Bartholomew's Hospital?—Well, I think that any person who is versed in the subject of diphtheria would not agree with the dictum which your Lordship has laid down; and I would say at once, if you will allow me, that diphtheria is most rapidly increasing in England, and in our large cities; and if ever there was a time in the history of England when sanitary improvements have been carried out throughout the country, and especially in our large towns, it has been the very time in which this synchronous increase of diphtheria has taken place. I do not believe that there is any direct relation between these sanitary circumstances and diphtheria.

13238. But in your opinion it is a remarkable fact, is it not, that there should have been an outbreak of that nature in one hospital with 54 patients, and no nurse attacked, while in the other hospital there are not three times that number of patients attacked, and yet a very large proportion of the staff are laid up; that is a remarkable circumstance, is it not?—So remarkable that I endeavoured to explain as far as I could provisionally what I thought it was due to.

13239. And that is a circumstance calling for inquiry?—Certainly; that is what I was called in to inquire about.

13240. If, coupled with that, you have what I will call a guilty sanitary conscience, sending immediately for their surveyor, calling you in, calling their own surveyor in, altering the dietary of the nurses, and all that, would not all that go to show that there was some sort of idea floating about in the minds of those who had charge of the hospital, that there was something wrong in the sanitary arrangements?—Doubtless; they had the ordinary notion which the public throughout England hold, that if there is any infection prevailing it must be from the drains.

13241. Was it you who suggested the alteration of the sinks?—No.

13242. That was done by their own inspector?—That was done before I went there.

13243. Now, these inquiries have lasted nearly three months, or two months have they not?—I could not say; I only know of a few weeks as regards my own.

13244. Did you examine the drain to know the date of it; is it a pipe drain or a brick drain?

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Earl Cathcart—continued

drain?—The architect has examined it; I have not been down into the main drain.

13245. Therefore, your examination has been of an exceedingly partial character?—So far it has been partial; but so much as has been done has been completely done; still, I do not profess to be an expert in constructive matters. My only object was to advise the Treasurer as to whether this diphtheria was due to any sanitary circumstances that I could detect about the hospital. I believe he asked me because I had paid attention both to diphtheria, and to the construction of hospitals, especially those for infectious diseases.

13246. Then I gather from what you told the Noble Lord in the Chair, that you are decidedly of opinion that the diphtheria did to some extent arise from defects in the arrangements; because you suggested yourself that the sanitary blocks were not in a satisfactory state, and that the nurses' scullery was connected with the main drain; you mentioned that in the evidence given in chief to the Noble Lord in the Chair?—I may have seemed to say this. But I feel sure that the Treasurer would not mind my reading to you my conclusions, because after what your Lordship has said, I feel sure I have given a false impression. Whilst I made certain recommendations, I did not regard those conditions which I had discovered, as being related to the diphtheria as cause to effect. If you will allow me I will mention the conclusions I came to: "Since my inquiries have primarily been concerned with the recent prevalence of diphtheria, I would, in conclusion, state first: that the sanitary circumstances of the nurses' home in Little Britain are such as to forbid the belief that they can in any way have been concerned in the production of disease. Secondly, that whilst I am unable to speak with equal confidence as to the Duke-street Home, I have no grounds for believing that diphtheria has been induced by any of the sanitary conditions of that building. Thirdly, that as regards the drainage of the ward blocks, and the internal arrangements of those buildings, conditions do exist, and this notably in the ward kitchens, which tend to unwholesomeness, and which have been known to produce 'sore throat'; and that even if this form of sore throat be not in its beginnings regarded as of a specific character, it is certain that those suffering from it are to an exceptional degree liable to contract diphtheria when the disease is prevalent. This statement is, however, not intended to prejudice the question as to the origin and diffusion of the infection during the recent prevalence as to which the necessary data are not yet forthcoming." I could not go beyond that statement at present.

13247. But coupling the scarlet fever together with the diphtheria, is it not in your opinion probable that any escape of sewer gas into the building might cause those diseases, or one of them?—I think it possible as to the latter, but if it had been so it would not have been limited almost entirely to the nurses who are doing one special duty, namely, attending to the diphtheria patients in one solitary ward.

13248. But we have heard that scarlet fever

Earl Cathcart—continued.

broke out in the surgical wards amongst the patients?—You are going beyond my knowledge; but I may say that we have no evidence in the public health department which would lead us to state that sanitary circumstances are related to scarlet fever in the sense of causing it.

13249. Are you satisfied that there has been no outburst of sewer gas into that building?—If there had been at all it would be by means of the ward kitchens.

13250. The sculleries you mean?—Yes, the ward sculleries.

13251. Do you think it is probable that there was an escape of sewer gas into those sculleries?—The arrangements in those sculleries are about the same as in nearly every private house in London, that is to say, they are so far faulty; but I know there have been complaints of offensive odours in that part of the ward-blocks, and therefore I am bound to admit that both the structural arrangements, and the evidence that one has received go to point to some such danger at that one spot.

13252. That is to say, in the sculleries attached to the wards?—Yes.

13253. Now as a medical man, would not it, in your opinion, be sufficient to account for an outbreak of disease that there was sewer gas?—Your term "disease" does not help me.

13254. I am not a medical man, but I mean an outbreak of such diseases as diphtheria and scarlet fever?—To the extent that I have indicated in my report; that it is well known that drain effluvia cause sore throat, and that sore throat is above all the condition which the diphtheria organism seeks as the soil in which to do its mischief.

13255. People standing over sinks, and doing work at sinks, would be particularly liable, would they not, to be affected by any sewer gas that did escape?—If you were speaking of enteric fever I should coincide with you; but it must be remembered that until comparatively recent years, diphtheria has been a rural disease, and not one of towns, where there is an abundance of sinks and drains.

13256. But if you had a sewer affected with diphtheria matter, that would cause the whole of the matter in that sewer to be diphtheritic?—I believe that that point is one of the most difficult in connection with the ætiology of diphtheria which it is possible to raise, namely, whether the organism of diphtheria getting into sewers is capable of developing there.

13257. But the poison of scarlet fever would certainly ferment there, would it not?—There is an utter absence of skilled evidence to show that scarlet fever is in any way caused by drains.

13258. Now this far you do admit: that in these wards, or connected with these wards, there has been, or was, for some time, a bad smell?—There is distinct evidence of complaint on that point.

13259. And you were told, probably, for how long that complaint of bad smell had existed?—I could not say that. This information I elicited myself, and it was sufficient for me to know that the cause of complaint had existed; and as I have already said, my report is incomplete, and

I have

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Earl Cathcart—continued.

I have not even finished the investigation on which it is to be based.

13260. Did anybody complain to you of these smells?—I called certain nurses and sisters together and asked them; and in some wards they did say there had been offensive odours at this one point.

13261. And did they themselves consider that they were in danger, and that they were exposed to risk; did they complain of the condition of affairs with regard to the sinks?—There was no complaint beyond the answering of my question.

13262. They mentioned to you that they thought these places were dangerous?—Oh dear no.

13263. That they thought they were unwholesome?—I think I am telling you everything I can when I say that they answered my question to the effect that there had been offensive odours from the closets in the ward sculleries.

13264. We were told the other day by Mr. Cross that there were no complaints about the closets; he said it was about the sinks?—I can only tell you that I asked them about it, and I have stated the answer they gave me.

13265. They told you that the closets were offensive?—That there were offensive odours from that portion of the ward building.

13266. The closets are not in the sculleries, are they?—Yes, they open out into the sculleries.

13267. Mr. Cross, in answer to my question, told me that the closets had not been complained of, only the sinks; you heard the closets as well complained of?—When I inquired I received that answer which I have given you.

13268. But the fact is that your examination of St. Bartholomew can have been of very little use indeed without having examined what is below ground as well as above?—I have examined matters below ground, except performing the task of going on hands and knees through the main sewer, which I leave to others; but that also has been done.

13269. May we take it from you that that is a sanitary barrel drain, not a brick drain?—I was told by the architect that it is a brick drain.

13270. But you, as a scientific man, know that a brick drain is not a satisfactory drain?—Perhaps I may be allowed again to tell you precisely what I have said about it in my report, though I do not hand in my report for the reasons named.

13271. I think it would save a great deal of trouble if you would kindly put in the whole of that report?—I have not the slightest objection myself; the only question is whether when I have given a gentleman a private document, and labelled it "private," and he is away, I am at liberty to put it in.

13272. It is not a private document in this much that it has been mentioned in evidence, and I apprehend that the people who rely upon that document are bound to produce it, and if they do not produce it, it must be supposed that it is so because it is damaging to them that they dare not produce it. That is what I should have said to a jury?—I should have no objection to their producing it.

13273. Then are you going on with this (24.)

Earl Cathcart—continued.

matter any further?—Yes, I intend to, certainly; the data are being collected for that very purpose.

13274. Thank you very much. I have occupied you at length, but it is a serious question?—I am most desirous to give you all the information I can: but my examination has been so partial that I feel a difficulty in speaking definitely at present as regards the diphtheria outbreak.

13275. And the other gentleman who was employed, the surveyor, is an architect, is he not?—The architect is here.

13276. What is the gentleman's name?—Mr. I'Anson.

Earl of Lauderdale.

13277. Are you in the habit of paying periodical visits to the hospital?—No, not for this purpose.

13278. What is the purpose for which you visit it?—I give occasional lectures on public health to a class of students.

13279. You would not be in the way in the case of receiving any complaint of this kind at all, therefore?—I hardly ever enter a ward, and should not have any knowledge of it at all unless I was informed of it.

Earl of Kimberley.

13280. You have no experience as a sanitary engineer; that is not your profession?—That is not my profession.

13281. You advise upon the medical aspects of the case?—Yes; and in so far as I have had to do with the construction of hospitals, I have advised as to the general principles of hospital drainage.

13282. But still it is not possible, is it, to give any competent opinion as to the construction of drains without experience as a sanitary engineer?—No, it is the proper function of a sanitary engineer to do that.

13283. Do you know whether the architect employed has had any experience of that kind?—I never met him till the other day; but he certainly seems to have had such experience judging from the reports he has submitted to me.

13284. With regard to the question about the connection between diphtheria and bad drainage, is it not the fact that in all these diseases it is exceedingly difficult to specify cause and effect?—Not so with regard to typhoid fever; I think the relation is very definite.

13285. You are convinced on that particular point in common with, I believe, the majority of the medical profession, that it is so?—I am.

13286. But I suppose you know that a good many people entertain a doubt whether that theory holds?—I have never met with anyone who does. I suppose you are referring to milk; but then the milk may become infected by drain-air.

13287. Yes, I refer to milk. Of course you know very well that theories of this kind spring up, and after being believed for a certain number of years, they are entirely disbelieved afterwards; so that one does not feel great confidence in any of the theories. You do not perhaps agree to that?—No, I do not.

13288. Would you not draw this conclusion, at all events, that as there is some doubt about
U some

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Earl of Kimberley—continued.

some diseases, there can be no doubt that the best sanitary arrangements should always be made, in order that if there be any connection between the sanitary arrangements and those diseases it should be avoided?—That was the principal object of my recommendations in this matter.

13289. And that is the principal ground upon which anyone can strongly recommend that sanitary arrangements everywhere should be made as good as possible; not with a view to say that that can absolutely prevent disease, but that bad sanitary arrangements have a tendency to produce a state of health which leads to disease?—I entirely concur.

13290. And to that extent you would say that even with regard to diphtheria, if at present it is not shown that diphtheria is connected with sanitary arrangements, that would not relieve anyone from the responsibility of seeing that the sanitary arrangements were as good as possible?—I never fail to utilise diphtheria to that end if I can.

13291. Now, I heard it mentioned that there are closets which opened out of a scullery. Can anybody suppose that that is a sanitary arrangement which ought to exist in any establishment?—I have recommended that that should be at once discontinued.

13292. Also I gather that they still enjoy the privilege in this hospital of having the old brick drain?—It is an old brick culvert.

13293. Is it not a fact well known to every one having to do with drains, private or public, that brick drains tend to be defective, and are not to be relied on?—As a general principle I concur with that.

13294. It is not very satisfactory to find that a great hospital like St. Bartholomew's has not adopted the more recent methods which I suppose every careful person has adopted in private houses?—It so happens, as far as I have been able to judge, that this culvert is an exceptional one. There are brick drains and brick drains, and this one does appear to have been laid down in a remarkably efficient manner when it was constructed. I felt confident that this disease was in no way connected with it; and as the question of relaying it would involve very important consequences to the hospital, as regards perhaps closing it for a time, I have gone so far as to say that I do not feel in a position to advise such a step on the information that I have received with regard to it.

13295. You mentioned that the scullery arrangements are much the same as are common in private houses; will you just tell us if you know what their arrangements are for drains and sculleries?—I was not speaking of a scullery, but I was speaking of a house; that is to say, the closets open directly into the ward buildings through the scullery, just in the same way as closets often open into a house without any aerial disconnection. It was from that point of view I spoke.

13296. It was not from the point of view specially of the scullery?—No, not from that point of view.

13297. Did you see any other structural objections to the drainage at St. Bartholomew's?

Earl of Kimberley—continued.

—Not to these three ward blocks, and to the two nurses' homes to which I have as yet limited my inspection.

13298. You said that bad drainage was not the cause of diphtheria, but you also said that it was the cause of sore throat, and that sore throat predisposed to diphtheria. Would it not be logical (I should say so, certainly) to say that, therefore, bad drainage may be the cause of diphtheria?—Yes; I think I used the words "direct cause" purposely in order to cover that point.

13299. Is not a direct cause an equivocal phrase which does not admit of precise definition?—In dealing with the ætiology of disease, one is obliged to use very careful terms.

13300. But is the term "direct cause" a term that will bear examination?—I thoroughly apprehend it myself.

13301. What is the distinction between a direct and an indirect cause; how can a cause be a cause unless it is a cause?—It is a term in very common use.

13302. I am quite aware of that?—It is in very common use, and generally understood.

13303. But do you think it a term which can bear in any way a scientific examination?—I will not press the point, if you object; but my meaning, I hope, was quite clear.

13304. I put the point for this reason, that I apprehend a cause is a cause, and that it does not signify whether it is direct or indirect. What is meant by an indirect cause, I suppose, is that the cause cannot be traced so near to the effect; but, after all, in a chain of causes, it does not signify much where it is?—If I accepted that definition I should be obliged, I think, to say that I do not believe the drainage of St. Bartholomew's has had anything to do with the diphtheria.

13305. You do not think that in this particular case there is proof that the bad drainage did induce the state of sore throat, which induced diphtheria?—I have no evidence of it in this case, rather to the contrary; and it was only in order that I might put before you every view that I mentioned that one point.

13306. At all events, I suppose this is universally agreed upon, that there is extreme difficulty in tracing the cause of diphtheria?—There is no disease the ætiology of which is more obscure.

13307. And your experience in the rural villages, of which I have, unfortunately, some, of severe diphtheritic outbreaks, is, that it is almost impossible to tell why those particular villages were the scene of those outbreaks?—That is often so; but every year we are learning more about it.

Earl Cathcart.

13308. I want to ask you this question; you have observed that the sculleries and the sinks, and their arrangements, were analogous in St. Bartholomew's Hospital to those in private houses. Now, I fancy that you must have overlooked the fact that in private houses now the waste-pipe of the sink is invariably disconnected?—I said that the sink arrangements had been altered before I went to the hospital.

13309. Do you mean that they are disconnected now?—I think they are all finished now.

13310. But

16 February 1891.]

Mr. THORNE, M.B., F.R.S.

[Continued.]

Earl Cathcart—continued.

13310. But you found them connected with the drains?—Not the scullery sinks; I referred to the sinks in the sanitary projections from the wards; but outside there was a so-called disconnecting shaft.

13311. But they dropped into a gully?—They did not drop onto a proper gully; and it was as to that that one of my recommendations was made. These sinks were in a projection that was aerially distinct from the wards.

13312. In private houses and by everybody's lease they are bound now to cut off all connection with the drains, and the sinks have to drop into a gully?—I could take you to many thousands of houses where it is not so. Under modern bye-laws that is so, but modern bye-laws are only very partially accepted as yet.

Lord Clifford of Chudleigh.

13313. Your examination only went to the principle upon which the drains were laid down; not actually to their being in an efficient condition?—Everything that I could see I looked upon myself as competent to judge of; but I have made no inspection of the main drains underground.

13314. I suppose the clerk will tell us what methods of inspection were taken to test the actual condition of the drains?—I have no doubt the surveyor would tell you that.

Chairman.

13315. Is there anything else you wish to add?—Nothing more.

The Witness is directed to withdraw.

MR. WILLIAM HENRY CROSS, is re-called; and further Examined, as follows:

Chairman.

13316. Do you have a periodical examination of the sanitary condition of the hospital?—No, we have not.

13317. You have an architect on the staff of the hospital?—Yes; he is termed a surveyor; and we have a resident clerk of the works.

13318. Are those experts in drainage and sanitary matters generally?—I should say that the surveyor is; the clerk of the works has been with us for the last 20 years, and it is his business to see that everything is kept in a proper state of repair.

13319. But he is under the architect?—Yes, he is under the surveyor, as we call him; the surveyor acts as architect if buildings have to be designed.

13320. You do not know whether the surveyor is an expert in the matter of drains, or not?—I do not know that he is specially expert in such matters.

13321. Has it ever come up before the committee of which you are the acting secretary, whether it would be advisable to have somebody on the staff of St. Bartholomew's Hospital, which is a parish in itself, with some actual practical knowledge?—No, that has never come before them.

13322. The last witness acknowledged that there were some defects also in matters of detail in a certain portion of your hospital; have you any reason to believe that those defects do not exist in other parts of St. Bartholomew's, and possibly to a larger extent?—I think not; I think he has exhausted almost everything.

13323. But he has not inspected the whole hospital?—He has not. But might that question be asked of the surveyor; perhaps he is rather more competent to answer it than I am.

13324. But you told us yourself that you were the eyes of the treasurer?—Yes, I did say so.

13325. Therefore, is it not your business to see to every possible detail of the hospital?—I hardly think that it is my business to attend to these sanitary arrangements in the way I think your Lordship suggests. Anything that comes to my notice, or anything that I see amiss in his absence I report to the treasurer.

(24.)

Chairman—continued.

13326. I will make my question a little clearer: supposing a nurse is ill from some slight cause, would you not consider it your business to make inquiry what was the cause of her illness?—No; the matron would report to the treasurer if the illness were at all serious.

13327. Would the treasurer make it his business to make some inquiry into what was the cause of her illness?—What happens is, that the matron every week makes a report to the treasurer and almoners of various matters in her department, and she always states how many nurses are ill; and the treasurer and the almoners then make inquiry, if there is anything provocative of inquiry.

13328. Who would they make that inquiry of?—First of all of the matron.

13329. We will assume a case: here is a case which you must have every week; a certain number of the nurses disabled from some cause or another; nurse So-and-so is ill; does the matron say what is the matter with her?—Yes, she mentions it in her weekly report to the treasurer and almoners.

13330. She says she is suffering from sore throat, for instance?—Yes.

13331. Does not he then get hold of some medical officer and say, "What is the cause of it"?—He would if there were many of them; but unless the matron said something to call especial attention to the matter, I do not think anything more would be done.

13332. But possibly the main drain may be out of order, or some pipe that comes into the nurses' room; how would you discover that unless there was some constant supervision?—The leakage you mean; the clerk of the works ought to discover it.

13333. Does the clerk of the works go round periodically?—He goes round every three months.

13334. Do you consider that sufficient?—I am only stating the fact; I do not mean that it is not more frequently than every three months, because he is constantly in and out of the wards; he is sent for to attend to small repairs, leakages, breakages; it is not an infrequent thing, for instance, to have to unstop a water-closet which

U 2

had

16 February 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

had got stopped up by things being thrown down; he is constantly in and out, and in addition he makes a periodical inspection every three months.

13335. Supposing any thing is wrong in a ward, like the stopping of a closet, would the nurse in that ward send to the matron?—The sister would send to the clerk of the works; there is a slate hung up in his workshop upon which she would make a memorandum of what was required in the ward, and he would attend to it at once.

13336. Would he report to you?—No; if the thing were done no more would be said about it. If he thought it was anything extraordinary he would report to the surveyor.

13337. Who has to judge that the work is properly done?—He is under the surveyor.

13338. And how often does the surveyor come?—At least once a week.

13339. Is the surveyor an honorary officer?—No, a salaried officer.

13340. And does the clerk of the works go round with him and point out the various arrangements that are defective?—If there is anything that he thinks it necessary to call the attention of the surveyor to; but I have no doubt the surveyor himself will tell you exactly what happens in these cases.

Earl Cathcart.

13341. I have no doubt you will answer my questions with the utmost candour, but last time you told me there was nothing the matter with the water-closets?—May I give this explanation. I was examined here on the 29th of January, and speaking on that day I stated, as was the fact, that no water-closets had been objected to. I heard nothing about these water-closets until Dr. Thorne's Report, which was not written until the 3rd or 4th of February.

13342. It was defective information, therefore, that led you to make that answer?—It was according to the information I then possessed.

13343. I am much obliged to you for the explanation. All the witnesses have answered me with the utmost candour, and I was under a wrongful impression, I find, that you had misinformed me?—I should be very sorry if there were any ground for your Lordship imputing to me anything of that kind.

13344. I do not for a moment; it was quite right that I should ask the explanation; it seems that I was under a misapprehension and that you had not known the fact till afterwards?—Not till afterwards. And may I further observe that it was said just now by your Lordship that I had referred to the report of Dr. Thorne in my evidence. That is not the case.

13345. I beg your pardon. Will you refer to Question 10,506, Lord Monkswell's question?—That was our surveyor, not Dr. Thorne, I was speaking of then.

13346. Will you kindly read the question; I was under the impression that you referred to Dr. Thorne?—No; I knew nothing whatever of Dr. Thorne's Report or opinion (except as I will tell you presently), when I was at this Committee on the 29th of January; I was speaking then entirely of the report of our surveyor, Mr. P'Anson.

Earl Cathcart—continued.

13347. That would lead to the impression that you were referring to Dr. Thorne?—Question 10,506 is: "With regard to this outbreak of diphtheria you say that your surveyor inspected the hospital two months ago; what was, generally speaking, the nature of his report?" I do not think there is any reference to Dr. Thorne there.

13348. I do not wish to delay their Lordships?—Perhaps I may say that in 10529, a question of Lord Arran's, there is a reference.

13349. Then it is 10529; what does that say; you have the document and I have not; that is a question of the Lord Arran's I understand; what does it say?—The question is: "You have no reason to suspect the existence of any old bad system of drainage that has not been properly destroyed?" and my answer was: "I should say not." Then I volunteered this: "In addition to this report from their surveyor, the governors, in order that there might remain no doubt about it, have called in a well-known expert to advise them generally upon their system of drainage. As the result of the inquiries made so far, there is no ground for believing that drainage has had anything whatever to do with this outbreak."

13350. You refer directly to Dr. Thorne there?—I refer to Dr. Thorne, but not to his Report, which did not then exist. What I had in my mind was a conversation which I had had with Dr. Thorne.

13351. We cannot tell what you had in your mind; we will change the subject. This is a paragraph taken from the "Medical Press": "We have the formal assurance that it is not true that nurses had been sent to sleep in a room at one time reserved to infectious cases; but the hypothesis that the nurses contracted both diphtheria and typhoid from the patients is hardly one that will commend itself to medical readers; even if this were so it would have to be construed unfavourably, for such an unusual proclivity to infection would justify the inference that there was a want of care in the selection of the nurses, that they are overworked or underfed, or finally that the general sanitary conditions of their environment were not what they should be." Now there is nothing that can be said in regard to a want of care in selecting the nurses; the nurses are well selected?—Well, I should be afraid that perhaps we have sometimes admitted nurses who had not the physique and the constitutional fitness for bearing the strain inseparable from their duties, I may be wrong, but I think it has been so. But may I say that the governors, about two months ago, instituted a more searching medical examination of all candidates for appointment as nurses, in order to make sure that we do not admit anyone constitutionally unfit.

13352. Then they say in the "Medical Press" that perhaps they are "overworked." We went into that carefully the other day; they are not more overworked than other nurses perhaps?—Their hours are unquestionably very long; and no one can deny that their work is laborious.

13353. This is what it comes to, "or that they are underfed"?—I will only say that I have two daughters at this moment working as nurses in the hospital.

16 February 1891.]

Mr. CROSS.

[Continued.]

Earl Cathcart—continued.

hospital. They fare as others do, and they tell me that they are very well fed and very well cared for. I do not believe that there is any ground for complaint on account of their food.

13354. Then the question which I was leading up to is this: Have you not very recently in consequence of this outbreak increased the food given to the nurses?—The matron suggested, I think about the middle of December, that it would be desirable to give the nurses temporarily a glass of port wine, those who chose to take it, every day; and that some soup should be provided at about 10 o'clock for those who chose to come down and have soup.

13355. And what was the reason that the matron gave you for asking for permission to do that?—It was on account of the illness prevailing.

13356. So generally was the illness prevailing that it was thought necessary to give port wine as an unusual extra thing to the nurses?—It was thought desirable.

13357. And you sanctioned it?—The Committee sanctioned it.

13358. Now to follow the case of the young lady, your daughter, who was unfortunately afflicted with this complaint, where was she; was she living in your own house?—She slept in my own house.

13359. How did she contract it; from being with a patient?—She contracted it from a girl, a ward-maid, who had diphtheria; at least that was her opinion; and I have no doubt whatever that it was so.

13360. Then the ward-maid would be a sort of girl that was always stooping over the sink, I suppose?—No; this particular ward-maid had been in the hospital only four days, and the general belief is (I cannot say more than that) that she was already infected with diphtheria when she came to us. It was my daughter's business to help to pack her up, as the term is, when she was removed from the ward she was working in to the diphtheria ward. She, in doing that duty, bent over her, and had the belief that from a whiff of her breath which she got at that moment she contracted diphtheria.

13361. And I hope the young lady has recovered?—Yes.

13362. One of the medical staff was affected with diphtheria, it is mentioned; who was that?—No one that I know of. A statement made that one of our physicians was so affected is not true.

13363. And that "numerous cases of diphtheria had occurred among various patients admitted for other complaints or diseases"?—I do not think that that is true; there have been a very few cases, one here and one there; but to say that they were numerous—

13364. In the surgical wards?—In the surgical wards I can tell you exactly from a return in my hands extending over the year 1890, and including January 1891; it would not come so much to my knowledge in the medical wards, but it would come to my knowledge in the surgical wards.

13365. What diphtheria was there in the surgical wards?—There was a case on the 14th of December in a surgical ward; that is the last case in that return; there was a case in a medical ward on the 27th of October. I have no surgical

(24.)

Earl Cathcart—continued.

ward case between those two. I have not any return from the medical wards.

13366. But the broad fact is that you have had an outbreak of diphtheria in the surgical wards, where the nurses are not in contact with the diphtheritic patients?—That is not the case. On the 14th of December there was one case of diphtheria from a surgical ward. Now if your Lordship will allow me, I will see whether there were any other cases.

13367. It is quite enough for me if you say you had some cases of diphtheria in the surgical wards?—They were very rare.

13368. Then had you not typhoid cases in the surgical wards?—There was one case on the 7th of last month, and there were two cases in another surgical ward, on the 29th and 30th of September; those are the only cases I have got down during the past 13 months.

13369. Is it not a surprising thing to have cases of typhoid in a surgical ward?—It is a surprising thing.

13370. It is almost an unparalleled thing?—It is an unaccountable thing.

13371. It is a thing beyond your own experience, is it not?—No, not that they should occasionally happen.

13372. It is excessively rare?—Excessively rare.

13373. And did the nurse who died of diphtheria belong to a surgical ward?—No nurse died of diphtheria; the nurse who died had been nursing typhoid, and she died of typhoid.

13374. It is said that, "in one ward alone (that is to say, one of the wards reserved for other complaints), no less than five cases of typhoid occurred"?—All I can say is that I have tried to trace those alleged cases, and been utterly unsuccessful, and that I do not believe it.

13375. And that three were amongst the nurses and two amongst the patients?—No, that cannot be true.

13376. I want you to contradict it; that is all?—May I tell you of the cases of typhoid that have occurred among the nurses during the past year?

13377. If you wish?—I think it would clear this point up.

13378. You mean in the year 1890?—Yes; there have been none in 1891 so far. We have had four cases of nurses suffering from typhoid during the year 1890; one on the 17th of August; one on the 3rd of October; one on the 8th of November, and one on the 15th of December, and all these four nurses had been nursing typhoid patients.

13379. And, it is stated, "that there have been at least three cases of scarlet fever in one ward"?—I do not know of three in any one ward.

13380. "Amongst patients admitted for other diseases, the last having occurred only a fortnight or so ago," that is about three weeks ago at the present time?—You see it is not said within what time those three cases occurred; it may have been within three months, or three years.

13381. This is what is said by the man in the street; I want to give you the opportunity of contradicting it?—I do not know of it.

13382. "That there have been some cases of
U 3 erysipelas

16 February 1891.]

Mr. Cross.

[Continued.]

Earl Cathcart—continued.

erysipelas in the same ward"?—I do not know which ward is referred to; there are occasionally cases of erysipelas in the surgical wards.

13383. Have you had any fatal cases of erysipelas?—Not amongst patients removed for that cause from a surgical ward.

13384. But erysipelas would be caused by bad drainage?—I am not competent to express an opinion upon that point. We have a ward for erysipelas, to which cases developing erysipelas are moved whenever the disease occurs.

13385. And that in addition to the 25 people down with diphtheria, you have had a very great amount of tonsillitis sore throat?—I do not think there is authority for saying a very great amount. We have had some cases. I have not any return before me.

13386. How did the matron manage to get the complaint?—The matron, in order to relieve a sister, who was very hard worked at the time, who could not leave her patients, and yet wanted change, actually took duty as a sister, and nursed a diphtheria case, and she herself attributes (she told me so) her infection to that cause.

13387. How came you to put the nurses into this cubicle place alongside of this infectious ward?—I can only reply, as Dr. Thorne did, that if there had been a choice of other places, I do not think that they would have been put there; there was no idea that they would run risk of being affected, and I do not think anything has transpired since to justify such an idea.

13388. Then, looking back, you do not think it a want of judgment to have used for the nurses a cubicle ward on the same floor as this infectious ward?—I would hardly go as far as that. Sometimes in looking back, after an event has occurred, you determine that you would not have done what you did.

13389. Had that cubicle ward ever been used as an infectious ward?—"Ever" is a very long time.

13390. Within recent memory, I will say?—May I give you the history of that ward?

13391. If you please. The history of that ward would be very interesting?—It was a ward which, a good many years ago, was reserved for typhus; it was disused for a very long time.

13392. What is, in your mind, "a very long time"?—I may say that although it was reserved for typhus it was very rarely that typhus cases were there; because typhus in London has come to be an almost extinct disease.

13393. My question simply is: how long was the room disused for infectious purposes; how long is it since it was used for any infectious purposes?—Certainly seven years, and it has been disinfected since that time, and more than once thoroughly re-painted.

13394. Where did you hurry the cubicle nurses to, when you hurried them out of the cubicles?—I do not think that one can say that they were hurried out; they were taken away from that ward, as I think I explained last time, because a case of scarlet fever had occurred.

13395. In that cubicle ward?—In that cubicle ward; and when it was discovered that somebody who had been there had had scarlet fever it was

Earl Cathcart—continued.

thought desirable to remove the nurses, and disinfect the whole place.

13396. Where did you move them to?—We moved some to the nurses' home (there were only eight of them) and some to a house which had been in process of enlargement, and which by that time was ready to take them in.

13397. And you did not think of the treasurer's house, which has not been occupied for five years?—The treasurer's house, at that time, was not fitted up for the purpose; but it has been since adapted, and is at present occupied.

13398. It could not have been used, you mean, at that time?—I do not mean to say that it could not have been used.

13399. In the interests of the poor, is it not a pity that that house should have remained unoccupied for five years?—That was a matter for the governors. I do not think it would become me to express an opinion upon that point.

13400. Quite so; but is it not natural that that should suggest itself to one's mind?—It was at one time used for nurses.

13401. That house is part of the administrative block?—It is.

13402. At the right hand end as you go in?—Yes, it is on your right as you go in.

13403. Then, evidently, all of you felt that there was something wrong with the drains, because you called in your own surveyor, and then the treasurer called in Dr. Thorne, and you served out extra rations to the nurses; and to any unprejudiced person who has gone into this inquiry it is clear that in your own minds you had a sort of guilty sanitary conscience?—I do not think that follows; but we were bound to investigate every possible cause of the disease. It did not follow that because we turned our ideas to the drains we therefore felt sure that it was the drains.

13404. The impression is strong on my mind, from all the facts taken together, that you had an impression from the first that there was something wrong with the sanitary arrangements?—We should have been neglecting our duty if we had not inquired into that possible cause. I think that is as fairly as one can put it.

13405. Now about this intention to buy land at 100,000 £ next door when you can get it, that is a matter that has been a great deal considered by the governors, is it?—There has been no question of price.

13406. But buying the extra land at a great price?—No doubt it will be at a great price. The fact is, we are hemmed in by the streets on all sides, except on the side where Christ's Hospital abuts on the hospital, and we are much hampered in our work by want of space.

13407. Now that it has grown to so large an establishment, and one so much shut up by houses, and in a situation where land is so vastly expensive, has it never occurred to the governors, when the matter has been discussed, whether they should not go into South London and form a branch establishment?—They have never discussed that. We started a convalescent home in the country with 70 beds some six or seven years ago.

13408. I notice that the salaries make a large lump sum; now has it ever occurred to you that some

16 February 1891.]

Mr. CROSS.

[Continued.]

Earl Cathcart—continued.

some of those salaries might have been greatly reduced?—I do not know that it has. That is a question entirely for the governors to determine.

13409. It seems a large lump sum; that is why I asked the question. Now you bank with the Bank of England?—That is so.

13410. And what do you do with your large current balances?—Until the last two or three years our balances have been so small, as a rule, that our account has been scarcely worth keeping.

13411. Have you not saved some 15,000 *l.* a year lately?—No. Our savings towards the special purpose indicated in my answer, No. 10348, were 6,000 *l.* in 1888, 11,000 *l.* in 1889, and 6,000 *l.* in 1890, until the last two or two and a-half years our balances have been very small.

13412. What has been done in the last two and a-half years with your current balances; how much would they be generally?—They might be 4,000 *l.* or 5,000 *l.*

13413. What is done with that?—It remains at the Bank of England.

13414. It is dead there; you have not a deposit account there?—No; you cannot have a deposit account there.

13415. Have you any banking account whatever beyond your general hospital account?—We keep the account of the college separate, and that we bank at the London Joint Stock Bank; that bank is conveniently near. We bank our Samaritan fund account at the Union Bank of London; but they are very small accounts.

13416. The hospital account you keep with the Bank of England?—Yes.

13417. And the college account with the London Joint Stock Bank?—Yes; and the Samaritan fund account at the Union Bank.

13418. There is no sort of advantage or anything to be gained by anybody who is a trustee of the hospital beyond a house, or is there any advantage whatever?—Do you mean the treasurer?

13419. Yes?—No; none whatever.

13420. No rations?—No.

13421. Merely the house?—Yes.

13422. With gas?—Yes; but as I think Sir Sydney Waterlow explained to you, and your Lordship knows, he has not occupied the house for a long time.

Earl of Arran.

13423. Is the clerk of the works in daily attendance?—Yes, he lives in the hospital.

13424. And would any complaint as to any defect in the sanitary arrangements be immediately attended to, or would it stand over for two or three days?—I am sure it would be immediately attended to, because the sister would complain either to the matron or steward, or the matron to me if she did not get it attended to.

13425. And do you think the clerk of the works would act immediately?—I have no doubt he would; I cannot say more.

Lord Monkswell.

13426. Is there any external sanitary authority at all that has power over the hospital; I am told that it is a parish by itself, so that it cannot be interfered with by any other body?—I

(24.)

Lord Monkswell—continued.

imagine that the medical officer of health of the City of London could interfere with it.

13427. He never does?—He never does, but I imagine he could.

13428. As far as you know, there is absolutely no jurisdiction over you; you can do as you like in sanitary matters?—Excepting what I say, that I think the medical officer of health for the City of London may have some jurisdiction over us.

13429. He has never made any inquiries at all?—I would not say that he has never made any inquiries, but he has never taken any action.

13430. On another matter; supposing the treasurer was to want to live near the hospital, could he get any convenient place other than the house that was reserved for him?—I do not think he would; there is not much residential property in the neighbourhood if your Lordship means quite near; if you mean within a mile, of course there is plenty.

13431. Then supposing that Sir Sydney Waterlow was to give up, and supposing you had to have a treasurer in succession to Sir Sydney Waterlow, possibly you might want the house again?—I have no doubt we should, and we should have to make other arrangements for the use to which the house is now put.

13432. I wish to direct your attention to an answer given by Sir Henry Longley, at Question 3233. He there asserts that you came before him *in formâ pauperis* with St. Thomas's and Guy's Hospitals to ask that he would enable you to take paying patients, and that he sanctioned it?—I am much obliged to your Lordship for calling my attention to that. I have a memorandum to ask the Committee to allow me to correct that statement of Sir Henry Longley's. We have never applied for permission to take paying patients; it is a mistake on his part. As a fact we do not take paying patients.

Chairman.

13433. You are what is termed the chief clerk?—The clerk.

13434. In other institutions of a similar nature would that answer to the post of secretary?—No doubt it would; but as your Lordship knows St. Bartholomew's is a very old institution, and, as it is the case with the City Companies that their secretary is termed the clerk, so it is with the Royal Hospitals.

13435. I am not quarrelling with the term?—I am only endeavouring to explain it.

13436. And your salary is 1,000 *l.* a year and a house, you said?—Yes.

13437. Was it an increasing salary?—Yes, it has been several times increased; it began at 400 *l.*

13438. And your service is now 24 years, you told us?—Yes, 24 years.

13439. Now you have referred to your own position as practically being the eyes of the treasurer?—Yes, in his absence.

13440. And there is a committee which meets weekly of the treasurer and almoners?—Yes, that is so.

13441. At the same time you explained to us that you had no definite power to suspend any official in the hospital?—That is so.

U 4

13442. You

16 February 1891.]

Mr. Cross.

[Continued.]

Chairman—continued.

13442. You have no absolute power?—No, I have not.

13443. At the same time you have an official called the steward, who is in a sort of semi-responsible position irrespective of your authority altogether?—That is so.

13444. There are two sorts of heads, as it were. Now, in the case of a difficulty you told us that you sent for the treasurer?—Yes, I think I said something to this effect: that I should not hesitate to assume a responsibility, which is not committed to me by the terms of my duties, adequate to the occasion; I should act, and I should trust to getting a bill of indemnity afterwards.

13445. You would suspend an officer?—If I thought that the necessities of the case justified me in doing so.

13446. But does not the fact of your not having the power weaken your hands very much?—I have not found any practical difficulty. I have found that the officers about the place are quite willing to defer to any authority I may exercise.

13447. But you have never suspended any one?—I have done it in the case of a subordinate who was drunk.

13448. But that is what is termed a servant?—Yes.

13449. Where is the treasurer now?—I believe the treasurer is at Monte Carlo; he is away for a few weeks on account of his health.

13450. The treasurer is in the south of France?—In the south of France.

13451. When do your almoners meet?—They meet every Thursday, but I may say that during the absence of the treasurer one of them often looks in; the treasurer has been away now for a week, and five days of that week I have had one of the almoners come in to know whether I wanted anything.

13452. To whom you could refer?—Yes.

Chairman—continued

13453. Do you know where he lives?—I know where they all live, and I think I could make sure of getting some one within an hour.

13454. But now, as a matter of administration (I am not referring to your own position; I think you gave me an answer to this question before), would it not be much better to have an official as a permanent head in the absence of the committee?—I think I said "Yes" in reply to that before, but that I felt myself in somewhat an invidious position in being asked by your Lordship to answer that question.

13455. I only want your opinion?—If I may dissociate myself personally from the answer, I would say, "Yes."

Earl Cathcart.

13456. Will you leave Dr. Thorne's report?—Of course I am in the hands of the Committee; I will do whatever the Committee directs.

13457. Dr. Thorne has no objection; it was agreed that Dr. Thorne should hand it to you, and you were to hand it to us?—If you thus direct me, of course I shall do so.

Chairman.

13458. I understood that that was the case?—If your Lordship says so; I only want to acquit myself of responsibility in the matter.

Earl Cathcart.] Your responsibility is gone.

Witness.] If your Lordships tell me to do so, that relieves me of responsibility (*handing in the Report*; see *Appendix*). There was something said also about handing in surveyor's reports.

Chairman.] We shall have the surveyor.

The Witness is directed to withdraw.

MR. EDWARD B. PANSON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

13459. You are the Surveyor to St. Bartholomew's Hospital?—I am.

13460. Will you please tell us exactly what your duties are?—My duties are to exercise a general supervision of all the buildings in the hospital; to report anything that I observe wrong either in sanitary or constructional matters; to survey between 300 and 400 houses personally every year, and to report on their general condition.

13461. That is the property of the hospital?—Yes, outside. Then I hear reports from the clerk of the works every week, and oftener if necessary. Then, if there is anything special beyond the unstopping of a closet, or something of that sort, I always go and look at it myself the moment my attention is called to it.

13462. Are you a sanitary engineer yourself?—No, I am not what is called a sanitary engineer; I do not go by that name, but I understand drainage matters; at least I think I do; I have had a good deal to do with them

Chairman—continued.

13463. But you are not a sanitary engineer?—No.

13464. You are a salaried officer of the hospital?—I am.

13465. May I ask your salary?—300 guineas; but I have a private practice. That is not my only duty; I have a practice of my own.

13466. That is your private practice?—Yes, my private practice.

13467. Then do you receive any commission on any work that has to be done as well as your salary?—On new buildings.

13468. At what rate?—2½ per cent., half the usual commission.

13469. 2½ per cent. on any buildings built, over a certain sum?—No, on new buildings. Sometimes I have to do a great deal of work on what are called alterations, which I think I ought to have a commission on; sometimes they lay out 3,000 l. or 4,000 l. on alterations; on that I get no commission; but if I put up a new building costing,

16 February 1891.]

Mr. P'ANSON.

[Continued.]

Chairman—continued.

costing, say, 200 l., I should get a commission on that

13470. Now with regard to this report of yours, dated the 2nd February 1891?—That is my second report.

13471. When was the first one?—The 11th of December; you have that before you also.

13472. Then, previous to that, when had you made a report?—I had never made a report on the sanitary condition as a whole.

13473. How long have you been surveyor?—I have had the appointment for nearly three years.

13474. Then in the three years had you made no report of any description to the governors?—Yes; I have reported to them generally on the state of the buildings and on the property.

13475. And is that an annual report?—Yes.

13476. To whom do you report?—To the house committee.

13477. And after you have made that report you do not know what becomes of it?—It is printed.

13478. But do they criticise it at all?—Yes, if they think proper.

13479. Do they criticise it?—They very often ask questions, and then I explain.

13480. You are in attendance when that document is considered?—I am.

13481. Can you tell us how often that occurs?—Once a year, in February.

13482. That is with regard to the condition of their property and the hospital buildings?—Yes, and the houses that have been left and everything connected with the hospital.

13483. With regard to this report of 11th December, was it made in consequence of the diphtheritic outbreak?—It was.

13484. Did you inspect the whole of the hospital then?—Not every building in the hospital.

13485. What buildings of the hospital were they that you included in your examination?—All the wards, Duke-street Nurses' Home, and the matron's house.

13486. That was what you inspected?—Yes.

13487. What does that leave uninspected?—That leaves the houses which the officers live in, and the Nurses' Home in Little Britain. I thought there was no necessity for examining the Little Britain Home; I felt sure about the sanitary arrangements of that.

13488. Why were you so sure about the Nurses' Home?—Because it was one of the most recent things done, and I knew it was well done.

13489. At the same time, if you were making an examination of the whole hospital to report to your employers, would it not have been well to inspect the whole building?—My time was somewhat limited, and therefore I took those parts that I thought might require it most.

13490. Why was your time limited?—I was instructed on the 4th of December, and I had to report by the 11th; and the hospital is a very large place, especially if you do not know all the ins and outs of it.

13491. Then you do not know all the ins and

Chairman—continued.

outs of it?—It is impossible to know everything.

13492. But have you not got plans of the drainage, and of every sanitary matter connected with the hospital?—Yes; there is a plan, but, of course, the drains have been laid down for many years; long before I had anything to do with it.

13493. Quite true; but still you had to complete your examination by 11th December, I understand?—Yes.

13494. Did not you make any statement that that was your report only as far as you had gone?—I did. I stated so at the end of my report: "In conclusion, I must ask you to accept this report rather in the light of a preliminary report, as time has not permitted me to go further into details."

13495. Is this report of 2nd February an amplification of that?—You may term it an amplification. By the 2nd of February I had had time to go down the main sewer; that I wished to inspect personally, because I thought it my duty to do so, though it is not very easy to get along in some parts.

13496. The first is a report, of which this later one is an amplification?—Yes.

13497. Then these two reports are the result of that inquiry which you made?—They are.

13498. And what was the conclusion as regards the buildings of the hospital?—The buildings were in very good condition.

13499. I mean the sanitary condition of the buildings?—With the exception of what I have stated in these reports, I consider them to be good, though not up to date in all respects. That I state.

13500. You know the report better than I do; would you read us what the exceptions were?—I will begin with the sculleries.

13501. Would you mind reading your report?—Which one?

13502. Read the first one?—The first, that dated 11th December, is as follows: "Gentlemen,—Since meeting you on Thursday last, the 4th instant, I have made an inspection of all the wards; also of the Duke-street Nurses' Home, and the Matron's House, and, so far as I have been able to ascertain, there is nothing in the sanitary arrangements which will account for the cases of illness to which attention has been more particularly called; but, as may be imagined, all the arrangements are not of the newest type, and there are some matters to which I would call your special attention. In the surgery wing, the soil pipes ought to be properly ventilated, and I would recommend that this be done. In this block the water closets of the Lucas and the ophthalmic wards unite in one soil pipe on the ground floor level, but provided this is properly ventilated, I see nothing wrong in this. The wastes of lavatories on the surgeons' side of the surgery, also the sink in the surgery dispensary, should all be made to deliver on to a drain intercepting trap with open grating. This also applies to the lavatories in the instrument room. The lavatory in the operating theatre is taken into a trap outside, known as a bell trap. This trap should

16 February 1891.]

Mr. P'ANSON.

[Continued.]

Chairman—continued.

should be removed, and an intercepting trap substituted. The drains in this block are disconnected from the sewer by means of a syphon trap, and are also all well ventilated. In the front area of this block three inspection chambers should be provided, and three in the back area. In the east, west, and south wings, I tested, in all the sculleries, the soil pipes of the water closets and the sink wastes with oil of peppermint. When a large volume of water was thrown down from the top of the scullery waste pipes the traps of the sinks in Kenton and Luke wards became unsyphoned and there was a smell of peppermint. The waste pipes from these sinks are iron and ventilated at the top. These pipes are also entirely cut off from the sewer by means of disconnecting traps, so that if any smell came up these sinks it would not be from the sewer. These sinks have very large D traps which do not easily cleanse themselves, and have a very small outlet into waste pipes. Although there was no smell from the waste pipes of these sinks, I think it would be preferable to substitute a lead pipe and to put in a ventilating pipe in addition, to prevent the unsyphoning of the lower sinks, as per sketch in margin. I would also suggest that the large D traps be removed and replaced with Dent and Hellyer's anti-D traps, which are much more easily cleaned out. The soil pipes of water closets in the sculleries of the west wing are iron, and although I did not detect any smell from these pipes, I think it might be desirable to substitute lead pipes. The pipes now deliver into a dip trap, as do all the soil pipes from the water closets in the sculleries of the east and south wings. There was no smell from the soil pipes, which were of lead in the sculleries of the other wings. I would recommend that all dip traps be removed from these pipes in all three wings, that inspection chambers be formed and that the drain be disconnected from the sewer by means of a syphon trap. There should be a fresh air inlet introduced into this chamber so as to create an up draught. The water closets, stop sinks, baths, and lavatory wastes in the sanitary blocks of these three wings all deliver into what are known as basin traps. These traps retain a quantity of foul water, and I should do away with them. I should trap every drain with a syphon trap before it enters the brick sewer, and put an inspection chamber so as to be able to cleanse the trap if necessary. The water closet adjoining linen room ought to be removed, as it is a pan closet, and one of modern type substituted and taken into a separate drain, which should be cut off from the sewer by a syphon trap. I would also suggest that the sink in the basement in connection with this part of the building should be removed and placed in the water closet and made to deliver into an open pipe which will deliver into an intercepting trap before entering the sewer. *Nurses' Home, Duke-street.* In the Duke-street Nurses' Home I had the drains opened in two places in the basement, and they appeared to be clean, and, as far as I could detect, there was no smell. I applied the smoke test and the smoke at once ascended the soil pipe

Chairman—continued.

and also the waste pipes from the sinks on the third floor. I would recommend that the dip trap in basement be removed, and that an inspection chamber be formed outside the building, and a syphon trap be put to cut off these drains from the sewer. In the matron's house the drains are all outside and appear to be perfect. In the house occupied by Mr. Streeter" (that is the clerk of the works) "there is a soil pipe which also acts as a rain-water pipe. There should be a new rain-water pipe. I have not carefully examined the main sewers in the hospital leading into the public sewer, as this would probably be a matter of some months, but where I had the manhole opened the sewer was clean. Throughout the hospital the gully traps for taking off the surface drainage are all brick. I would recommend that earthenware gully traps be substituted. All bell traps in kitchen area should be removed, and stoneware traps substituted. All rain-water pipes, which do not already do so, should be made to deliver on to gully traps. In conclusion, I must ask you to accept this report rather in the light of a preliminary report, as time has not permitted me to go further into details."

13503. Now is that part of an annual report?—No.

13504. It was an exceptional report?—It was an exceptional report.

13505. Do you know when diphtheria broke out?—No, I cannot say; I think shortly before that time.

13506. But it was owing to the outbreak of diphtheria, at any rate, that this inspection was made?—Yes.

13507. Then if there had been no outbreak of diphtheria, these faults would have been allowed to continue; this is not the annual report, you say?—No, this is not the annual report.

13508. Then there is no reason why this state of things should have been entirely altered and should not have continued?—It possibly might.

Earl of Kimberley.

13509. You have been three years surveyor?—I have.

13510. And you had never made an inspection, I understand, of these drains?—Not a sanitary inspection throughout.

13511. Therefore, as far as you were concerned, you were ignorant of the state of them?—Yes, except where complaints were made.

13512. Now, in your report yearly to the governors, did you report that the hospital generally was in a satisfactory condition?—Yes, but I do not think I touched on sanitary matters at all.

13513. But if you reported that the hospital was in a satisfactory condition, how do you justify that when you knew nothing of the sanitary condition of the drains?—I justify it in this way: whenever there has been anything wrong, it has been complained of, and, so far as I was acquainted with the drains, they were in good order. No complaint of the drains was ever made to me.

13514. Is it not rather unsatisfactory that a report should be made to a body of governors that

16 February 1891.]

Mr. I'ANSON.

[Continued.]

Earl of Kimberley—continued.

that their buildings are in a satisfactory state, when that report is not founded upon knowledge?—What I reported on was founded on knowledge.

13515. But I understood you to say that you did not know the condition of the drains, because you had not inspected them, and knew nothing except of those particular matters which had been complained of?—I could speak positively only of the condition of those drains which were put down since my appointment.

13516. Do not you think it is the duty of any one entrusted with such duties as you have, not to wait until complaints are made, but to see for himself that things are satisfactory?—Well, that is rather a difficult question to answer, because I do not think it is my duty to go and stir up everything to find out faults.

13517. Why?—Because the hospital authorities are always making additions and improvements from time to time, both structural and sanitary.

13518. Now, your duty is to make a report yearly to the governors of the hospital, as to the condition of the hospital?—Yes.

13519. And I must ask you again how can you make that report unless you have inspected the hospital?—Well, I had inspected the hospital.

13520. But you made a report that the hospital was in a satisfactory condition, which in point of fact was not true. I do not mean that you intentionally made an untrue report, but that report was not founded on such knowledge, I understand, as to justify you in making it; how do you justify it?—As regards the whole system of drainage, I admit that it was not founded on personal knowledge.

13521. Then how could you say that the buildings of the hospital were in a satisfactory condition; on what ground did you say that?—The buildings were structurally in good condition.

13522. You did not know whether they were in a satisfactory condition?—I had never heard any complaint from the clerk of the works. It is the clerk of the works' duty to report to me.

13523. You depend upon him, then?—Only partly.

13524. Do you think, if I employ a surveyor to see that the arrangements of my house are satisfactory, and make a yearly report to me, you can say that that surveyor has discharged his duty if he makes a report without having made an examination beforehand?—Not if you put it in that way.

Chairman.

13525. Will you read the other report?—This is dated February 2nd, 1891:—"Gentlemen,—Since reporting to you in last December, I have continued my investigations with regard to the sanitary arrangements and drainage of the hospital, and some portions of the above I have examined in conjunction with Dr. Thorne, and I beg to report as follows:—I purpose in the first place to deal with the sanitary arrangements of the hospital apart from the drainage, and by this I mean the arrangements of the buildings set apart for sanitary purposes, or those that should

Chairman—continued.

in my opinion be added in order to make these arrangements more complete. I purpose first of all to deal with the ward sculleries in the south-east and west wings. In my report of December last I recommended that the present iron waste pipes and lead D traps from the sinks in these sculleries should be removed, and that lead waste pipes and anti-D traps should be substituted. In the east and south wings the work to these waste pipes is now being done, and they are being fixed outside the buildings. In the ward sculleries I further recommend that the nurses' w.c.'s be removed, and that a separate building be erected for the w.c.'s, connected by a narrow cross ventilated lobby with the sculleries. The w.c.'s themselves also to be cross ventilated. In the sanitary blocks in these wings I recommend that the bathrooms be ceiled over at a level of about nine feet above the floor, and that the top side panels of the w.c. enclosures be removed so as to obtain cross ventilation to the w.c.'s. I also recommend either that the slop sinks be removed and placed in separate enclosures and cross ventilated, as described for the w.c.'s, or that the w.c.'s be made to answer the double purpose of w.c. and slop sink. In the latter case a swivel tap would have to be placed in the rear of the w.c. to be used for cleaning the bed pans. *Drains.* There are two courses open to you, either to retain the present main drains, making good the few slight defects there may be, or to lay an entirely new system of drainage. When I made my preliminary report in December last I stated I had not been able to examine the main drains which are of brick. These I have now had examined and have also personally examined them for the greater part of their length, and I found them to be, although they have subsided slightly in some places, in a good condition structurally, and clean, although some time has elapsed since they were flushed. There was very little foul matter in the main drain and the water flowed freely. There was no evidence of rats having in any way damaged these drains although they have easy access to them from the sewer in Duke-street. On the whole I see no reason for removing these drains unless it be your wish to have a system of drainage quite in accordance with modern sanitary views. The present main drains vary in size from 2 feet by 2 ft. 6 in. to 3 feet by 6 feet, and are in section thus (*showing a figure with sides vertical and the top and bottom rounded*). If the present main drains are retained I recommend that they be cut off by traps before they enter the public sewers and be properly ventilated. If you decide to adopt an entirely new system of drainage, then the existing brick drains must be removed, and glazed, tested stoneware pipes substituted. These pipes should be bedded on Portland cement concrete. The new drains are indicated on plan by thin red lines. It will be observed that they are as nearly as possible in straight lines between manhole and manhole. I have also indicated on the plan how I would deal with the branch drains to which I referred in my report of December last. All these would deliver into trapped and ventilated manholes which would cut them off from the main drains.

This

16 February 1891.]

Mr. L'ANSON.

[Continued.]

Chairman—continued.

This should be done whether the present main drains are retained or not. With regard to the drainage of the nurses' home in Duke-street, beyond what I advised in my report of December last, I recommend that the sink in the servants' sitting-room be removed to an external wall and made to deliver with an intercepting trap. Also that the sink in kitchen be taken into an intercepting trap, this trap to be flushed by an automatic flushing tank. If these suggestions are adopted there would then be no drains under the floor of this building. In the Little Britain Home I recommend that a ventilation pipe be placed at the cross on plan to complete the ventilation of the drain. In conclusion I beg to state that the works, which you authorised me to proceed with after my report of December last, are now being executed, but the frost has caused some delay.

13526. These two reports, which have just been read, ought to be taken in conjunction one with the other?—Yes.

13527. They are special reports?—Yes.

13528. When will your ordinary report be made?—In February.

13529. That will be made this February?—Yes, the second Thursday in February.

13530. On the second Thursday in February 1890 you made a report?—I did.

13531. What form did that report take?—That is the report (*handing it in*).

13532. Will you first check me and see if I am correct here. This is a report which has to do with the properties of the hospital, as well as any alterations in the hospital buildings you considered necessary?—Yes, or that I had been ordered to do.

13533. But had you suggested, previous to making this report, as to work done that certain alterations were necessary before then?—I believe not.

13534. In fact, do you believe that to be part of your business?—No, unless it is anything very special.

13535. Then this report has to do with certain undermentioned houses which are the property of the hospital, in the New Kent-road, Rahere-street, President-place, President-street, and so on?—Yes.

13536. And then you say that certain other premises "have been surveyed, valued, and let," at certain rents stated. Then you report that the surrender of a certain number of leases and agreements of certain premises was accepted during the year; and then "the two corner blocks of premises in Powell-street and Central-street" you say you have pulled down; these are all outside the hospital?—Yes.

13537. And then there are certain "dilapidations"?—Yes.

13538. Then certain alterations in this property, exclusive, of course, of any in the hospital itself; then certain premises damaged by fire are stated; certain leases and repairs; then there is something about a communication from the board of guardians, and so forth; and a paragraph having to do with the Gaslight and Coke Company; and then we come to what you said on the 11th of February 1890 as regards

Chairman—continued.

the hospital. Perhaps you will be kind enough to read it. The other matters have to do with the property outside the hospital, and we need not go into them?—"In the hospital itself the following special works have been carried out, in addition to the ordinary works of repair and maintenance:—Two hydraulic lifts have been erected, one in the south wing and one in the west wing. These are now in full working order. The sanitation in Dr. Moore's house has been improved. New lavatories have been erected for the house surgeons at a cost of 64 *l*. Owing to the surgery being insufficiently warmed, an estimate has been obtained for heating the same with hot water coils, at a cost of 190 *l*. 10 *s*. This work is now being carried out. For the purpose of carrying out the scheme lately approved by the house committee, tenders have been obtained for an enlargement of the surgery accommodation, and for the provision of rooms for the surgery nursing staff, by means of additions to the house lately occupied by the curator. The better ventilation of the surgery has also been provided for. The lowest tender for the whole of the works, amounting to 1,915 *l*., was accepted, and the alterations are now commenced. Filter tanks have been erected at Swanley at a cost of 375 *l*."

13539. With that report the governors, or whoever they were, to whom it was addressed, expressed themselves satisfied?—Yes.

13540. And a year afterwards you made a special report upon the sanitary condition of the hospital, which you have just read?—Yes.

13541. And you have mentioned various things which you considered defective, requiring alteration?—I say that they are not up to date in sanitary arrangements.

13542. Not efficient?—No, I beg pardon, I do not mean that.

13543. You say here, "I recommend that they" (that is the main drains, I suppose) "be cut off by traps before they enter the public sewers, and be properly ventilated." Does that mean that they were in this condition in 1890?—Yes.

13544. And do you consider that satisfactory?—No, I consider they ought to be altered.

13545. You consider now that they ought to be altered?—Yes, and have reported accordingly.

13546. But did not you consider it within your province to discover this state of things and report it to your governors?—Except on special instructions, I do not know that I am bound to go into the main sewers.

13547. But you are a salaried servant of the hospital?—I am.

13548. And is it not part of your business to know the system of sanitation?—Yes.

13549. And is not this about as bad as anything can possibly be which you recommend to be altered, when you say that the main drains should be cut off by traps before they enter the public sewers, and be properly ventilated?—No, because the drains from the buildings are trapped before entering this main drain, and all waste pipes and soil pipes are open at the top.

13550. Would you like to have a house of your own in that condition?—If you will allow me to explain, this main drain is equivalent to an ordinary

16 February 1891.]

Mr. F'ANSON.

[Continued.]

Chairman—continued.

dinary street sewer, and provided your house is cut off from that street sewer, which answers in our case to the main drain, you have all that is requisite.

13551. What does this cutting off in that report of 2nd February relate to?—(*The Witness explains it on a plan to the Committee.*) This drain went as far as there, and at that point is one of the places where I recommended it should be cut off from the sewer; but if you say, "Would you like this in your own house?" you can hardly apply that test, because *this* drain is really what would be the street sewer as regards a private house.

13552. Then I will supplement that by asking this question: whether if you had been aware of the state of things that existed you would not have embodied this in the report of February 1890?—I do not know that I should unless anything special had occurred.

13553. Then you would have been content as sanitary officer with the condition of things which you understood existed?—Not if the governors wished to bring everything up to date; in that view alterations were desirable, although in my opinion not absolutely necessary.

13554. Is it not obviously necessary that the sanitary conditions of the hospital should be as good as anywhere else?—Yes, and I think the year.

13555. You think they were?—Yes.

13556. When they were in the condition which you have now recommended to be altered?—This (*pointing to the plan*) is really the main sewer to all intents and purposes, just like the street sewer.

13557. They were in the same condition, were they not, as you found them when you made your special report?—They were.

13558. And now you recommend them to be altered?—I do.

13559. And therefore they are deficient?—So far as they are not up to date.

13560. But they were in the same state in 1890?—Yes.

13561. And were they not deficient then?—Yes, but only in the sense that they were not modern and up to date.

13562. Are you an expert in hospital sanitation; I believe that some people are more expert in hospital sanitation than others?—Yes, I believe some are; I believe I am thoroughly acquainted with everything that is necessary to hospital sanitation.

13563. And to that you probably owe your appointment as hospital surveyor?—No, not entirely. You see my duties are various.

13564. I only wish to know on what basis you were appointed?—I was appointed I suppose because I was thought to be generally suitable for the appointment. You require to have a considerable knowledge of property and also of architecture, besides sanitary matters.

13565. But supposing (I am not alluding to your own position now at this particular hospital) you had a great institution with most extensive buildings, would you not prefer to have two separate officers, one for the property and another a thoroughly efficient expert as regards the drains?—Well, I do not think it would be necessary to divide the offices.

(24.)

Earl Cathcart.

13566. Has it never struck you that there are about a thousand people in that hospital, that a good many of those people, namely, 600, are sick people, and that the hospital drains are therefore peculiarly liable to fermentation; did it never occur to you as one of your chief duties to regard the sanitary state and the condition of the drains in that hospital when you were appointed?—I certainly considered it my duty to attend to the sanitary condition of the hospital.

13567. But do not you consider that it is the most important part of your duty?—I consider it a very important part.

13568. Were you alive to the fact that you had the sanitary supervision of the drainage arrangements and sanitary matters relating to these 600 sick people. You are aware of that?—Yes.

13569. Did you receive from your predecessor drainage plans?—No.

13570. Did you not ask in an old building of that sort for a drainage plan?—I did.

13571. And you found that there was none?—There was a very old one.

13572. Of what date?—I cannot tell you.

13573. Too old for the memory of man?—I do not say that. I do not recollect the date.

13574. Finding that there was no drainage plan within any reasonable time, did it not occur to your mind that it was your very first duty to set to work to make a drainage plan?—It occurred to me that a drainage plan ought to be made.

13575. Then if it occurred to you that such a plan ought to be made, and you had it on your own conscience, why did you not do it?—I have from time to time done so.

13576. Have you a complete drainage plan now in your hand of every part of the building?—I believe the plan now before you is complete.

13577. Those I am accustomed to are made out in a much more elaborate manner than the one you have produced, showing every trap and arrangement there is. It is quite obvious that you know what is necessary. From reading that report it is obvious you knew what your duties were in regard to the alterations required, but it appears you neglected that duty; because you have been there three years, I understand?—I have been in office nearly three years.

13578. And why did you not recommend these things to be altered which you knew to be wrong three years ago, or two years ago, or even one year ago?—With regard to the sanitary blocks, those were put up some 15 years ago.

13579. I am speaking of matters within your own time, if you will confine yourself to your own time. The obvious answer is that you had not made any particular inspection; it is obvious that you had the knowledge?—No, I did not make any special inspection.

13580. I take it from you that the reason nothing was done immediately upon your appointment was that you did not really make an efficient inspection of the drainage works until your attention was called to it by this outbreak of diphtheria?—I did not make such an inspection as I have now made.

x 3

13581. But

6 February 1891.]

Mr. F'ANSON.

[Continued.]

Earl Cathcart—continued.

13581. But did it not occur to you ; it must have occurred to your mind that something of the sort ought to have been done upon your appointment, as you found no efficient drainage plan?—It takes some time to prepare such a plan.

13582. Did you suggest that such a plan ought to be made?—I spoke to the clerk of the works about it.

13583. But the clerk of the works is an officer subordinate to yourself, is he not?—Yes, but he has been there 20 years.

13584. He may have been there 20 years, and he may have been there too long, and got careless about the matter ; did you ever report this to the treasurer or to the clerk?—No, I did not report these things either to the treasurer or to the clerk.

13585. With regard to what you have done now, do you consider it sufficient and satisfactory to make it safe for the present?—I do.

13586. I will ask you a question which every practical man in London will understand at once : Will your sanitary arrangements stand the smoke test and the water test all over the building?—Those I have tested have done so.

13587. That is not an answer to my question. My question is, would all the different apparatuses which ought to be tested all over the hospital, bear the smoke and water test?—So far as I know, I believe they would.

13588. And it is your belief that these appliances which you have lately been working at will all bear such a test?—I am sure that they will.

13589. And that you may reasonably suppose that that will last over a reasonable time?—I am certain of it.

13590. I will take that as your answer?—I shall be very pleased for anyone to test them. I may say that I tested the Duke-street Nurses' Home with the smoke test.

13591. And the other with the peppermint?—Yes.

13592. The smoke test is the more effective? Sometimes.

13593. My question is, will all your appliances all over the hospital stand the smoke and water tests if it were to be applied at this moment?—All those that I have inspected I believe would.

13594. Then I may take it from you that you have not inspected all the appliances to this day?—Not in some parts ; in what I call the hospital proper I have, but not the officers' houses.

13595. Every practical man will agree with you that the appliances you have mentioned in your report are old fashioned?—They are.

13596. Did you ever hear of the Derby experience, where the patients and doctors last year, or the year before, were all driven out by the rats?—No, I did not.

13597. Your main drain is a brick drain?—It is.

13598. And is that brick drain parged inside?—No, it is not ; they are a very hard stock brick.

13599. Good old bricks?—Yes.

13600. But the very best brick drain is liable to all sorts of inequalities which will stop the flow of the fluid?—It may be so.

Earl Cathcart—continued.

13601. And it is round on the section?—At the top and the bottom it is round on the section.

13602. If you put in a modern drain it would be ovoid on the section?—Certainly.

13603. And that is very advantageous in getting off the drainage matter?—Yes, it is.

13604. Your main drain of all you mention as going into Little Britain ; is that ventilated?—No.

13605. Why was it not ventilated by you, as you had it in your power?—We could not ventilate it in its present state.

13606. Why not?—Because we should ventilate the whole of the city ; it is the highest point in the city.

13607. Did it ever occur to you that it ought to be cut off?—I have recommended that it should be.

13608. Would you be surprised to hear that that is the first thing I should have suggested, cutting off that drain?—I have suggested it and it is under consideration.

13609. You have only suggested it since this epidemic broke out?—That is so.

13610. Ought you not to have suggested it on your arrival at the hospital?—If I had gone into the sewer.

13611. Or employed other people to go into the sewer?—I do not believe in employing other people.

13612. If you had exercised your imagination, anything would have been better than standing still. Can you fix the age of this brick drain?—I cannot ; I believe it was made in 1829, but I am not certain.

13613. Then there is a matter of the very greatest importance which must not be overlooked ; I gather from you that many of the drains of the hospital run underneath the building?—No, not a great many.

13614. There are some that do?—Yes.

13615. Now from the sanitary point of view, and speaking as an engineer, is not that absolutely wrong that any drain should be within the building?—Yes.

13616. It ought to be outside?—Yes, it should be.

13617. Why did you not recommend that it should be taken outside?—With regard to this one drain—

13618. There is more than one ; there are a good many?—Pardon me ; I do not think there are a good many (*referring to the plan*).

13619. There is a big main drain that runs underneath the building?—Yes.

13620. But I am talking now of the ward drains?—There are no ward drains underneath the building ; they are all outside the wards.

13621. On your reputation as an engineer, you would say it is a wrong thing to have drains running through a building?—Very undesirable.

13622. And a wrong thing to have a main drain like that running down underneath the surgery ward?—No, it is under the surgery, not under a ward.

13623. And that is connected with the surgery ward, is it not?—No ; it is close by.

13624. You admit that that is a gross defect?—I do not. But I should not so construct it.

13625. Why did you not point out that gross defect when you came into office?—I was not aware of it.

13626. Was

16 February 1891.]

Mr. F'ANSON.

[Continued.]

Earl Catheart—continued.

13626. Was it not your duty as the sanitary officer to have made yourself aware of it?—It is only during this inspection I found it out. May I mention this fact, that drain is 10-ft. 6-in. below the basement of the surgery; and therefore, in my opinion, it is not at all dangerous.

13627. What is the soil above it; what is the nature of the soil?—It is made earth I should think; but it is under a cellar that it runs; it is 10-ft. 6-in. below the floor of that cellar, which is brick vaulted.

13628. But what is the nature of the soil upon which the hospital is built?—I do not know.

13629. Now I ask you as an engineer, if you are a competent man, to tell me what sort of soil it is; is it a pervious or an impervious soil, on which the hospital is built?—I really cannot answer that question.

13630. Do not you think that that is a question on which I ought to have an answer from you? The first question I should ask if I were going to make a house is, what is the nature of the soil?—Yes, if you built a new house.

13631. Has it never occurred to you during the three years you have held your appointment to inquire what was the nature of the soil on which the hospital is built?—No, it has not.

13632. Now in your opinion (I will take it now for such as it is; I do not know that it is worth while asking you) ought it to be an entirely new system of drainage if it was not a question of money?—If you wished to bring it quite up to date it should be re-drained.

13633. But my question is, considering that you have 600 sick people collected on that piece of ground, is it your opinion that that system of drainage ought to be commenced *de novo*?—I think it would be desirable, though I can discover nothing wrong with the brick drainage.

13634. In your opinion as an engineer, ought that system of drainage to be begun again *de novo*?—Yes, I should prefer to do so, though I do not consider it absolutely necessary.

Lord Zouche of Haryngworth.

13635. Do we understand that at, or soon after, the date of your appointment, you did suggest to the clerk of the works that either a plan or an inspection of the drains should be made?—I asked for a plan of the drains, and I asked what condition the drains were in.

13636. And what was the reply made to that?—I was told that they were good, and a plan of the drains was produced to me.

13637. But what plan was produced, a modern one?—No, a very old plan.

13638. Did you suggest that a more recent plan should be drawn out?—I said it would be most desirable to get a better plan of the drains.

13639. And that was refused, was it?—No, I never communicated that officially.

13640. You suggested it?—I said to the clerk of the works that it would be most desirable if we got a proper plan made.

13641. You said it was old?—It was before the present clerk of the works came there.

13642. And he has been there 20 years?—Yes.

13643. We do not understand that you have suggested that this new plan should be made?—I said in my report that if it is the opinion of the

(24.)

Lord Zouche of Haryngworth—continued.

authorities that the drainage should be brought quite up to date, a stone-ware drain ought to be laid.

13644. But my question applied to before the date of your report?—No, I did not do so before.

13645. You made no suggestion whatever?—I did not.

Earl of Lauderdale.

13646. Is this a complete plan of the drainage now?—I believe so.

13647. There may be drains still existing that you know nothing about?—Possibly; you see it is a very old place.

Earl of Kimberley.

13648. It is quite possible, is it not, that the plan of the thing is not quite carefully done; may be imperfect?—It is possible; but I believe it to be so, as far as I can tell.

Earl of Lauderdale.

13649. But you have not examined the drains sufficiently to be able to say that it is a perfect plan?—I could not do so without taking up the whole place. I think I have made every investigation required for the purpose.

Lord Clifford of Chudleigh.

13650. I see in your report on the 2nd February of this year, you begin the part which deals particularly with drains: "There are two courses open to you, either to retain the present main drains, making good the few slight defects there may be, or to lay an entirely new system of drainage"; do I gather from that that your opinion was that the existing state of the drains, with the exception of the few slight defects, was good as far as the system went?—Yes.

13651. And that there was nothing really prejudicial to health in the existing system?—That is my opinion.

13652. But that it would be a more perfect system, and it would be better to take the whole thing out, and put a system more in accordance with modern ideas?—Certainly, we should never think of laying a drain like that now.

13653. And you thought that question was not a question of necessity, but a question really of the expense and improvement?—Well, that I left to the governors to determine.

13654. But I mean to say you meant to point out to them that the state of the case was one for improvement and not for an absolutely necessary alteration?—Well, I do not consider it absolutely necessary to pull up that bricksewer.

13655. There is a great deal of difference in the representation that is made by a surveyor upon any thing that requires alteration as to whether it is a thing that is a necessity or simply an improvement that he recommends?—Pulling up all the brick drains would be a very serious matter.

13656. What I mean is this, you might have found in the system defects which you considered it your duty to recommend should be immediately obviated?—Yes, and I have done so.

13657. But that was with regard to what you call the "slight defects"?—Yes.

13658. But with regard to the system of drainage

16 February 1891.]

Mr. I'ANSON.

[Continued.]

Lord Clifford of Chudleigh—continued.

drainage you thought it was in workable order but not in the most approved modern plan?—That is so.

13659. Does not the clerk of the works inspect the drains, and from time to time clean them out, or do anything to them?—His man does.

13660. And therefore I suppose he reported to you from time to time that the drains were in good working order?—Yes; I was constantly asking about it, and I had no reason to suppose they were not in good order.

13661. How often do you suppose he would do that?—They would be flushed I think about every three weeks, or oftener in the summer time.

13662. Would he ever use any test to see if there was leakage?—His man would report if there was leakage.

13663. How would he find out?—The drain would be defective and it would not hold water.

13664. But are there not defects in drains that you cannot tell without some smoke test, or something of that sort?—You could not possibly apply the smoke test to the brick drain.

13665. It is not to the brick drain that I mean?—You are talking of the other drains; they are not brick drains.

13666. But are they tested by any means to know whether there is any leakage or not?—You could block them up and test them with water.

13667. But do they?—No; and some you could test with smoke but not all.

13668. As a matter of fact they do not test them?—I am not aware that they have.

13669. As regards this brick drain which you recommend should be ventilated, and which you compare to an ordinary street drain, is not an ordinary street drain ventilated?—Yes, sometimes.

13670. In most cases?—In the case of a street sewer you ventilate it into the street.

13671. And this drain in the case of the hospital differs from the main drain of a street inasmuch as it is not ventilated in the same way that a street drain is?—No, it is not; it would probably ventilate into the hospital buildings if it were so treated.

Earl of Kimberley.

13672. Are any of these drains at present ventilated in the hospital; I am not referring to your recommendation?—Certainly; all the soil pipes I may say are open at the top, and all the drains of the Nurses' Home are ventilated, and in the surgery wards also.

13673. By pipes going to the top of the roof?—Yes (*producing a plan*). There is an outlet ventilation there (*pointing*).

13674. Is that above the roof?—Yes, right above, with a cowl on it. Then there is a man-hole there (*pointing to the plan*); the other side of that is a syphon trap or U trap, and there is an inlet there, and there is a pipe, and I believe that drain (*pointing*), to be thoroughly ventilated. It is a stone ware drain and *this* also is stone-ware.

13675. Does the rain water communicate with the drain?—It is carried into the drain.

13676. Have you made a separate system for the rain water?—No, that has not been done.

13677. And for the drinking water; is that cistern quite separate from the other cisterns?—Quite.

Earl of Kimberley—continued.

13678. Are the cisterns in which the drinking water is kept cleaned from time to time?—Yes; I believe so.

13679. Whose duty would it be to see that they were cleaned?—The clerk of the works.

13680. Could you tell me how often they are cleaned?—No, I could not.

Earl Cathcart.

13681. Are the water tanks for the supply of water inside or outside the building?—They are up at the top of the building, but covered in.

13682. No means of germs or anything of that sort getting to them?—No, I should say not.

13683. What water company is it?—I do not know. (Mr. W. H. Cross.) The New River Company. And the water tanks are cleaned out every half year.

Lord Monkswell.

13684. (To Mr. I'Anson). When did you begin the present drainage plan; you say directly you were appointed you thought there ought to be a drainage plan; you found an old one which you thought of very little use, but did you begin to make a new one?—This plan I have now, I have made lately, but it is taken from plans in my possession and the old one.

13685. When did it occur to you that there ought to be a new plan?—It occurred to me some time ago.

13686. When did you first begin working upon it?—Only two or three months ago.

13687. After this outbreak of diphtheria?—Yes.

13688. And you say that you would not have made these recommendations unless something had occurred; then I suppose it would not have occurred to you to investigate the main drain unless something had happened?—No, not unless some complaint has been made to me by the clerk of the works, or by any one else.

13689. You knew, I suppose, that this main drain was a brick drain?—I did.

13690. Would it not occur to you that it would be very liable to get out of order and that it might be very dangerous unless it were of peculiarly good construction?—I was informed that it was of peculiarly good construction.

13691. And you took that on trust?—I did till lately; but now I have confirmed it by personal inspection.

13692. Did you not ask the clerk of the works or his man to tell you about it?—Yes; they told me it was in good condition; but then I went down myself.

13693. After the outbreak?—Yes.

13694. Do you know how old this is?—You must not take this as quite correct, but I believe it is since 1829. I know that there were considerable sanitary alterations in the hospital at that time; I believe up to that time they had cesspools.

13695. Among other things which you found out to be wrong, and which Dr. Thorne found out to be very wrong, was the proximity of the water-closets to the ward sculleries, and you reported very properly that those water-closets ought to be removed; but do not you think you ought to have made that recommendation at all events

16 February 1891.]

Mr. P'ANSON.

[Continued.]

Lord Monkswell—continued.

events before, even if you did not suggest any alteration in the main drain?—Possibly I ought; but no complaints of any kind were ever made as regards the water-closets to me. Of course it is not a nice thing to have a water-closet next to your room, but there are many houses in this country that have.

13696. I suppose you have gone round and noticed yourself that there have been bad smells?—No; on the contrary, I have never smelt them.

13697. Have you gone round?—Yes.

13698. And never smelt anything in the sculleries?—Only when I tested the sinks; but they were entirely disconnected from the drains in every way, and the smell arose from the accumulation of dirt in the large D traps; they were peculiarly large.

13699. So that, though they might be unpleasant, you saw no reason to suppose they might be dangerous to health?—No, the sisters have never complained to me of any nuisance at all.

13700. Or anybody else?—No; the sisters would be the people, or the nurses.

13701. Or the doctors?—They would not complain to me, but to the treasurer; but the doctors, as far as I know, made no complaint.

Earl of Kimberley.

13702. Is not an old brick drain as old as this one, which is probably 50 years old, liable to become soaked with sewage?—Not if the bricks are good.

13703. But, as a matter of fact, is it not very often the case that sewers, which were constructed by good builders, do become soaked with sewage after a certain time?—They are liable to it if the bricks are soft. Of course, every brick is more or less porous, even the hardest brick; I do not know whether black bricks are, but almost every brick, certainly bricks of that period, would be more or less porous.

Earl of Kimberley—continued.

13704. In your experience, have you not seen brick drains that, when taken up for the purpose of having a pipe drain substituted, have been found to have been saturated in that way?—I have. The public sewer in Duke-street, Little Britain, is not in nearly as good a state as that of the hospital; that also is a brick drain.

Earl Cathcart.

13705. The great danger in the barrel system of draining is that the superfluous room causes the sewer gas to get a greater volume of power, and it becomes a sort of pop-gun, in fact?—I do not think it would have time to accumulate in this sewer, it is flushed too often.

Chairman.

13706. You are the subordinate official of the court of almoners and treasurer are you not?—I am.

13707. And you present that report of yours annually, such as we have seen your 1889 and 1890 reports to be?—I do.

13708. No unfavourable comments have been made upon those reports?—No.

13709. And therefore that being the case, do you consider that you have carried out your duty to your employers?—I thought I had done so.

13710. That your responsibility had ceased as regards the works of that year if they approved of your report; is not that it?—I should think they were satisfied, but, unfortunately, my responsibility never ceases.

Earl of Lauderdale.

13711. Is the 1891 report out also?—Yes (*handing in the same*).

Chairman.

13712. Is there anything else you wish to add to your evidence?—I think not.

The Witness is directed to withdraw.

MR. ROBERT BARNES, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

13713. You are a general practitioner in London, are you not?—A physician.

13714. And will you tell us the various qualifications that you hold?—I am Fellow of the Royal College of Physicians and Fellow of the College of Surgeons, and I have been Censor of the College of Physicians; I have been physician to the Metropolitan Free Hospital, the London, St. Thomas's and St. George's; and I am now consulting physician to St. George's Hospital in my department of obstetric medicine.

13715. These are all general hospitals, are they not?—Yes, these are general hospitals. I am also consulting physician to the Chelsea Hospital for Women, and I have held several other appointments.

13716. I will read them out and ask you to say whether they are correctly stated. You are consulting physician to the Seamen's Hospital?—Yes.

(24.)

Chairman—continued.

13717. To the East London Hospital for Children?—Yes.

13718. To the Hospital for Epilepsy, Paralysis, and other Diseases of the Nervous System, in Regent's Park?—Yes. I served 15 years as physician to the Seamen's Hospital, the "Dreadnought."

13719. With regard to these last, the Hospital for Epilepsy and those diseases, the Hospital for Women, and the Hospital for Children, those would be what are termed special hospitals?—Yes.

13720. I should be very glad of your opinion as to the respective merits of special and general hospitals?—I should say generally that they supplement each other; you cannot do exclusively with general hospitals; the special hospitals are necessary to make up the deficiencies which the general hospitals cannot supply.

13721. As a rule are you in favour of all special hospitals?—I should say there may be
Y good

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Chairman—continued.

good and bad. I am quite prepared to admit that that there may be special hospitals that are not necessary, but I should not be able to name them. Most of those that I have known arose out of the force of circumstances. Will you allow me to hand you a list of those special hospitals which I have drawn out from the "Medical Directory"?

13722. Will you read it?—In the first place, there are six, what I call, supplementary general hospitals without medical schools: the French, the Italian, the German, the Great Northern Central, the Metropolitan Free, and the West London Hospitals. These are general hospitals that have no schools attached; they may be considered to be supplementary, providing for the needs of outlying districts. Then there are 10 special hospitals for children with 505 beds, and one for children for hip disease with 50 beds; four special hospitals for the diseases of women, with 225 beds; for consumption there are four hospitals with 615 beds. Then the fever ones are distinguished in a particular manner. There is the Fever Hospital at Islington, which has 200 beds; then there are five metropolitan fever hospitals; they are under public management, that of the London County Council, or a public body; those five hospitals contain 2,141 beds, which are necessary as a sanitary provision; the Small-Pox Hospital, with 108 beds; one for heart disease, in Soho-square, with 26 beds; three hospitals for incurables, with 301 beds. Then there is a hospital of a similar kind, St. John and St. Elizabeth, with 50 beds; the Lock Hospital for syphilis has 240 beds. I am not aware that there is any more than that one. Then there are three hospitals for lunatics, especially, Bethlem, St. Luke's, and the City of London, which is situated in Dartford; but it is a London hospital. Those two hospitals carry 656 beds altogether without the Bethlem. There are six lying-in hospitals for women, with 175 beds; and a large number of women are delivered in the workhouse lying-in departments of infirmaries. That would not count in the hospitals. Of ophthalmic hospitals there are five, with 195 beds; orthopædic hospitals three, with 118 beds; the one for stone, with 24 beds. Then there is the Seamen's Hospital, to which I was attached; the Greenwich Hospital, the main one, has 225 beds. They have opened a branch in the Albert Docks to supplement it, to be on the spot where accidents occur. It provides 14 beds. Then there is a hospital for accidents in the neighbourhood of the Docks at Poplar, which is an extremely necessary one, with 51 beds. For the throat and ear there are four hospitals with 52 beds; three for skin diseases, with 55 beds; one for cancer, with 120 beds; and for fistula two, with 42 beds. Now I do not pretend to say that that is complete, but as far as it goes it is fairly correct. Those special hospitals and the supplementary general hospitals without schools, and the lunatic hospitals, give a total of 6,494 beds.

13723. Do all those hospitals apply for voluntary contributions to the public?—I think Bethlem does not; it has funds like St. Bartholomew's; the Metropolitan Fever Hospitals are maintained out of the rates.

Chairman—continued.

13724. Do you know whether a greater number of these hospitals have sprung up of late years?—They mostly have, I should think, within the last fifty years. The lunatic asylums are much older than that, and the Small-pox Hospital is of long standing; two or three of the lying-in hospitals have been in existence over 100 years certainly. With regard to the consumption hospitals, one or two of them have been in existence for a good many years now; the Seamen's Hospital is of 70 years' standing; and one ophthalmic hospital, the one in Moorfields, has existed for over 80 years certainly.

13725. Now, do you consider that the majority of these hospitals treat their cases better, or I will say, have better facilities for treating their cases, than the large general hospitals?—That is the reason why they were founded undoubtedly.

13726. But does that reason apply as much now as it did 30 or 40 years ago?—I think more strongly.

13727. Could you give your reasons for that opinion?—The general hospitals have not built special wards and appliances for special diseases; they cannot admit more than a certain number. Take the case of diseases of women; they cannot possibly devote space enough to them to admit any number; and all the school hospitals have established departments for that for the sake of teaching; the examining boards require it, and the students must have some instruction in the matter; but it is imperfect. The number of beds devoted to the purpose by the surgeons and physicians is very small, not at all sufficient, and therefore it must find more outlet outside.

13728. Then the special hospitals, according to you, are owing to the want of accommodation in the general hospitals?—Very much for that reason; and also because the physicians to whom these special departments are entrusted have not sufficient authority; they are under the command of the staff of surgeons and physicians who exercise their authority in rather an arbitrary manner. An obstetric physician, for example, I know can hardly have a choice of cases; he must accept what they choose to give him in the way of beds for those cases; he has not free scope and hand.

13729. Even of the special cases that ought to go to him; he can only get a certain proportion you mean?—He is not allowed to treat them in some hospitals; the moment it comes to an operation they are to be handed over to the surgical staff; therefore he cannot pursue the practice with anything like success or satisfaction. In my own case I undertook office at St. George's on express condition that I should be allowed to operate.

13730. Are these obstetric physicians members of the staff of the general hospitals as well?—They are members of the staff. The obstetric physician stands alone in helpless minority; in some cases there is an assistant, not always.

13731. Is he at the same time on the staff of a special hospital sometimes?—Very often; almost always. That applies to all specialities.

13732. Is he allowed to operate in the special hospital?—Yes, they do that; outside, the staff of a general hospital have no authority over what a man does.

13733. But

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Chairman—continued.

13723. But if he is not allowed to operate in a general hospital, is not that because he is not supposed to be sufficiently competent?—That may be so in one or two cases. I presume that the surgeons at Bartholomew's would seek justification on that ground.

13734. Would a man be allowed in a special hospital to operate?—In a special hospital they do operate; the same man who cannot in a general hospital.

13735. Do you mean that in a special hospital they would allow a man of inferior capabilities to operate?—No, not by any means. I can give some striking examples to the contrary.

13736. And why are they not allowed to do so in the general hospitals?—The general hospitals were founded upon an old principle; they adhere to the idea that medicine is general and surgery is general; and specialities have been springing up of late years, and they have not yet got a sufficient footing in the general hospitals, and the staff of the general hospitals are really rather jealous of them.

13737. Then do you think that the real business of a general hospital is more dealing with accidents and such urgent cases as present themselves?—I think it must be so; at the same time I quite approve of having special departments in them, with some little instruction in those departments: but it can never be complete or quite satisfactory.

13738. You consider that the special cases are more skilfully treated in the special hospitals than in the special wards of general hospitals?—Certainly, that they are more freely treated and better conducted there.

13739. Some of these special hospitals are very small indeed, are they not?—Some are small.

13740. We will take several of them that I have here, taking this return of the Charity Organization Society for what it is worth. Here is a hospital in Vauxhall Bridge Road for fistula, with seven beds?—That I know nothing about.

13741. Then there is an ophthalmic hospital with 14 beds?—Yes.

13742. Then there is a skin hospital with 10 beds, and another with 12 beds. Then there is a miscellaneous hospital, called Lady Gomm, with six beds, and a good many hospitals with about that number of beds. In your opinion are those useful?—I think some of those might be dispensed with.

13743. So that although you favour special hospitals in principle, you think at the same time there are no doubt some that we should be quite as well without?—Quite; I quite admit that.

13744. Have you ever thought of any method by which we could check the growth of new ones?—No, I have not; it must be left to the public judgment.

13745. Have you any fear of special hospitals springing up as speculative undertakings?—There are two or three examples, I think, pointing that way, but I think they do not go very far; they are very soon pulled up by public or professional opinion; they do not go very far in the way of abuse. I have heard of massage-hospitals.

13746. At the same time, is it not a fact that a certain amount of good money which would

(24.)

Chairman—continued.

find its way into general hospitals, or good special hospitals, finds its way to them?—To a very small extent; I do not think that applies to the vast majority of these special hospitals here.

13747. Do the special hospitals, as a rule, take payment for patients?—Not as a rule, but many do, and so do some of the general hospitals.

13748. Now, which of these do you consider the most useful; for instance, a hospital for hip disease, what do you say as to that?—Those chronic cases cannot be treated in a general hospital; they would encumber the wards and crowd out more urgent cases.

13749. Then a hospital for hip disease is a sort of home for incurables?—Yes.

13750. Now the Children's Hospital, do you consider that a good kind of special hospital?—I do not think those hospitals could be done without. There is the greatest possible use in them. The East London, for example, is a great institution.

13751. You prefer the special hospitals for children to having wards in the general hospitals for children?—They could not accommodate enough in the general hospitals. They have a ward for children at St. Thomas's over the way, and a very admirable one it is; but if the work extended they would exclude more important cases, grown up cases. In the east of London, where the only hospital of any importance is the London, they must supplement it by other hospitals, and the Children's Hospital there was founded by a pupil of mine, Mr. Heckford, out of pure philanthropy. He went to live in it and spent all his money on it.

13752. Now, special hospitals for women you said were necessary?—Quite necessary.

13753. Do you consider hospitals for cancer quite necessary?—I can hardly say. You see cancer cases are chronic, and all chronic cases would encumber the general wards of big hospitals, and some special arrangement is desirable. Then, again, one of the reasons for these special hospitals is to afford men of ambition an opportunity of studying the diseases more carefully than they can in the general hospitals. By that means medical science is improved, and humanity is certainly somewhat succoured. That is at the root of many special hospitals.

13754. You think they are useful for education?—Yes.

13755. Supposing a new general hospital is built, should you be in favour of a large general hospital, or one within certain limits?—One of moderate size. Large hospitals are open to great danger from crowding, and difficulty in drainage and ventilation, and arrangements of that kind. The proper plan for a large hospital is to have it in blocks spread over a very large area, and that becomes almost impossible in London.

13756. You mean with the wards on only one storey?—Only one storey, or two storeys at the outside; that involves an enormous spread.

13757. Have you ever considered the advisability of removing some of the large general hospitals into the country?—I have often thought of it. It was discussed very earnestly about this place over the way, St. Thomas's, at one time; but the difficulty is that hospitals must be available for the casualties and the emergencies of a large

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Chairman—continued.

large dense population, and that could not be carried out in the country; it would be only cases comparatively chronic, or on their way to convalescence, that could be accommodated outside. Take St. George's Hospital, to which I am attached as consulting physician and life governor; it is a fashionable neighbourhood, but at the same time of extreme importance for accidents; it could not be carried into the country; Hyde Park supplies a considerable number of accidents there.

13758. Would it not be possible to have a sort of out-patient department there on a larger scale and have the more permanent cases in the country?—You must have some provision for urgent cases in London; but I think a larger out patient department might be useful; but there is a strong feeling against that at St. George's, and a feeling that it ought to be restricted; they want to restrict the out-patient department, and they do restrict it to 15 new cases a day, I believe.

13759. We have had that explained to us. Then do I gather this from you, that you would like to see the big hospitals in the country, were it not for the urgent cases?—If it were not for the urgent cases, excepting for another strong reason indeed, that you cannot have the education of pupils in medical schools carried on away from their clinical work; and chronic cases in the country would not answer their purpose.

13760. Then would there not be difficulty also in securing the medical attendance in the country?—That is a difficulty, undoubtedly; although, of course, with the facility of locomotion now, it is less than it would have been. I, myself, would not not have gone into the country to attend a distant hospital on any account.

13761. Have you ever been able to compare the attainments and knowledge shown by the medical men in the special hospitals with those shown by those in the general hospitals?—I think they can more than hold their own at the special hospitals. Good men have been excluded from the general hospitals out of feelings of jealousy, or something of that kind; and some of the most able men have been driven to fight for their reputation outside. I might mention three or four striking names if it is thought desirable.

13762. Yes, if you please?—When this new building over the way, St. Thomas' Hospital, was building, they were waiting to fill up the vacancies that were occurring on the staff; it was known that they wanted a staff, and three surgeons were to be appointed. The men who were rejected were Sir Spencer Wells, Mr. Lawson Tait, and the late Mr. Edward Bellamy.

13763. What became of them?—They went and fought their fight outside. I think we all know what Sir Spencer Wells has been, and Mr. Lawson Tait is now, I suppose, the foremost and most enterprising surgeon living. He went to Birmingham and special hospitals.

13764. Are there any facilities for teaching in special hospitals?—Yes, they can teach their own departments; not general medicine, of course. The Ophthalmic Hospital especially, the lying-in hospitals and the women's hospitals have students attending,

Chairman—continued.

13765. As to some of these small hospitals, which you say we might be just as well without; they are of no use to education?—They are of use in supplementing what the general hospitals cannot teach. A number of men who have been house surgeons, distinguished pupils at the general hospitals, where their education is supposed to be completed, will go and spend some time either as assistant or house physicians in these special hospitals; they are glad to get these appointments, and so to get experience, which they cannot get in the general hospitals.

13766. Can the general hospitals keep pace with medical science now-a-days?—Not alone in the present day. In gynecology and ophthalmology progress is almost entirely the work of men attached to special hospitals.

13767. And that is one of the advantages of the special hospitals?—Yes.

13768. But is not observation easier in a general hospital?—No; take a very large hospital like St. Bartholomew's with a large number of students; the beds in a special department would be too few to admit of students approaching the beds, or to enable them to get the experience; the students would be too crowded. They want to be detached, as it were,—to go off into detachments, to take certain cases at special hospitals more carefully where there is more opportunity for following them.

13769. Now, are you in favour of hospitals for the throat and ear?—I think that kind of hospital has been of great service.

13770. To the public or to the profession, do you mean?—Certainly for those who are attached to it, the officers; but also for the public. It has enabled them to follow up a system of observation which they could not do in the general hospital. Now, take the London Hospital; Sir Morell Mackenzie, for example, was physician to the London Hospital, but he did not find scope enough there and went elsewhere; so with others.

13771. And you do not, as I judge from what you have said just now, seem to fear any abuse from the springing up of these hospitals?—There may be abuses here and there undoubtedly; I cannot dispute that for a moment.

13772.—Would you like to see any controlling body who should determine whether the building of an additional hospital should be sanctioned or not?—I have often considered the question of central control. I was educated in Paris, and saw that all the hospitals there were under central control; and my opinion is that it worked badly, and I think strongly that the very essence and spirit of English philanthropy in hospital work is independent free action. It answers infinitely better and does more good, and I should trust to the general public opinion pressing upon that.

13773. But it goes so far in Paris that you cannot buy any stores except at the central dépôt, and all the doctors come from the central dépôt, and the beds are allocated from the central dépôt?—Yes, the beds are distributed from a central bureau,—not absolutely; they can in case of accident go in directly.

13774. But suppose you had some sort of body in London whose duty it might be to recommend or hinder the building of these hospitals, and supposing

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Chairman—continued.

supposing that some sort of license had to be obtained for the for the building of a new hospital, granted by the Local Government Board or some council, and that there was a committee or central body exclusive of all Government interference, who could say whether they considered this hospital necessary, and could audit all the accounts of the hospital, and lay some basis on which they could be drawn up, and who could do many other things connected with hospital work, would you think that good?—Yes, I should think that would be very desirable.

13775. Beyond Government interference?—Yes.

13776. You would not like to see Government officials in the London hospitals?—I should like as much freedom, free, independent action as possible; but I think some general control and supervision would be useful.

13777. I understand you to mean by a body outside the Government?—Yes, outside the Government.

13778. You would be afraid of Government interference, because you would fear that if allowed it would stop the flow of philanthropy?—Yes; and outside the medical profession. I think the general public ought not to be controlled in their philanthropy in that way.

13779. You said that jealousy on the part of the staff in general hospitals now and then interfered with the freedom of action of medical men; ought that to occur in a well-managed institution?—Institutions go on acting on old traditions as it were. You have heard about St. Bartholomew's to-day; they will not admit anything like free action on the part of the obstetric physician; they will not allow him to operate; when it comes to an operation they call in a surgeon who knows nothing of the case. Medicine cannot improve under those conditions, and that is why men of true spirit seek work outside.

Earl Cathcart.

13780. I think you mentioned that you knew the lock hospitals very well?—I knew one of them many years ago.

13781. There are only two?—I was not aware of more than one.

13782. There is a male and a female?—Yes, just so.

13783. And you are aware that the male hospital only has about 13 beds occupied, and the female hospital only 141 beds; that can hardly be adequate to the treatment of those cases in London?—By no means equal to it; but I think all the hospitals in London take in syphilitic patients.

13784. We are told that they do not take in primary cases, except in the out-patient department?—Yes; I do not see how they can accommodate them as in-patients, and many do not require in-patient treatment.

13785. Are you aware that they have just built a new hospital at Liverpool, in connection with the new hospital there, for syphilis, with 100 beds?—I have heard of that.

13786. And they attribute the greatest importance to their treatment?—Yes, no doubt; (24.)

Earl Cathcart—continued.

but that is a seaport, and a number of cases come there.

13787. You mentioned your having a connection with the Seamen's Hospital; were you a medical officer of that institution?—I was physician for 15 years.

13788. You know Mr. Michelli?—Yes; I know him well.

13789. You consider him an able man?—Yes.

13790. Would you consider that the system of accounts laid down in his book would be a useful thing to study for anybody interested in hospital accounts?—I have not gone into the accounts.

13791. Are you aware that that new institution of which you spoke just now has 14 beds; you were not quite sure of the number?—I am obliged for the information.

13792. The one in connection with the Albert Dock, I mean?—Yes, I was at the opening of it.

13793. You do not agree with what was told us here that an enterprising doctor, a speculative solicitor, and, if they could obtain one, a member of the Royal family, would easily set up a flourishing special hospital?—I do not think that.

13794. But do not you think that many of these institutions are rather founded for the good of the doctors; so it has been suggested to us?—I have no doubt that some of them are started by the doctors.

13795. In their own interest?—In their own interest.

13796. And they have been called private adventure hospitals?—That may apply to a very few cases.

13797. The Lady Gomm Hospital of which you spoke, we were told is a handy cottage hospital, doing good work near a dock where it is much wanted for cases of accidents?—I can quite understand that.

13798. A hospital of that sort attached to a dock might be exceedingly useful?—Yes, like the Poplar, for accidents.

13799. Sir Morell Mackenzie told us that the Throat Hospital takes payment according to what the patient likes to give?—Yes.

13800. You were asked about the teaching in a special hospital; that teaching we were rather led to believe could only take place after the student had passed an examination; that the people who went to the special hospitals were people who had finished their curriculum and would go there to get special instruction?—That is generally the case.

13801. But a young man working at St. Thomas's would not have time to run up to Soho Square to a special hospital?—He could not.

Earl of Kimberley.

13802. You said that you were favourable to some central body which should have a general control over the London hospitals; how would you constitute that?—I am afraid that question is beyond my capacity to answer off-hand.

13803. You also said that you should not wish it to be connected with the Government; but something was said as to the county council; should you approve of that?—I should not be inclined

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Earl of Kimberley—continued.

inclined to trust the county council at first entirely.

13804. Practically the county council is the municipal government?—Yes.

13805. You have not considered whether such a body might be elected by the different hospitals?—That might perhaps be better.

13806. So as to keep it free from any connection with the Government?—Some little control of that kind has been exercised by the Hospital Saturday and Sunday Fund by distributing, according to their judgment of merit; and I have understood that they would like to exercise more direct control; but how far that would work I cannot say.

13807. Might it not be possible to lay it down as a law that no hospital should be opened in London without a certificate that it was properly equipped and fit to be used as a hospital?—If that law had been in operation 30 years ago it would have stopped the development of many very useful institutions.

13808. Why?—The control might have been arbitrary; one cannot tell in what way and on what principles they would have exercised that power.

13809. Supposing there were to be a limitation as to the number of beds, do you think that would be well?—It might be useful; no hospital should go beyond a certain number.

13810. But taking the other end of the scale, would it be useful to say that no hospital should be opened which had not a certain number of beds?—Everything must have a beginning, and a small number of beds may be usefully devoted to a necessary object with a view to development. No hospital starts at once fully equipped or is started by the public with funds enough. All the special hospitals have begun as small buildings, and have then been enlarged by building special hospitals for them. The Samaritan, and the Chelsea Hospital for Women, have both been extended by building new hospitals; they could not have been started on that scale; and that applies to the others.

13811. Have you turned your attention at all to the poor law infirmaries as at present constituted?—I have been trying to look into them, but I have not been able to do so much. I think they might be very usefully applied to purposes of education; they are very necessary indeed, and, generally speaking, from what I have heard, I think they are admirable institutions, and well conducted, and the mortality in them is remarkably small.

13812. Is not it the fact that with regard to the poor law infirmaries the tendency for them to become the hospitals for a large portion of the population?—That comes to a question of the poor law; one does not like to mix up pauperism and ordinary hospitals.

13813. But looking at the matter rather from a broad point of view, you would say if you were making arrangements for the hospitals, that there ought to be a given number of beds for a given population?—Yes.

13814. And is it not logically wrong that the population should be left to depend upon the chance of voluntary effort to supply their wants?

Earl of Kimberley—continued.

—That depends upon how far voluntary efforts meet the demand. On the whole they have done it remarkably well, perhaps better than in Paris, where that does act; the poor persons go into general hospitals there.

13815. At present, does it not seem as if the infirmaries were taking the place and supplying the vacancy left by the voluntary hospitals?—To a great extent, no doubt they do.

13816. And would not that have a tendency to bring about a system in which the infirmaries will occupy a very much larger and more important part than they now do?—I think that it is growing that way, and that they are usefully employed.

13817. There might be, however, this danger, that the population would regard itself at last as entitled to have hospital treatment at the expense of the community?—And that is a dangerous principle; I think it tends to create among the mass of the population a belief that they must be supported independently of their own labour.

13818. Therefore you would be quite in favour of whatever would limit the hospital treatment to those who really require it from their circumstances, either from urgency or from their poverty?—I think so.

Lord Monkswell.

13819. Upon medical education, have you any suggestion as to how the system of medical education may be improved; have you thought about that?—That is a very wide question, which has rather taken me by surprise. I think one thing, I have seen distinctly is this: There are only three or four hospitals in London on a sufficient scale to provide all the necessary means of education; for example, in physiology, chemistry, and some of the scientific subjects. It can be done over the way at St. Thomas's, it can be done at St. Bartholomew's, and at Guy's, the London, and University College. On the other hand University College Hospital, with only 200 beds, is too small for liberal clinical study. The smaller hospitals have not the space or the means of having large enough laboratories or appliances for it; and there I think some central body, or one or two central bodies, separate schools for what we call the scientific department, would be very useful to take the students of the smaller hospitals.

13820. Then you would still continue the whole of the teaching in some schools attached to hospitals?—Yes.

13821. Or would you take away the preliminary teaching altogether from all of them?—That I cannot say. If they can satisfy the professional want, and are doing it well, I should say leave it as it is. I know it cannot be done at the smaller hospitals; and when I was a student, that was acknowledged to be the case. In chemistry, for example, all the students at St. George's, and Middlesex, and Charing Cross, and I think one or two others, went to the Royal Institution; we went there for chemistry, under Faraday and Professor Brande. It was only afterwards that they established these chemical lectures at the other hospitals; but I think we ought to go back to that plan.

13822. Sir

16 February 1891.]

Mr. BARNES, M.D.

[Continued.]

Lord Monkswell—continued.

13822. Sir Andrew Clark thought that two or three central schools for those preliminary subjects would be better than having them attached to the hospitals; do you agree with that view?—Yes, I do.

13823. Mr. Gould, the dean of the Middlesex Hospital school, said that he thought it would be better to have a medical faculty, as proposed by the scheme of the University of London; do you agree to that?—Yes.

13824. And do you think that the medical council might in any way be remodelled to make it more representative than it is at present; would there be any advantage in having hospitals represented on it?—I am unable to answer that.

13825. One question about infirmaries. It has been generally thought by the witnesses examined here, that the doctors in infirmaries were not so good as the doctors in hospitals?—They are not of the same standing; they are mostly general practitioners. What makes a good physician is teaching or working under the observation of other persons; and possibly infirmaries might be open to that extent; they might have attached to them a physician or surgeon to the students; then they would work under professional observation, and that would, no doubt, attract able men to go to them.

13826. Then, in fact, you would put the permanent paid infirmary officials under some very celebrated physician or surgeon, just as they do at the hospitals?—That I think very desirable. At one time it was done at the Marylebone Infirmary; there were two excellent physicians there at one time, and students attended.

Chairman.

13827. Some time ago, last Session, Sir Henry Longley, the Charity Commissioner was before us, and we asked him a question as to a central body for organisation of matters in regard to hospitals, and he said, giving his own private opinion, and not speaking as Charity Commissioner, that he thought the best body would be the central governing body established under the City of London Parochial Charities Act. At Question 3251, we asked him how he would shadow out his idea of an organising body; and he said, "It has sometimes struck me that, perhaps the central governing body established under the City of London Parochial Charities Act, which will be a very important body, might be charged with such a function. (Q.) Would you kindly explain what that central governing body is?—(A.) It is constituted by a section of that Act, the 48th Section. It is established in order to administer by one hand all these charities, when they are regulated by schemes that we make, instead of the numerous hands by which they have been regulated hitherto; and it is to be constituted in this way: It is to 'consist of 21 persons, of

Chairman—continued.

whom five shall be nominated by the Crown, four by the Corporation of the City of London, and the remainder (four of whom shall, in the first instance, be chosen from among the persons who are now trustees of the parochial charities of the City of London) in such manner, or by such persons or bodies as the Commissioners shall by scheme provide;" and he goes on to say, "And what we have done in our scheme in that respect I think I happen to have here. In our scheme the body stands thus: Five by the Crown, four by the Corporation of the City of London, four by the London County Council, two by the Ecclesiastical Commissioners (that is only a temporary provision, they will cease to have an interest after a time), one by the University of London, one by the Council of University College, London, one by the Council of King's College, London, one by the Council of the City and Guilds of London Institute, one by the Governing Body of the Bishopsgate Foundation, one by the Governing Body of the Cripplegate Foundation; and when the Ecclesiastical Commissioners cease, as they will in a few years, to appoint, the London School Board are to appoint those two vacancies." Now should you feel inclined to favour some such body as that?—I think the broader the constituency the better. I should be very sorry to see any absolute power put in anybody's hands, to arbitrarily control and check free action.

13828. You would like to keep it entirely outside any municipal or other Government interference?—I think it would be better; leaving free scope for that spirit, which is very strong indeed in this country, both professionally and among the general public, free action to develop institutions as may be necessary.

13829. And you would like to maintain as much as it is now maintained, the individuality of these hospitals?—I should. They do good by rivalling each other. One thing has struck me very much; when the University College and Hospital was founded it was the first hospital that was quite free from all old traditions, and they took their professors and teachers from anywhere that they could get them.

13830. And that improved all the others, you mean?—Very much; they all found the benefit of competition; at all the other hospitals they became a little more liberal in their choice of officers. It did away with some other old prejudices. At St. Bartholomew's a man could not be a surgeon, for example, unless he had paid a handsome fee of 500 l. to one of the old surgeons; he came in on that right by purchase. Those things have been abolished greatly by the influence of University College.

13831. Have you anything you wish to add to your evidence?—No.

The Witness is directed to withdraw.

Die Jovis, 19^o Februarii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
Earl SPENCER.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. FREDERICK CLARE MELHADO, is re-called ; and further Examined, as follows :

Chairman.

13832. You desire to make some corrections on one or two points in the evidence you gave when you were examined here before?—Yes.

13833. If they are actually as to matters of fact, you can give the corrections now in evidence?—They are as to matters of fact. In my reply to Question 12640, I stated that the sisters had passes for two hours on four days a week ; I should have said five days a week. In reply to Question 12656, I stated that in the year 1870 we lost a sister who died of typhoid fever in the cancer wards ; I should have said that in the year 1870 we lost the sister of a male medical ward, who died of typhoid fever, probably contracted in attendance on a patient. In reply to Question 12675, I stated that there was always one senior nurse made responsible during the night on each floor before the sister went off duty ; I should have said that two staff nurses on each floor are made responsible. In my answer to Question 12700, I appear to have stated that the institute nurses received commission at the rate of only 5 per cent., 10 per cent., and 15 per cent. ; I should have said 10 per cent., 15 per cent., and 20 per cent. Then, in reply to Question 12794, I am afraid I rather led the Committee to understand that patients have always had to provide their own tea, sugar, and butter. This I understand is not the case. Some years ago the hospital supplied these articles experimentally, but I am informed that so many complaints arose, and such dissatisfaction was created, that it was decided to allow all patients that could afford to do so to provide their own tea, sugar, and butter ; and it is, I believe, looked upon by them and their friends as a privilege. I may perhaps add in regard to expense, that if the minimum allowance was made, viz., 1 s. per week to, say, 260 patients, it would cost the hospital at least an additional 676 l. per annum. Then, as to Ques-

(24.)

Chairman—continued.

tion 12806, I find that we have employed male nurses from the Hamiltonian Institute once or twice, and should do so again in case of need ; but we prefer those who are near at hand, and have been frequently employed, and to a greater extent trained by ourselves. At Question 12810, mention was made of a nurse who died of pyæmia. The nurse who died of pyæmia in the year 1870 was an elderly woman, exceedingly stout, and in the habit of imbibing freely ; a bad subject for disease of any kind. She pricked her finger in dressing a patient, and died of a poisoned hand.

13834. There is only one question I should like to ask you in addition to what you said the other day, and that is, are your accounts audited by members of the Chartered Accountants' Society?—Yes ; we employ a firm of public chartered accountants, who examine the accounts twice a year, and give a certificate to the weekly board. They are also examined annually by three auditors, who are appointed by the Court of Governors in the month of February.

Earl Cathcart.

13835. Are the patients, before they are taken in to the operating theatre, rendered insensible outside in some ante-room?—Yes ; we have a separate room for the purpose.

13836. Is that invariably done?—Always.

13837. Is that the general custom in all the London hospitals?—That I am not prepared to say.

Lord Thring.

13838. I want to ask you another question about this tea, butter, and sugar. I understand you to say that the patients prefer to provide them for themselves?—Yes.

13839. But why?—Because I think that in a great

Z

19 February 1891.]

Mr. MELHADO.

[Continued.]

Lord Thring—continued.

great number of cases, at least so I understood, when it was provided some years ago, complaints were made by the patients about the tea and the sugar; they did not think that it was good enough, and some thought that the tea was inferior; and it led to constant complaints.

13840. But then do I understand you to contend that the hospital did not supply as good tea, butter, and sugar as these poor people could supply out of their own means?—Well I suppose the hospital supplied at that time the quality that they considered suitable for such patients; but the patients themselves were not satisfied.

13841. It is scarcely worth going back upon a thing that is so long passed; but it would seem a discreditable thing to the hospital if there were complaints of tea, butter, and sugar, that those complaints were not redressed, and if they were just, it is impossible to conceive but what the hospital could have supplied as good tea, butter, and sugar as these poor people could supply for themselves. The question is why they differ from any other article of food supplied by hospital. You might apply the same argument to meat or pudding, or anything else, might you not?—I am not prepared to answer the question any further.

13842. Then I should like to ask you why the poor people like to supply those articles for themselves?—Their friends like to bring in things to them, and the articles are so limited which they are allowed to bring in that they are very glad to have the opportunity of bringing in tea, butter, and sugar.

13843. You mean that the friends like to bring in little delicacies not supplied by the hospital?—Yes; and these articles are looked upon in that light.

13844. But surely tea, butter, and sugar are not delicacies; they are as much necessities of life as bread, are they not?—I cannot answer the medical part of that question. I do not think the

Lord Thring—continued.

doctors look upon them in that light, especially in some cases.

Earl Spencer.

13845. What happens in those cases where the patients do not supply tea, butter, and sugar for themselves?—It is supplied out of the Samaritan Fund of the hospital.

13846. Are any large proportion of the patients provided in that way?—I should think that on an average there are about 20 patients a week who are so provided.

Earl Cathcart.

13847. Have you got a complete drainage plan of your hospital?—Yes.

13848. Most complete, showing everything?—Yes.

13849. You could lay your hand on any defect in a moment?—Yes.

13850. You have it hung up?—I have one in my office. The resident medical officer is better acquainted with that subject than I am.

13851. All I want to know is that you have such a thing hung up?—Yes.

13852. And that is kept posted up, is it; if there are any alterations made in drains they are made on the plans, too?—Yes.

13853. And, in your opinion, is that necessary in a building like a hospital, where a great many people are collected together?—Most certainly.

13854. And you would be surprised to hear that there could be a great hospital which had not a plan of that sort?—I can hardly understand that such a thing could exist.

Chairman.

13855. Is there anything else you wish to say?—Nothing.

The Witness is directed to withdraw.

MR. ARTHUR EDWARD READE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

13856. You are the Secretary of the Charing Cross Hospital, are you not?—Yes.

13857. What is the date of the foundation of the Charing Cross Hospital?—It was founded first as a dispensary in 1820, in Villiers-street; it was then moved to its present situation in the year 1831, and was opened in 1834; that is the first record we have.

13858. Is it a free hospital?—Quite free.

13859. And have you anything in the way of letters there?—Yes, letters are issued for in-patients and for out-patients; but it is not compulsory on a patient to have a letter; of the in-patients, out of 2165 last year, about 150 only brought letters; I cannot give you that figure certainly.

13860. What is the test of admission?—The patient being a suitable case, and being one suitable for hospital relief, a poor person.

13861. And a patient having a governor's letter has no preference?—None whatever.

Chairman—continued.

13862. To whom are you responsible as secretary?—To the council of the hospital; they are the paramount authority in the hospital.

13863. How often do they meet?—They meet once a month, the second Wednesday in every month.

13864. Is there any intermediate body between you and the council?—No.

13865. By that I mean any weekly committee?—There is a weekly board. They consist of members of the council; and it is an open board for governors. Might I just read the definition of their duties.

13866. Yes, will you please do so?—"The weekly board shall meet every Tuesday at two o'clock, and it is their duty to regulate the admission and discharge of patients, to superintend the proper performance of the duties of the various departments, domestic and professional, conformably to the rules of the institution, and to give directions, and make temporary arrangements

19 February 1891.]

Mr. READE.

[Continued.]

Chairman—continued.

ments for the comfort and advantage of the establishment, and its officers and servants, subject to the sanction of the council."

13867. That is practically the Executive of the Hospital, is it?—Yes, I should say so; but they could not do anything very important without the sanction of the council; they could not sanction any great work, or pass large bills.

13868. Do I understand, from what you read, that that is the body to which the weekly reports are made?—Yes.

13869. Those of the matron and steward, or whatever the officials may be?—Yes; all the books are presented to them.

13870. Are the books laid on the table of that meeting?—Yes.

13871. Do they check all the small books at that meeting, such as the petty cash-books?—No, there is a finance committee that does that, which meets after the weekly board. That is a copy of the agenda (*handing it in*).

13872. This weekly board is an open meeting, you say?—Open to any governor of the hospital.

13873. Any governor may come who likes?—Yes.

13874. About what is the general number who do come?—Very few; not more than six or seven.

13875. Out of several hundreds, I suppose?—Yes; they are all members of the council who do come; we very seldom have a governor outside the council.

13876. Then how are the council elected?—They are elected at the annual general court. Each member of the council is elected for three years; they retire at the end of three years, and if they choose to offer themselves for re-election they may be re-elected. Any vacancies are filled by persons elected by the council themselves.

13877. Then, as I understand you, the authority of the council is independent of the authority of the annual court?—Yes, it is the paramount authority in the hospital.

13878. Does that council appoint and dismiss the high officials in the hospital, such as the matron, or the secretary?—Yes. Might I just read the provision in the laws with regard to that?

13879. I think your answer is sufficient for my purpose. Now, in the case of the dismissal of a nurse, we will say, or a subordinate servant, would that be in your hands as secretary, or in those of the council?—All the male servants are engaged and discharged by myself. The nurses and probationers are engaged and discharged by the lady superintendent; but the sisters are engaged by the council, in consultation with the lady superintendent. In the event, however, of the dismissal either of a male servant or a nurse, the matter is always reported to the weekly board, or to the council. There is always an appeal to a superior authority. We never discharge any one without reporting it; they are discharged practically by the weekly board.

13880. Does it come to this, that you and the lady superintendent have the power of suspension?

Chairman—continued.

sion?—Yes, we have the power; but we consider that the matter should be reported, and practically confirmed. There is no absolute rule to that effect, but as a matter of custom, we report to the weekly board.

13881. Then you have a finance committee, you said?—A finance committee; they meet after the weekly board on Tuesdays. This is our agenda (*handing it in*).

13882. Who composes that committee?—The two treasurers and three members of the council. The treasurers are *ex officio* members of all committees.

13883. Then is there a nursing committee?—Yes.

13884. And they have to do with all questions of nursing?—All questions regarding nursing.

13885. And would they investigate any charge against a nurse before dismissal?—Yes.

13886. Then the whole financial control is under the finance committee?—It is under them, subject to the authority of the council. They report once a month to the council.

13887. Where do you get all your funds from?—We get our funds partly from subscriptions, also from donations and legacies. We have a little property; but our income, including annual subscriptions, is about 6,000*l.* a year.

13888. What do you consider your most reliable source of income: annual subscriptions?—Yes.

13889. And legacies?—Our legacies are a very unknown quantity. Last year we only had a little over 1,000*l.* in legacies; the smallest sum we have had since the hospital assumed its present proportions.

13890. Have you any idea of the average of your legacies for the last 10 years?—I could not give it you from memory.

13891. Then your main reliable source of income is the annual subscriptions?—Yes. The donations vary; sometimes we get a good year of donations; at other times a bad year.

13892. How much were your annual subscriptions last year?—£. 1,838.

13893. Is that sufficient to pay for the cost of the nursing staff, and the administrative staff of the hospital?—No.

13894. So that, taking your most reliable source of income into consideration, it is not enough to defray the cost of the staff?—No; we have a little money from rents.

13895. I will come to that. You have rents, you say; is that from landed property?—No, from leasehold houses in the vicinity of the hospital.

13896. Have you any landed property?—None whatever.

13897. Then, of course, this 6,000*l.* a year is insufficient to pay the expenses of the hospital?—Very insufficient.

13898. Is the hospital full?—Yes, very full.

13899. That is to say, all the available beds are occupied?—We always keep a few vacant, in case of a rush of accidents, three or four in the accident wards, and special wards; but the majority of the working beds are nearly always full.

z 2

13900. With

19 February 1891.]

Mr. READE.

[Continued.]

Chairman—continued

13900. With the exception of the margin usually left in hospitals, your hospital is full?—Yes.

13901. And how many beds are there?—There are 175 beds, of which we might call 165 working beds; the other 10 are our margin.

13902. And your 6,000 *l.* is insufficient to meet the expenses of those 165 beds?—Yes.

13903. How do you make up your deficit?—By appealing for donations; and in prosperous years we lay by. The last two years have been what I may call lean years, but with what we lay by in prosperous years, we have been able to meet the deficit.

13904. You have, like other places that we have had before us, to meet your deficit out of your capital, I suppose?—Yes.

13905. There is a limit to that capital?—There is.

13906. Have you any fund that acts as an endowment of your hospital?—They are all set forth on the back of the balance sheet I gave your Lordship.

13907. Which is the foundation to which you refer?—The Golding Fund, the Levy Fund, the George Sturge Fund, and the Llewellyn Fund. The general fund is the only fund we could possibly use for the purpose of uncertain deficits.

13908. But if you are unlucky in legacies, and also in the way of donations, it might be the case that you would have to shut up a part of your hospital?—It might.

13909. In the present condition of things, do you have to turn patients away from your wards because you have not room for them?—Very seldom; we generally send them on to other hospitals.

13910. Is it only in a time of epidemic, or does it constantly occur that you have to turn patients away?—It does not constantly occur. We have sometimes to defer their coming in; we send them away rarely I should say.

13911. Would it be too much for you to say that, from your experience, the medical relief in your part of London is sufficient for the demand? I should say it was sufficient.

13912. Are you in the midst of a nest of hospitals and dispensaries?—I think there are one or two dispensaries round about us; King's, or Westminster, is the nearest hospital to us; they are about equally distant I should say. Then there is St. George's Dispensary; I think that is up somewhere in Soho. We are not exactly in a nest of them. There may be some of the shilling dispensaries that are kept by these private doctors, but no public dispensaries.

13914. You have no idea of the number of dispensaries there happen to be within a certain radius of your hospital?—No.

13915. Now you contract for your supplies, do you not? Yes; I have brought down our last contracts for you to see.

13916. Who makes the contracts?—The finance committee; and they are confirmed by the weekly board.

13917. Do they advertise for tenders?—Yes, once a year.

13918. Then the secretary or the steward has nothing to do with making the contracts at all?

Chairman—continued.

—Nothing whatever; the finance committee makes them all.

13919. Who takes in the stores?—The housekeeper; and my clerk keeps a store ledger; he accounts for all the stores, and we take stock every month.

13920. You have no steward?—No; nobody called by that name. The executive staff consists of myself, and an assistant secretary and a clerk; and we do the work between us.

13921. Does the housekeeper inspect all the food when it comes in?—Yes.

13922. And does she weigh it?—She weighs the meat and bread, and sends back anything that may not be quite good.

13923. Do you find much difficulty in keeping the food supply up to sample?—Not the food. We have had a difficulty this year with coals; and I think there might be a reason for that in bad weather and the strikes.

13924. Suppose the patients make complaints of their food from time to time; how do those complaints get to the proper quarter. They complain to the nurse, I suppose, in the first place?—They complain to the nurse or to the visitor for the month.

13925. Suppose they complain to the nurse, who is the person always in the ward; what step would she take?—She would tell the lady superintendent, and the lady superintendent would inform me.

13926. And so you would get to the bottom of it?—Yes.

13927. Do you find that the patients complain much?—I cannot now remember a single complaint about the food. There has been a complaint, I think, on the part of one or two of the resident doctors, who have said that the beef tea has not been what it ought to be; but that has been owing to a fault in making, rather than a fault in the material supplied; and we have gone into the matter at once.

13928. When a complaint is made, say, for instance, about beef tea, which is, of course, a very important article in a hospital, do they have a sub-committee of the weekly board to inquire into it?—It is done at once by myself.

13929. Are all such complaints reported to the weekly board or the council?—No. This is one instance; the medical registrar came to me and said he did not think the beef tea was up to the standard; that was about three or four years ago.

13930. Have you a medical committee?—Yes.

13931. Would the beef tea be passed by them, as it were?—No; the beef tea always comes under the inspection of the medical officers who are going round the wards, and if they saw anything wrong like that they would at once report it to me. The complaint about the beef tea was not sufficient to justify anything like a report upon it.

13932. But at the same time the council think that the administrative staff is competent to deal with these things; they do not require a report to be made to them?—No.

13933. Have you got a resident medical official officer?—No.

13934. Then who is the head medical authority in

19 February 1891.]

Mr. READE.

[Continued.]

Chairman—continued.

in the hospital?—There are five medical officers resident in the hospital; two house physicians, two house surgeons, and a resident obstetrical officer.

13935. Do they admit to the beds?—They admit to the beds. In the case of all patients bringing a governor's letter the letters are brought to me.

13936. Then are those resident surgeons and physicians the only authority that do admit?—The weekly board admits on Tuesday, and the medical officer and the surgical officer attend the weekly board as officers for the month, and advise the board; but that practice of admitting Tuesday patients at the weekly board has gone out a great deal, because nearly all urgent cases that come to the hospital are admitted at once.

13937. But still, on the recommendation of these two officers, I understand you to say?—That is only on the Tuesday; but on any other day one of these resident officers admits.

13938. Now, in the case of an accident being brought in, the resident house surgeon would be sent for?—Yes, and if the case is bad enough he would send the case upstairs at once.

13939. And if not, he would treat him?—If not, he would treat him and let him go.

13940. You mean that he would be an outpatient. Who are those gentlemen, the resident house surgeons under?—They are under their respective surgeons, on the senior staff; and as regards discipline, they are liable to myself in regard to keeping the rules of the hospital.

13941. Supposing, to take a very rare occurrence, one of these officers misconducted himself very grossly, would you have the power of suspension till you could get hold of the senior officer?—I should report him straight to the board.

13942. But the board might not meet for a week?—I should send for the treasurer if it were a very gross thing. It has never happened in my nearly nine years' experience there; but I should do that if it did happen.

13943. But you have not authority to suspend an officer under those circumstances?—No.

13944. Have you a chaplain resident?—Yes.

13945. And does he make any inquiries about the patients as well as carrying on his spiritual duties?—Yes; he has a great deal to do with the patients; he administers the Samaritan Fund, and helps them in various other ways.

13946. What salary does he get?—He gets 150 *l.* a year and his board and lodging.

13947. I have not yet asked what salary do you get?—£. 400 a year now; I began at 300 *l.*

13948. And lodging?—No; I have my luncheon at the hospital; and, if detained by any duties, I am allowed to dine there.

13949. The chaplain is the highest resident officer?—Yes.

13950. And has he power of suspension?—No; not any more than I should have.

13951. He would send to the treasurer if a case requiring suspension arose?—He would send to the treasurer and would report to me the next morning if anything gross happened.

13952. Is the secretary of the institution

(24.)

Chairman—continued.

always to be found in case of fire?—Yes; when I go out I always say where I am going to.

13953. Your address is in the hospital?—Yes, my address is in the hospital; I should be sent for at once in case of fire.

13954. The nurses are under the lady superintendent you have told us?—Yes; under the lady superintendent.

13955. And what salary does she get?—£ 100 a year, board and lodging and uniform.

13956. And then the nursing staff consists of what?—There are 51; 10 sisters; 17 nurses and 24 probationers.

13957. Does that include any night superintendent?—It includes everybody.

13958. Are any of those 24 probationers what are termed lady pupils or lady probationers?—Yes; six of them.

13959. On what terms do they come; do they pay the hospital?—They pay a guinea a week and get their board and lodging.

13960. Do you train your own nurses?—Yes, but I should add that we have only taken up the nursing at our hospital since the 25th of March 1889.

13961. Where did you get your nurses from before?—We were supplied with nurses from St. John's House.

13962. Why was that given up?—There were constant troubles amongst themselves, and their sisters were always resigning, and the nursing staff was constantly changed. Our medical staff thought this injurious, and that it would be much better to have our own nursing establishment; so we gave them notice and terminated the contract. Practically, St. John's House had ceased to exist then, and had become amalgamated with the sisterhood of nurses which nurse University College.

13963. Do you find any difficulty from the sort of double authority that existed in the hospital when you had nurses from outside?—There was unpleasantness.

13964. The nurses were not under you?—No, they were not under us at all. If there were complaints they were made to the council of St. John's House; it was a dual authority.

13965. And that dual authority was found prejudicial?—Undoubtedly.

13966. Will you give us the hours of your nurses?—The sisters have eight-and-a-half hours a day on duty; one Sunday five hours and the next Sunday nine hours; that is 58 hours a week. The nurses have 10 hours a day, and the probationers 10 hours a day; one Sunday they have nine hours, and the next six hours; they have 67½ hours a week. These are the hours on duty.

13967. At what time do the staff nurses go into the wards?—At 7 a.m. Their dinner is at 12.45 p.m.; exercise, 3 to 5 p.m. on three days in the week; tea, 5 p.m.; wards, 5.30 p.m.; exercise, 6 to 8 p.m. three days in the week. Then prayers at 8.25; supper at 8.35; and on Sunday they are off duty from 10 a.m. to 1 p.m., or from 1.30 p.m. to 10 p.m. Then, in addition to that, they have half an hour about 9 o'clock just to tidy

z 3

19 February 1891.]

MR. READE.

[Continued.]

Chairman—continued.

tidy themselves if they want to change their caps or aprons.

13968. Do they have their breakfast before the go into the wards at seven?—Yes; at 6.30 they breakfast.

13969. How long is allowed for dinner?—Half-an-hour.

13970. What does "exercise" mean; what kind of exercise is it?—They are always sent out to take fresh air.

13971. Where do they have their tea?—In the dining room.

13972. Do the sisters have their tea there too?—Yes.

13973. And do the sisters dine practically off the same food as the nurses?—Yes.

13974. They cannot all dine together, of course?—No, the nurses have dinner at 12.45., and the sisters at 1.15. The lady superintendent always dines with the nurses.

13975. Where do the lady probationers dine?—They dine with the nurses.

13976. Then as regards the night nurses, what are their hours?—They come on duty at 9 o'clock. Of course they go off duty at 7. They go to prayers at 8.25 p.m.; breakfast at 8.35 p.m.; wards 9 p.m.; home 9 a.m.; dinner 9.30 a.m.; exercise 10 a.m. to 12.30 p.m.

13977. Then your night nurses and day nurses do not overlap at the time which we are told is very heavy in the wards, that is to say, between 7 and 9?—I am now told by the lady superintendent that they do overlap.

13978. Have you any ward maids?—Yes, we call them ward maids; they come in from the outside; they are what are known as charwomen.

13979. Do they do housemaid's duties or scrubbing?—They do scrubbing and housemaid's duties as well; they do all the cleaning. The nurses do nothing but absolute nursing.

13980. Do the nurses have to perform any menial duties?—None whatever, unless making beds can be called "menial duty."

13981. Do your nurses have any pension after a certain length of service?—The council are now considering that subject. We only started with our own nurses a little under two years ago, and the question of pensions has not come before the council yet as one requiring immediate decision.

13982. Are all your wards pretty much the same size?—We have six wards of the same size. Then there are four smaller wards, and then there are two special wards, and one ward of three beds, which is close to the great landing, in which accidents are put when they come in at night, instead of taking them up to the general ward and disturbing the other patients when they are asleep. Patients who are put in there for the night are moved up the next morning to the general ward.

13983. At night is there a nurse in each ward?—A nurse in each ward, and two in the children's ward.

13984. But as to these special wards where you have special cases going on?—There are special nurses provided for them.

13985. Where do they come from?—We have spare nurses, just a few, so that we are always able to supply a spare one.

Chairman—continued.

13986. You never have to get one from outside?—No, we never have had to do that.

13987. Do the nurses have a separate kitchen?—Yes, they have a separate home.

13988. Does the lady superintendent live in that separate part?—Yes; and the nurses sleep in dormitories above the hospital, right at the top.

13989. What is the pay of the nurses?—The nurses get 22 l., going up to 25 l.; they get indoor and out-of-door uniform; and they are allowed 2 s. a week for washing.

13990. And the probationers, what do they get?—The probationers get no salary for the first year: 15 l. for the second year, and 20 l. for the third; they all receive out-door and indoor uniform, and for washing 2 s. a-week.

13991. Then the third year do you certificate them as nurses?—Yes, they have a certificate.

13992. Then before they become certificated nurses, what is the arrangement? They are engaged by the lady superintendent in the first instance?—Yes.

13993. Then, supposing they want to break their contract, can they go away at the end of the month if they find the work not suitable for them?—Yes, at the end of a month.

13994. It is terminable by either party?—Yes.

13995. If they remain they are apprenticed, as it were, and then at the end of two years, supposing the nurse wants to go away, what happens; is she allowed to go?—She would be allowed to go.

13996. Have you got what is termed, at some other hospitals, an institute, from which you send out nurses as private nurses?—Yes, we have a few private nurses; we began that last April.

13997. That is an increasing concern, I believe?—It would be if we had room for them, but we are so cramped for room that we only have half-a-dozen.

13998. And what number of years do they serve in the ward before you consider them qualified to go out?—Two years.

13999. And then do you advertise them?—Yes.

14000. Do you get any money from the Hospital Sunday Fund?—Yes; 1,010 l. was what we got last time.

14001. And from the Hospital Saturday Fund too?—Yes, 261 l. last year.

14002. You have to make up your accounts according to the Hospital Sunday Fund system, in order to receive a grant from that fund?—Yes.

14003. Is that the same way as you keep them for yourselves?—As near as possible the same.

14004. Therefore you consider that a good system, I presume?—A very good system.

14005. Would you like to see a similar system of accounts at all hospitals, so that people could judge whether they were extravagantly managed or economically managed?—I should, so far as it is possible; but I do not think that it is possible to bring them to be exactly alike.

14006. Why

19 February 1891.]

Mr. READE.

[Continued.]

Chairman—continued.

14006. Why?—Some set out details differently from others. My brother secretary at Westminster, for instance, objects to the heading "Sundries." I do not object to it; nor do our finance committee. We cannot detail "cab fares," telegrams and similar petty disbursements. It would make an interminable account to put them separately.

14007. We have had the estimated cost of beds furnished to us in a memorandum drawn up by the Charity Organisation Society, which memorandum you have seen, no doubt?—Yes.

14008. You are put down at 66 *l.* 13 *s.* per occupied bed; St. George's is in the same list at 75 *l.* 14 *s.*; Middlesex, 81 *l.* 15 *s.*; then we come to University College, 59 *l.* 11 *s.* We do not know what that term "Cost per occupied bed" includes in those different cases?—If you look at my annual report you will find the whole thing tabled out there.

14009. But the public have no idea what may be included in St. George's to make it appear a good deal more than yours; there is no similar basis?—I think that is another question; I was thinking of the way the accounts were submitted to the Hospital Fund. We show forth amply in our annual report how we calculate our cost per bed.

14010. Have you ever tried to make an estimate of the cost of an out-patient?—Never; I could not do it.

14011. You think it practically impossible?—It is. There were over 10,000 out-patients last year, and 11,170 in the casualty room; so many patients come in there with trifling wounds, stomach ache, and similar slight ailments.

14012. I will ask you a question about that out-patient department; is it a free department?—Entirely free.

14013. And have you any restrictions as regards numbers at all?—None; we do not find ourselves overdone.

14014. And yet the part of London that your hospital is situated in is a very populous one, is it not?—It is.

14015. Can you give any reason why you are not so overcrowded as some other places are?—No, I could not.

Earl Cathcart.

14016. Speaking roughly, throughout England and Scotland, I think, they take 1 *s.* a week as what ought to be taken for the expense of an out-patient?—We take 1 *s.* 6 *d.*; I think the Hospital Sunday Fund take 2 *s.*

14017. I thought it was 1 *s.*, but we have had it estimated as high as 1 *s.* 9 *d.*?—We always take 1 *s.* 6 *d.* in deducting the cost.

14018. Supposing there was a uniform system thoroughly understood throughout the London hospitals about as to how the cash-books should be posted, there would be no practical difficulty if the deduction for out-patients was uniform in arriving at standard of comparison in regard to the cost of beds?—None whatever.

(24.)

Earl Cathcart—continued.

14019. We have always been told that the great difficulty is as regards the out-patient dispensary, that it would necessitate two dispensaries, but that might be got over by having a uniform allowance throughout for the cost of out-patients?—Yes.

14020. The speciality of your hospital is that it is an accident hospital?—Yes; a good many accidents come to us.

14021. And that is a grand feature of your hospital, having this reception ward, of which you have told us, for people brought in in the night?—Yes.

14022. Which tends to quietude in the general wards?—Yes.

14023. And you have had in your hospital some people of eminence and position who have been brought there, and you have been the means of ministering to them with advantage to themselves; at all events, much to the comfort of their friends and relations?—Yes.

14024. And your fire arrangements are good?—I hope so.

14025. And you have a fireman on duty at night, have you not?—All night.

14026. Is that usual in all metropolitan hospitals?—I do not know.

14027. And you consider your hospital theatre to be a very good and modernised theatre, do you not?—Yes.

14028. And you administer anæsthetics before you take the unfortunate patient into the operating theatre?—Yes, always.

14029. That is a great mercy and kindness to a patient, especially to a female patient?—Yes.

14030. Is it the universal practice at the metropolitan hospitals to render the patients insensible before they are taken into the operating theatre?—I do not know; I could not answer for other hospitals.

14031. Your kitchen arrangements were specially good, especially in regard to the plan you have of a steam jacketed case for carrying up the dinner hot into the wards?—Yes.

14032. Is that an invention of your own?—Not mine.

14033. Or of your hospital?—It has been in practice ever since I have been there.

14034. Is it generally used in the metropolitan hospitals?—I do not know.

14035. Have you ever seen it used anywhere else?—I have not seen it.

14036. The beef tea is good and is made in the wards, is it not?—Some of it, the best beef tea; other beef tea is made down in the kitchen.

14037. You have specially good reason to be content with your meat supply, I believe; will you explain why it is specially good?—We get it from one of the best butchers in London, Mr. Grant, of King William-street.

14038. There is some other reason; you might get it from one of the best butchers, and yet it might

19 February 1891.]

Mr. READE.

[Continued.]

Earl Cathcart—continued.

might not be good?—I think he is a man who is very much devoted to the hospital, and always sees that we get it good.

14039. But, at all events, you are satisfied?—Yes, and we pay a good price for it compared to other hospitals.

14040. It is good economy, in your opinion, to have good meat?—Certainly.

14041. Your sanitary arrangements are in good order?—Yes, very good order.

14042. And you have an excellent plan of your sanitary arrangements?—Yes, one prepared by our architect for the information of the council.

14043. And you consider it absolutely necessary, I presume, at metropolitan hospitals that there should be posted up in the office a proper sanitary plan of the hospital?—Certainly.

14044. So that in case of anything going wrong means might be taken at the right place to remedy any defect?—Yes.

14045. You have a Jews' ward, have you not?—Not for Jews; a ward for Jewesses only.

14046. Have you any difficulty in regard to your kosher meat and unleavened bread?—No, we get the meat from a Jewish butcher in the neighbourhood of the hospital.

14047. And the benevolent lady who left you money for that ward was so good, was she not, as to say, in her bequest, that that ward might be applied to Christians as well as to Jews?—It was not a bequest; I am happy to say that the benevolent lady, Miss Levy, is alive now.

14048. She was good enough to say that the ward might be applied to Christians also?—Yes.

14049. Jews have the preference, and if it is not filled by them Christians may be put into it?—Yes.

14050. And when they are there together, Jewesses and Christians, they get on well together?—Yes, very well.

14051. You have a school attached to your hospital?—Yes; one of the articles of the foundation of the hospital was that we should have a school.

14052. And your school consists of 134 students, does it not?—It is over 200 now.

14053. It was returned formerly at 134; then that school will increase?—It will.

14054. You have nothing in the nature of a residence for the students?—No.

14055. And no club?—No club at present.

14056. How do you arrange with regard to maternity cases?—People apply for assistance, their names are registered, and they are given a letter. As the time of confinement draws near they bring this letter in, and the doctor goes out and attends them.

14057. You have a limit, I suppose, to the number of such cases that you treat; otherwise you would be overwhelmed?—We are not overwhelmed. We should have a limit if we found ourselves overwhelmed, but we have not been yet overwhelmed that I am aware of.

14058. Do you consider that you are at all injuring the poor practitioner in the neighbourhood?—I should think not judging by the appearance of the places to which our men go.

Earl Cathcart—continued.

14059. You have heard no complaints of that nature?—No.

14060. Have you any limit in the way of a radius?—No.

14061. You would go any distance?—No, we should not go very far from the hospital.

14062. And you do not consider that you are short handed in nurses?—No.

14063. Your accommodation is limited for them owing to the site?—Yes.

14064. You have done your best to make the most of that site?—Yes.

14065. And you would be glad if it could be extended?—Yes.

14066. Your nurses are young and active?—Yes.

14067. All of them?—Yes.

14068. They are cheerful, contented, and a happy family?—I think so.

14069. You would not be surprised if they told me that they were a happy family?—Not at all surprised.

14070. And your matron is young and active, and she is the sister, is she not, of the lady we had the pleasure of seeing here the other day, the matron of St. Thomas's?—Yes.

14071. Altogether your nursing establishment is a very satisfactory one?—I think so.

14072. A noble Lord here present and myself paid you a surprise visit yesterday evening, and went over the whole of your establishment, and you will not be sorry to hear that, in the opinion, I believe, of the noble Lord, certainly in my own opinion, everything we saw, considering the limited nature of your site, was most satisfactory?—I am very pleased to hear it.

Earl of Arran.

14073. What is your system for receiving night patients; is there a doctor always in readiness?—Always in readiness; he is always within hail. They very seldom go to bed much before two o'clock. The night porter is always on duty.

14074. And he would at once call down some one?—He would at once call down the resident on duty: we do not have a resident sitting up all night.

14075. Have you ever had any difficulties in that way; have there been cases which have not been perfectly clear at the first instance?—You mean cases which have been brought in of people supposed to be drunk, and who have had a fractured skull for instance.

14076. Yes?—Those cases have arisen.

14077. But the medical gentleman who would be in attendance at night would be perfectly competent to deal with such matters?—Yes, I have only known two in the eight years I have been there; in one case the man wished to go home, he would not stay; and in the other case it was so very slight that the coroner, Dr. Danford Thomas, said he was not at all surprised that the fracture was not detected.

14078. Do you prefer separate children's wards to having them mixed up with the others?—Certainly.

14079. Would you approve of their being taken into the grown-up patients' ward during the day?—There would be no harm in it; but if there are children

19 February 1891.]

Mr. READE.

[Continued.]

Earl of Arran—continued.

children crying, especially in the female ward, where there are sometimes patients who are very ill, the noise of children would disturb them. That is one reason why we have the children's ward put next to the male ward.

Lord Zouche of Haryngworth.

14080. Could you tell us what are the duties of the medical committee?—They examine candidates for the resident appointments, settle drug tenders, and advise the weekly board on all purely medical questions.

14081. And all that would be entirely under their control, subject to the general council?—Yes.

14082. But they would be allowed as free a hand as possible in all those cases?—Yes. I ought to say that the medical officers, the senior physicians and senior surgeons, are members of the governing body.

14083. I notice in your account here a rather large amount under "Salaries and Wages." The expenses of the "Engineers, porters, &c.," amount to 936 *l.* a year; does the engineer look after all the drains of the hospital; all the sanitary appliances of the hospital?—Yes, everything.

14084. Then he would take under his management the duties of a surveyor to a great extent?—Subject to the architect.

14085. And do you find that although that creates a very large expenditure it is fully worth it?—He does a lot of work in the hospital which would cost a great deal more if we had to put it out. For instance, repairing beds and making new appliances, foot-warmers, for instance; and all gas-work he does. Though we pay him a good salary, 156 *l.* a year, I think he is cheap at the price.

14086. Then with regard to the difference between that sum and the 936 *l.*, how do you account for that?—There is a stoker and an assistant engineer.

14087. And the rest would be porters?—Male attendants and porters. We have to pay commissionaires, and extra male attendants, when we have them in for delirious patients.

14088. That is all included in that 936 *l.*?—Yes, that is all included in that amount.

14089. And that you find is a better plan than having in a surveyor from outside occasionally?—We have an architect; but he is only called in to look at great things; the engineer is always there.

14090. And how is the architect paid, by fees?—He is paid by a commission.

14091. Then I think your medical school pays a small balance to the general fund of the hospital?—It does. We receive as the hospital share one-fifth of the fees from the school, and in addition we pay the ground rent, rates and taxes, and insurance, repairs, and a certain amount of wages. The school is practically part of the hospital. The Medical School Committee could not do anything very important without referring it to the council.

(24).

Lord Zouche of Haryngworth—continued.

14092. In the case of a death in the hospital, do you usually have a post-mortem examination?—We do always unless there is an objection.

14093. You do not ask leave first of all?—The patient's friends are told that there will be a post-mortem examination.

14094. If there is no objection made you have a post-mortem?—Yes.

14095. The post-mortem examinations take place on the other side of the street from the hospital, do they not?—On the other side of the street, at the school.

14096. I suppose one reason for your not being incommoded by the number of out-patients that come, is, that there are so many other hospitals within a short distance of you?—Well, that may be the reason; but a good many of our out-patients come from Kent, and from the country. The out-patient is a very extraordinary person; he goes where he thinks he will. You will find, probably, a great many Drury-lane patients going to St. Thomas's. It all depends on the doctor, I think. Sometimes, if they get a favourite doctor, there they crowd in to see him.

14097. As far as my experience of your hospital goes, I should like to endorse all that Lord Cathcart has said about it?—I am glad that you were satisfied with what you saw.

Lord Thring.

14098. Do I understand you that in your nine years' experience there has been on complaint made by the patients of the food?—I do not remember one.

14099. And yet they are perfectly free to complain?—Certainly.

14100. Do you boil your milk?—No, we have it fresh.

14101. I do not quite understand about the weekly board; what is the line of demarcation between your powers and those of the two treasurers?—The treasurer is practically the head of the hospital; I should refer to him in a case of emergency.

14102. Why are there two treasurers?—In case one is out of town.

14103. They have both got the same power?—Yes. Mr. John Biddulph Martin is the senior treasurer, and Mr. George Drummond is the other.

14104. They are above you in the hospital?—They are above me.

14105. Practically, they do not interfere in the management so much as yourself?—No, but I should refer to them any case of emergency.

14106. The practical daily management of the hospital lies in your hands, I understand?—Yes.

14107. When you go to the weekly board are these six or seven gentlemen usually the same, or different people every time?—They are usually the same.

14108. You mean six or seven of the governors; they are governors, are they not?—Yes.

14109. Six or seven of the governors virtually constitute the weekly board from year to year?—Yes, with the physicians and surgeons.

A A

14110. There

19 February 1891.]

Mr. READE.

[Continued.]

Lord Thring—continued.

14110. There are not physicians and surgeons on the weekly board, are there?—Yes; as governors of the hospital they always come.

14111. Then do I understand that the weekly board are not laymen, but medical people?—They are a mixed committee; there are laymen as well.

14112. But I want to know what is the official management, as it were; does the weekly board consist really and truly practically of the medical officers of the hospital or concerned with the hospital; or does it consist partly of medical officers concerned with the hospital, and partly of outside governors?—Partly governors and partly medical officers, who are governors of the hospital.

14113. The medical officers then govern themselves; because, I presume, if anything went wrong with the medical staff, it ought to go to the weekly board, ought it not?—Yes, it would go to the weekly board.

14114. Then what proportion are there of non-medical persons on the weekly board, as a general rule?—I should think about three to one.

14115. You say the attendance is six or seven?—I am talking of lay governors; there are always one or two medical governors; I should think six or seven lay governors; sometimes we only have two or three.

14116. I think you must misunderstand; I understood your answer to the Chairman to be, that the weekly board usually consists of six or seven members?—Yes.

14117. And that of the six or seven members, taking the average, there are two medical men and five laymen?—Something of that sort.

14118. Then coming to the council, they meet once a month, you say; how many meet?—About eight to 14; eight is a small number; 14 is a large council.

14119. I presume that from month to month the same members attend really and truly?—Yes.

14120. Then are the members of the council also members of the weekly board; or, I will put it the other way, are the members of the weekly board also members of the council?—Not necessarily; the weekly board is open to any governor or benefactor who may be inclined to come.

14121. But practically I mean do the weekly board attend at the monthly meetings of the council?—Yes.

14122. Then at the monthly meetings of the council there are really and truly, besides the weekly board, only about seven men at a good meeting?—Yes.

14123. Then it comes to this: the weekly board are very nearly the only superintending authority of the hospital?—If you look at it in that way it is practically so.

14124. I only want to get at the ordinary management; that is what it comes to?—That is so.

14125. Then who do I understand that the weekly board are elected by; they come in as they like you say?—At the weekly board they come in as they like; it is an open board.

Lord Thring—continued.

14126. Then, in truth, the management of the hospital is by seven or 14 gentlemen who practically elect themselves?—No; the council are elected by the Annual General Court.

14127. Then it is a management by 14 gentlemen who have been elected on the council?—That is it.

Earl of Lauderdale.

14128. I see in this account for 1890 there is a sum of 4,280 *l.* put down as expended for “New medical school”?—Yes.

14129. Has that recently been constructed?—No; that is an addition to the medical school which has been necessitated in consequence of the increase in the number of students.

14130. And in order to meet that you have had to sell Consols to the amount of 1,800 *l.* and Railway Stock to the amount of 2,000 *l.*?—Yes.

14131. And, therefore, you have to sustain the loss of interest on those two amounts?—We get it back in this way: the more students there are the more we get in fees; we look upon it as an investment.

14132. That is the question I was going to put to you; what is the total amount of Consols and Stock that you have in hand at the present time?—You will see it in the last sheet.

14133. This does not give the total?—£. 261 9 *s.* is the amount of Consols.

14134. But I mean the whole of your stock and investments of different descriptions?—They are all on that page.

14135. They are all here separately; I want to know your total; have you got the total?—No.

14136. What is it about, do you suppose; 100,000 *l.*?—I think it is about 2,000 *l.*; that is all, just about 2,000 *l.* That would not, of course, include the value of the leasehold property and the value of the hospital as a freehold property.

14137. Then, in the statement of liabilities, you have “Outstanding accounts, 2,319 *l.*”?—Yes.

14138. What does that mean?—That includes the quarter's accounts ending the 31st of December; we pay our accounts quarterly.

14139. It is an amount due for that quarter but not paid?—Not paid yet.

Lord Clifford of Chudleigh.

14140. Judging from this account, supposing that you carried the hospital on on the same basis as you have done for the last year, how long do you suppose you could carry it on as it is?—For about two years.

14141. And what was the nature of the fund which enabled you to put by a reserve fund in previous years?—A big year in legacies; we had 28,000 *l.* one year.

14142. Therefore, unless you were to get some big legacies in succeeding years, it would be impossible to carry on the hospital for any length of time as it is?—Without a special appeal to the public it would be impossible.

14143. You say you get a good many cases at your hospital from Kent?—Yes.

14144. Do you get them sent up by doctors at all?—

19 February 1891.]

Mr. READE.

[Continued.]

Lord Clifford of Chudleigh—continued.

all?—Some are sent up by doctors. You see Charing Cross Station is quite close to the hospital.

14145. It is the most convenient hospital for them to come to?—Yes.

14146. But it is not a great proportion of them that are sent by medical men?—No.

14147. What is the size of the larger governing body, the council?—It consists of the vice-presidents, 24 governors, and the three senior physicians and three senior surgeons, and the physician accoucheur.

14148. Would it be about 30 in all?—A great deal more than that; there are about 80 vice-presidents.

Chairman.

14149. Do you often appeal to the public for funds?—We are always appealing, and, besides, we have a festival dinner every three years.

14150. You mentioned a special appeal; you have made a special appeal, I suppose, from time to time?—Not since 1880; not what we call a special appeal.

14151. That was before you were in your present position?—Yes; that was when we had to shut up 30 beds.

14152. Do you have to bury many people at the expense of the hospital?—Not many. You can tell how many from the Samaritan Fund account.

14153. £. 35. 5 s. is the amount stated under the head of "Funerals"?—Yes; each funeral of an adult costs the hospital about 4 l.; and a child's, 2 l. That amount therefore represents about eight funerals.

14154. Are those people of whom you can find no belongings?—No, those are buried by the parish; but there are people whose friends are too poor to provide a decent funeral, and it is these we help from the Samaritan Fund. The chaplain generally provides that.

14155. Has the chaplain full control over the Samaritan Fund?—He has full control over the Samaritan Fund.

14156. Subject to the weekly board, I suppose?—Subject to the finance committee.

14157. Now, I think you said that the out-patients were about 20,000 in a year?—The out-patients are something over 10,000; the casualties are about 11,000. The total last year was 21,640; if you take 11,070 off that, that gives you the out-patients; but that includes midwifery cases as well.

14158. I think you did not tell us how many midwifery cases you had last year?—Two hundred and seventeen.

14159. In the out-patient department, everybody begins by being a casualty patient, I suppose?—By no means.

14160. Will you tell us what the system is?—The door of the out-patient room is open at 1 o'clock, and the patient is supposed to attend at 1 o'clock; the door is open from 1 o'clock to 1.30. The casualty patient is a patient who comes in an urgent case, or who comes in after the

(24.)

Chairman—continued.

out-patient room is closed or before it is open. Most of the casualties are cases of injury; some, very few, are medical cases; sometimes people come in with faints, for instance, or indigestion, and such trifling ailments.

14161. But then a person coming in as a casualty patient and then being discovered to have some disease which necessitates his coming back three or four times, is sent to the out-patient department?—He is sent to the out-patient department, certainly.

14162. Can you tell us what number out of the 11,000 casualties are new cases?—They are all new cases.

14162*. And what about the 10,000?—So are the 10,000; they are all new cases; there are not any renewals included in them, they are not attendances; the attendances may be half a dozen or more in any one case.

14163. Then you practically had 21,000 new cases, taking the casualties and the out-patient department?—Yes.

14164. And about what number of attendances would that represent?—I do not know; I could not tell that.

14165. You do not keep any record of that?—No; we do not keep any record of attendances.

14166. Still the number of new cases is, of course, a small proportion of the amount of work that is done by the out-patient department?—Certainly. I should like so say with regard to the patients that come in with scalp-wounds, or other trifling injuries, they are, after they have been attended to, told to go away and come at 9 the following morning, when they are attended to by their own particular dresser.

14167. Then you attribute the ease with which you work your out-patient department, not to the want of out-patients, but to your organisation?—I hope so.

14168. You spoke of the meeting of the governors that takes place once a year; and then you have also a weekly board; that is an open court for the governors?—Yes.

14169. The whole body of governors might come to that if they choose?—Yes.

14170. Then what is the annual general court; is that an open court?—The governors are summoned by agenda notice and public advertisement.

14171. But it is open to all governors?—It is open to all governors.

14172. Therefore it is practically the same body as the weekly board, is it not?—Only the governors are not summoned to the weekly board. It is perfectly optional for them to come to the weekly board; and, of course, it is optional, too, for them to come to the annual court; but in the case of the annual court they have an agenda sent them, and are requested to attend.

14173. But they are practically the same body, an open court of governors?—Yes, practically, except that the weekly board have not the powers of the annual court.

A A 2

14174. Do

19 February 1891.]

Mr. READE.

[Continued.]

Chairman—continued.

14174. Do you take all classes of cases into your hospital?—No, we do not take scarlet fever, and we do not take, as a rule, diphtheria; we only take diphtheria in very urgent cases; if, for instance, a child requires tracheotomy, and it is the only chance of saving its life, then it is taken in.

14175. You take the most urgent cases?—Yes. We take typhoid fever cases.

14176. And typhus?—No, not typhus.

14177. And have you any lock cases?—No, we do not take lock cases; we send them to the Lock Hospital.

14178. You have no lock ward?—No.

14179. I forgot to ask, have the nurses any holidays?—Yes; the sisters have one month in the year, and the nurses three weeks, all at one time; and any probationer can have a week if she wants it, and anyone can have a day or half a day off without any difficulty.

Earl of Kimberley.

14180. Do you make any inquiry as to the circumstances of the out-patients?—Very often.

14181. In order to see that they are proper subjects of the charity?—Certainly.

14182. Is that done by an inquiry officer?—No, but if any one comes in whom either the out-patient medical officer, or the registrar, who takes the name, suspects of being a person who is not a proper recipient of the relief, he refers the case to me, and I inquire. But I should like to point out that in many cases the patients come there and use the hospital as one goes to a consulting physician; they say: "I cannot afford to pay two guineas to a physician, therefore I come up to the hospital to get a skilled opinion."

14183. And you regard that as a legitimate use of the hospital?—Yes.

14184. Do you find the out-patient department in many cases abused?—No.

Earl Spencer.

14185. Are those cases generally sent by the local practitioners?—No, they come up of themselves.

14186. Are a great many cases sent to the hospital by other medical men in London?—Yes poor persons as in-patients. Many of our old students, if they have got a case among the poor that wants hospital treatment send it up to the hospital, and we take it in.

Earl of Kimberley.

14187. And do they also send cases up to you for consultation?—Very often.

Lord Clifford of Chudleigh.

14188. From London a good many are sent to the hospital for consultation?—Yes.

Lord Thring.

14189. With regard to these patients who come from Kent, does a poor man come up on the mere expectation and chance that you will take him in?—Sometimes they are foolish enough to do that, but as a rule some governor, or friend, or minister, who is interested in the case, writes and asks if the person can be admitted.

Then I think you hardly apprehended Lord Clifford's question which he put a little while ago.

Lord Clifford of Chudleigh.

14190. I meant to ask whether they were sent up by medical people; doctors who knew something about them, or whether they come up on their own account?—It varies; some come up on their own account, and some are sent up.

Earl Cathcart.

14191. You have a specially decent way of presenting the dead people to their friends and relations?—Yes.

14192. Will you explain that to the Committee?—We have a mortuary chapel, in which the body is placed, when friends of the deceased wish to view it, instead of remaining in the mortuary with other bodies.

14193. That was the gift of a benevolent person, I believe?—Of the late treasurer of the hospital, Mr. Robert Few.

Chairman.

14194. And who looks after that?—A porter. The chaplain often reads the first part of the burial service there for friends.

14195. Is there any nurse who looks after the dead bodies?—There is a female attendant there.

14196. In the out-patient department, is there any nurse?—In the out-patient department there is a sister on duty, and a female attendant; and if any women come in to the casualty rooms, a sister, or a nurse, is always present.

14197. Have you a night superintendent?—Yes, a night sister; she is the night superintendent.

Earl of Lauderdale.

14198. Are your treasurers salaried officers? No, they are all honorary.

Chairman.

14199. Will you put in a list of all your employés, with their remuneration?—Yes, I will do so.

The Witness is directed to withdraw.

MR STANLEY BOYD, is called in; and, having been sworn, is Examined, as follows:

Chairman.

14200.—You are the dean of the medical school, are you not, at Charing Cross Hospital?—Yes.

14201. Are you a physician or surgeon?—Surgeon to the hospital.

14202. Do you hold the qualification of the London College of Surgeons?—Yes.

Chairman—continued.

14203. Would you give us a general account of your school; how many students are there?—The number of students, at present in attendance, is 228. Last year we had 31 general students, that is to say, students who were going to take the ordinary medical qualifications.

14204. Were

19 February 1891.]

Mr. BOYD.

[Continued.]

Chairman—continued.

14204. Were those 31 new students?—Thirty-one new students. We had 35 dental students. The position of Charing Cross Hospital is rather singular; it is close to the Dental Hospital of London, and by far the majority of the dental students come to us for their anatomy and physiology; and we had 16 occasional students, taking one class or another, making altogether 82 entries.

14205. Was that more or less than in preceding years?—About the average.

14206. Do you find your school increasing?—Increasing slowly, but steadily, I think.

14207. Then as to the fees these gentlemen pay; what are they?—The general students pay either 90 guineas in one sum, or 100 guineas by five instalments.

14208. That is for the whole curriculum?—For the whole curriculum, for the Conjoint Board diploma.

14209. How long does that curriculum take; four years?—Four years. The dental students pay 54 guineas in one sum, or 60 guineas by two instalments.

14210. The total gross revenue of your school last year was what?—It was 4,070 l.

14211. Out of that you had to meet the expenses of the school?—Yes. The way in which that is arranged is this: one-fifth is taken off all fees for the hospital, that amounting to 814 l. last year; one-fifth is taken off for school management; three-fifths are then divisible among the staff and lecturers.

14212. As regards the first item, the one-fifth for the hospital; is that to defray a debt, or what is the object of paying the hospital that money?—That is in the way of rent, because the governors of the Charing Cross Hospital are as much responsible for the school as for the hospital. According to the charter, the place was chartered to give education as well as to treat the sick.

14213. The school itself is quite apart from the hospital, is it not?—A separate building entirely.

14214. A separate building on the other side of the street?—On the other side of the street, connected by a subway.

14215. Then three-fifths, you say, is divisible as premiums among the staff and the lecturers?—Yes, the hospital staff, I mean, and the lecturers at the school. There are certain hospital fees which go entirely to the staff, hospital fees for clinical teaching.

14216. Are those paid to the hospital, apart from the school?—They are paid by the students for teaching given by the hospital staff at the hospital clinical fees, as opposed to fees for general teaching.

14217. Then there are the clinical fees and there are the fees for the lecturers?—The school fees.

14218. Those are comprised in the three-fifths?—In the three-fifths.

14219. Would you tell us on what basis the division is made. I do not want to ask what any particular individual may get, but the maximum and the minimum?—You mean the principle on which we divide them?

(24.)

Chairman—continued.

14220. Yes?—The school fees are divided like this: each man gets what is paid to his chair by the students, less two-fifths. For teaching anatomy, for instance, the lecturer will receive the anatomy fees, less two-fifths; and so on with chemistry and all the others. The hospital staff divide among themselves the hospital fees, less one-fifth. That is divided in this way: it is split up into 82 shares; 60 shares go to six senior officers, the three surgeons and three physicians, whilst the remaining 22 shares go to the three assistant physicians and three assistant surgeons, the obstetric physician, the dental surgeon, and the skin physician.

14221. These are what you call the hospital fees?—Those are what we call the hospital fees.

14222. What is the maximum amount that might be derived from fees for a course?—The winter course, I suppose, averages about 160 l. to 170 l.; the six months winter course. Sometimes they may reach 190 l., but the average would be I should think, 170 l. for the winter classes, whilst for the summer classes they go from 60 l. to 80 l.

14223. That is the minimum of the higher officials?—These are school fees, they have nothing to do with the hospital at all.

14224. Then what is the minimum that a teacher or lecturer might earn?—If he had a summer course only he might not earn more than 60 l. by his course of lectures.

14225. Do not some lecturers get more shares than others?—No; I am speaking of school fees now. The clinical fees are divided according to shares; the school fees are divided thus: after two-fifths has been taken off the remaining three-fifths is handed to the man. If he has a chair which there are a large number of men attending he will have more; if few, he will have less; if it is a long course it will be more; if short, it will be less; the winter course being six months and the summer, three months. That is the way the school fees are divided. The hospital division is according to the share, by which every senior officer gets five times as much as one of the many juniors.

14226. In fact it depends, as regards the lecturer, upon the number of students attending his course of lectures?—Yes, and the length of his course, the number of lectures.

14227. As a matter of your own opinion, are you satisfied with the present system of medical education in the hospitals?—Very fairly.

14228. Could you point out, giving us your own opinion, any direction in which improvements could be made?—I think it would be a very great advantage if the hospitals could be relieved entirely of the teaching of botany, zoology, and physics, and a certain amount, just of the rudiments, of chemistry. If students were made to pass those before they began their medical education, I think it would be a very great advantage.

14229. Where would you have that course given; would you have some central lecture halls?—That does not seem to me to be necessary. There are plenty of places where they can go; there are excellent science departments in so many colleges all over the country.

A A 3

14230. You

19 February 1891.]

Mr. BOYD.

[Continued.]

Chairman—continued.

14230 You would make it merely a necessity for entrance into your medical school that they should have acquired that preliminary knowledge before they were allowed to enter?—Precisely.

14231. Then where would you have your examination to test their qualifications?—It ought to be part of the preliminary examination; the preliminary examination I mean, that everybody must pass before he can be registered as a medical student by the general medical council.

14232. Then as they have to be examined in certain subjects for registration by the general medical council, you would just add to the examination these three or four subjects which you have mentioned?—Yes.

14233. What is the preliminary examination now?—There are so many of them; each one with a different syllabus. I mean to say that you can get a very easy one, which is admitted by the general medical council, or you can get a university degree, which, of course, they are very glad to accept. They will accept down to a certain level; I forget whether you must have Greek; but you must have Latin and one modern language. Chemistry is one of the subjects which they will take; physics is another which they will take.

14234. Have you ever considered whether it would be advantageous to have a central education board for medical students?—Yes, I have thought a great deal on it.

14235. Will you give us your opinion?—I think that there would be great danger about it. In the first place the absence of competition would do away with the strong desire to teach. In the next place it would probably be the case that men who taught nothing else but their own science, and who did not practice, would be the teachers. I am supposing that you are including anatomy and physiology, not simply physics and chemistry. I think it is a distinct disadvantage to the ordinary medical man to be taught anatomy and physiology by a man who never applies either; a very distinct disadvantage.

14236. That system does exist, does it not, abroad; do you know what happens abroad?—Yes, undoubtedly in many cases there are pure anatomists and pure physiologists teaching the subjects.

14237. But you prefer the system as it exists here?—I do. I think that the entirely scientific men have of course their great value, because they are the men who, to a large extent, advance the knowledge of their science; they devote their whole time to it; but I do think there are great advantages to the ordinary medical student in being taught by a man who always makes the subject bear on what he has to do afterwards as the work of his life. Of course we have illustrations of both in London. At the different colleges you will find pure anatomists and pure physiologists. At University College, for example, you will find Mr. Schäfer, who is a pure physiologist, and Mr. Thane, who is a pure anatomist.

14238. Do you think by having a branch of a central university for such studies you would not secure better lecturers?—You might, and you might not. You might get a very able man, a man who knew his work extremely well, and yet

Chairman—continued.

was not a good teacher. That is often the case in those special chairs. You find a man, an extremely able anatomist, who knows everything that is known about that subject, but he is not a good teacher at all, and the work goes to his demonstrators; it is not at all uncommon to find that; he will have half-a-dozen demonstrators working it.

Earl of Cathcart.

14239. The subway which you mentioned is not in the nature of a passage, where people could pass, but simply a subway to get over small trucks?—It is for the purpose of conveying the bodies of patients who have died in the hospital to the school, where all post-mortem examinations are now performed.

14240. Was any difficulty experienced in getting permission to make the subway?—I cannot tell.

14241. Have you any private practice, or is your whole time occupied as dean?—No; I have private practice as well, and I am surgeon to the hospital as well.

14242. If there was a uniform preliminary examination, including the subjects you mentioned—elementary botany, zoology, and chemistry—then crammers and schools preparing for this preliminary examination would come of themselves?—Yes; I suppose so.

14243. Then there is, at present, no uniform system for this preliminary examination?—No. There are ever so many bodies examining for it.

14244. It would be much better if there was a uniform system?—Very decidedly.

14245. You want a preliminary examination, as you have of subjects required for the Army, carried out on a uniform principle?—Yes.

14246. So that young men might come from colleges and public schools all over England prepared to pass this preliminary examination on a uniform system?—Decidedly; that would be the greatest reform you could have.

14247. And that is what you really want?—Yes.

14248. So that boys might come from Durham, or any college or school, and pass an examination in those preliminary subjects?—Yes.

14249. And, afterwards, their whole course of education would be in the hospitals?—Yes.

14250. Have you any trouble with the students as to discipline, and that sort of thing, by reason of your not having a residence or a club?—No; occasionally, of course, troubles do arise.

14251. But the conduct, on the whole, is good?—I think so.

Earl of Arran.

14252. Would you have the certificate for the examination in these subjects of botany, chemistry, and zoology given by the hospital?—No; given by the examining body.

14253. So that the students would arrive with this certificate, and be prepared to enter on their further course?—Yes.

14254. Which would be the best general body, in your opinion, to give that certificate?—I have not thought of that; what I have always thought is that we want a more uniform standard, and a higher

19 February 1891.]

Mr. BOYD.

[Continued.]

Earl of Arran—continued.

higher standard, very decidedly, than the lowest which is now accepted.

14255. There are, as I understand you, plenty of places where they can go through this preliminary course, and learn these subjects, in existence at this moment?—Yes.

14256. Would you take the certificate of each of those places, or would you have a uniform place of examination?—A uniform place of examination; but I would take the certificate of any teaching place. All you want to know is, that the man has the necessary knowledge, no matter how he got it.

14257. You think these bodies would be sufficiently competent to grant a certificate?—They can easily get examiners who are perfectly competent to examine.

14258. Would you like to have a central body conducting those examinations?—We want to make it bear upon Scotland and Ireland as well; and it would be very difficult, I suppose, to bring men from all parts of the kingdom to one place. Of course an examination might easily be conducted all over the kingdom, and if we could get a uniform standard to prevent men from going through by a side portal, so to speak, that would be an immense advantage. If we could get that right through the whole education, get the lowest standard fixed, it would be an immense boon.

14259. You would then get examinations conducted upon the same principle, which they are not at present, I understand. The Scotch examinations are conducted on somewhat different principles, are they not?—The principles are the same; it is a question of standard, I imagine. The papers set at examinations for some of the lowest diplomas contain questions, that to answer thoroughly, you would think yourself a very good man. So it must be a question of standard rather than of the papers.

Lord Zouche of Haryngworth.

14260. Did I rightly understand you to say that at the present moment you do not admit a man as a medical student till he has passed some examination?—No one can study at a medical school until he is registered as a medical student by the general medical council. It is true that they will sometimes allow a man to back register; but with that exception, what I said holds good.

14261. He must have a certificate from the general medical council?—He must be registered as a medical student by the general medical council.

14262. On what conditions do they put him on the register?—On condition that he shall have passed a preliminary examination, which may have been that of the College of Preceptors, or I think, a second-class Cambridge local, or one of the Apothecaries' Hall. On the other hand, of course, they will take a B.A. if they can get it; they are very glad of it.

Lord Thring.

14263. The question you are raising, is the question that has been raised for the last twenty years, has it not, as to the capacity of certain colleges to be examining bodies?—There is no doubt that they are able to do it if they like, only

(24.)

Lord Thring—continued.

it is the interest of certain bodies to have a lower standard.

14264. To put it in very plain English it is simply this: We know very well that there are certain colleges in the United Kingdom that have very fine examinations, but pass men at a very low standard?—Exactly.

14265. In the same way as we have had American degrees and degrees from all over the world brought forward as a qualification for the medical profession, till they were stopped by a recent Act. But your argument goes to show this: that you want to have the number of bodies limited that have a power to grant certificates of these preliminary examinations; that is so, is it not?—Unless some method could be devised by which the standard should be kept up to a certain point.

14266. But this is the question really and truly: There are various colleges which we all know, but need not specify, which pass their men at too low a standard?—Yes.

14267. And you want to abolish those colleges, as far as this question is concerned, but you do not want, do you, to have one college or to have one examining body only, that should examine for all the medical profession?—No, I do not think that would be desirable.

14268. You do not want to do away with the power of Oxford or Cambridge, or the other great universities, to grant certificates of these preliminary examinations?—No.

14269. You want them to require a certain examination?—I want either that, or to give them a decent standard.

Earl of Kimberley.

14270. With regard to the preliminary examination, you think, as I understand, that it should be conducted in the same manner for all candidates?—I think that a certain standard ought to be ensured for that; but I should think that the B.A., or anything higher than the standard fixed, should be received.

14271. With the exception of certain university degrees which you think would be sufficient without any further preliminary examination, do you think that the examination should be uniform?—I do.

14272. Then how would you secure that?—It might be secured by having a body here to set and to correct the papers, and then sending them over the kingdom.

14273. That would involve, in fact, a central examining body?—It would involve a central examining body.

Lord Thring.

14274. I will put this case to you: I examine, say, for a small college; I set a series of papers exactly the same as Trinity College, Cambridge, the largest possible college, would examine upon; I know that my men do not come up nearly to the standard of the Trinity College people; but if I set quite as hard papers it is a question of who is examining; I pass so many men at a lower degree of excellence than I should pass them if I belonged to a larger college; but how can you possibly prevent that

A A 4

except

19 February 1891.]

Mr. BOYD.

[Continued.]

Lord Thring—continued.

except by having a central examining body in which all the examiners are consulted and set the same papers. The papers that you set at an examination are not the test of whether the examination is difficult or not; the test is the standard which the examiner requires; and very often an easier examination is much more difficult to pass than a harder examination, because the one examiner requires a higher standard than the other; do you follow me?—Yes, I follow you.

14275. Then I do not understand how you can do it, except in this way: you must do one of two things; you must have colleges which you can trust to have a proper standard, like Oxford or Cambridge, or else you must have a central examining body, all the examiners of which will take care that men do not pass through at an inferior standard; but that is not secured by the hardness of the examination or by the papers being the same. You show me your papers and the noble Lord opposite shows me his, and I say, “His are more difficult than yours; a man who can pass his papers ought to be of higher attainments”; but it does not follow; there may be a higher standard required by one examiner than by the other?—I follow you, and I quite admit that you cannot have uniformity unless you have one body to examine.

Earl of Kimberley.

14276. In point of fact you would have to introduce the same system as in the London University, namely, that the candidates are either examined at the university itself, or that papers are sent out to the different colleges and returned to the university, and then the papers themselves examined by the London University examiners?—That is one plan I did suggest.

14277. One word in regard to the diplomas for surgeons and physicians; I think I understood you to say that you were very desirous to see it brought to the same standard through the United Kingdom?—The lowest standard I should like to see brought up to a certain point.

Earl Spencer.

14278. Is there any body now in existence in England that conducts these preliminary examination examinations as a central body?—I do not think so.

Earl Spencer—continued.

14279. You would have to create it?—I think so.

14280. Have you ever thought how you would create it?—No, I have not.

14281. It would be rather a difficult thing, would it not, to get a body that would gain the confidence of all the medical schools?—Of course the idea of that would come from a State diploma, if you have a State minimum.

Earl Cathcart.

14282. But how, by taking university degrees instead of the preliminary examination you speak of, could you ensure your getting the special subjects you want included?—You would have to say they must be included; but anybody who wished to study medicine would probably study science if he was taking a degree at all.

Chairman.

14283. Are you very anxious to maintain the individuality of your own school?—Well, yes, personally I am, very decidedly; and I think we have been mentioned on one occasion in this inquiry in rather a bad sense. I think it was said that we could not possibly teach various subjects. It was said, for example, by one witness, that how a school like Charing Cross or Westminster could teach physiology or chemistry was beyond his power of conception; he did not see how we could do it at all. I think, without any boasting, I may say that our physiology department at Charing Cross is as good as any in London. We have got a beautiful microscope room, and an excellent private laboratory for the higher work, and our physiologist is well known, I think, not only here, but on the Continent.

14284. Is there anything else you wish to state?—Nothing.

Earl Cathcart.

14285. Can you give us the number of the question where that statement was made?—I cannot.

14286. Do you remember who it was who said it?—Sir Andrew Clark; and I am not aware that Sir Andrew Clark has ever been in the place.

The Witness is directed to withdraw.

MR. FREDERICK WILLCOCKS, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

14287. You are one of the out-patient physicians, are you not, in the Charing Cross Hospital?—Yes.

14288. Are you resident in the hospital?—No.

14289. Could you tell us please, how you organise your out-patient department on the medical side; what happens from the first moment of a patient presenting himself at the hospital?—The out-patients come from one to

Chairman—continued.

half-past one o'clock; then the doors are shut and locked, and we commence to see them.

14290. No out-patient is admitted after half-past one?—Not after half-past one; they all have to be there by half-past one. Those who come without any recommendation from a governor are given a paper which lasts them according to the discretion of the medical officer, to give them medicine for three days or a week, or even longer; and

19 February 1891.]

Mr. WILLCOCKS, M.D.

[Continued.]

Chairman—continued.

and they are recommended to get a subscriber's letter if they desire to attend again; or the medical officer has the power to give them a letter himself at once if he thinks it necessary. Other patients come with subscribers' letters which last them for two months if it is necessary for them to attend so long.

14291. Are those letters renewed by the hospital?—They may be renewed if it is necessary.

14292. What constitutes a man an out-patient?—The fact of his applying.

14293. But how does an out-patient get from the casualty department to the out-patient department?—The ordinary out-patient has to sit there till we see him; he comes at a certain time and waits to be seen by the out-physician or surgeon; and he has to wait till all the business there is finished; but the casualty patients come to the front of the hospital, and are seen by the resident officers.

14294. Then from being casuals they become out-patients?—Some do, but not many. The majority of the out-patients come at a certain definite time to attend a certain department, and they all have to wait till they are finished; they may wait three or four hours in some cases.

14295. We were told that there was no limit to the numbers of out-patients; but practically opening the doors at one o'clock, and shutting them at half-past one, does limit the numbers, does it not?—We are mainly limited by space; the number that can be in the waiting-room at a given time.

14296. But supposing you had half-a-dozen out-patients coming at a quarter to two they would not be admitted?—No.

14297. They would have to come the following day?—Yes.

14298. Now, in the out-patient department, there are several departments working at the same time?—Yes; there is always a physician sitting; a surgeon and, very commonly, some special department going on at the same time.

14299. What time do these departments begin?—They begin at half-past one.

14300. That is the earliest?—The ear, the throat, the teeth cases, and so on, are seen on some of the mornings; I see throat cases on Friday mornings, in addition to my two afternoons at ordinary out-patients work; that is my special department.

14301. Then casuals come whenever they feel inclined?—Yes; they come at any time; they are mainly accidents.

14302. Do you find that you have sufficient time to diagnose the cases?—We have to take the time; we have to stop there till they are finished; there may be very many or few patients.

14303. There is no limit, as regards the time, when you have patients in hand?—No; we have to go on till they are finished.

14304. Do you teach?—Yes; I am lecturer on *Materia Medica* in the school.

14305. Have you a class in the out-patient department?—Yes, students attend; there is clinical teaching there.

(24.)

Chairman—continued.

14306. How many students do you have there?—They vary on different days, according to the attractions that there may be elsewhere; sometimes a dozen or more; sometimes only two or three; there are always some.

14307. Do you find that much advantage in regard to the education of medical students is obtained from the instruction given in the out-patient department?—I think, perhaps, on the whole, from a teaching point of view, it is the most valuable part of the hospital. They there see the class of cases that they will see afterwards, the serious ones and the comparatively minor ones mixed up together, and they have to pick out the serious ones.

14308. They see every description of case?—Yes; and they see it from the very beginning.

14309. What takes the time really is the teaching, is it not; not the diagnosis of the cases?—The physician has to find out of course what is the matter with the patient; he must go thoroughly into the case; that may be partly done for him by his clinical clerks; they take histories and get information for him, and so on.

14310. But the second time, for instance, that a patient comes, I suppose the treatment itself might be carried out in a very short space of time?—Yes, in many cases.

14311. But still there is a certain amount of explanation required for the students?—Yes.

14312. And that is what takes the time?—The difficulty with the out-patient is the first time of seeing him; we have to take a record the first time, and get all the facts out of him.

14313. Your new cases are limited merely by opening the doors at one and shutting them at half-past?—Yes.

14314. Then you would not like to see the out-patient department of the hospital done away with at all?—No.

14315. Do you have many out-patients sent to you from practitioners in the neighbourhood?—A good many medical men send patients to the hospital to know what we think of them; by old students it is very commonly done; especially if one of the physicians takes a special department.

14316. Are your out-patients all of a very poor class?—I should say the large majority are.

14317. You do not think the charity is abused?—No.

14318. How long have you been in the out-patient department?—Nine years.

14319. You have had considerable experience therefore?—Yes.

14320. Do you find that there is much complaint made by the profession of the out-patient department of your particular hospital?—I do not think so; I do not think our patients could pay; certainly not very much.

14321. By the poor practitioner, I mean?—I do not think our out-patient department injures him.

14322. What would become of these people supposing there was no out-patient department; they would have to go to the poor-law, I suppose?—Yes.

B B

14323. Does

19 February 1891.]

Mr. WILLCOCKS, M.D.

[Continued.]

Earl Cathcart.

14323. Does an outside practitioner ever send cards or notes with an out-patient?—Occasionally; they perhaps want some advice about a patient.

14324. And do the patients mention by parole statement that they have come from a certain doctor; is that done also?—Not as a rule; if they come from a doctor, they come with his card or a note.

14325. We were told at St. Thomas's that it was very usual there to get notes and cards from outside practitioners?—I get a fair number of them.

Lord Monkswell.

14326. Have you formed any opinion whether any reform would be desirable in medical teaching?—I think what my colleague Mr. Boyd said just now expresses my opinion.

14327. You agree with him?—In the main.

14328. Mr. Gould, the Dean of the Middlesex Hospital School, told us the other day that he was in favour of the scheme of the University of London so far as it included some kind of representative faculty which would have considerable influence on the medical schools; do you agree with him there?—I think generally. It is not precisely known what the University of London Scheme is yet. It is not finally settled.

14329. What he says (it is at No. 13168) is: "All the teachers of all the London medical schools would together form a faculty and have the power of sending a certain number of representatives to the senate (that means the senate of the London University, I suppose) and appointing a board of studies"; should you agree to that?—I should in general terms. The University of London is the best central examining body we could have for the London Medical Schools; and a representative board of medical studies in the University would command the respect of the teachers in the schools of medicine.

14330. You think it would be desirable?—Yes.

14331. Do you think it would be desirable, as Dr. Lennox Browne suggested, that the schools should be separated from the hospitals?—I think not; I think the natural place to study medicine is at a hospital.

14332. Do you think the schools are too numerous at present?—I think not. The student there sees the practical application of scientific work.

14332*. You would not do away then with even the smallest of the medical schools?—No; they are very fairly attended. A small school to-day may be a large one to-morrow, and in a small school the student gets more individual attention from his teacher than in a crowded one.

14333. Would you not get better men to lecture at larger schools?—I think not. We were a small school 15 years ago, and are now comparatively a large one. It depends very much on the staff of the particular institution.

14334. You would not suggest any interference, but would say that any hospitals should have schools that like?—Any increase of them might be open to question; there are quite enough.

14335. Then your answer rather amounts to

Lord Monkswell—continued.

this: that there may be a certain amount of vested interests concerned in keeping up schools, if you say it would not be desirable to increase them?—I do not think there is much room for more. One hospital tried an elementary school some time ago but gave it up.

14336. Do you think that, in the natural course of things, a school that was not wanted would disappear; or would you suggest that some authority should have power to prevent the needless multiplication of schools?—I think it is very much a matter of free trade; if the staff of the hospital like to teach, and can attract students, there is no reason why they should not, and the proposed central board of studies in the University could supervise and inspect the teaching of any subject in any of the schools, and maintain the teaching at a high standard.

Chairman.

14337. Do you keep any return of the cases that you treat in the out-patient department?—I keep notes of them all on their papers; these papers are all numbered and pigeon-holed.

14338. You know how many new cases you have?—That is kept by the registrar.

14339. Not the number of attendances?—No; I believe the average number of attendances is about four times the patient, taking those without letters and those with letters; and our out-patients are about 20,000.

14340. So that it is about 80,000 attendances?—Yes.

14341. You receive no salary as out-patient physician?—No.

14342. Can you answer this question: do the residents in the hospital receive any salaries?—No, they do not; they merely have board and lodging.

14343. And the physicians and assistant physicians, and surgeons and assistant surgeons, do their work for nothing?—Yes.

14344. Do you know if the work in your department on the physician's side is greater or less than the work on the surgical side?—I could not say positively.

14345. But is there very much difference?—I should not think there was very much; perhaps there are rather more medical cases than surgical; medical complaints, perhaps, are commoner than surgical.

14346. But the system is the same on the surgical side as it is on the medical side?—Yes.

Lord Clifford of Chudleigh.

14347. Did I understand you aright that it is your opinion that, if there was a strong examining body it would be immaterial to a great extent, at which school a student studied?—Yes; I think it would be in that case; that is to say, he would go to the place he could have the best education at.

14348. And as long as the knowledge acquired by him was sound, there would be no object in restricting the number of schools where he could learn?—The student would naturally go where he got the best teaching.

Earl of Kimberley.

14349. Do you limit the election of your medical

19 February 1891.]

Mr. WILLCOCKS, M.D.

[*Continued.*]*Earl of Kimberley—continued.*

medical officers to those holding any particular qualification, to those who possess a London qualification, for instance, the qualification of the College of Surgeons, or the College of Physicians?—A surgeon must be a fellow of the Royal College of Surgeons, and a physician a member of the Royal College of Physicians.

14350. So that you could not elect anyone who possessed a qualification in Scotland, or in Dublin?—Not unless he took the London qualification.

14351. On what ground do you enforce that regulation?—I think it is an old custom in most of the London hospitals.

14352. Very likely; but on what ground is it based?—I do not know; it is merely a custom kept up still.

14353. Do you think there is any value in it?—I think it is the old idea as to the College of Physicians that no man could practise in London as a physician unless he was a member or fellow of the College of Physicians in the old days.

14354. Do you think you may exclude competent men from your hospital by that restriction?—They could easily take the London qualification.

14355. But would it be a very pleasant thing for a man who had a large practice, when he was advanced in life to have to pass an examination?—I have known men who have done so.

14356. Do you think it is an agreeable thing to do?—No.

14357. Do you think every man could do it; do not you think that many people who are very competent have forgotten their book knowledge so much that they could not pass the examination?—Then they are not competent to be on the staff of a teaching hospital.

14358. But, surely, could you not trust your electing body to select really eminent men from whatever parts of the United Kingdom they might come?—It is not really a subject I have ever thought much about. It is the general regulation of most London hospitals.

Chairman.

14359. You said that the surgeons and physicians must have these qualifications; does that apply also to the assistant surgeons and physicians?—Yes. All the permanent hospital staff must have these qualifications.

14360. Do you include the resident medical

Chairman—continued.

officers in that answer?—No, theirs are the ordinary qualifications; they are selected by a competitive examination; they are our best students.

14361. Does it ever occur that you get a man as resident who has been educated at Glasgow or Edinburgh?—Not for many years; we have always had a sufficiently large number of students to select the residents from; there is always great competition.

14362. You do not know whether there is an obligation on the part of the authorities to advertise vacancies?—No; they do not advertise them; generally they select men educated in the institution.

Earl of Kimberley.

14363. Is not that open to this objection, that being a sort of close corporation they are very apt to get into one groove if they have no outside light thrown on them?—I think not, because the medical practice of the profession is much the same everywhere.

14364. Still is not it in all institutions found to be very desirable to have, occasionally at all events, men from the outside, who generally look upon things with somewhat different eyes from those that belong to any particular body?—Yes; still these resident appointments are the prizes of the school really; they are the best things a man can get; he aims at getting one of these resident appointments at the end of his curriculum.

14365. Does that apply to the consultant staff?—No, we are taken from all schools.

14366. You limit your reply to the residents?—Yes; we have almost every university in England represented on the teaching and consultant staff, and also some of the Scotch Universities.

Earl Cathcart.

13367. You have a number of gentlemen of colour in your school, have you not?—Two or three, I think.

13368. As a rule, are they up to the average of your pupils?—Some have been very much better than the average.

13369. And sometimes they are made officers?—Yes.

13370. We had a coloured gentleman from the London Hospital who was one of the staff?—They are sometimes made resident officers.

The Witness was directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 23^o Februarii, 1891.

LORDS PRESENT :

Earl CADOGAN.
Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. THOMAS RYAN, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

14371. You are the Secretary of St. Mary's Hospital, are you not?—Yes ; I am the Secretary of that hospital.

14372. Where is that situated?—It is situated in Cambridge-place, Paddington.

14373. In the parish of Paddington?—Yes, in the parish of Paddington.

14374. When was it founded?—It was founded in 1845 ; the foundation stone was laid in that year.

14375. It is, therefore, I suppose, what you would call a hospital with a great deal of modern improvements about it?—I am not quite sure that I could answer that question in the affirmative. It ought to have many modern improvements because it has the advantage of youth ; but I am not quite certain that it can be said to have all the improvements of modern construction ; I think the medical staff are rather inclined to entertain the opposite opinion.

14376. But at any rate it is of newer construction than a great many of the hospitals that we have had before us, like the Middlesex Hospital, for instance?—Doubtless.

14377. Is it a free hospital?—I should describe it as a free hospital, although the letter system exists ; but owing to the fact that so many patients are admitted without letter by reason of the gravity of their condition, I think I can correctly describe it as practically a free hospital.

14378. You have no paying beds or wards?—We have no paying beds or wards.

14379. And are the out-patients in the same degree free, with the exception possibly of letters?—The out-patients are free in the same sense.

14380. Is there any restriction on the numbers?—There is no restriction on the numbers whatever.

14381. How many beds have you?—Two hundred and eighty-one.

14382. What is about your working maximum?—About 255. Our proportion of working

(24.)

Chairman—continued.

strength is somewhat higher than that of most hospitals. The number of patients we take in per bed during the year approximates to 14, which is about the same as at University College Hospital, but is more than at most others, I think.

14383. And from that answer, I suppose you you are continually full?—We are pretty continually full.

14384. Is there any time of the year when you have to turn away patients, because you have not got room for them?—I should say that we constantly have very carefully to sift our patients with a view to taking the gravest cases, and letting the others go elsewhere on that account.

14385. At the same time in that district, we were told the other day, there is an enormous amount of medical relief from hospitals, and dispensaries, and so on?—I should hardly have thought that it was so. There is only one hospital in that district.

14386. The answer that I have got in my mind was one from Mr. Fardon, of the Middlesex Hospital, who told us that within one mile of the Middlesex Hospital, there were over 2,000 beds ; perhaps they do not stretch out in your direction?—It may be as Mr. Fardon states ; but if I were to endeavour to bring to your Lordship's conception a notion of how we stand in that way, I should say that the whole of the district of London, west of the Edgware-road, and north of the Park, is served by St. Mary's, and that it is a very large district indeed, the population of which has vastly increased within the last 20 or 30 years. Quite a new town has sprung up, which we know as Kensal New Town, and that part known as North Kensington ; and I can say positively, that St. Mary's is not adequate at the present moment to meet the necessities of this large district.

14387. Then to get your answer on the Notes I will put this question to you : Do you think that

B B 3

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

that the medical relief in Paddington is deficient?—Certainly.

14388. Is there a Paddington Infirmary?—There is.

14389. Is that one of the new 1868 infirmaries?—I believe it is; but my information on that subject is limited.

14390. Now as secretary may I ask, are you a salaried officer?—I am.

14391. Will you tell us what your salary is?—My present salary is 400*l*.

14392. And board and lodging?—I do not reside in the hospital.

14393. But have you any board, luncheon and so forth?—Yes, there is a luncheon provided for me.

14394. To whom are you responsible?—I am responsible to the weekly board. Perhaps it would be well if I were, at this point, to give you to understand the nature of the constitution of the weekly board.

14395. I think it would be an advantage that you should do so?—The hospital is governed by a number of individuals who are called governors, and the governors are persons who subscribe three guineas a year or who have given donations amounting to 30 guineas or more. The form in which they have become a government is the form of quarterly and weekly boards, which quarterly and weekly boards appoint standing committees. The two standing committees are the House and Finance Committee, which may be considered the general administrative body of the hospital, and the Medical Committee. I can tell you the nature of the business of those boards and committees.

14396. If you please?—The quarterly board, as may be gathered, meets once a quarter, and the nature of their work is to read the minutes of the weekly boards that have been held during the quarter, and to confirm them or otherwise; and practically that is the nature of the control which the quarterly board exercises over the affairs of the hospital.

14397. The quarterly board consists of all governors, I presume?—It may consist of all governors.

14398. And how do they become aware that a meeting of this quarterly board will be held?—The law is that it shall be advertised in the newspapers and that notice shall also be sent; but there is an exception to the sending of notice which is provided for by law, and that is if the business is of a purely formal character.

14399. Then as to the weekly board?—The weekly board's business is as follows: they first of all read the minutes in the ordinary way.

14400. Will you tell us first of all how it is constituted?—It is constituted in the same way as the quarterly board; that is to say, every governor has the right to attend and vote.

14401. It is an open court then?—It is an open court.

14402. It is practically the same body, then, as the quarterly board?—Without any difference whatever; it is exactly the same body, except, of course, that that body as a quarterly board has higher functions than as a weekly board.

14403. And how about notices; is it a known

Chairman—continued.

fact when the weekly board will sit?—It is a known fact; we do not summon weekly boards. The weekly board, I may say, meets on Friday at four o'clock.

14404. And its business is what?—The first business after the reading of the minutes, is the question of the election of governors. The names of those persons who have qualified are read out to the board, and they are elected, or otherwise, as the board may think fit. Usually they are elected. Then the business varies fortnightly; every fortnight the house and finance committee, which meets once a fortnight, sends up a report, and that report of the house and finance committee is taken next: and there is generally a warrant at that time prepared for the chairman to sign, authorising the payment of such accounts as the house and finance committee may have recommended; and then the clauses of the house and finance committee's report are taken seriatim, considered, and resolutions passed upon them.

14405. Then a medical man may serve at either of these boards, I suppose, if he is a governor?—A medical man occupies precisely the same position with regard to the right of attending and voting at those boards as any other governor.

14406. This is what happens as far as the weekly board is concerned?—Yes; I was about to conclude my account of the business of the weekly board: Once a month the medical committee, which meets monthly, sends up a report which will be taken next. Then from time to time as an examining committee, which is a sub-committee of the medical committee, may have examined and have to report upon the qualification of candidates for resident medical appointments, they send in their report and a resolution is taken upon that appointing or not appointing the officer recommended; after which special business will be taken; any motion of which a governor may have given notice, or any other special business I may have to put on the agenda paper; and following that the formal reports of officers and others; I will read them, with your permission. There is what we call an alcohol report. Alcohol is an item of expenditure upon which the board considers a very careful eye must be kept; and, with a view to keeping that careful eye upon it, they have a report made weekly as to the amount of alcohol used in the gross, and the amount per head, on the average, throughout the week.

14407. Does that alcohol report pass the medical committee?—That alcohol report does not come under the medical committee's notice. Then there is a report called the house visitor's report. I should explain that we have two governors, who are appointed at each meeting of the board to visit the wards during the month, and they have to question the patients as to whether they have been well fed and tended, and treated in every way; they make the same inquiry with respect to the nurses' treatment, whether they have had sufficient exercise, and so on; and they report to the weekly board.

14408. You said that at their meeting they appointed these house visitors for a month; but the

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

the board meets every week, does it not?—Yes, and the appointment of the house visitors is made the last week in the month. The next item on the paper is to receive the report of the chaplain; then to receive the report of the matron. One feature of the matron's report is that she very specially reports to the board, as she also does to the house and finance committee, as to the incoming and outgoing of nurses.

14409. Does that mean by their appointment and dismissal, or does it mean in connection with an institute of private nurses?—No; it simply means the nurses coming in to commence their training as vacancies occur, and their leaving on the completion of training, or for any reason for which they might leave. Then follows the report of the resident medical officers as to the number of patients admitted; the deaths, causes of death, and so on; after which is read a weekly return of patients, the number admitted, the number discharged and the averages; and then the medical officers' attendance book, a book in which every member of the staff signs his name and the hour he enters, is examined. The next item on the paper is the appointment of the house visitors, of which I have spoken before; that comes on at the last board in the month: and certain books are laid on the table; they are two copies of the laws of the hospital; the medical and surgical admission books. There is a feature about those medical and surgical admission books which I should like to mention. It is this: that they afford the governors an opportunity of exercising a very considerable scrutiny over the class of patients who are admitted; it sets out the occupation of every patient, and in practice it is a very effectual check on the admission of people of a class in life who ought not to be in the hospital.

14410. That is to say, of course, as in-patients; it has nothing to do with out-patients?—That is, as in-patients. Then the legacies book is put on the table and the book called the Two Months Book, which reports on every case of an in-patient who has been in the hospital longer than two months. That completes the agenda paper of the weekly board.

14411. Does not any return come in as regards the number of out-patients?—Yes; that would come in under the head of the "Weekly Return of Patients," before referred to. That weekly return gives a return of all out-patients, casualties, and every class of patients.

14412. You keep, of course, a register of the new cases?—We keep a register of the new cases.

14413. And do you keep a register of each separate attendance?—We do not keep a register of the separate attendances.

14414. Does it not rather occur to you, that that being the case, in your report you rather under estimate the work of the department, if you do not state the number of attendances; because, of course, the number of attendances is very large?—The number of attendances is very large; but we do keep a record of the number of out-patients who attend in the out-patient department every day; but that does not come up (and, in this way, I did not give

(24.)

Chairman—continued.

you quite a clear answer) in the weekly return of patients, nor, in fact, does it come before the board. The board could always find out from me the particulars as to the number of attendances; that is one of the things that are not regularly reported to them. I always have the means of giving information on that point; I collect information and tabulate it every day. As secretary, I, of course, become aware of many things which I do not think it necessary always to report.

14415. In your own individual opinion it is an important matter I presume what the number of attendances is, because that represents the great weight of the work of the out-patient department?—Precisely.

14416. Then after the weekly board you said there were two committees; will you describe their functions?—Yes, there are two committees, one being the House and Finance Committee, as it is called.

14417. What are the functions of the House and Finance Committee?—The House and Finance Committee practically manage the hospital. The secretary of course manages it between their meetings, but I think it is a very happy description of their functions to say that they practically manage the place.

14418. They are the executive?—They are really the executive you might say. You will be able to estimate where the point of contact is between the administration of the House and Finance Committee and my own. Of course, the secretary does most it is true, but speaking of the committee as a committee, it is the administrative body of the hospital.

14419. What is the nature of the duties of the House and Finance Committee?—They commence by reading the minutes in the ordinary way, and the next thing that is done is described on the agenda paper as: "audit accounts for the past month." For the assistance of the committee, and with a view to giving method to that audit, I have a thing which I may describe as a sort of programme, which perhaps you would like me to take you through?

14420. If you please?—I should say that this audit meeting is every other meeting; it is the fourth Wednesday in each month. The first thing they take is the receipts. They check the account of the income book in the first place against the receipt books, that is to say the secretary's receipt book, the collector's receipt book, and the canvasser's receipt book. Again, they check the account against the banker's pass-books; the General Maintenance Fund, the Chaplain Endowment Fund, and the Extension Fund pass-books. Then with regard to the debtor side of the cash book, they check that against the account of income, which they have already audited, and against the Pupils' Fees Fund pass-book. The nature of that fund will be gathered from the name of it; pupils, of course, pay fees for lectures. That is with regard to the receipts. Then with respect to payments. In the first place they check the secretary's disbursement book, first of all against the weekly wages book and then against the quarterly wages book; secondly, they check the creditor side of the

B B 4

the

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

the cash book in the first place against the secretary's disbursement book which has been already checked, and secondly against tradesmen's receipts. Then they check the cash-book totals; and having thus completed their examination and audit of the financial statement, they check it against the General Maintenance Fund pass-book, the Extension Fund pass-book, the Pupils' Fees Fund pass-book, the Chaplain Endowment Fund pass-book; and they check it against the Maternity Fund account of income, and the Convalescent Fund account of income. They then prepare a money statement for submission to the board, which is merely a statement of the balances in hand, or the other way, if it happens to be so. Then this is balanced with the cash-book; and the nature of the announcement made to the board upon it is, that the balances at the beginning of the month are so and so on each fund, the total being so much, and that that total agrees with the balance between the debtor and creditor side of the cash-book. So that it is practically a complete audit from beginning to end right through the hospital accounts once a month. That takes us through the second item on the agenda paper of the House and Finance Committee. The next thing that is done is to take the report of the secretary. The secretary makes a report calling attention to anything of interest and any notion of reform or improvements in the administration of departments that he may have to suggest. The matron's report is then taken; it is very similar in character to the report she makes to the board, especially with respect to the incoming and outgoing of nurses; in fact it naturally mainly relates to nurses; it also embodies a requisition for such stores as she requires for the use of her department. The report from the steward is next taken, and then the house visitors' book is read, as it is before the weekly board. After that, they proceed to examine the steward's account of the receipt and consumption of provisions. This is a very elaborate account as to the receipt and consumption of provisions, which details every item of provisions almost; its details do not descend into trivialities altogether, but short of that it is broken up very considerably, and gives the committee a very accurate view as to the amount of consumption of provisions and as to the cost of each class, and as to whether the cost per head goes up or falls during the week, and that gives rise to question and explanation. Then the secretary has written on the agenda paper the payments which he requisitions the committee to recommend to the board for cheques to be drawn; after that would follow any special business.

14421. Is that the whole?—That completes the work of the house and finance committee generally.

14422. This house and finance committee is elected from members of the weekly board, is it not?—From governors, I should rather say.

14423. Who are the treasurers of the hospital; are they bankers?—They are not bankers; the treasurers are prominent governors of the hospital, who were appointed, for some reason or another, which would lead the board to know that they would be excellent persons to serve as treasurers.

Chairman—continued,

I might remark that they have a seat *ex officio* on the house and finance committee.

14424. Then with regard to complaints, supposing there are any complaints which have been brought to you during the week, as they occur, do they come before this committee, or do you dispose of them?—If they were at all serious, I should lay them before the committee; if they were unimportant things which I could settle, since the law puts it into my jurisdiction to settle them, I should settle them; but if they were at all important, even if I had settled them, I should report the circumstances to the house and finance committee.

14425. For instance, in the case of patients or nurses complaining of their food, or if you or the steward had occasion to find fault with the meat, would you report that?—I should not report if I had occasion to find fault with the meat, or if the steward had; I should in that case deal directly with the contractor, and record the circumstance, so that when the question of tenders was gone into next time I should place before the committee, as is my custom, a report upon the conduct of the contractors during the term we should be referring to.

14426. At the same time if the meat was bad or the coal was bad, would you send it back to the contractor?—I should send it back or provide other myself, and charge him with the difference between his price and the price I had paid.

14427. And merely make a black mark against him?—Just so.

14428. What are the duties of the Medical Committee?—The Medical Committee sits once a month, on the first Monday in every month, and the minutes are read in the same way as in every other committee. The special business generally is taken first, and then the following reports and books are examined. The medical superintendents' report is the first book which comes before them; that would refer to any septic conditions that had arisen during the month; anything connected with the sanitary condition of the hospital that should be brought to the notice of the committee; the behaviour of clerks and dressers, and the names of those he had appointed, and similar matters of that class. Then the report of the dispensary visitors. The dispensary visitors are two governors, who as their name implies are visitors to the dispensary; to see that it is in good order, and that the dispensers are doing their work well.

14429. Keeping the place clean?—Clean and in good order, with the necessary stock of things kept up, and that the place is well administered. Then the six months' book is taken. The six months' book is a book that refers to out-patients; the case of any out-patient who has been continuously an out-patient for six months or more, is reported upon, and the committee have to be satisfied that there is reason why he should be retained for a longer period than six months. Then the next thing is a book called the septic book, containing the report of any septic cases which have arisen during the month, why they arose, and the result.

14430. What are the septic cases?—Cases of

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

of erysipelas, cases of scarlet fever, diphtheria, and such cases. Then the post-mortem record, with a view to seeing whether the notes which should be kept of cases in which post-mortem examinations have been held, have been well kept. Then books of registration, &c., that is to say, the books registering the date of admission, the treatment and the results, and so on, of in-patients both medical and surgical. And then the temperature books which are kept by the sisters of the hospital to record the daily temperature of the wards, morning and evening for each day. And then every month the dispensary visitors, whose report I have before referred to, are appointed. That finishes the ordinary business of the medical committee.

14431. Those are the whole of the different individual bodies who manage the hospital?—Yes.

14432. I did not notice that you made any mention of an annual meeting or an annual court?—There is an annual meeting.

14433. Is that practically one of the quarterly courts?—It is quite a separate meeting, and it is a meeting at which other subscribers than governors are entitled to be present.

14434. Is it a public meeting, then?—That is practically a public meeting; the press can attend.

14435. Do the press come?—They do sometimes come. At every annual meeting I have been at there have been one or two representatives of the press, I think.

14436. There is one question I should like to ask: Have you any power in your rules to allow you to suspend an officer if he has misconducted himself, pending the next meeting of the committee?—My position in that respect, I think, is described by the laws of the hospital in this way: I am spoken of as being the governing head of the establishment; and I presume, although it has never been necessary, that under certain conditions I should suspend an officer. It would have to be, of course, under very serious circumstances.

14437. Obviously; then do you dismiss subordinate servants?—I am in a position to dismiss subordinate servants; I have the right to do so, but I have to report it to the weekly board if I do, and, of course, give a good reason for having so done.

14438. Then you mentioned a resident medical officer just now?—His title is the medical superintendent.

14439. Is he a salaried officer?—He is a salaried officer.

14440. And is he a member of the medical committee at the same time?—He is not a member of the medical committee. His salary is 150 *l.* per annum.

14441. And board and lodging?—And board and lodging.

14442. Then would he be the head of the establishment at night when you are away?—Yes, he would be; and his particular functions are those of supervising the resident medical officers, the clerks and dressers. That is a general description of the nature of his functions.

(24.)

Chairman—continued.

14443. Has he anything to do with the admission of patients?—He admits all patients who are admitted through letters of recommendation.

14444. Has he anything to do with the out-patient department?—He has something to do with it; he has generally to supervise it; he considers it his duty to pay visits to it daily; but I do not think he has any definite duties in regard to it.

14445. It is not one of his functions to see every out-patient?—By no means.

14446. Is he in any way responsible for the sanitary condition of the hospital beyond the general supervision that he has of it?—He would certainly be expected to report to the medical committee upon any defect in that particular.

14447. To know and report?—To know and report. It would be considered neglectful, I think, if he were not very familiar with every particular in the hospital of that sort.

14448. Supposing it were discovered that the drainage or closets or anything of that sort were out of order and he did not know anything about it, it would be considered negligence on his part?—He would be the person who would be expected to find that sort of thing out.

14449. Is he a man of standing in his profession?—Most distinctly he is; he is a man who, I think, would hardly be appointed unless his professional accomplishments were somewhat above the average, certainly above the average of our resident medical officers as a rule.

14450. He is a great deal senior to the resident medical officer?—He is always a former resident medical officer, who has held all the resident appointments, and, as far as my recollection goes, he has generally been a doctor of medicine of London, which is a considerable attainment in the profession; and that answer is given with a view to suggesting to you that his standing is high.

14451. Now the qualification for admission to a bed in the hospital practically is disease, is it not?—Yes; disease.

14452. Do you take all sorts of cases?—Excepting infectious cases, I think we take all classes of cases.

14453. And in the matter of diphtheretic patients, do you take all diphtheretic cases?—We do not. Since the Metropolitan Asylums Board, about two years ago, made arrangements for the reception of those cases, we have not taken any cases of diphtheria, except where the cases were so grave on application that they could not be safely sent away. We take them, roughly speaking, when they require operative treatment, or, at any rate, the case must be very grave; that is, perhaps, the better way to put it. We should not take a case unless its condition were so grave that we could not safely send it away.

14454. Are they in separate wards?—They are isolated; rigorously isolated.

14455. Then who gives the admission to the hospital; who passes patients in?—As we describes it in the rules, cases of urgency (with a view to distinguishing them from patients who bring letters) either medical or surgical, are ad-

C c

mitted

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

mitted by the house physician, or house surgeon, as the case may be, on duty for the day. I might explain that by saying that there are three house physicians and three house surgeons, and one of them is always described as the house physician or house surgeon on duty for the day, and his duty then that day is to admit diseases of urgency, or accidents of urgency.

14456. Has the staff or assistant staff got anything to say as regards the prohibition of patients going into their beds?—Practically the admission is managed by the resident medical officer, as I have described to you, without limitation. I dare say the staff would express approval, or disapprobation, if some cases which they thought ought not to be in their beds, were there; but that is a point of management which I have have never heard raised.

14457. You have never found your kept beds empty on that account?—No. In the paper which I answered from when I was speaking of the cases of diphtheria, there are a few notes made by the medical superintendent touching cases of enteric fever; I do not know whether you would care to know how we treat them. We do receive them; we do not isolate them.

14458. That is rather a medical question, is it not?—The fact that we do admit them would not be a medical question. I thought you might like to know that we do take them.

14459. You can, if you please, give us any information on that subject?—It was simply to mention that we do admit cases of enteric fever, and that we had 47 cases treated in the general wards during last year. I had noticed in the evidence before your Committee that that is a question which has come up very often, and I therefore prepared myself on the point.

14460. Do you take typhus?—Yes, we should take typhus.

14461. Do you isolate that?—I am not able to answer that question.

14462. Have you got many of these isolation wards; or how do you manage?—We have a floor, at the top of the hospital, or at least, part of a floor which is given up to isolation wards. The number of isolation beds is 10; there are four male isolation beds, four female, and two that we call special.

14463. Are the special wards for male patients or females?—I think they are for some special case that must be even more particularly isolated than the others; it must not only be isolated from other cases in the hospital, but even isolated from those in that section of the hospital.

14464. You tell us that you have no restriction as to the number of out-patients?—We have no restriction as to numbers.

14465. Have you ever considered that the charity is abused for want of such restriction?—No. When I was answering your question as to whether we had a restriction upon the number, I rather understood your Lordship to mean that we do not say we will draw the line at fifty or a hundred.

14466. I did mean that?—But we do make inquiry into our out-patients, and I have a green form in my hand which has certain questions upon

Chairman—continued.

it which these people are required to answer, and if the answers bring out any feature which induces the admitting officer to think that they should be brought under my notice, he sends them up with the information that he has collected, and I proceed to make a further examination, and note at the bottom whether the patient is to be admitted to the department or not.

14467. Is that inquiry made by a special inquiry officer?—That inquiry is made by the clerk who admits the applicants; but, as you may readily apprehend, after some experience in the department, he practically becomes an inquiry officer, and is very capable indeed to judge in the first place of the probable merits of these people.

14468. Will you read the contents of that form?—"Reference" is written at the top; then "Name, address, age and sex;" then "State," that is, married, widowed or single; "occupation" and "weekly earnings;" if married, the number of children under thirteen; if a youthful patient, living with parents, the occupation of the father, and weekly earnings, and how many children under thirteen. Then the nature of the ailment, and after that is written "Instructions," which is where my intervention comes in.

14469. Do you take any steps to verify the statements made in reply to those queries?—It is a very customary thing for me to see those patients.

14470. But do you ever see them in their homes, or do you ever put it into the hands of the Charity Organisation Society, or any other body, to make inquiries?—No, not into the hands of any outside body.

14471. You do not follow it up then, beyond getting answers from the patient?—Except I should see reason. If there is a *prima facie* case for inquiry it is sent to me, and I should make inquiry, as I thought fit, which might begin and end in my office, or might go further, as it has done in many cases.

14472. Are there many cases in which you have to make special inquiry?—The number of cases is very small indeed, so small as to make me feel quite satisfied that the amount of abuse of the out-patient department in St. Mary's Hospital is extremely small.

14473. Where do you get your funds from?—We get our funds from the public mainly, in the shape of subscriptions and donations.

14474. Voluntary contributions?—Voluntary contributions, as they are called.

14475. What is the main staple of the income?—The main staple of the income is the annual subscriptions.

14476. How much did they amount to last year?—Last year they amounted to 5,227 l.

14477. Is that enough to defray the expenses of your administrative staff and the nursing staff of the hospital?—I should hardly be able to get at those expenses very well. The only item of those expenses I should be able to tell you is salaries and wages.

14478. That is what I mean?—That amount more than covers the amount of salaries and wages

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

wages of all classes. The salaries and wages last year were 4,590 *l.* However, roundly speaking, they are pretty much the same.

14479. What was your expenditure last year in the grand total?—In the grand total last year it was 23,608 *l.*

14480. Then what was your deficit which you had to make up from capital?—The balance last year against the hospital was 1,063 *l.*

14481. Where does the rest of the money come from?—The rest of the money came from the following sources: The amount of donations 3,177 *l.*; dividends and rents, 2,521 *l.* (I am leaving out the shillings and pence as immaterial); refund of income tax, 49 *l.*; legacies, 8,276 *l.*; the award of the Hospital Sunday Fund, 2,083 *l.*; from the Hospital Saturday Fund, 368 *l.*; contents of almsboxes, 47 *l.*; Church collections, 27 *l.*; Friendly Societies' Demonstrations, 83 *l.*; benefit entertainments, 5 *l.* 5 *s.*; payments by probationers, 412 *l.*; sale of old materials, &c., 62 *l.*; and then a transfer from the Maternity Fund, 200 *l.* That makes up the total.

14482. Making up a total of what?—22,544 *l.*, and leaving a balance of 1,063 *l.*

14483. And that has had to come out of the hospital?—It had to come out of our invested property.

14484. Is 8,000 *l.* in legacies an exceptionally good year?—It is somewhat above the average. I think the average income from legacies from the year 1881 to the year 1890 (it happens to be just ten years) was 7,354 *l.*

14485. When you say "rents," so much is that from landed property?—Dividends and rents, 2,521 *l.*, the greater portion of which was from dividends, a small proportion from rents; and those rents have only recently arisen, and I will explain how they have arisen. The hospital, as I have before stated, is not large enough for the work it has to do, and we therefore contemplate, in fact we have taken very considerable steps towards, increasing the size of it. In addition to its not being large enough, its situation is most unfortunate; it is cut off from the main thoroughfare by a row of wretched shops, so that one can hardly find it; and that is another reason why we have wished, and have taken steps, to increase its size; and the steps we have taken are these: We have purchased the reversion to a certain piece of land on which these shops stand; then, of course, we proceeded to buy the ground-rents, and then proceeded to buy the other interests down to the occupier; and as we proceeded we received rents in an increasing degree, and those are the only rents the hospital has ever received.

14486. You have no landed property in any other sense?—We have no other landed property.

14487. Have you any endowment?—We have no endowment except one or two cots.

14488. I mean to say, could you sell out your capital to the uttermost farthing?—Precisely; and that is a point that I have wished to refer to in criticism of the figures that are contained in this memorandum of the Charity Organisation Society. I do not propose to stray out of my own particular business at the moment, and that

(24.)

Chairman—continued.

is St. Mary's Hospital, but I have a criticism to make on the whole thing. With respect to St. Mary's, which is given on page 12 of that memorandum, they set out a statement of what they call ordinary income and ordinary expenditure, and they say in column 6, "difference between ordinary income and ordinary expenditure," and in arriving at that difference, which shows a deficit of 6,000 *l.*, they omit legacies 3,900 *l.*, for what reason I have no sort of notion whatever. We included the legacies in our ordinary income, and we spent every farthing; why then they should have thrown them out in order to create an imaginary deficit of 6,000 *l.* I cannot conceive; at any rate, it is absolutely inaccurate.

14489. Do you ever make calculations how much your beds cost?—Yes.

14490. What do you estimate the cost of beds at St. Mary's to be?—Our beds are a varying cost; I should say, roughly, from about 72 *l.* to about 84 *l.* That is a very considerable variation; and I may take this occasion to remark, that I question entirely the correctness of endeavouring to form a criterion of either the excellence or the economy of the management of a hospital by a comparison of its cost per bed. I entertain the strongest opinion on that subject, that it is a fallacious comparison; it is extremely misleading; and I consider that it is open to very considerable mischief. I shall be prepared to explain to you, if you like, my views on that subject.

14491. Yes, please; I will ask you one question first; would you like to see some universal system of hospital accounts?—Nothing would please me better.

14492. And for what reason?—For the reason that they would be more susceptible of comparison; but I mean comparison by persons who understand them; because comparison of hospital accounts one with another, except by a person who has carefully studied them, and who is prepared to go to great trouble for his comparison, and to make correction of the figures, would be misleading in the extreme; nothing could be more misleading than to take half-a-dozen hospital reports and a sheet of paper, and take down the cost per bed from them, and compare their merits on those lines. In the first place, one thing that I should like to call attention to, is the fact that a hospital with a medical school attached to it, is undoubtedly more expensive than a hospital without such a medical school; while on the other side, at the same time that it has a higher expenditure, it undoubtedly increases the number of those persons who are interested in its welfare, and I consider very considerably increases its income at the same time; but that its expenditure is increased I think is undoubted. Then the question is disturbed by the proportion of expensive classes of patients, or inexpensive classes as the case may be. For instance, the expenditure of a hospital that takes a large proportion of cancer cases is increased thereby, as I heard the secretary of the Middlesex Hospital say the other day, I think, by about a half for each patient. And then, if the proportion of children in a general hospital is large, the proportion

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

proportion of expenses per individual is reduced; children are very much less expensive than grown-up patients; and, the cost throughout the institution would be brought down in proportion to the number of children in it. And then the cost of the out-patients is considerably affected by the expense of the maternity department. That of course affects the cost of in-patients; since before you commence to calculate your cost for in-patients, you make a deduction of the cost for treating out-patients from your total expenditure. Then some hospitals are rated at their full value, while some pay a mere fraction. For instance, the hospital to which I am attached has paid up to this point, on a rateable value of 250*l.* a year, but the other day it was assessed at 1,500*l.* a year, multiplying its figure by six, and that has made an increase in the cost per bed for us of about 1*l.* 4*s.* for that one single item. Some hospitals, as is well known, as I said before, are rated at a mere nominal figure, and some are very highly rated indeed. Then another point is the existence or absence of necessity to incur expense for the raising of funds, which arises very much from the locality in which the hospital is situated. A hospital situated in a very poor locality has to incur very considerable expense indeed to raise the funds necessary for its maintenance; while a hospital situated in a wealthy locality, such as St. George's or my own hospital, needs the expenditure of a very much less sum for that purpose.

14493. Where would that expense come; under what heading?—That would come under "Postage, advertising, festival dinner," and all that class of thing. The secretary's salary and the extent of the office staff would be affected by the same consideration, no doubt, and so would the number of canvassers, and so on. If you were to follow that through, and if you could possibly throw out every item of expense which was affected by that, you would find that many items of expense were affected by it; of course your printing would be affected by it.

Earl of Kimberley.

14494. Surely those expenses to which you refer would be simply deducted from the gross receipts as income; if your mode of raising funds was more expensive than in another hospital, how could that circumstance affect the cost per bed?—The cost per bed is calculated upon the gross expenditure, and always should be so calculated, I venture to say.

14495. I mean this: supposing that you are going to raise a certain sum of money by subscriptions, you have to spend a certain sum in order to obtain that; the gross amount that you receive ought to have that sum deducted from it to show what the net profit is?—That is not the way we should do it; the accounts should show every penny received on one side, and every penny spent on the other without deduction.

14496. Is it not exactly the same as this case; supposing that I had an estate with a gross income of 10,000*l.*, and you have another with the same gross income, but my outlay is 2,000*l.* and yours 1,000*l.*, and we calculate the expenditure with regard to 10,000*l.* in each case, would not that be a delusion?—It would be perfectly right to describe the one expense as higher than the other.

Earl of Kimberley—continued.

14497. If I had a net income of 8,000*l.* a year and you had 9,000*l.*, would it be right to calculate the expenditure with reference to 10,000*l.* in each case?—I hardly think it is a parallel case. Whatever we expend on appeals goes into expenditure; whatever that total expenditure is it is taken and divided by the number of beds occupied.

14498. In point of fact, they are two different calculations: the cost per bed, calculated on the net amount you have at your disposal, and the cost per bed, calculated on the gross amount of your income?—Entirely; two different things altogether; and the figure called the cost per bed is a figure calculated by dividing the number of occupied beds into the whole expenditure.

Chairman.

14499. But before you do that, do you take away the cost of the out-patients?—That is all.

14500. You do deduct the cost of the out-patients?—The cost of the out-patients; we make no other deduction.

Lord Clifford of Chudleigh.

14501. In recommending a system of accounts for hospitals generally, how would you deal with hospitals for instance that have landed property which is an expensive one to manage; would you calculate the beds upon the gross annual rental of that property or the net annual rental?—I do not quite follow that you would calculate the cost per bed on those figures; I take it you would calculate it on the expenditure of the hospital.

14502. I will put it in another way, it comes to the same thing; would you put into the expenses of the hospital all the expenses of managing that landed property?—No, certainly not.

14503. Why should you put into the expenses the cost of collecting subscriptions, which is, after all, the expense of managing your property in collections?—I think I gave you too ready an answer to the previous question. As a matter of fact the administration of landed property is a thing I have not to do with. If I am to give you a valuable answer I should like to think more upon it. The principle would seem to be the same, so that if you did the one you should do the other.

Earl Cathcart.

14504. Supposing there were a uniform system of putting down certain things in the books to the cost of beds, and certain well understood items only were to be included in the cost of beds, then the bed would form a standard of value and comparison?—But of course the method of posting would have to be very vigilantly watched.

14505. Undoubtedly; but that is done with the greatest satisfaction, I believe, by the Dublin hospitals; they have a certain number of items which are specified and which are posted to the cost of the beds, and in that way they obtain uniformity, and they do make the cost of the bed a standard?—I can conceive that that might be very well as far as it went; but if it did not exercise any control over items of expenditure other

23 February 1891.]

Mr. RYAN.

[Continued]

Earl Cathcart—continued.

other than those specified and posted to the cost per bed there would be room for vast abuse and extravagance in the classes of expenditure thus excluded.

14506. You will find a system of accounts laid down in Mr. Michelli's book whereby certain items are to be posted to the maintenance of the beds, so as in that way to gain a standard; it being necessary that there should be a general agreement as to the items to be posted to the beds?—I do not understand Mr. Michelli's Glossary to be intended for that purpose at all, I rather understand that his paper is simply to suggest to secretaries the different accounts to which every item that comes into hospital expenditure should be carried.

14507. You have evidently very clear views upon the subject; could you propose any means by which a standard could be established for taking the cost per bed?—That is a matter in which I have not only taken a personal interest but personal action for some time. When the Hospitals Association was established, some seven years ago, I attended the conference of the Social Science Association, and made some suggestions at that time for uniformity of hospital accounts. Nothing much was done then, and things went on. My principle of action was rather that the hospitals should endeavour to reform themselves, and take these steps (I said so at the time), and not wait for some outside body to come in; and my drift has always been in that direction. Time went on, and nothing was done till this Committee sat, and the question became very much talked about. At the end of last year I called my brother secretaries to meet me at St. Mary's, in November, to consider proposals that I had to lay before them as to what accounts a hospital should keep, and as to the nature and form of those accounts it should keep. There were not many secretaries there on that occasion, because on this matter, as on others, there is a very considerable difference of opinion, and nothing much came out of that, except a little knowledge and information. Then the Hospital Sunday Fund a little while back, as you may know, called the secretaries of the London hospitals to a meeting at the Mansion House, when the subject was again laid before us in the shape of the form they proposed. That form I very considerably criticised with some other gentlemen who were present; and after the meeting a member of the Distribution Committee suggested to me that it would be a good thing if the hospital secretaries themselves appointed a committee to consider that form, and after that to confer with the Distribution Committee of the Hospital Sunday Fund.

14508. Can you tell us in two or three words what your essential principle is?—The essential principle is that we should be all alike, that we should adopt the same form. The general principle is that it is not a vital matter what the shape is, provided everybody does the same thing.

14509. And you think that that uniformity would be practicable?—Without the least doubt; I am sure it would, but it should go very deeply down, and it should touch matters rather outside what would first appear to be matters of account; it should go into the matter of registering patients,

(24.)

Earl Cathcart—continued.

to be sure that the practices followed are the same; the calculations which bring out the number of occupied beds should be made in the same way. The accounts which the hospitals should keep should be all the same as to number; there should be a balance sheet, a debtor and creditor account of investments, and that is very unusual; in many hospitals there is no such account. And then there should be an income and expenditure account, with identical headings in every case, to which the same items should be debited or credited, as the case may be.

14510. That would almost entail a central audit of some kind or other to keep people up to the mark, would it not?—If this committee, of which I have spoken, will meet the Distribution Committee, will come to a conclusion as to the form to be adopted, and then draw up a glossary on something like the lines of that contained in the annual you have before you; if they will do that, and all adopt the form as revised, I think that no central audit would be required, but that that will effect the purpose in view perfectly well.

Earl of Kimberley.

14511. I rather gather that it is your opinion that, for the reasons you have stated, the mere cost per bed is not a safe guide to the bad or good management of the particular hospital?—Yes, that is my firm conviction. I had just got to the middle of this point when I diverged. Shall I continue? You will remember we broke off at the question of appeals and their cost. Then I should like to refer to the exclusion by some hospitals of certain articles from the dietary. The articles most often excluded are tea, sugar, and butter; and with a view to understanding the extent to which they would affect the cost per bed, I would tell you that the cost per occupied bed per annum for these articles at St. Mary's is 2 *l.* - s. 1 *d.* Then there is the question of the pressure at which a hospital works, I shall make some remarks upon that; the comparative severity of the cases, one hospital case may be of a very much higher proportion of severity than another. As a matter of fact that is a very weighty commentary on the comparison which is often drawn between the cost per bed of London hospitals and that of provincial hospitals. In provincial hospitals the practice is to keep patients much longer, to keep them during a greater part of their convalescence, which is a much less expensive time. Then the question of empty beds may come up; owing to some question of sanitary matters you may have to empty certain wards, and in that way you bring down your number of occupied beds very considerably, and yet your establishment expenses remain as they were, and therefore the cost per occupied bed goes up. Then, on the particular point as to whether the cost per bed is a reliable standard of comparison of all hospitals, I have some remarks to make touching St. Mary's last year, compared with previous years. The number of beds occupied daily, I would premise, depends upon the number of patients admitted and the length of their stay. For instance, if each patient stayed one year, the number of beds occupied daily would correspond

C C 3

23 February 1891.]

Mr. RYAN.

[Continued.]

Earl of Kimberley—continued.

spond with the number of patients admitted, or if each patient stayed six months, the number of beds occupied would be equal to half the number of patients admitted, and so on. Therefore, if the length of the patients' stay is reduced to a greater extent than the number admitted is increased, the result will be that the number of beds occupied daily will be lessened. Last year in St. Mary's the duration of patients' stay was reduced to a greater extent than the number of admissions was increased. This was owing to our having increased the operations of our convalescent fund and sent patients to convalescent homes at an earlier stage of their convalescence than previously, and than we could have sent them to their own homes. It is certain that this course was a great blessing to the patients so treated. It is equally certain that it resulted in the benefits of the hospital being conferred on a larger number of sufferers at a time when they most needed them. It is unquestionable, however, that this increased the expensiveness of each patient since they become less costly as their convalescence progresses. To sum up, by this policy the standard of excellence of the hospital's work was undoubtedly raised; yet, as the total expenditure was increased,—as the number of occupied beds (by which the expenditure must be divided to find the cost per occupied bed) was decreased,—therefore the cost per occupied bed was much higher. In short, we increased our dividend, decreased our divisor, and consequently augmented our quotient. You, therefore, have the work of the hospital increased in value, at the same time that you have its cost per occupied bed increased; and, consequently, the theory that a high cost per bed is an evidence of bad management or extravagance is utterly fallacious; and that, of course, holds good, as I maintain, whether it refers to one year's work of the same hospital compared with another year's work, or whether it is the comparison of one hospital under one set of conditions with another hospital under a different set of conditions.

Earl of Arran.

14512. Then those conditions must vary every year?—They are continually varying.

14513. Therefore, no comparison could be really satisfactory?—Unless you make your corrections for these varying conditions very carefully, just as in comparing the magnitude of several vulgar fractions, you would have to bring them to a common denominator.

14514. You would have, therefore, in any report based on this comparison, to point out the different circumstances which varied every year?—Very carefully; and you would have to be very well acquainted with hospital management to correctly appraise the allowance to be made in regard to them.

Chairman.

14515. It comes back to this, that everything in a hospital, all the large accounts and small accounts, must be on the same basis to make any reliable comparison?—Precisely.

14516. To turn to another subject, who is the head of the nursing staff?—The matron.

Chairman—continued.

14517. She is a salaried officer?—She is a salaried officer.

14518. What might her salary be?—The salary of the matron at the present time is 125 *l.* per annum, and board and lodging.

14519. And she is responsible to one of these committees that you spoke of just now?—She is responsible to the house and finance committee, and, of course, directly to the weekly board.

14520. What is the sum total of the strength of the nursing staff?—The strength is this: one matron, one night superintendent, 10 sisters, 26 staff nurses, and 23 probationers.

14521. Do you train your own nurses?—We train our own nurses.

14522. You have never been nursed by a sisterhood?—I believe we have never been nursed by a sisterhood.

14523. At least you have not, so far as you know?—Not so far as I know.

14524. In the case of some of these isolation cases that you spoke of just now, for which you have a considerable number of isolation wards, are you ever at a loss for nurses?—We are sometimes, owing to the practice which is growing in prevalence of employing special nurses, at a loss for a nurse.

14525. And what course do you take then?—We take the course of getting them from the Brompton Consumptive Hospital, where they have an institute, and send out trained nurses.

14526. Do you always get sufficient in that way?—We never have any difficulty.

14527. That adds a great expense to the hospital management, does it not?—Of course it is much more expensive to get a nurse in that way than to have a nurse standing on the staff.

14528. What do you have to pay for a nurse; two guineas a week?—I think it is less than two guineas; a little reduction is made in the fee charged to a hospital, but it is not very much below that figure.

14529. And you have to lodge her and board her?—We have to lodge her and board her. With regard to the strength of the nursing staff, I have also divided them into the day and night staffs. The day staff consists of the matron, 10 sisters, and 37 nurses, making a total of 48. The night staff consists of one night superintendent and 12 nurses, being a total of 13.

14530. What becomes then of the probationers?—They go in to make up the nursing staff; I have included them in the 37 nurses who are on day duty.

14531. Then out of those 37 nurses how many are probationers?—Nearly the full strength of the 23 that I gave as the total number of probationers, I may say in general terms, are on day duty; they are not put on night duty.

14532. And how many wards have you; you say you have 12 nurses on at night; is there a nurse in each ward at night?—We have 23 wards.

14533. Are some of those wards without nurses at night, or how is it arranged?—Of course the wards are divided up into charges; so many are committed to a particular sister and nurse. I can give you a statement of the names of our wards, the number of the wards and the beds

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

beds in them, and of the sisters and nurses taking charge of each.

14534. As to the end of the sitting, I will ask you to put in a return of the employés?—One thing I may remark which may be of some service at this point, namely, that the proportion to a nurse on day duty is about seven.

14535. But now there are a large number of wards and only 12 night nurses, I understand; but then is there a nurse within hail of any patient all night long?—Yes; with regard to these wards those comprising a set are all close together; one set, for instance, consists of five wards of 10, 6, 10, 6, and 16 beds respectively.

14536. And how many beds has that one nurse to look after during the night?—There would be two nurses for those beds, in addition to the night superintendent, with one nurse, who is perambulating all night.

14537. Will you tell me how many beds that would be altogether for the two nurses?—That would be 43.

14538. And they have to keep moving about all night long?—They would. Of course that must be taken with this modification, that if there were serious cases, the custom which I spoke of just now as growing in prevalence of employing special nurses, would considerably affect it.

14539. Does the matron go round the hospital frequently?—Constantly, every day.

14540. Would you tell us what are the hours of the nurses in the wards?—I commence with the sisters: Their hours are from eight in the morning till 10 at night; I have their full hours on duty without deduction, and I have the deductions and those things arranged in a very simple way in a table, and if you like to know what they come out to I can tell you after. The sisters, I said, were on duty from eight in the morning till 10 at night; they are off duty twice weekly, from 5 to half-past 10; once weekly from 7 to half-past 10; every other Sunday from 3 to half-past 10, and on Saturday from 2 to half-past 4. Their holidays are one day per month, and one calendar month per annum.

14541. Have the sisters had their breakfast by 8 o'clock?—Their breakfast is a deduction from their hours on duty, so they have not had their breakfast. The custom is for them to visit each patient, take the temperature and see the medicine given before they take breakfast.

14542. Where do they breakfast; in their own rooms?—They breakfast in their own rooms.

14543. Do those open into the wards?—In some cases they do; in some cases they do not. In the old wards they do.

14544. Then as regards their dinner?—They dine together in a common dining-room.

14545. At what time is that?—At half-past 12, I think.

14546. Who dines with them; does the matron dine with them?—The housekeeper generally presides at the table.

14547. When have they to be back in the ward?—At a quarter past 1; three quarters of an hour is considered the time they have at their disposal for dinner.

14548. And then tea, supper, and so on?—I

(24.)

Chairman—continued.

have their diet arrangement here: Tea, 4 to 4.30; supper, half-past 8 to 9.

14549. And back into the ward from 9 till 10?—Yes.

14550. And then the nurses, what are their hours?—Staff nurses from 7 in the morning till 9 p.m.; off duty twice weekly from 5 o'clock, once weekly from 7 o'clock, and every other Sunday from 3 o'clock. Their holidays are one day per month and one calendar month per annum.

14551. And do they have breakfast before they go in the wards?—They breakfast before they go to the wards; at half-past 6 in the morning they breakfast.

14552. And when do they dine?—They dine at the same time as the sisters; I am not quite sure; I think there is a little arrangement there. I may be in error for half-an-hour, because an arrangement has to be made of this time for them to occupy the dining room at a different time; it may be half-an-hour one way or the other.

14553. And, then, the probationers?—The probationers' hours are these, 7 in the morning to half-past 8 at night.

14554. And then like the nurses, they have a breakfast beforehand, and their dinner takes place in the middle of the day?—Yes.

14555. Have they three-quarters of an hour for dinner?—Yes, the same time.

14556. Is there any refreshment between early breakfast and dinner?—Yes, there is a lunch, which is taken some time between 9.30 and 10.30. They just run and have what you call a little snack, and away again; they cannot have long at that time of the day. The off-duty hours of the probationers are two hours daily; we treat them better in that way than the staff nurses, because they are less used to hospital work, and they need a little more leisure in the day, and they need, or we conceive that they need, a more valuable time, and therefore we allow them to be off duty in the morning from 10 to 12 in one week and in the afternoon from half-past 2 to half-past 4 in another week, and so on. Their holidays are once a month one week-day, and annually three weeks: and, to meet their case again there, the matron arranges that instead of having the whole holiday at once, they have it spread over the year, so that they have not to go a twelvemonth before they get a holiday. Then I come to the night staff; the night superintendent's hours are from 10 at night to 7 in the morning, holidays one night per month, and a calendar month per annum. Coming to the night nurses, their hours are from 9 o'clock at night to half-past 8 in the morning, and their holidays are the same as those of the staff nurses.

14557. Then, differently from what we have been told is the practice of other hospitals, the night nurses and day nurses, according to you, do not overlap during the time between 7 and 9 in the morning when the work is heaviest in the wards; the day nurses come on, you say, at 7, and the night nurses leave at 7?—No; I have said the night nurses' hours are from 9 p.m. to 8.30 a.m. They do overlap to the extent of an hour and a half,

C C 4

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

half, you see. Then I have this little table as to the net hours that they get on duty.

14558. Will you give us those?—It works out in this way: that the sisters' gross time on duty is 15 hours in the day; the deduction for meals and for daily relaxation on the average amounts to $4\frac{1}{2}$, leaving a net time on duty of $10\frac{1}{2}$ hours per day. The staff nurses' gross hours on duty are 14; their deductions in respect of meal hours and relaxation are $4\frac{1}{2}$, leaving them a daily average of $9\frac{3}{4}$ hours. The probationers' full gross hours are $13\frac{1}{2}$, and the deductions for meals and relaxation four hours, leaving a net of $9\frac{1}{2}$; so that their hours of active duty are less than either the staff nurses' or the sisters'.

14559. In making that calculation, do you include the monthly holiday?—I throw out the monthly holiday.

14560. Do the nursing staff have a separate kitchen?—They have not a separate kitchen; their meals are cooked in the same kitchen as those of the patients.

14561. Have you any ward maids in your hospital?—We have ward maids.

14562. Do they live on the premises?—The bulk of them, not all, on account of want of room.

14563. The nurses do not have to perform any menial duties?—I suppose, broadly speaking, I should say they do not perform any menial duties; dusting and that sort of thing, but nothing more.

14564. No scrubbing?—The scrubbing is done by scrubbers who are practically charwomen.

14565. What are the wages of the nurses?—The staff nurses begin at £20 per annum.

14566. The sisters?—The sisters' commencing salary is 30 *l.* per annum, and they increase to 40 *l.*, which is the maximum, by annual increments of 2 *l.* The staff nurses commence at 20 *l.* per annum and increase to 25 *l.* by increments of 2 *l.* in the first year, 2 *l.* in the second, and 1 *l.* in the third. With regard to the probationers, their rate of pay is 10 *l.*

14567. And all found?—And all found.

14568. When do they begin to get nurses' wages?—They begin to get full nurses' wages in the second year of their probationership; they do not become full staff nurses, but they get the wage.

14569. And when do they get their certificate?—At the end of two years they are open to get a certificate. If for any reason they should cease their training at the end of one year, they get a certificate merely to the effect that they have been in the hospital and received instruction for a year; but they do not get a certificate expressing the fact that they are qualified to act as a nurse under two years.

14570. Do you give any pensions?—The practice of the hospital with respect to pensions has been modified by the fact that it has adopted, or has affiliated itself for that purpose with, the National Pension Fund for Nurses; and with respect to that, I gave very particular personal attention to seeing how that pension fund arrangement could be turned to the best account for hospital nurses; and in that connection I should like to say that Mr. Burdett, in his annual, adopted my paper on that subject, and has put it in as the best basis which hospitals could follow.

Chairman—continued.

We in St. Mary's have passed a regulation that every nurse from the date of the order must contribute towards this pension fund for nurses; and with a view to encouraging her to do so the hospital will pay half of her premium. So from this time forward we shall pension our nurses only through the National Pension Fund. And we arrange so that we take 30 years as the basis; we think a nurse should be pensioned at 55, and therefore we take 30 considering 25 years' service a fair qualification for pension. If she happens to be younger than 30 years of age when she enters we should still pay the half of the 30 years' premium, and she naturally would have to pay less, which is nothing but fair, since she would have served the hospital longer. And with respect to the nurses who have been in the hospital service some time, we propose to pay them on a scale in respect of the years which are passed, which will put them even in a better position than nurses entering in future.

14571. What happens if they go away, do they lose their premium?—They do not, because the table we have adopted is the table of premiums returnable, so that in no circumstances can the nurse be any worse off.

14572. You said that the school made the hospital dearer; I do not think you gave any reason for that expression of opinion?—I think that expression of opinion depends upon the fact that the work of the hospital, the dressing and clerking, is done by younger men, and probably you cannot expect them to exercise that discretion and economy that you would expect of older men; and that is the class of thing which I should think affects the expenditure. That is my opinion; I do not say it affects it greatly, but it does affect it I think.

14573. Do you mean that they waste their dressings?—I think there is a disposition to do that. It would be impossible for me to attempt to prophesy what practice would be followed if you had not dressers who were pupils; you would no doubt have to salary them.

14574. Have you any female clerks or dressers?—No.

Earl of Kimberley.

14575. With regard to your examination of applicants for out-relief, what amount of wages should you consider, taking a family, for example, of a man and his wife and four children earning nothing, would exclude the man from the charity?—I hardly think that unless there were many other circumstances brought to bear upon it I should attempt to adjudicate upon the question on those data and no more.

14576. Still I suppose you would carry some general standard in your mind (just as is done in the case of the Poor Law Administration), as to the amount of wages which would enable a man to pay for his own medical attendance?—The impression I should bring to bear upon that, to start with, would be this, that unless he were very obviously quite able to pay for it, I should be helping him to keep himself from being pauperised by giving him hospital relief.

14577. I take a typical family for comparison; I am supposing the case of a man and his wife and four children, none of them of an age to earn anything?

23 February 1891.]

Mr. RYAN.

[Continued]

Earl of Kimberley—continued.

anything?—If that man were earning 30 s. per week, I should consider it very carefully before I sent him away.

14578. You said the nurses take the temperature night and morning; I suppose they take the temperature at other times of the day?—Yes, frequently, according to the nature of the case.

Lord Clifford of Chudleigh.

14579. You said there were very few cases into which you had found it necessary to inquire; but in those particular cases was the result of your inquiries generally favourable to the people or the reverse?—The result of my inquiry generally, has been to send them back to the department and allow them to be treated.

14580. And with regard to the sanitary arrangements, and the drainage of the hospital, do you have anything in the nature of a periodical inspection of your sanitary arrangements?—I cannot say that we have a periodical inspection; the whole system of drains has recently been reconstructed; they constantly automatically flush themselves by flushing tanks, and if anything were wrong it would force itself upon our notice.

14581. You trust to that?—I think I may say we do; we do not make a periodical inspection. Of course the drainage is constantly coming under my notice from walking round the hospital; that kind of inspection is pretty constant.

14582. But no other inspection?—There is no professional periodical inspection. I have a few facts touching the sickness of the nursing staff which I shall be prepared to state.

Lord Saye and Sele.

14583. I should like to know how many separate legacies contributed to make up the sum of 8,000 l. last year if you can tell me that?—I am very much afraid that I could not tell you that. My own report for last year is not complete yet.

14584. Was it one large one, or a number of small ones?—Probably one large legacy of 4,000 l. or 5,000 l. and several smaller ones. In the year 1889 there were about 15 legacies.

14585. You had one large one, one of more than 4,000 l., you say, last year?—Something of that kind.

14586. Your balance sheet would have shown a deficiency of something like 10,000 l. last year if you had had no legacies?—I have not the figures in my hand, but it would be something very considerable.

14587. What would have been done in the event of your not having legacies?—We should have been obliged to sell some of the investments which the prosperity of other years has enabled us to accumulate.

14588. You do not appear to have investments?—We have some; we have invested property to the extent of 72,927 l.

14589. What are the dividends?—Taken with the rents, which are about some 60 l. roughly, 2,500 l.

14590. Can you tell me what you have expended already in purchasing the shops and land you want to acquire?—I have not the means of answering that question, but I shall be happy to get particulars.

(24.)

Lord Saye and Sele—continued.

14591. I suppose, as it is known in the neighbourhood that you are very anxious to buy that property, you have to pay an exorbitant price for it?—I suppose the tendency is in that direction; but we have a committee who are very cautious about that kind of thing; they would rather let the thing stand over than pay an exorbitant price. It is a case of time on one side or expense on the other, and we should be prepared to let the time lapse rather than pay an exorbitant figure.

Earl Cathcart.

14592. About sickness in a nursing staff, you were just now going to tell us something?—I should like to say that the number ill among the nursing staff last year was 50, which included 21 who suffered from the epidemic of influenza at the beginning of the year. The number of days they were ill was 456, the average daily number of nurses on the sick list was 1.25.

14593. But the influenza was quite an exceptional circumstance?—Quite exceptional; sufficiently so to make the difference between last year and the year before.

14594. The year before, what was the illness?—The number ill was 21; the number of days, 205; and the average number daily on the sick list, 0.56.

14595. Nothing very serious?—Nothing very serious in any case.

14596. Would you tell us what your previous profession or occupation was?—My previous occupation before I went to St. Mary's was this; I was the secretary of Queen's Charlotte's Hospital for seven years.

14597. And what before that?—For three-and-a-half years I was clerk of the Seamen's Hospital at Greenwich. Before that I was a Clerk in the Civil Service.

14598. And you are personally an acquaintance or a friend of Mr. Michelli's?—I am very well known to Mr. Michelli.

14599. And he is an able man with regard to accounts?—I think so.

14600. I have not the least idea what your building is like; is it a quadrangle on the pavilion system, or what?—Roughly speaking, the T shape.

14601. And you have a complete circulation of air?—Not much circulation of air on account of these houses in Praed-street, which I was saying we are anxious to pull down.

14602. Are there any immediately attached to you, or can the air circulate around your hospital?—Pretty well as much as you can expect in a crowded part of London.

14603. No doubt you have a plan of the drains?—We have a plan of the drains.

14604. Has that been a costly business; this new drainage?—It cost us several thousand pounds; it was done just before I joined the hospital.

14605. With regard to fire, do you take precautions?—Very particular precautions about fire.

14606. Have you a fireman?—One of the Metropolitan Fire Brigade officers inspects our apparatus; he conducts a fire drill among all our porters

D D

23 February 1891.]

Mr. RYAN.

[Continued.]

Earl Cathcart—continued.

porters. We have two hydrants on every floor, and attached to every ward in the hospital a fire escape which will admit, in the case of emergency, of the lowering of persons to the ground.

14607. And do you not have all your nurses fire-drilled?—Not our nurses; we have our porters.

14608. In regard to water supply, have you a constant supply?—We have a constant supply.

14609. That is highly important in a hospital?—Very important indeed.

14610. I am afraid in many of the hospitals the supply is intermittent?—My impression is that we have a constant supply.

14611. Do you render the patients insensible before you take them into the operating theatre?—If it is necessary that they should be rendered insensible at all, they are rendered so before they are taken into the operating theatre.

14612. In an ante-room?—Yes.

14613. Have you a resident club?—We have not a residential college on the hospital premises, but we have adjacent.

14614. In regard to bread and meat, your steward's separate account appears to be a remarkably good one; it is a dissected account?—It is a dissected account. The chairman of the house and finance committee is here, and I think he has a page from that book which you might like to see.

14615. That would be very interesting to see, because we have never seen since our inquiry began a book of that kind produced?—It is the result of a long experience of my own, and I know that it works extremely well.

14616. With regard to the bread and meat, is that satisfactory, and have you any difficulty in keeping the quality up to the mark?—We have very excellent bread and meat, and have no difficulty in keeping up the quality.

14617. Do you often change your contractor for meat?—I cannot say that we do. The tendency has been the other way the last few years.

14618. In the contract do you include the best joints or do you exclude them?—We include them.

14619. In some cases in hospitals the best joints are excluded, are they not?—No; I rather think not. That is a question that it would rather puzzle me to answer except in this way, that as far as my experience goes the inclination of the committee is to get the best part of the animal.

14620. Do you admit reporters to your quarterly board?—We do; they do not often come.

14621. But if they did come would you shut the door in their faces?—We should not.

14622. Complaint has been made in the papers that reporters are excluded from hospital meetings on some occasions; that is not the case with you?—They would not be admitted to the weekly board.

14623. Certainly not; but to the quarterly board?—To the quarterly board, I think, I am correct in saying that they are admitted.

14624. And to the annual meeting?—And to the annual meeting most certainly.

14625. The attendances in the out-patient department we were told average about four; is

Earl Cathcart—continued.

that your experience, that supposing an out-patient comes and is ministered to he probably would on an average come four times in all; have you ever made any calculation of that sort?—I have made a calculation, but do not carry the figures in my mind.

14626. Are complaints usually made to the weekly visitors?—Complaints are very commonly made to the visitors.

14627. By the patients?—By patients when there are any complaints at all; I am happy to say they are not very frequent.

14628. We have heard that patients are apt to be silent in the hospital and to complain afterwards when they go out?—There is a tendency in that direction.

14629. But complaints are made to the visitors in your hospital?—Complaints have been made.

14630. Such as what?—That a nurse had told the patient to keep quiet, or had been a little harsh, or that he did not like his food, or that he was sent out before he was well, and so on.

14631. We have heard of nothing of the sort that you described with regard to the temperature book in any other hospital; have you any difficulty in keeping it up to 60 degrees in winter?—In one or two wards we have had difficulty, but not generally. It was the fact of the difficulty in those one or two wards that induced the keeping of the book.

14632. From your account of the book-keeping, it appears to be the most admirable that we have heard of yet?—I am pleased to hear your Lordship say so.

14633. Do you ever use hot water or steam to keep up the temperature?—We do it by open fires and a careful arrangement of doors and windows; we have no hot water heating system.

14634. You have an engineer and boilers?—We have an engineer and boilers.

14635. You said you took in most cases; have you any lock ward?—We have not any lock wards.

14636. Do you exclude lock cases?—Yes; we do from in-patient treatment.

14637. Primary cases?—I am not able to go far into the question. In a general way venereal cases are excluded by a law of the hospital.

14638. Is that a recent law?—Not a recent law.

14639. Do the legacies come from people in your own neighbourhood who take an interest in the hospital?—Sometimes, I suppose as a rule, but not always.

14640. How do these benevolent people that are not in your neighbourhood come to know of your hospital?—Sometimes one has no notion from whence a legacy springs.

14641. You said that a school was distinctly costly to a hospital; in what particular. When you cut off all the attendances which you receive from the pupils and otherwise, that expense is reduced to nothing, is it not, if you estimate the advantages which you gain in having a school attached?—If the advantages are weighed against the disadvantages, I am under the impression that the advantages preponderate.

14642. That is to say, if you had not the school attached to it you would have to pay people

23 February 1891.]

Mr. RYAN.

[Continued.]

Earl Cathcart—continued.

people to do the duties now done by the pupils?—And further I do not think we should have such a large list of contributors.

14643. But in point of fact the school does not entail any special cost if you deduct the advantage of having the students in the hospital?—That is so; but the question I was on was the question of cost per bed as arrived at by division. I was only expressing an opinion that where there is a medical school that cost per bed is increased thereby.

Earl of Arran.

14644. Are most of your cases from the immediate neighbourhood?—Most are.

14645. It is a poor neighbourhood?—It is a very poor neighbourhood, though the hospital's actual immediate surroundings are the other way. It might be thought that so wealthy a place as Paddington is hardly one where hospitals are needed; but it frequently happens that wealthy places in London are immediately contiguous to places of the most squalid poverty, and such is the case with Paddington, West Marylebone, North Kensington, and Kensal New Town.

14646. What is the nearest hospital in your neighbourhood?—The nearest of any kind is the Children's Hospital in Paddington Green, and probably the next is Queen Charlotte's Lying-in Hospital in Mary-le-bone-road.

14647. No general hospital?—No general hospital nearer than St. George's, which is the other side of the Park, or the Middlesex.

14648. Is there not a hospital called the Great Northern Hospital?—The Great Northern Hospital is a long way from us.

14649. You said you had the power of dismissing servants, and that you made a report to the board after doing so; I suppose the servants themselves could appeal?—Certainly.

14650. And their case would be heard?—Undoubtedly; the simple fact that I am obliged to report it in every case would carry that.

Lord Thring.

14651. I suppose, with respect to the constitution of your weekly board and your finance committee, in effect the same people, or a great number of the same people, attend both?—In effect the same people attend the weekly board and the quarterly board, no doubt.

14652. And the house and finance committee and medical committee?—The best way to answer the question would be to say that the members of the house and finance committee constantly attend the weekly board.

14653. It comes to this, as we have had it in other hospitals, that practically some 15 people manage the whole thing?—Precisely.

14654. One word about this vexed question of cost of bed: I think the distinction is this, is it not. I thought, before I came to this Committee, that the cost of beds meant, what I should call the objective cost of a bed; that is, supposing a bed to be there, the cost of maintaining a patient for the whole of the year or any given time, what with his nursing, his feeding, and everything connected with that bed; that I have called the objective cost of the bed, and that was the meaning which I thought before I came here was attached to it; but as I understand it, you consider the subjective cost of the bed; that is to say,

(24.)

Lord Thring—continued.

the cost that the hospital incurs to produce that thing called a bed, which you arrive at by dividing the whole of its expenditure by the number of those beds?—The whole of the sum expended; that is the uniform practice throughout hospitals.

14655. Therefore it is quite obvious that the two things are absolutely distinct, and my impression is wrong, and that if you talk of the cost per bed, in what I call the objective sense, that differs entirely from what I call the cost per bed in a subjective sense?—Nothing could differ more.

14656. Would it be possible or easy to give the cost of a bed in the objective sense?—Yes, I think it would be possible to do that.

14657. But that is never done?—That is never done; and I rather think it is never done because the object in making this comparison has generally been to point out an excess of expenditure in directions where there should be no excess. I think there would be less inclination to cavil at the cost per bed if that money were always spent on the patient.

14658. Supposing we had the objective cost of the bed, it would show distinctly whether there was waste or not?—Speaking generally, it would show whether there was waste in the things included in this so-called objective cost per bed.

14659. You take into consideration what you state most strikingly about the difference of the cost of different diseases; but making the correction for different diseases, given the same diseases, the object of showing the cost of the bed would be to show waste or not?—Yes.

14660. What are your floors made of?—The floors in the old part of the hospital are of deal, the ordinary deal floors.

14661. And they are washed?—They are washed.

14662. And I need not ask you whether that is not a very bad flooring?—There is no question of it, and nothing would give us greater pleasure than to be able to remove it.

14663. You would put teak, and dry-rub it?—Yes; that is what is done in the new wing.

14664. Have you got a mortuary?—We have a mortuary.

14665. And one question about the way in which you deal with the dead bodies when they are dissected; do you take care that they are arranged in such a manner as not to shock the feelings of the friends?—The very greatest attention has been paid to that question in every direction. It is a small detail, but it is a most important point, even with respect to the certain identity of the individual; we tie round the wrist or ankle of the deceased before the bodies are moved from the ward a parchment label on which the name is written, and which cannot be removed. It may not be unknown to you, my Lord, that it has occasionally happened that a wrong body has been presented; and the precaution I have mentioned is taken with a view of obviating that kind of thing which is amusing in one way, but it is harrowing to the feelings of the relations. Then with respect to the restoring of the body after it has been dissected, or whatever it may be that is done with it, we are very careful about that, and the porter (he is called a porter, though he is a skilled person) pays very great attention to it indeed.

14666. Does any nurse attend?—No nurse attends.

D D 2

14667. But

23 February 1891.]

Mr. RYAN.

[Continued.]

Lord Thring—continued.

14667. But the porter is a skilled person you say?—He is a skilled person. Porter is hardly the name that should be given to him; he is a man with a special training.

14668. With respect to the food, we were told that patients very seldom complain of the food; I presume that is because they are afraid to do so?—It did not occur to me that that was the reason, but that they had very little to complain about. In fact, I think they are pretty ready to complain; many of those people who have next to nothing to eat at home and are of a very poor class, are very prone to complain of much better fare in a hospital.

14669. Have you many complaints of the food at all?—We have not; and, generally speaking, it is the house visitors who complain of the viands when there is any complaint.

14670. How is the beef-tea made in your hospital?—By cutting the beef up into small pieces, shredding it, standing it in cold water for several hours and bringing it to the boiling point and keeping it simmering for a certain number of hours. It soaks a long while. I believe it is prepared according to the best opinion as to the methods to be followed.

14671. And have you had any complaints from the doctors about the beef-tea?—We have no complaints from the doctors about the beef-tea; I believe they are very highly satisfied.

Chairman.

14672. The majority of complaints as to quality or quantity of the food would come from the sister of the ward?—Yes, necessarily.

14673. Because she serves out the dinners?—She serves out the dinners, and it would be very poor management indeed for a sister to allow that kind of thing to go past her. If a sister does her work well, she should be the person to complain if there is anything to complain of.

14674. So that if the meat were all gristle or bone she would call attention to it?—She should call attention to it, or it would be very great remissness on her part.

14675. Whose attention would she call to it?—She would call the attention of the house-keeper to it, who is the immediate head of the culinary department, under the matron.

Earl of Arran.

14676. Do you send any nurses out?—We do not send any nurses out for private nursing.

Chairman.

14677. I understand from the evidence you have given that you would like to see any re-organisation of hospitals come from within the hospitals themselves, rather than from some outside body?—I should have liked that that should have come to pass.

14678. Mention has been made to us during the inquiry that it might be useful and convenient to have some sort of central body who should undertake such matters as visiting hospitals, auditing accounts, and possibly register or license the building of new hospitals with a view to seeing whether they were required in certain localities, or whether they had a certain endowment; have you any opinion to express on that?—I should have hoped that some such central

Chairman—continued.

authority could have done good, and certainly if it could in any way put a stay upon the establishment of special small hospitals to the damage of larger ones, it would do a valuable work indeed; but, personally, I do not entertain the opinion that much good to hospitals will come from placing them under a central authority. My impression of the result of central authority is rather that it does more harm than good. I should illustrate my answer by referring to the Metropolitan Asylums Board, for instance. My impression is that the standard of excellence of the Metropolitan Asylums Board Hospitals, their freedom from scandal or questions of that kind is not so great as that enjoyed by the voluntary hospitals of London which are managed separately; therefore, I should not look forward with any great expectation to great results, or valuable results, ensuing from the appointment of a central board to exercise any sort of authority over hospitals.

14679. You think it better that the hospitals should preserve their individuality?—My impression is that they have done a wonderfully good work in a wonderfully effective manner, as they are, and that they would not be so well managed or bring about such good results in so economical a manner if they were managed by a central authority as if they managed themselves.

14680. In fact you wish to preserve the individuality of the hospitals?—Personally, I should regret to see it altered.

14681. Is there anything else you wish to state?—There was one little matter in connection with our own hospital touching the nurses. I should like an opportunity to say that we make no distinction between the treatment of our lady probationers so called, and the nurses we pay. They dine at a common table, they mix one with another, and the effect is admirable.

14682. In regard to these probationers, have you then any lady probationers?—We do have ladies come to train, who pay for their training, and who, I suppose, would be described as lady probationers; they pay 30 l. a year.

14683. For board and lodging?—Yes, for board and lodging.

14684. And what period do they come for?—For two years; occasionally a nurse will come for one year, but she will not in that time get a certificate as a trained nurse of course. I simply wanted to remark in that connection that they are treated precisely the same as all the other nurses in every way; we should regret any distinction. There is just one little question of hospital management that is not unworthy of mention which is brought out in two of my reports as to the number of patients daily resident in the hospital. Of course I have a report presented to me each morning as to the number of patients in the hospital; and it is curious to know that although the number of our beds is 281, yet with 259 patients on the one hand or 267 on the other, we have a very great pressure in a particular department. You may have, therefore, some 21 beds not occupied and yet have no less than two, four, six, or seven beds extra up in particular quarters of the hospital. That is just a remark on the question of what

23 February 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

what the working margin of a hospital is; you could not possibly have in St. Mary's, I think, 281 beds occupied at any time; but with 250 or 260 you would have great pressure in some quarters.

14685. Have you any chaplain?—We have a chaplain.

14686. Resident?—Not resident.

14687. Do you pay him a salary?—Yes; 200 *l.* a year.

14688. And any board?—No board; he is non-resident, and he does not board in the hospital.

14689. Does he manage the Samaritan Fund?—He does not; I manage the Samaritan Fund. Formerly it was managed by the chaplains, but it is now managed by the secretary.

14690. Do you pay any money out of the Samaritan Fund to maintain families whilst their relatives are patients in the hospital?—That is a class of payment that I have not made out of the Samaritan Fund. The Samaritan Fund is called in our case the Convalescent Fund: it is more particularly limited therefore to help to convalescence; though I should not be withheld from spending money in the direction you speak of if I really felt there was reason for it; but I have not had occasion to do it.

Lord Saye and Sele.

14691. I suppose the weekly board really administers the fund through you?—No; I actively administer it personally.

14692. Without consulting the weekly board?—Without consulting the weekly board.

Chairman.

14693. There is a separate account at the bank for that fund?—A separate account at the bank, and a separate report. I should say that there is a committee who have the overlooking of the Convalescent Fund, who meet quarterly, and to whom I report.

14694. Is there anything else you wish to say?—With respect to St. Mary's I have nothing more in my mind to state. There was a matter touching the newly organised ambulance service for London, which works in connection with the hospitals, and does a very useful work, which I should have liked to have made a few remarks upon.

14695. Pray do?—Great suffering and loss of life has long been caused in cases of accident from patients, when they are injured, being thrust into a cab. I believe I am perfectly accurate in saying that many a patient has come to his death who need never have come to it but for being thrust with broken ribs, or injuries of that sort, into a cab, which has caused the ribs to pierce some vital organ, and therefore cost the patient his life quite unnecessarily; and that class of thing happens a great deal. It was because I had observed that, that I read a paper before the Hospitals' Association in April 1888, laying the matter before them and what I felt to be the mischief of it, and submitting a scheme whereby an ambulance service could be formed for London which should obviate the necessity for that kind of thing; which should provide wheeled hand litters, and have such a number of them so placed about London that no patient (24.)

Chairman—continued.

could be injured in the streets, without such a vehicle being within five minutes of him. That suggestion and that scheme commended itself so much to the meeting at which it was read, that they determined to adopt it, and to create a special branch of the Hospitals' Association to administer it, with myself as a member of the committee, and as the honorary secretary. One friend, Mr. Bischoffsheim, subscribed the whole of the money necessary to establish the service, and to maintain it to this moment. There are now some 50 stations all over the metropolis, and we are going on with it, and so soon as it is complete, it will not be possible for any person to be injured in the streets of London without having an easy running ambulance with all the necessaries that are required to render him first aid, within five minutes of him. This thing will be run up and the man wheeled off to the hospital without disturbing him further than to lift him on to a stretcher placed beside him on the ground.

Earl of Arran.

14696. And will there be a staff told off to work these things?—There will not be a staff. The position in that way is this. Most of the Metropolitan police (and I believe this movement has proved so acceptable to the police that they will increase this feature) are instructed in the art of rendering first-aid to the injured; they have taken lessons from instructors of the St. John's Ambulance Association. I know the Chief Commissioner of Police is so pleased with this kind of thing that there is likely to be an arrangement that all policemen, or the greater proportion of them at any rate, shall be instructed in that way. At present it is purely voluntary on the men's part. But, though it would be very nice to have a staff, that would not be any criticism upon the value of the means of transport without such staff; because hitherto we have had neither the one nor the other. It is a simple thing to lift a man a few inches from the level pavement on to a stretcher placed on the ground beside him, and then lift him on to a wheeled frame, and run him off to the hospital; but it is often difficult and highly dangerous to put him into a four-wheeler.

Chairman.

14697. These things are kept in sheds, are they not?—Yes; and, in some cases in fire brigade stations.

14698. Who keeps the keys?—The sheds are situated mostly on the cab-ranks. The key is kept chiefly by policemen. There is, however, such a shed in the court yard in front of Middlesex Hospital; but most of them are on cab-ranks. And, with respect to the key, it is important to mention that it is a railway key, and, therefore, if you could not get the key to open it, you could open it with a little piece of wood; then there is a glass pane in the door, so that one could break it and open from the inside. Now there are some fifty of these ambulance stations in various parts of the metropolis, and there will be more.

Earl Cathcart.

14699. The same system prevailed at Liverpool some little time ago?—Not the same system, I think.

D D 3

14700. Very

23 February 1891.]

Mr. RYAN.

[Continued.]

Earl Cathcart—continued.

14700. Very much the same?—I think they have a horse ambulance there.

14701. No; a man was killed by my side there ten years ago, and the police ran him off on an ambulance upon wheels without a delay of two minutes?—I was not aware that the same system was in use there.

COLONEL STANLEY G. BIRD, is called in; and, having been sworn, is Examined, as follows:

Chairman.

14703. You are the chairman of the house and finance committee of St. Mary's Hospital, are you not?—Yes.

14704. We have had the functions of that committee explained to us by the secretary of St. Mary's Hospital; have you heard his evidence?—Yes, I have.

14705. And it is substantially correct as he stated it?—Yes.

14706. Is there anything you wish to add to it?—He might have stated that the greater part of the duties of the house and finance committee was to check extravagance in the hospital; and we are able to do that by means of these tables which he mentioned. This book (*producing the book*) is kept.

14707. We should like to see that; after all said and done the secretary is responsible to the house committee?—Exactly.

14708. So that the chief duty of the house committee is to check its own extravagance?—Not exactly so; they have not the ordering of the food or the diets; the diets are ordered by the resident medical officers, the resident surgeons and the resident physicians.

14709. The resident medical officer is one thing, but the resident medical officers of the establishment are a very different thing?—There is the medical superintendent; then there are surgeons and physicians, house surgeons and house physicians, and they have the ordering of the diets, and a great part of our duties is to check extravagance on the part of those gentlemen; I do not mean wilful extravagance.

14710. Would you like to put that paper in?—I should very much; it might be of very great use. It shows under heads here the different diets, and also it is a means of showing us from week to week how the increase or decrease in the different articles arises; and from that we are able to check this extravagance, or any extravagance that might arise. The average daily cost of a patient is about 1 s. 3 d.; that varies from 1 s. 2 d. to 1 s. 3 d.

14711. Can you tell me how you get at the cost of an out-patient?—No; we cannot check that exactly because you see the whole of the accounts for the dispensary come under one head, and of course the in or out-patients both draw their medicine from the same place.

14712. Quite so; but in calculating this cost of 1 s. 3 d. per patient, that is all the expenditure less the out-patient expenditure?—Less the out-patient expenditure, and there is nothing for medicine included in that. That is only the house expenditure.

Chairman.

14702. Do you have to bury many of the patients who die in the hospital?—We do not have to bury many, but we have to bury them at times; we do not find the guardians too ready to come forward and help us in a difficulty of that kind.

The Witness is directed to withdraw.

Chairman—continued.

14713. Then if you cannot estimate the cost of your out-patients what is the use of estimating that of the in-patients?—I may say that the cost of an out-patient is nothing except for medicine.

Lord T'hring.

14714. It is only the food, is it not, that is represented by that 1 s. 2 d.?—Only the food.

Chairman.

14715. Do you take the physic as the cost of the out-patient?—Merely the physic.

14716. Can you keep separate the amount of the physic for the out-patient and for the in-patient?—No, it is only an estimate.

14717. Is there anything else you wish to say to the Committee?—With regard to the government of the hospital I should like to say that we are governed by an open board, which, in my opinion, is very disadvantageous to the hospital.

14718. Why is it disadvantageous to the hospital?—There is no continuity in the work; the board is open to any one to come; and it is also open to the grave defect of being able to pack the board at any time. Then, again, with an open board, you have very great difficulty in exciting the interest of the public to attend the board. I do not mean to say that there is a difficulty practically, or that that ever is done; I should not like to say that; but still we are open to that disadvantage.

14719. Have you ever found inconvenience from it?—Yes, frequently.

14720. From having a packed board, do you mean?—I think I guarded myself by saying that that had not often occurred. I do not know that it has occurred.

14721. What is the inconvenience that you have found to result?—The inconvenience is this, that we who spend a great deal of time in managing the hospital are sometimes out-voted by people who come there who know nothing whatever about the management, who, possibly have never been in the hospital before, but for some reason they are brought there by someone interested in the particular case before the board and then we are out-voted by people who practically know nothing about it, and possibly never enter the hospital again.

14722. That is the weekly board you are speaking of now?—Yes.

14723. Would you like to see this general weekly board abolished?—I should very much.

14724. Leaving your business as executive committee

23 February 1891.]

Colonel BIRD.

[Continued.]

Chairman—continued.

committee of the hospital to be reviewed by the quarterly board?—Yes.

14725. Which is public?—Yes; I should think that when a close board was established, there would hardly be any necessity for a house and finance committee except as a sub-committee of the close board.

14726. Could you suggest any means by which the alteration could be made which you would like to see brought about?—Yes; some years ago I proposed, and it was carried by a large majority, that the hospital should be governed by a close board; but when it was referred to a sub-committee to alter the laws so as to work the hospital under the close board we were beaten when those laws were presented to the quarterly board; and the matter has remained in abeyance ever since. That was brought about by very unfair means; I may say, by means of a governor addressing a circular, and stating very gross inaccuracies, telling the governors, that they would lose all their privileges, and that they would lose all chance of supervising the work of the hospital.

14727. Then was it brought forward at the annual meeting?—It was brought forward, but we could do nothing; we were out-voted by so large a majority.

14728. In fact the governors of the hospital wanted to keep it as it was?—Yes, knowing nothing about it. Out of the 120 who came, there were 40 who knew nothing of the hospital, and 60 who have never been since.

Lord Thring.

14729. What numbers of outsiders, as you call them, might come in to oppose you; you say you find yourselves greatly embarrassed in the management of the hospital by having an open committee; how often does it occur that you have been over-ruled?—I could specify some three or four cases within the last four or five years.

14730. In respect of what questions did they over-rule you?—With regard to the close board for one.

14731. I understood you to say that the great objection to this open system was that you had been over-ruled in questions material to the interest of the hospital?—Yes. I may mention one; we had some difficulty with the matron some few years ago, and then very warm discussions took place about it, and there were several cases in which the governors came up then and gave opinions on the matter, who really knew nothing whatever of the working of the hospital or the matter in dispute.

14732. You were beaten on the question of dismissing the matron, in fact?—Yes.

MR. HERBERT W. PAGE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

14742. You are the dean of the medical school of St. Mary's Hospital, are you not?—I am not at this moment; I was until the end of last year.

14743. Are you a member of the College of Physicians or Surgeons?—Of the College of (24.)

Lord Thring—continued.

14733. Can you quote any other?—Not on the instant.

14734. In the last four or five years that has only occurred once?—There have been other occasions, but I hardly remember them now.

Lord Clifford of Chudleigh.

14735. In the case of the dismissal of the matron you would have been obliged to refer the matter to one of the quarterly courts, would you not, before she was dismissed?—We should.

14736. And therefore if you had had a close board, it would have been practically immaterial then?—You see practically the people who come to the weekly board are the same who come to the quarterly board.

14737. But they would not necessarily be the same governors?—Not necessarily.

14738. You said that part of your duties was to check extravagance, not intentional extravagance, on the part of the medical officer. How would you manage to check extravagance in diet on the part of the medical officers; the committee could be no judge, could they, of whether the diet was necessary or not?—We could call the attention of the senior staff to it at once. I may mention one or two things. With regard to beef essence, for instance, that is a matter that they very frequently run very wild upon. We have beef tea and beef essence, and the extract of beef. Extract of beef costs about 2 s. 7½ d. a tin; and we can make our beef tea and beef jelly at very much less cost. It only requires the attention of the senior staff to be called to it, and they alter it at once.

Earl of Lauderdale.

14739. With regard to these medicines I think I understood you to say that you could not divide the cost of the medicines between the in-patients and out-patients?—No, we cannot.

14740. To which head do you charge the whole of the medicines?—I said that the cost of the medicine for the out-patients was estimated, but that figure of 1 s. 2 d. a head does not include anything for medicine at all. There is another sheet (*producing it*). You were asking the secretary about beef tea just now. We are rather particular about our beef tea and beef essence; and in order that the manufacture of it should be the same always, on the back of the diet scale we have had printed the composition of beef tea, beef jelly, and of mutton broth.

Chairman.

14741. Will you put that in?—I will put it in (*handing in the same*).

The Witness is directed to withdraw.

Chairman—continued.

Surgeons. I am one of the surgeons of the hospital, and have been for 15 years; 10 in the out-patient department and five in the in-patient department.

14744. What is the number of students at
D D 4 St.

23 February 1891.]

Mr. PAGE.

[Continued.]

Chairman—continued.

St. Mary's?—I suppose at any one time we have somewhere about 300.

14745. Is your school increasing or decreasing in numbers?—For some years, until this last year, it had increased very considerably; last there was a fall in the numbers, but our numbers have very much more than doubled within the last five or six years.

14746. Could you assign any particular reason for the diminution last year?—I think the successful rivalry of other schools, especially those which had started residential colleges, Guy's and Middlesex, had a very great deal to do with it.

14747. What is the income from the fees of the school?—The average income during the last seven years has been somewhere about 4,500 £; the largest sum ever received was 5,900 £. in 1887-8, which was the year when the number of students was larger than it had ever been before.

14748. And the average is about 4,500 £, you say?—The average is about 4,500 £, taking a series of seven years, beginning with a very small total. The total in the first year of the seven was only 2,317 £; it was after that that the amount jumped up, jumped up at once to 3,177 £, then 3,700 £, 4,200 £ odd, 5,200 £ odd, 5,900 £, and then it dropped to 5,500 £.

14749. Then out of that 5,500 £ you have to provide certain expenses, have you not?—Yes, the expenses of keeping the place going come to somewhere about 4,400 £ a year.

14750. But I meant the school expenses, irrespective of fees to lecturers and so on?—Irrespective of fees to lecturers it is 1,100 £ less, it is 3,300 £ or 3,400 £.

14751. You think they would have to deduct 3,000 £. before there is anything to divide?—3,400 £ or 3,500 £. before there is anything paid to the lecturers. Then certain of the teachers at the school have fixed payments every year irrespective of the amounts received, irrespective of the net profits.

14752. Do those come out of that same fund?—They come out of the same fund; it is the only fund from which payment is made. There are certain demonstrators and tutors, not staff officers, that is, who have salaries amounting altogether to about 1,100 £.

14753. What is the maximum that any lecturer or teacher can get at the school; I do not mean to ask what any particular individual gets, but what is the maximum?—I should think the largest that any man ever received for his lectureship taken out of the division was about 160 £; then holding other appointments, he would get something for those also.

14754. In the same hospital, do you mean?—In the same hospital.

14755. And provided from the same fund?—And provided from the same fund. The lecturer on physiology is the only exception to that statement; he has a comparatively large salary, because he has no other means of earning his livelihood, and it is thought well to have a professed physiologist to occupy that particular chair.

14756. How is the division made; are the funds divided up into so many shares?—They are

Chairman—continued.

divided up into so many shares, and the value of a share is calculated by a time value; that is the amount of time occupied in each particular work for which this division is allowed. Then in addition to work at the school the teaching work at the hospital also receives a share calculated according to the same time scale. So that a man who holds a lectureship at the school, and who also is surgeon to the hospital, and who also gives clinical instruction in the hospital, may receive altogether, we will say, something like 250 £; but that would only be in a very good year. If I may mention amounts, I may say that the largest sum I myself ever received while holding half a lectureship; that is to say, lecturing jointly with one of my colleagues, was just upon 180 £; but the average of my own receipts from the school during the 15 to 16 years I have been there is something under 50 £.

14757. You mentioned just now that a man was paid for his lectureship, and also for his clinical instruction, being a surgeon to the hospital; but he does not get any payment for being a surgeon to the hospital?—No, that payment is simply because of the teaching.

14758. Then who is responsible for the discipline of the students?—The dean.

14759. And is there any committee of discipline?—There is the school committee, which meets once a month, and there are various sub-committees dealing with educational matters, and so on. The school committee meets once a month, but practically the dean has the control and management of the whole concern.

14760. The committee is composed of whom?—It is a committee composed of the staff and lecturers and a certain number who are appointed by the board of the hospital (they are at present 10 in number), medical governors who sit upon this school committee; and it is in that way that the school and hospital are associated, as it were, in the joint management.

14761. Do you wish to see any reform in the system of medical education, or are you contented with it as it is?—No; I am not altogether content with it, and I think that in several ways improvement might be made. I think that an improvement might be made in getting rid of certain subjects of instruction before men begin their definitely medical work. Evidence has already been given before you that such subjects as chemistry, physics, and botany might with advantage be taken up by men before they begin their purely medical studies; and I think myself it would be an advantage if they were out of the way. First of all because they actually interfere with the time that men have to give to their purely medical work; and, secondly, because, I think, that men having worked at those subjects before entering as medical students would come very much better prepared to engage in scientific work; they would have their minds attuned to scientific observation.

14762. Is there any other point which you would wish to touch upon?—The question has been raised as to whether it would be advisable to have any central school in London. I have thought that possibly it might be a good thing to have some of the subjects dealt with at a central school

23 February 1891.]

Mr. PAGE.

[Continued.]

Chairman—continued.

school, but I would in nowise suggest that the individuality of the schools should be interfered with as far as they are places where medicine and surgery are to be learnt. There is great waste of energy and of money in maintaining no fewer than 11 fully equipped medical schools in London, and I think that in the direction of centralising some of the pre-hospital work, an improvement might be made, that is to say, work before men go into the hospital, such as anatomy, physiology, and so on.

14763. Have you any further point?—Not as far as my school is concerned. I do not know whether you ought to be told that we have what is called a residential college at St. Mary's.

14764. Will you tell us about that residential college?—Two houses in the neighbourhood were taken for the purposes of a college some years ago.

14765. Is that part of the hospital, or is it a commercial undertaking connected with the school?—It is a commercial undertaking connected with the school. The hospital had nothing to do with it.

14766. And then how is that maintained?—It is practically part of the school concern; the payments to the college go into the general receipts of the school, and the school supplies any deficit where it exists.

14767. Do you find it popular among the students?—Not altogether. It began well, but then dropped off; and I think the reason for its so doing was that there was a general feeling that it was much more costly to live at the college than in lodgings in the neighbourhood. The charge originally made for the academic year of nine months was 90 guineas; and considering that two men can very well live together in rooms for somewhere about 120, the extra cost of the college has been against it; and, as a matter of fact, there has been recently a new regulation made, very much reducing the amount to be paid to the college, in fact, to take men in for both college and school at one united fee; but that has not yet come into force. The object of the alteration is to endeavour to fill the college again. In some respects it is popular in the sense that men living there have the opportunity of receiving personal help and instruction from the resident warden, a junior member of the staff generally, holding perhaps one of the lectureships of the school and able to help men in their early studies.

Earl Cathcart.

14768. Would this meet your idea, a preliminary examination analogous to that for the Army, which young men might have to pass before they went to the various medical schools?—You mean an examination on scientific subjects.

14769. Yes, in those subjects that you think ought to be learnt before pupils come to the medical colleges?—I think in many ways it would be a very great improvement.

14770. It was suggested to us at our last meeting that there should be a uniform preliminary examination, so as to ascertain that all

(24.)

Earl Cathcart—continued.

young men before they went to the medical schools had a certain knowledge of those elementary subjects that they require, and which it is not necessary to teach in the medical schools; that would meet your view, would it?—It would. Of course the various examinations ought to be as much as possible uniform.

Earl of Kimberley.

14771-2. Is there a rule at St. Mary's Hospital that members of the staff must be members of the College of Physicians or of the College of Surgeons?—No; I think that a man is not obliged to be a fellow of the College of Surgeons in order to become surgeon to the hospital, though the understanding as a matter of fact is, I think, that every one is. The law does not absolutely require it, because I remember an instance of a man being elected who was not at the time a fellow, but I think it was at the time an understanding that he would soon become one. With regard to the College of Physicians, a man must be a member of the College of Physicians before he can become a member of the staff on the medical side.

14773. Do you know on what ground the limitation is based?—I suppose standard of knowledge more than anything else.

14774. Do you mean that it is assumed that no one would be duly qualified to be physician unless he had passed that particular examination?—Yes, it is a sort of assumption. (*A copy of the laws is handed to the Witness.*) The law, I find, is: "The physicians, and physicians in charge of out-patients, shall be fellows or members of one of the Colleges of Physicians of the United Kingdom," and not of the College of Physicians of London; but practically everyone is.

14775. In point of fact, then, it is not limited to the College of Physicians?—No, not according to the law.

Lord Clifford of Chudleigh.

14776. Did I understand you to say that the cost of the school, exclusive of fees to lecturers and other emoluments to lecturers, was about 2,400 l.?—£. 3,400.

14777. You mentioned the figure 3,400 l.; but out of that you said there were certain salaries, as I understood you, which amounted to about 1,100 l.?—That was when I mentioned the whole sum, 4,400 l.

14778. But I have got it down here, and I want to know whether it is correct, that the average income is taken at 4,500 l.; the amount of fees divided among the lecturers, 1,000 l., reducing it to 3,500 l.; and then there are certain fixed fees and emoluments, which you did not give us, amounting in all to about 1,100 l., leaving a balance for ordinary expenses of the school of somewhere about 2,400 l.?—Somewhere about that. As a matter of fact, I have not struck an average of the annual charges; they have very much increased; at the time when the period begins they were very much smaller than they are now.

14779. What I want to get at is the expense of the school irrespective of the sum paid one way or the other to lecturers, and that I take it

E E

is

23 February 1891.]

Mr. PAGE.

[Continued.]

Lord Clifford of Chudleigh—continued.

is somewhere over a couple of thousand pounds?—More than that; about 3,400 *l.* or 3,500 *l.* irrespective of anything paid for teaching purposes.

14780. Then what is the 1,000 *l.* that you gave us as deducted from the 3,500 *l.*?—I understood you to say that besides the actual sum divided into fees, there were the fixed emoluments which the lecturers got, which are not so fluctuating, and that those fixed emoluments amount to about a thousand a-year?—£. 1,100 really.

14781. And what is the nature of the expenses which swallow up the remainder of the sum?—There are things like advertisements, printing, prizes and scholarships each year.

14782. Might I ask about what is the amount given in scholarships?—The actual amount given for prizes and school scholarships each year is about 130 *l.* but in addition to that there are scholarships of the value altogether of about 700 *l.* which are not paid in money, but which are deducted from the school fees; but that is not an actual sum disbursed. Then there is the secretary and librarian, grants for two of the departments, a grant to the athletic club of the students, wages, taxes, gas, and various miscellaneous expenditure; and then a certain amount which is paid each year to the hospital as the interest upon money expended by the hospital upon the enlargement of the school building a few years ago.

14783. Could you give us the amount of that?—The amount is 440 *l.* The sum advanced by the hospital some eight years ago, and again more recently, in all comes to 11,000 *l.*, upon which the school has to pay out of its profits 440 *l.* a-year. Then I ought to say that, in addition to this loan from the hospital, it was necessary because of the enlargement, and also because of the college, to issue debentures to, I think, the amount of 6,000 *l.*, which are being paid off at the rate of 500 *l.* a-year, and the interest upon which, at 5 per cent., comes to something considerable. So that there is more than a thousand pounds in fixed charges each year off what otherwise would be profit for division.

Chairman.

14784. And then, in addition to that, you have the liability of a deficit upon the college?—Yes.

14785. Is there anything else you wish to state to the Committee?—I think you have heard incidentally as to the scholarships which are offered each year.

14786. Are any of them paid by the hospital?—Not any.

14787. Is any money paid towards the school by the hospital?—Not any at all. In the original constitution of the hospital fees were to be paid, and they still are paid to the hospital into what is called the pupils' fee fund; that is a separate item in the hospital account; but, as a matter of fact, that money is received entirely by the school. In the original constitution it was laid down that the hospital should have a certain proportion, the school a certain proportion, and the lecturers a certain proportion; but that arrangement died out long ago, and the hospital really relinquished its share, on the understanding that the sum should be expended each

Chairman—continued.

year in scholarships and prizes, and so on; and practically it never comes into the hospital account at all. At any rate the amount which is annually given, both disbursed in money to students as prizes, and also the amount offered in scholarships, and deducted from pupils' fees, is somewhere about 700 *l.*

14788. Is there anything else you wish to add?—Nothing, as far as the school is concerned. Of course I have had some years' experience in connection with the hospital, both with regard to out-patients and in, if you would like to ask me any questions on that subject.

14789. We have had the detail of the management of the hospital pretty fully from the secretary, and, I think, another gentleman is coming to speak to the out-patient department?—Yes. The only point I should like to mention is this: one of the questions which has been asked, not to-day but at other times, is with reference to any body which should control the hospitals outside themselves.

14790. We shall be glad to hear your opinion on that question?—I do not think that there should be any body to manage the hospitals outside the hospitals themselves, but I do think that it would be a very good thing indeed if there were some body, whether connected or not with the London county council, upon which there might be medical men of position in the profession, which should have some voice in deciding whether hospitals should or should not be erected in particular places. I think that in that way very great good might accrue. I believe that the public would in time come to know which were the hospitals deserving of support and which were not; and I think there would be very great benefit derived from some such power, to determine whether a hospital should or should not be founded in a particular place.

14791. Would you or would you not prefer to keep the hospitals quite free from any Government interference of any kind?—Absolutely free.

14792. But if you had the county council, or any body of that kind, meddling at all, would you not gradually get the inspector into the hospitals?—That would be the risk, but I think he could be some how or other kept out. It would be an immense advantage to prevent the possibility of hospitals which have no business to exist being founded, hospitals being established without any need for them; and I think the general public would come in time to know which were the hospitals deserving of support and which were not; and I think also very great advantage would accrue in the fact that presently an end would be put to the system whereby persons of high social position lend their names to advocate hospitals in order to obtain large sums of money which might be very much better expended.

14793. Do you think that any of these kinds of hospitals which are unnecessary or hurtful exist at this moment?—I do.

14794. Are those what are termed special hospitals?—Not necessarily so.

14795. In some cases?—Of course, the tendency is for them to be special hospitals; but I
do

23 February 1891.]

MR. PAGE.

[Continued.]

Chairman—continued.

do not wish at all to imply that I had special hospitals in my mind in saying what I have said.

14796. Had you any particular kind of institution in your mind?—Yes; I had in my mind instances, but of course it would be very invidious indeed to mention them.

14797. Would you like to see a system of registration of hospitals for which a small fee would be imposed?—I have not considered the subject in that light.

Earl of Kimberley.

14798. But supposing that you had any such control as you suggest, would it not almost certainly follow that the public would demand that the same body which determined that there should be or should not be a hospital should also be responsible for seeing that that hospital was built in a particular way, and was furnished with certain appliances, and in that manner would it not lead to a general control of the hospitals?—It might do so. I should have no objection to persons who are able to form an opinion deciding as to what the hospital's shape should be, or the way in which it should be furnished; but that is a very different thing indeed from managing a hospital afterwards.

14799. You have not thought of a certificate given by a competent body that the hospital was really one which was fit to be opened?—It would rather be as to whether a hospital was really needed; that was what I had in my mind.

14800. My point was whether the one would not lead to the other almost inevitably?—It might; but the evil to be combated is so great and the evil resulting would be very much less.

Earl of Kimberley—continued.

14801. Should you approve of a superintending body elected from the different hospitals to have certain powers as to the accounts, and some other matters, which might be referred to it, with regard to all the hospitals in London?—Not unless you put them all on the same footing.

14802. But still, for example, to secure uniformity of accounts?—That would be very desirable, but I think it may be done by voluntary methods rather than by compulsion.

14803. Would you like to see any system of inspection of hospitals by such a body, not a Government body, but a body formed by the hospitals in London generally; supposing that they elected a board, would you approve of their having any power of inspection of the hospitals?—They might be rather a nuisance, but I should have no great objection to it.

14804. But do you think they would be any advantage?—No, I do not think any advantage.

Earl Cathcart.

14805. If you study a map of London, at the present moment, where the hospitals are marked, the position of the hospitals is almost an absurdity; you find large districts without a hospital at all, and on the other hand others where they are crowded together; is not that so?—Yes; that is largely due to the growth of London.

14806. Still, that is the case; you find large districts where there is no hospital at all; for instance, in the south of London?—Yes, it is the case.

The Witness is directed to withdraw.

MR. MALCOLM MORRIS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

14807. You are on the staff of St. Mary's Hospital?—Yes; I am in charge of the skin department of the hospital, the out-patient skin department, and I have four beds in the hospital under my care.

14808. Do you know what system is pursued in regard to out-patients at St. Mary's?—Yes.

14809. Would you kindly explain it to us from the moment that a person comes to the hospital to be treated as an out-patient. He first of all arrives at the hospital; where does he go when he arrives?—It depends very much upon the time when he arrives at the hospital, and it depends also whether he arrives armed with a subscriber's letter or not. If he comes without any subscriber's letter to the hospital he is seen by an officer known as a casualty officer, who examines him, and if it is a case suitable for a special department he sends the patient to that special department: the eye, the throat, skin, and so forth. If it is only a trivial matter he sees the patient himself. If it is not a trivial matter, and belongs to one of the out-patient physicians or out-patient surgeons, he sends him to that out-patient physician or surgeon. If it occurs in the morning he will send him to the

(24.)

Chairman—continued.

out-patient physician or surgeon in the afternoon of that day; between one and two is the time that they come. If it is a trivial injury he will attend to it, and the patient will come every day if need be until the injury is well, or until the trivial complaint is over.

14810. That is the casualty officer of whom you have been speaking?—That is the casualty officer.

14811. Does he take both surgical and medical cases?—He takes both surgical and medical cases.

14812. Supposing that a case has to be passed on to a special department, what then?—If the patient came to my special department, if it was at all a serious case, he or she would go on attending at that special department twice a week or once a week according to circumstances, until the patient had recovered. Practically it acts so; there are certain limitations, but taken as a rule, it is until the patient recovers or until the patient leaves of his own accord.

14813. Do you have any cases that you treat without letters?—If the case is an urgent one. If the case is not a particularly urgent one they are requested to get a letter.

E E 2

14814. Supposing

23 February 1891.]

Mr. MORRIS.

[Continued.]

Chairman—continued.

14814. Supposing a person comes to you with a certain disease, do you give him a letter for a certain number of attendances, say six attendances?—No, not any fixed number.

14815. He merely comes backwards and forwards until he is well?—Yes.

14816. Do you teach in your department?—I do.

14817. And do you find that your department is very crowded for that reason?—When I was appointed in the year 1882 no students came at all to the department; it had existed before, but there was no special officer for it; it was done before by one of the members of the staff who held other appointments; but since 1882 the department has gradually increased, and the number of students, and now it is inconveniently crowded.

14818. It is inconveniently crowded for teaching purposes, you mean?—For teaching purposes; because, of course, space must be left for the patients' easy ingress.

14819. Do you know if that overcrowding goes on in the other departments?—You mean by students? There are a considerable number of students who attend all the out-patient departments.

14820. But now as regards the patients, are there too many of them for you to examine properly?—I have never had that difficulty at all.

14821. So that as regards the treatment of the patients the department is not inconveniently crowded?—No, only on account of the large number of people having to be in a smallish room.

14822. Now, in the event of a case being a rather more serious case than a casualty case, you said the casualty officer refers that case to someone else?—To the out-patient surgeon or physician attending on that day. There is an out-patient surgeon and an out-patient physician attending every day in the week except Sunday, and those cases are referred at half-past one, or a quarter-past one, whatever time they come, to the physician or surgeon of the day, who takes charge of them; and if he thinks the case is a suitable case to be admitted into the hospital he admits into the hospital if there is room.

14823. And would these patients have to wait a very long time after seeing the casualty officer?—Sometimes it happens so when the patients come from a distance; they may have to wait perhaps from ten in the morning until one; but if they are from the neighbourhood they can go away and come back again if they are not too ill. If they are too ill for that, then comes the question as to whether they ought not to be admitted into the hospital at once; and then the resident medical superintendent is immediately consulted; so that a person really bad would not be kept waiting.

14824. But then is there any limit of time as to when the physicians and surgeons, or assistant physicians and surgeons go away?—No, no limit of time.

14825. They stay till they have finished their work?—Yes; it is not an uncommon thing for

Chairman—continued.

them to begin shortly after one, and to go on till between five and six in the afternoon.

14826. Do you have many cases sent to you for consultation?—By practitioners in the neighbourhood you mean? Yes, a very considerable number.

14827. And do you think that the free treatment of your hospital, St. Mary's, interferes with the practice of the smaller practitioners?—I think very slightly indeed. I have been interested in the hospital question for some years, and I have considered very carefully the question as to whether people who attend the out-patient department are improper people to do so, and I have in several instances made an attempt to try and find out whether people were right subjects for medical relief, but I have never in one single instance during the nine years that I have been on the staff there, found any case where I could fairly think that a person ought not to have claimed to be relieved. The nearest one was one that I took up to the secretary: a man came to my out-patient department, and I thought he looked, judging from his appearance, in a position to pay, and so I took him up to the secretary. It turned out, however, that he was a clerk on a very small salary; he had a rather more respectable appearance than most of those who usually attend, but as a fact he had had illness in his family and considerable difficulties, and was just as much in need of relief as the actual poor, perhaps more.

14828. Do all the officers, the physicians and surgeons, and assistant physicians and surgeons do their work for nothing at the hospital?—We all do the work of the hospital for nothing; we are only paid for the lectures we deliver, and we get a certain fractional proportion of the fees for the instruction that we give in the out-patient department; independently of seeing the patients.

14829. The resident officers in the hospital are unpaid, are they not?—They get board and lodging for their work, but no payment at all. They are considered to be the best prizes that they can get, because to have one of those appointments gives them an opportunity of studying.

14830. Do you know whether when an appointment is vacant they advertise it in the newspapers?—Not the resident appointments. The appointments on the staff are advertised, but not the appointments in the hospital.

14831. Have you anything else you wish to say to the Committee?—I have one or two points. One is the utilising of the poor law infirmaries for medical teaching. I think that there is a very large amount of material in the large poor law infirmaries in London which might be utilised for the teaching of medical students. An attempt is being made just now for a post-graduate course, which is a most desirable thing; but I think that they ought to be thrown open for systematic teaching. Some years ago, before I was on the staff of this hospital, and when I was wanting material from which to teach, I made an application to one of the poor law infirmaries for permission to do so, and for a short time took a class to that infirmary to study certain

23 February 1891.]

Mr. MORRIS.

[Continued.]

Chairman—continued.

certain diseases; but difficulties were thrown in the way and it was impossible to go on with it. But I think it is a pity that such a large amount of most important material, which would be of the greatest possible use for the teaching of medical students, and would assist them immensely when they became doctors in after life, should be practically unused; for the class of case that they would there see is the class of case that they are more likely to see when they are in practice for themselves, rather than the severe and acute cases that are seen in the beds of our general hospitals. And I think that instead of a single medical officer or two to have charge of these infirmaries, it would be far better if they had a consulting staff such as we have at what are called general hospitals.

14832. And would the system you advocate operate favourably also to the patients in these infirmaries?—I think so. I think it would throw a great deal of light on the institutions. I do not for a second mean to imply that they are not exceedingly well managed and looked after; but I think it would be an immense advantage to the patients, an immense advantage to medical science, and an immense advantage to the young medical students who are being taught. Then I would like to say one word about the formation of hospitals, which Mr. Page referred to just now. If nothing else would come out of this Committee but this one thing, that hospitals should not be formed without some license, it would be a most desirable boon. It is impossible now for the benevolent public to discriminate between a hospital which is started simply for the benefit of an individual and a hospital which is started really for the common weal. Hospitals which are useless, and which are worse than useless, I may say which are detrimental, are constantly started, and the benevolent public have no real means of being able to discriminate.

14833. Do you think that any subscriber to any general hospital who is not an expert could find out anything at all from the accounts of most general hospitals?—No, I do not think he could; I think he would have to be very much skilled in it if he did. I think if they were all reduced to one condition of uniformity it would be very much better. I think the only desire of those who are most interested in the hospitals and their welfare, and who have nothing whatever to get in connection with it, is that the greatest amount of good should be done with the money.

Earl of Kimberley.

14834. What body would you entrust with this power of licensing?—That is a very difficult question. The county council have hardly been in existence long enough for us to be able to judge whether they are capable of fulfilling such an important trust; but provided they were, I should think the county council is probably as good a body as could be imagined; and theoretically, that is probably the sort of body that should have a municipal power like the one that I suggested.

14835. Might it not be desirable that there should be in such a body some experts, by which I mean some medical men of repute, whose opinion

Earl of Kimberley—continued.

would carry weight, as well as some laymen?—I think, when a person wants to start a hospital he should show cause on the same principle that no fresh public-house can be started in a neighbourhood without showing some reason for the license; and it would be an immense advantage if, on that board, there was somebody who was an expert and in a position to know if the medical man (a new hospital is very often started by a medical man) is a man of repute, and if it would be an advantage to the public instead of a disadvantage.

14836. I rather meant to imply that it would not be safe, probably, to entrust it wholly to the members of a body such as the county council, who might not always be well qualified to discharge the duty; that it would be well to add to a committee of that body some persons otherwise chosen; and that is your opinion, I gather?—Yes, I think it would be very advantageous.

Lord Clifford of Chudleigh.

14837. With regard to the use of poor-law infirmaries for medical teaching, you said that there is a certain amount of objection coming from the poor-law infirmaries; does that come from the managers or does it come in any way from the inmates?—So far as I am personally concerned, I cannot say always where it comes from; it chiefly comes from the managers.

14838. You think that the inmates themselves have no repugnance to their cases being made use of for medical teaching?—I have never had any reason to believe so. In the out-patient department patients take it as a compliment to be lectured on; they do not in the least object to it; there is never the least difficulty or, when I say never, very seldom indeed is there any; and, as far as my experience goes, the patients in the poor-law infirmaries do not object to it in the very slightest.

Chairman.

14839. Have you anything else to say?—In reference to our own hospital there is one point, and that is the question of the open board of governors. The hospital is governed by an open board.

14840. Are you a governor?—I am a governor, and I have been for four and a-half years a member of the House and Finance Committee; and I do not think that that is the best method of governing a hospital. There have been attempts made every now and then to make this board a close board. I think it is a bad system that a hospital should be governed by an open board of governors; that they either yearly or at some appointed time should elect from their body a certain number to govern the hospital, and that the medical staff ought to have a certain proportion of their number upon that committee, so that it might be a joint committee of the governors of the hospital and of the staff.

14841. But is not that rather a matter for the governors of the hospital themselves to decide?—That is so; but on the present system any governor can bring up a certain number of governors and can alter the work of the previous

23 February 1891.]

Mr. MORRIS.

[Continued.]

Chairman—continued.

week in a way exceedingly inconvenient and bad for the management of the hospital.

14842. At the same time the individual who wishes to urge the opposite course would have the same means of bringing up governors, I presume?—Yes; but I would urge that if sufficient evidence to justify it was laid before this Committee, this Committee would do immense good by saying that there was to be uniformity

MR. ALFRED PEARCE GOULD, is re-called; and further Examined, as follows:

Chairman.

14844. YOU wish to make a correction, do you not, of a statement as to fees which you made when last you were examined?—Yes, I ought to have stated when speaking of the division of the fees amongst the lecturers, that each lecturer has to bear the cost of his own course of lectures. In some cases that is rather heavy. In the matter of chemistry, for instance, our lecturer on chemistry has to provide all the materials for his course of lectures on chemistry and the course of practical chemistry; so that that makes a considerable deduction.

14845. Does it put him to great expense?—Yes; I could not say what, but it does put him to considerable expense.

14846. Then as to the discipline of your medical students at the Middlesex Hospital; you desire to make an addition to your evidence?—Yes; there is a small committee of the committee of management of the school, consisting of three lecturers, the secretary and the dean, who meet every month regularly, and they go into any questions of discipline. Any student, for instance, who is not attending lectures with sufficient regularity is interviewed; any one who has been lost sight of for any little time has to appear before this committee; and that gives us an opportunity of seeing that all the men are at work; and then if any question necessitating discipline arises that committee can meet at once, or the dean can act in any emergency.

14847. In fact, you really have the students under your eye?—Yes.

14848. Then as to improvements in medical education you desire to say something?—The one great need I think in London just now is improved facilities for learning practical anatomy, dissecting. Most medical schools in London are generally very imperfectly supplied with subjects for dissection, and it is a need that is becoming more and more pressing. This particular year it has not been pressing at all, but that is a mere accident; for several years past the difficulty of obtaining a sufficient supply of subjects for dissection has been increasing until it has become a very serious matter indeed. It has considerably interfered, too, with the teaching of practical operative surgery, because for that dead bodies are required, and there is really a considerable need of improving our means of educating men in that particular.

14849. Is there not some regulation regarding workhouses in reference to that subject?—Yes, there is an Anatomy Act, but that is a voluntary

Chairman—continued.

of management, as well as uniformity of accounts.

Lord Monkswell.

14843. Have you known any inconvenience arise from any governor who likes to come being admitted to the governing board?—I have.

The Witness is directed to withdraw.

Chairman—continued.

Act, it is not a compulsory Act; and unless the managers and some individuals indeed, in connection with workhouse infirmaries choose to send the bodies of unclaimed paupers to medical schools they cannot be compelled to do so.

14850. Who are the individuals you refer to?—The master of the workhouse can prevent it, and I believe also the dead-house porter.

14851. Have you thought of any way wherein the wording of the Act should be altered?—Well, if it could be made in any way compulsory to send the bodies of unclaimed paupers to medical schools, that would answer the purpose.

14852. Then, as regards infectious diseases, you have something to say, I believe?—That is a matter on which I may say that the ordinary medical schools have not proper facilities for teaching their students. The general hospitals, with very few exceptions, exclude infectious diseases, scarlet fever, measles, small-pox, from their wards; and it is certainly a want. That has been recently, in some measure, met by the poor law fever hospitals being thrown open, under certain special conditions, to students; that has only just recently come into force, and we cannot tell how it will work. The difficulty, of course, is the great distance that these institutions are from most medical centres.

14853. And as to apprenticeship after curriculum you have something to say?—The old apprenticeship system, before the medical curriculum, has died a natural death, or has almost entirely passed away; but that certainly supplied something which the hospital training cannot supply. It brought a man into contact with actual practice in a way that we cannot do it in hospitals; and I think it would be a great improvement if we could have some system of apprenticeship after the curriculum. I do not think it would be desirable, or even possible, to revive the old system; it had many drawbacks, and having once become extinct we could not revive it; but I think it might be revived at the end of the curriculum with very great advantage in this respect, that it would give the students their practical instruction at the time when it was most useful to them, that is to say, when they had obtained the theoretical instruction at the hospital. It would also be a very good thing for the practitioners, because it would keep them in touch with medical science. They would be continually having men fresh trained from the schools brought into their homes and into their practice, and it would be a great help to them. And I think also it could be done without expense

23 February 1891.]

Mr. GOULD.

[Continued.]

Chairman—continued.

expense to the medical students, because their services would be really useful to the practitioner to whom they went. Instead of the boy's parents having to pay an apprenticeship fee, a man after his four or four and a-half or five years at the hospital, would be taken by a doctor for nothing, or he would pay him something. It would also probably lead to the abolition of the class of unqualified medical assistants.

14854. You have no doubt in your own mind as to the value of the out-patient department?—No, it is most important. A large class of diseases are seen in the out-patient room that never get into the wards of the hospital, and it is most important that the students should see them. There is quite a variety of cases brought into the out-patient room.

14855. Is there a large enough field for surgical instruction in the out-patient department?—Yes, within certain limits. Nothing but the most trivial operations can be done upon out-patients, but there is a large number of cases that do not require any operation, and the subject can be very well studied there indeed. There is a very large field indeed there.

14856. And are the cases that come before you in the out-patient department sufficient for teaching purposes?—Yes.

14857. Are they too many for those purposes?—Speaking from my own experience, I should say quite enough, but I am not crowded at all.

14858. Is there any other point you want to refer to?—I think there is a difference between surgical and medical cases as to their fitness for hospital treatment; that people who might be in a position to pay the doctor for medical treatment are often unable to pay for surgical treatment. Surgical treatment is the more expensive thing. And then surgery certainly in the last 20 years has become a much more scientific pursuit, and it has become much more of a fine art, and it has become much more largely operative than it was; and all of those things have rendered it much more expensive. Even trivial operations are treated now with certain special and often expensive precautions, so that it is impossible to properly remunerate a doctor unless the patient is decidedly above the ordinary hospital class of patient.

14859. That only means to say that there are many people who are justified in going to a free

Chairman—continued.

charity because they cannot afford to pay a surgeon, who would not be equally justified in going to it for relief on the medical side?—Yes; I think many people are justified in going to the surgical side of a hospital who might not be justified in going to the medical side of the hospital.

Earl Cathcart.

14860. How is the great army of unqualified practitioners recruited; are they broken down students; I ask the question because in the country there is a great number of them?—I should like to answer that question with a little reserve; but certainly some of them are medical students who have never obtained a qualification. Some of them have started as unqualified assistants, and have never gone to a medical school at all. Some of them are chemists, I presume.

14861. But unqualified men are largely employed by medical men as assistants throughout the country?—Yes.

14862. You have midwifery cases attended by extern clerks from your hospital?—Yes.

14863. What distance do they go?—I think within a radius of one mile.

14864. Do you make any difficulty about the poor women, or do you take the cases of any who come?—I believe we take any who apply.

14865. And have you the aggrieved poor practitioner to deal with in that matter; does he complain?—My own impression is that the class of patients who come in that way for the attendance of the medical students are only quite the poor.

14866. That they would not be worth the private practitioner's having?—No; I never heard the difficulty raised.

14867. What is the payment for a very poor case, 10 s.?—Yes.

14868. Is any less fee than 10 s. taken?—I never heard of a less fee than 10 s. 6 d. for a doctor.

Chairman.

14869. Some hospitals have residential colleges and others have not; is the residential college a very good thing for the students?—I think the experience, so far as it has been tried in London, is not strongly in favour of them.

The Witness is directed to withdraw.

MR. HENRY VANE, is called in; and having been sworn, is Examined, as follows:

Chairman.

14870. YOU wish to correct a statement of Sir Henry Longley's, on his behalf, do you not?—Yes.

14871. What is the number of the question?—No. 3233.

14872. The question was "Besides Guy's, have you ever had any large hospital before you applying to you for an alteration of their scheme?" and Sir Henry Longley's answer was, "Yes, within the last few years, we have had both St. Thomas's and St. Bartholomew's applying

Chairman—continued.

for the very same alteration. In both those cases the Governors found their income insufficient to meet their expenditure, and rather than reduce their expenditure, they came to us, just in the same way as the Governors of Guy's did, to ask for a scheme to enable them to take paying patients?—That all stands, except that "St. Bartholomew's should be Bethlehem Hospital.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 26^o Februarii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.

Earl SPENCER.

Earl CATHCART.

Earl of KIMBERLEY.

Lord ZOUCHE OF HARYNGWORTH.

Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.

Lord SUDLEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. SIDNEY M. QUENNELL, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

14873. You are the secretary of Westminster Hospital, are you not ?—I am.

14874. How long have you held that position ?—Exactly 13 years.

14875. Would you mind telling me what you were before you became secretary for that hospital ?—I was brought up in business in the City in the office of a large firm of merchant bankers. I had also some little experience in hospital work, having worked at the Poplar Hospital for two or three years.

14876. Was that immediately before going to Westminster ?—Not quite immediately before.

14877. When was the Westminster Hospital founded ?—In the year 1719.

14878. Is it a free hospital ?—Practically free.

14879. Will you explain what you mean by that answer ?—Our governors have letters, but they use them very sparsely and nearly all the patients are admitted quite free. The out-patient department is quite free ; a letter is not required there at all ; and with regard to the in-patients I think about a 100 governors' letters are used out of about 2,500 or 2,600 patients admitted.

14880. Is your qualification for admittance disease and not favoritism as regards governors' letters ?—That is so. I might explain that with regard to governors' letters, a patient bringing a governor's letter would have priority over a patient who did not bring one, provided that the two cases were of equal severity.

14881. Your hospital has existed a very long time you have told us ; have any alterations been made in accordance with modern knowledge ?—Yes. Our present building was built in 1834, and the hospital has had several homes. It was originally established in Petty France, removed to Chapel-street, Westminster, in 1724 ; it was then moved to James-street, Buckingham Gate, where it stood for a hundred years, and the present building was built in 1834.

(24.) c.

Chairman—continued.

14882. Then this Westminster Hospital is practically a new building ?—It was built in 1834 ; but I may say that since 1834 very extensive alterations have been made, principally in 1877 and in 1885-86.

14883. How many beds have you got ?—We have 205.

14884. And what is your average number of patients ?—Sometimes the hospital is quite full and we have not a single bed vacant ; we are not very careful about keeping a margin. Of course the accident beds are those that we should fill up last.

14885. Is it too much to say that your average of beds occupied is 190 ?—Our average last year was 184.

14886. To whom are you responsible as secretary ?—I am responsible to the house committee.

14887. And when do the house committee meet ?—They meet weekly on Tuesdays at one o'clock.

14888. Would you explain the constitution of the hospital. Are there any quarterly or annual courts ?—Yes. The hospital is under the control of governors assembled at general courts either quarterly or special.

14889. And is the quarterly court an open body ?—The quarterly court is an open body.

14890. To governors, I suppose ?—To governors ; it is a body to which all governors are summoned by circular.

14891. And then a special court is held as occasion demands ?—The special court is exactly the same as a quarterly court except that it is called for a special occasion instead of for the usual quarterly business.

14892. I observe that you used the word "general" ; did you mean to say that you have a general court as well as a quarterly court ?—No, there is a quarterly general board and a

F F

special

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Chairman—continued.

special general board; but the term "special" applies to the business, not to the nature of the board.

14893. Then the executive of the hospital is the weekly committee?—The house committee.

14894. And who is chairman of the house committee?—We have no permanent chairman.

14895. What are the functions of the house committee?—The functions of the house committee are to manage the business of the hospital; they act under rules.

14896. Perhaps you will tell us from the rules what the duties are?—"The house committee shall transact the ordinary business of the hospital, and shall do their utmost to see that the laws herein contained are duly attended to, for which purposes they shall meet at the hospital at least once every week on a stated regular day and hour (such day and hour to be fixed at their first meeting after the annual election), and at such other times as they may think expedient." "The house committee specially summoned for the purpose shall have the power of making, from time to time, such bye-laws as may appear to them necessary for the due transaction of the ordinary business of the hospital, and for the due performance of the duties of any person in the employment of the hospital; provided that all such bye-laws shall be in accordance with the laws herein contained. No alteration in any bye-laws, nor any new bye-law shall take effect until the same has been confirmed at a subsequent meeting of the house committee specially summoned for the purpose." "No business, except the discharge and admission of patients, shall be proceeded with except in the presence of at least three members of the house committee." "Any governor not being a member of the house committee may attend its meetings and may speak on the business of the day, but shall not vote thereat." "The house committee shall appoint two or more of its members to be house visitors for any term not exceeding one month. It shall be the duty of the house visitors personally to overlook every department of the hospital, to report upon the performance of the duties of all the officers and servants of the hospital, and upon any complaints that may come before them, but they are not authorised to give any orders, or take any independent action. The house visitors' report shall be made in the form prescribed by the house committee from time to time." "The house committee is empowered to grant leave of absence to any medical officer of the hospital for a period not exceeding three months, upon being satisfied that his duties will be properly provided for in his absence; in the event of leave of absence being required for any longer period it must be applied for to a general board. Any medical officer absenting himself from his duties without permission for one calendar month, except from illness, shall be considered to have vacated his office, and the necessary steps shall be taken to fill up the vacancy if the house committee, specially summoned for the purpose, shall see fit." "When any officer, or other person in the employment of the hospital, shall, under the laws applying to his office, be required to furnish security, the

Chairman—continued.

house committee shall be at liberty to accept the policy or agreement of indemnity of any society or institution established under the authority of Parliament, or by Royal Charter, for granting indemnities, in lieu of the securities required by the laws applying to such office."

14897. How is the house committee elected?—The house committee consists of the president, the vice presidents, and the treasurers *ex officio*, and 36 elected members who are elected at the first quarterly court in each year.

14898. From among the governors?—From among the governors. Of the 36 elected members, only three-fourths are eligible for re-election, and the fourth who are not eligible for re-election are the nine who have attended the fewest number of times in the year, so that nine always go off.

14899. Are there any sub-committees who transact business in detail?—They are not sub-committees; they are independent committees; the audit and finance committee, the medical committee, the estates committee, and the school of medicine committee. When I say that that they are independent, I mean that, if they saw fit, they would report to the quarterly or general board of governors direct, and not through the house committee.

14900. Then how often do this audit and finance committee meet?—At least once a quarter.

14901. And they then audit every item of the accounts?—We have a professional auditor; perhaps I might explain the system?

14902. Yes, if you please?—At the end of the quarter the bills are all checked by myself and scheduled; and, as soon as that is completed, the professional auditor is called in, and he then checks them, and certifies that they are correct, and that they are in accordance with the vouchers and other documents that are placed before him. He reports that to the audit and finance committee; they meet to receive his report and to make any check that they think proper for themselves.

14903. Of course there must be a large quantity of books, petty cash-books, bankers' books, the housekeeper's stock-book, and (if you have got a steward), the steward's books, the alcohol book, and so forth; are those placed on the table of the committee every week?—The wine and spirit book has nothing to do with the steward's department; that belongs to the dispensary, and that is placed on the board-room table every Tuesday.

14904. And these other books, are they placed on the board-room table?—No; the house steward's register of in-patients is placed on the board-room table, but the house steward has no petty cash account.

14905. Who has the petty cash account?—I have.

14906. How often is that audited?—The petty cash-book is audited by the professional auditor once a year.

14907. With regard to all these accounts relating to matters of detail, are those not checked more than once a year?—The petty cash is checked every fortnight by the house committee. I might explain what our system is:

I have

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Chairman—continued.

I have in my hands 50*l.*, and I draw a cheque every fortnight for the amount of petty cash which I have expended out of that 50*l.*; I place the vouchers before the house committee, and it comes, we will suppose, to 46*l.* 6*s.* 10*d.*, or to 43*l.* 3*s.* 10*d.*; I produce the vouchers to the house committee, and they then sign a cheque for the amount; and I start every other Tuesday with 50*l.*

14908. What I want to get is, whether the housekeepers' stock-book, for instance, which possibly may have to do with all the food is checked once a quarter?—No, we really have no stock-book; we never have any stock; we order our things every week as we want them.

14909. Then how do you find out whether there is an increase or decrease in the consumption of any article?—That we can tell once a quarter from our ledgers.

14910. Do you think that sufficient?—Quite sufficient, I think. We have also a daily diet book, a weekly diet book, and a quarterly diet book. The first is kept by the house steward, the two others by myself, so that I know immediately whether there is any abnormal increase in the consumption of any article.

14911. You do not watch it from week to week?—Yes, I do.

14912. But you are not responsible for that; the house committee is responsible for that, and you report to them as I understand?—Yes.

14913. And they leave it to you to compare and go through these accounts?—Yes.

14914. And there is no sub-committee which takes in hand small books of that sort?—No.

14915. Who signs the cheques for the hospital?—They have to be signed by the chairman of the house committee, and by two members of the committee, and countersigned by myself.

14916. Do the treasurers ever attend the board?—They have not attended recently; in past years they have. It rather depends upon whether there is some active member of the house committee who does attend.

14917. Would you now tell us the constitution of the audit and finance committee?—"The audit and finance committee shall consist of five governors who may, but need not, be members of the house or any other committee, of whom two shall be a quorum." I perhaps had better read the rest of the rules relating to that committee; they are not long: "(2.) The audit and finance committee shall within one month after its election appoint a professional auditor, or firm of professional auditors, at a salary not exceeding twenty-five pounds (25*l.*) per annum, to assist them in duly auditing the accounts of the hospital; (3.) The audit and finance committee, with such assistance as aforesaid in addition to the other duties properly appertaining to the office of auditor, shall meet once every quarter to compare the secretary's and the collector's report of receipts with the banker's book; to look over the bills of the several tradesmen; to see that the quantities charged correspond with the quantities issued according to the diet-book; and that the prices of articles supplied are agreeable to contract when furnished on that principle, or are proper when not so furnished. They shall sign the several bills and shall report to the quarterly general board, which shall forth-

(24.)

Chairman—continued.

with be summoned, such matter as seem to them to require notice. (4.) The audit and finance committee shall not certify any bill for supplies or repairs, unless the person presenting the same can produce a written order from the secretary if required. (5.) The audit and finance committee shall consider and report upon any matter connected with the finance of the hospital, which may from time to time be referred to them by the house committee, and shall, as soon as may be after the fourth quarter's bills have been passed by the quarterly general board, prepare a list of the subscribers and the donors, and an abstract of the receipts and expenditure for the past year, together with a statement of the assets of the hospital, which they shall submit to the house committee." That audit and finance committee meets once a quarter and at other times when necessary.

14918. Are the bank accounts checked more than once a quarter?—No. I might say that the banker's pass-book is placed on the chairman's desk every Tuesday.

14919. Is it generally looked at?—Always.

14920. I forgot to ask you what is your salary as secretary?—£. 400 a year.

14921. Do you reside in the hospital?—I do not.

14922. Have you any board or lodging?—I take my luncheon there, and I also take my dinner there frequently.

14923. Is the financial control of the hospital under this audit and finance committee?—Yes, to a certain extent, but the house committee also exercises considerable control, and the rules of the hospital are rather stringent as to expenditure. The house committee is not at liberty to incur any new expense exceeding 5*l.* until the resolution relating thereto shall have been confirmed at a second meeting, nor to incur any new expense exceeding 25*l.* without the sanction of a quarterly or special general board. This naturally checks rash or ill-considered expenditure.

14924. Whence do you get the funds of the hospital?—We have a certain amount of realised estate. I think I could give your Lordship the exact particulars. Last year we derived 2,706*l.* 18*s.* 8*d.* from dividends and rents; 1,461*l.* 3*s.* 6*d.* from annual subscriptions; 1,860*l.* 9*s.* from donations; 6,610*l.* 15*s.* 4*d.* from legacies; from the Hospital Sunday Fund 1,145*l.* 16*s.* 8*d.*; from the Saturday Fund 300*l.*; and from miscellaneous receipts 24*l.* 5*s.* 3*d.*; making a total of 14,109*l.* 8*s.* 5*d.*

14925. And your expenditure last year?—Our expenditure last year in the total was 13,331*l.* 1*s.* 7*d.*

14926. Then you had a surplus last year?—We had a surplus of 778*l.* 6*s.* 10*d.*; and in addition to those receipts we had transferred to us a sum of 24,000*l.* Consols, which we do not introduce into our accounts for the year, but we put a note on the income side of the account. "In addition to these legacies, which were paid in cash, the executors of the late Mrs. Hannah S. Chadwick, for many years a munificent benefactor, who died December 1887, transferred to this corporation her bequest of 24,000*l.* Consols." We also show on our balance sheet a further sum of 1,000*l.*, which was given us for the definite purpose of endowing a bed. It is not

26 February 1891.]

MR. QUENNEL.

[Continued.]

Chairman—continued.

introduced into our accounts; it is cancelled by a *per contra* purchase of India Three per Cents., costing the same amount. So that really our income last year was very close upon 40,000 £.

14927. Have you any other endowments besides that one you spoke of just now?—Yes.

14928. Will you tell us what they are?—We have a sum of 10,000 £. for the endowment of a ward; we have 17,353 £. odd for the endowment of what is called the Incurable Establishment; we have 1,324 £. odd for the endowment of a Lithotriptic ward, as it is called; then we have altogether 4,400 £. for the endowment of beds and cots.

14929. All that is property that you could not sell out?—We could not sell it out at all.

14930. To turn for a moment to this 24,000 £. which you received, which you spoke of just now as being income, you said that your income last year was 40,000 £.?—Yes.

14931. Do not you put that to capital and then withdraw it as may be necessary; supposing for instance that your income was very good, next year you would still go on receiving the dividend of the 24,000 £.?—Yes; our practice is always to invest everything that we can invest from whatever source we get it. If we had at our bankers more than sufficient to carry us on say for the next two or three months it would be invested.

14932. And in like way if you had no money at the bank and there was a large deficit of 5,000 £. or 6,000 £. at the end of the year, you would then sell investments so as to realise enough to meet the deficit?—Yes.

14933. So that you would not keep any wards shut for what of funds?—No. At present we have 50,806 £., to the credit of the General Purposes Fund, and about 34,000 £. to the credit of these various endowments. With regard to the 50,806 £. we could spend every penny of it, and we could spend nothing of the rest.

14934. Then, as regards some of the other items; take for instance, 2,700 £. rents, and dividends, what are those rents?—Some years ago a gentleman left us his estates in Kent, but the governors very wisely sold them and purchased in their place ground-rents, ground-rents of 143 houses in London; and they bring us in 1,206 £. a-year. I think the rental of the landed estates in Kent when they came to us was about 800 £. a-year.

14935. Then what do you look upon as your most reliable source of income?—Of course our most reliable source of income are the dividends. They will be a little more this year; they will be 3,152 £. Then our annual subscriptions; I look upon that as quite certain to come in, and I think this year they will be 1,500 £.; and I look for 1,400 £. from the Sunday and Saturday Fund. That would bring it up to 6,000 £., or a little over probably, which will be approaching to half our need.

14936. Could you tell us your wages and salaries, and whether they exceed the amount of money that you procure from your most reliable source of income?—Last year they were 3,599 £., so that they are nearly covered by our dividends, but not quite.

14937. Who has the admission of patients to

Chairman—continued.

the wards of the hospital?—Practically, the patients are all admitted by the senior house physician or the senior house surgeon.

14938. Does he attend for that purpose every day?—Patients are arriving at all hours of the day or night, and these officers are resident.

14939. But they are not there all hours of the day or night, are they?—No; they have the power of admitting patients primarily; of course, if they are away the junior house physician or junior house surgeon admits.

14940. Does not the junior house physician or surgeon admit a great many more patients than the senior house physician or surgeon?—No, certainly not.

14941. Have you a resident medical officer?—No.

14942. Who is the responsible medical officer who does reside on the place. Is there a responsible one who resides?—Not one in particular. We have two house physicians, two house surgeons, and the obstetrical medical officer.

14943. Are those young men?—They vary; but as a rule they are pretty young; 23 or 24 years of age.

14944. What course would be pursued supposing a very grave case was in the hospital; would one of these young men look after it?—Certainly not; he would send a messenger in a cab for the surgeon or physician under whom he serves.

14945. Do the surgeons to whom the wards are allotted admit patients to them?—No; in old days the physicians and surgeons attended in turn on a Tuesday to see the patients, not to admit them, the house committee admitted them; they were recommended by the physician or surgeon for admission by the house committee. But that system has entirely dropped out; in those days admissions were principally confined to the Tuesday. I do not know how people managed in those days when they were ill on a Wednesday or a Thursday.

14946. Can an accident obtain admission to a bed if there be one vacant at any time?—Certainly.

14947. And do you take all diseases?—We exclude small-pox, typhus fever, and scarlet fever.

14948. Do you take diphtheria?—We take diphtheria.

14949. Do you isolate diphtheria?—We have no regular practice; sometimes we isolate it, and sometimes we do not; it depends upon the nature of the case.

14950. It depends upon the severity of the case, I suppose?—Yes, and also upon the inhabitants of the ward. A diphtheria case would never be put in a ward in proximity to children.

14951. Then, in regard to out-patients, is there any restriction as to numbers?—There is this restriction, that the physicians or the assistant physicians are not obliged to see more than 20.

14952. Is that 20 new cases?—20 new cases.

14953. Have you the term "casual" at your hospital?—No.

14954. Could you tell us how many in-patients were treated last year?—The total number was 2,730; that would include the number that were in the hospital at the end of the year, 192.

14955. And how many out-patients?—27,036 altogether, counting everybody.

14956. Does

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Chairman—continued.

14956. Does that give the whole of the work of the department; does it include the attendances?—No, those are all new patients; but it would include not only the patients who come to the out-patient department proper, but street accidents and such cases as come to the surgery, which are very numerous.

14957. Do you keep any return of the number of attendances at the out-patient department?—We do not.

14958. Is not it rather a fallacious way of putting it to say 27,000; is not the great weight of the work of the establishment in the number of attendances which must be very large?—Yes; it is reckoned that each out-patient would attend on an average about four times.

14959. Then you hardly do yourself sufficient credit, do you, in giving the number which you give, for your attendances would be at that rate upwards of 100,000?—I suppose they would; we never have been careful to magnify our numbers.

14960. But still it stands to reason that the amount of work is hardly shown by the figures as they are stated by you?—That would be so.

14961. Do you make any inquiry as to the circumstances of the out-patients at all?—No, we do not. It was proposed at the house committee some 14 or 15 years ago, and it was carried at the house committee that a Charity Organisation officer should be employed to make inquiries; but it was overruled by the governors at a general court, and it has never been done.

14962. You have been at the hospital 13 years; with your long experience gained during that time do you think that the charity is abused?—I do not on the whole.

14963. Have you ever had to turn people away from your hospital because you had no beds for them?—Yes.

14964. Should you say then that the medical relief in that district is very deficient?—I do not think so; because we are a general hospital in the widest sense of the term, and I was looking through our register yesterday to see where the patients came from, and I found that out of 365 patients registered under the letters A. and B. 41 came from the country and many from very distant parts, from Yorkshire and Staffordshire, and from Cornwall.

14965. As far as that goes therefore you think the medical relief is sufficient?—As far as I am able to form a judgment.

14966. Who makes the contracts, the house committee?—The house committee.

14967. And who receives the food?—The food is received by the steward.

14968. Does he receive it in person?—He receives it in person.

14969. And then supposing it is not up to sample, what happens?—It would be his duty to send it back.

14970. And would he report to the house committee?—He would report to me, I think; he is subordinate to me.

14971. And then you would report to the house committee?—Certainly.

14972. What is his salary?—He is a resident officer, and his salary is 80 *l.* a year.

14973. Are all the other officers in the establishment (24.)

Chairman—continued.

lishment subordinate to you; supposing a resident officer misconducted himself for instance, have you power to suspend him till the meeting of the committee?—It is a little difficult to answer hypothetical questions; I never had such a case.

14974. It is not laid down in black and white that your duty is to suspend in such a case, and then report it to the weekly committee?—No.

14975. Then as regards the food, the steward takes the food in?—Yes.

14976. Has the house committee anything to do with that?—No, nothing at all.

14977. Are the tenders public; do you advertise for tenders?—Yes, we advertise for tenders, and they are quite public.

14978. In the case of the food being found bad by the nurses or patients or officers of the hospital, what would be done?—They would naturally complain of it, I think, in the first instance to me, because I am always there; but they have other means of complaining, they can complain to the house visitors, for instance, of whom I spoke when reading the rules relating to the house committee. Two of them are appointed every month, and they visit the whole hospital very minutely, and they have to make a report to the house committee every Tuesday. They have to fill up this form: "Are the wards cleanly and in good order? Have the patients any complaints to make? Are the kitchen premises in good order? Are the provisions of good quality?" and then there is a note, "House visitors are invited to report on any other subject requiring the attention of the house committee."

14979. And then that report goes to the weekly board?—That is placed before the weekly board, and is read every week.

14980. Who is responsible for the sanitary condition of the hospital?—I presume that I am; at any rate, it is a thing that I look after very closely.

14981. Are you an expert on sanitary matters, or have you got a surveyor whom you employ?—We have got an architect, and if I came to the conclusion that there was anything wrong, he would be sent for immediately.

14982. If a nurse or sister reported to you that there was a bad smell in the wards, you would send for him?—Yes.

14983. Is he an honorary officer?—No.

14984. Does he get a salary?—No, we pay him for work done.

14985. And does he get any commission in addition?—No.

14986. Have you got a chaplain?—Yes.

14987. A resident?—Not a resident.

14988. How much do you pay him?—£. 200 a year.

14989. Does he get any board?—No; if he wished to dine at the officer's table, he would be entitled to do so. Our present chaplain has never done so.

14990. Is he within hail of the hospital?—He lives at Wandsworth Common.

14991. How often does he come to the hospital?—He comes every day, and sometimes twice a day.

14992. Has he any other duties to perform besides his spiritual work in the hospital?—He

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Chairman—continued.

is the almoner and administers the relief that is afforded by the Samaritan Committee.

14993. Then does he make any inquiries as to the position of patients when they leave the hospital?—Yes.

14994. And does he follow them up at all when they get to their homes?—Sometimes.

14995. Have you a chapel?—Yes.

14996. Then to turn to another subject, who is the head of the nursing establishment?—Our matron.

14997. She resides in the hospital, I suppose?—Yes.

14998. And what salary does she receive?—Our nursing arrangements are rather peculiar; she gets no salary from us; she is not only our matron, but she is also the lady superintendent of the Westminster Training School and Home for Nurses, which was founded in memory of Lady Augusta Stanley, principally for the purpose of improving the nursing of Westminster Hospital.

14999. I was just going to ask the question, do you train your own nurses?—Yes, at least the training school train their nurses in our hospital.

15000. Is that training school part of the Westminster Hospital?—By no means, it is an independent body, but we are very much involved one with another. The chairman of the managing committee of the Training School is the Duke of Westminster, and he is our president. The vice-chairman is Sir Rutherford Alcock, who generally takes the chair at our house committee, he being one of our vice-presidents. The treasurer of the Training School is the Reverend Dr. Troutbeck, another of our vice-presidents, also a frequent attendant at the house committee. And one or two of our house committee are members of both bodies; Mr. Erskine, for instance is a member of both bodies. So that although the two bodies are perfectly distinct and independent, the one of the other, the persons who manage them are very much the same.

15001. Where did the funds for the establishment of the nursing home come from?—They were collected by public subscription.

15002. On an appeal?—Yes. The late Dean Stanley took great interest in it. I think he got Miss Christine Nilsson to sing at St. James's Hall.

15003. Was that the starting of it?—That was one means by which funds were brought in; there were two concerts, and each brought in a thousand pounds.

15004. Does the hospital contribute anything to the support of the home; does it make up any deficit in its accounts?—No. There is no deficit; it is a self-supporting institution.

15005. Do you pay your nurses?—No, they are paid by the Nursing Institution.

15006. Are you qualified to speak about that, or would you rather the matron did?—I think the matron will give you all details. All I am qualified to speak on is our agreement with the Nursing Institution.

15007. Will you put that in?—Yes.

15008. Have you found it answer?—Admirably.

Chairman—continued.

15009. Are the nurses under you in the hospital?—They are under the matron.

15010. And she is the head of this home also?—Yes.

15011. So that supposing a nurse misconducted herself the matron would report it to the managers of the Nursing Institute?—I presume so; but that is a question which you would ask her perhaps.

15012. Will you read the agreement?—“Agreement made the 3rd day of August 1880, between the Westminster Training School and Home for Nurses, hereinafter called the Home, of the first part, and the Governors of the Westminster Hospital, hereinafter called the Hospital, of the second part. Whereas the nursing of the Westminster Hospital has for some time past been carried on by the home under an agreement dated the 15th December 1874, and it has now been arranged that the said agreement shall be cancelled, and that the home shall hereafter continue to supply the nursing staff of the hospital upon the terms and conditions hereinafter mentioned. Now it is hereby agreed between the said parties hereto as follows: (1.) The home will supply an efficient and competent staff of nurses for the hospital, such staff to be under the charge of a lady superintendent, who shall be selected by the committee of the home, and appointed by the house committee of the hospital lady superintendent of nursing for the hospital; (2.) The lady superintendent shall reside in the hospital, and shall also be appointed matron of the hospital without salary. She shall perform the duties of both offices, subject to the general control of the house committee of the hospital, to whom she shall be responsible for their satisfactory performance. For the conduct of the members of the nursing staff she shall be more especially responsible to the home committee; (3.) The salary of the lady superintendent shall be paid by the home, the hospital providing her with apartments and board; (4.) The nurses to be supplied by the home as the permanent establishment, exclusive of probationers, shall be not less than 26 in number, namely, seven ward sisters and 12 nurses for day service; one superintending sister, and six nurses for night service; (5.) The home shall be entitled to send to the hospital for training any number of probationers, not exceeding 25 at any one time; but no probationer nor any nurse of less than two years' standing shall be placed in charge of any ward during the night; (6.) The nurses and probationers employed in the service of the hospital, shall be individually and collectively under the authority of the lady superintendent, and they shall have no appeal against her orders and decisions, save as hereinafter provided; (7.) The medical staff, including the resident medical and surgical officers, shall give their orders and directions as to the care and nursing of the patients to the ward sister, or in her absence to the nurse in charge at the time, and the lady superintendent and nursing staff shall strictly and faithfully carry out such orders; (8.) The lady superintendent shall not dismiss nor remove any of the ward sisters without previous communication and consultation with the

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Chairman—continued.

the medical officer in charge of the patients in the wards over which such sister presides. In the event of any conflict of opinion arising with respect thereto which cannot be removed by mutual explanations, the matter may be brought by the medical officer or by the lady superintendent before the house committee, who shall refer it without discussion to the nursing joint committee, as hereinafter provided; (9.) All complaints with respect to matters in the hospital under the control of the lady superintendent, whether as lady superintendent or matron, shall in the first instance be made to her, and if the complainant be not satisfied the complaint may be made to the house committee or to the committee of the home, to be by them referred without discussion to the nursing joint committee, but no complaint shall be entertained unless it shall have been first made to the lady superintendent; (10.) The home and the hospital shall each of them annually appoint three members of their own managing committee to be members of a joint committee to be called the Nursing Joint Committee. Such appointments shall be made at the first meeting of the committee of each of the said institutions that may be held after the 1st of March in every year, or at some adjournment thereof; (11.) The nursing joint committee shall every year, within one month after their appointment, hold a meeting, and appoint some person, being a governor of the hospital to be the chairman of their committee, who shall take the chair at all meetings of the committee, of which three shall be a quorum; (12.) The nursing joint committee shall hear and determine all questions which may be referred to them with respect to matters coming under the control of the lady superintendent, and their decision shall be final; (13.) In case of any question arising between the two institutions which is not hereby referred to the nursing joint committee, and upon which a mutual agreement cannot be arrived at, the matter so in difference shall be referred to two referees (not being members of the committee or staff of either institution), one to be nominated by the committee of the hospital, and one by that of the home. Such two referees before entering upon the business referred to them shall choose some person not connected with either institution to act as their chairman, and the decision of such two referees and their chairman or the majority of them shall be final; (14.) The lady superintendent shall not be removable except by common consent of the hospital and the home; and in the event of any difference arising on this subject the matter shall be referred to the referees as provided in Clause 13; (15.) For the service of the before-mentioned permanent staff of nurses, the hospital shall pay to the home the annual sum of 1,700 *l.* by four equal quarterly payments; (16.) Any extra nurses required for service in the hospital in excess of the said permanent staff, shall be supplied by the home on the written requisition of any of the medical staff to the lady superintendent, and the hospital shall pay the further sum of 3 *s.* 6 *d.* per day, and the same per night for each extra nurse so supplied; (17.) The

(24.)

Chairman—continued.

home shall pay to the hospital at the rate of 25 *l.* per annum for each person whose board shall be supplied by the hospital, at the requisition of the lady superintendent, and if any change in the present dietary for nurses should be required, the same shall be adjusted with regard to any actual increase or diminution of cost to the hospital by mutual arrangement; (18.) The lady superintendent shall keep a register of the names of all nurses or probationers employed in the hospital in such form, and affording such information as either the home or the house committee shall from time to time require, and such register shall be laid before the house committee at its weekly meetings; (19.) This agreement shall be in force until it shall be determined by six months' notice in writing on either side."

15013. But now the committee of the nursing institution is made up of members of the house committee; is that so?—No, not at all. I said that it happened to be the case; that on the training school committee there are several who are connected with the hospital; that is all.

15014. Are you secretary of that training school committee?—Not at all.

15015. You do not know what goes on there?—No, not in the least.

15016. Where do the nurses have their food?—The nurses who work in the hospital at present to the number of about 33 have their food in the hospital; many of the probationers have their food at the institution.

15017. How far off is the institution?—In Queen Anne's Gate.

15018. How far is that?—One hundred and fifty yards at the outside I should say.

15019. They have to go there?—They have to go out to their dinner.

15020. Then we will ask the matron about the nursing institute. Are the medical staff paid?—No, not all.

15021. Are the residents paid?—No.

15022. Then there are no paid medical officers on the establishment, are there?—We have a medical registrar, and a surgical registrar, who are paid 40 *l.* a-piece, and a pathologist to whom we pay 50 *l.*

Lord Clifford of Chudleigh.

15023. You said that in matters under the lady superintendent there was no complaint to be made otherwise than through the lady superintendent; does that mean that there is no complaint to be made direct to the nursing joint committee?—Yes, I think so; the constitutional course is first of all to make the complaint to the lady superintendent, and if it cannot be adjusted then it would be made elsewhere.

15024. I can quite understand that every complaint should be laid before the lady superintendent, but is it the rule that she has the complete control in her own hand; would you read the passage in the agreement relating to that again?—"All complaints with respect to matters in the hospital under the control of the lady superintendent, whether as lady superintendent or matron, shall in the first instance be made to her, and if the complainant be not satisfied the complaint may be made to the house committee,

26 February 1891.]

Mr. QUENNEL.

[Continued.]

Lord Clifford of Chudleigh—continued.

or to the committee of the home, to be by them referred without discussion to the nursing joint committee, but no complaint shall be entertained unless it shall have been first made to the lady superintendent."

Lord Monkswell.

15025. With regard to the quarterly meeting of governors, I suppose that is the supreme authority of the hospital?—Yes.

15026. How many governors are there, a great many I suppose?—About 350; we have a certain number of governors who are ladies but we have not been in the habit of summoning them.

15027. But might they come if they liked, if they insisted on coming?—I cannot tell.

15028. Is there any form of election gone through?—No, it is a matter of subscription.

15029. How many governors usually come to the quarterly meetings out of the 300?—We had four quarterly meetings last year; at the first we had 27; at the second 25, at the next 21, and the next 23.

15030. I suppose in point of fact the members of the house committee generally constitute about half of the whole body?—Rather more than that I should think.

15031. They generally form the majority?—Certainly.

15032. It there was a great point at issue in which the governors might consider that they were personally interested, it might happen that they might throw over the recommendation of the house committee, or a recommendation supported by a great majority of the house committee?—It is a little difficult to get our governors to come. In 1877, before very extensive alterations were made in the hospital, there was a suggestion made that it should be moved to another site and a great effort was made to obtain the opinion of the governors on the subject, and a whip was sent out to induce them to come to a special meeting to discuss the subject. Only 36 came.

15033. But that was not a question specially affecting the governors. For instance, we have evidence with regard to St. Mary's Hospital, that the proposal of the house committee was that the committee should be a close committee instead of an open one in which all the governors could come and vote. That proposal was put before the court of governors and was thrown out; and the statement is that 120 governors came on that occasion, 40 of whom knew nothing of the hospital, and 60 have never been since; that might happen of course in any hospital?—No doubt.

15034. With regard to your own, I understand you to say that your house committee suggested that there should be inquiries made by some outside body as to out-patients?—Yes.

15035. That recommendation was over-ruled by the court of governors, I understand?—Yes.

15036. I suppose on that occasion there were a good many governors present?—No, not a larger number than usual.

15037. At any rate the house committee was over-ruled?—Yes.

Lord Monkswell—continued.

15038. Do you think it a good thing that the court of governors should have such a power; do not you think that the court of governors might be empowered to elect a committee out of their own number, other than the house committee who should be the supreme ruling body?—That of course is possible; but still the governors provide the money, and I suppose that it is on that principle that they are entrusted with the supreme control.

15039. I was only asking your opinion whether you did not consider that the principle might be amended?—I may say that I do not think we have found the slightest inconvenience one way or the other.

15040. Except apparently in this one case where the decision of the house committee was over-ruled?—I think it was the house committee practically that over-ruled it. A week or two later probably some of them changed their opinion.

15041. You do not think there was any conflict between the house committee and the other governors?—I am sure there was not.

15042. What is your opinion as to sitting up a central board of control so that in no hospital should the governors have supreme control over the hospital, but that the supreme control should vest in some central body on which all the hospitals should be represented; have you thought of that?—I have. It is only my own private opinion and may be worth nothing, but I can conceive that such a body might do a great deal of harm to the hospitals, and I can hardly see that it could do very much good.

Earl Cathcart.

15043. Do you keep a drainage plan posted up to date?—Yes.

15044. Is it hung up, or is it accessible?—We have it accessible.

15045. Do you take any precautions in case of fire?—Yes, we have a hose, and we also have a fireman outside our hospital all night with a fire escape.

15046. In short, you have thought what you would do in case of fire in getting patients out, and so on?—Yes.

15047. Is your water supply constant?—It is constant.

15048. That is a very great advantage in a hospital, is it not?—A very great advantage.

15049. You use a great deal of water consequently?—Yes, a great deal.

15050. Do you admit reporters to your half-yearly or annual meetings?—The question has never arisen.

15051. But if they came, would you shut the door in their faces?—Probably if a reporter applied, I should take the instructions of the governors.

15052. As an abstract general principle, do not you think that, where contributions are received, the working-man's sixpence, or the better-off man's five pound note, in the case of any hospital so supported, reporters ought to be admitted at the general meetings?—Certainly.

15053. In reference to the evidence which you

26 February 1891.]

Mr. QUENNEL.

[Continued.]

Earl Cathcart—continued.

you gave about the accounts, you know that a professional auditor is not in any way responsible for the expediency of the expenditure; that must be regulated by the committee?—That is so.

15054. And therefore a professional audit is only good so far as the mere reckoning is concerned?—Yes.

15055. Do you take lock cases into the hospital?—Yes; we exclude nothing but those which I mentioned, typhus, and small-pox, and scarlet fever.

15056. Now with regard to this nursing home, this memorial of Lady Augusta Stanley, that is situated in Queen Anne's Gate, is it not?—Yes.

15057. Is not that rather an inconvenient distance for you?—No, I think not; we have telephonic communication between the hospital and the home.

15058. And do you find that this dual nursing arrangement really answers?—Admirably.

15059. With reference to the accounts, I took the liberty of saying at the last meeting of the committee, that I thought that we had had an admirable system of auditing accounts from Mr. Ryan, the Secretary of St. Mary's; I refer to the answer to Question 14420. Your system falls very short of that system; yet you consider your system a sufficient one of auditing accounts?—I think it is very efficient. I am afraid that, perhaps, I have not explained it as lucidly as I might have done.

15060. I do not wish to find fault, but merely to make it a matter of record, that I have called attention to the difference between the account given by you and the account given by that gentleman; so that when people read the Blue Book, their attention may be called to the matter; and, perhaps, some day when you have an opportunity of seeing the Blue Book, you will also see that answer, which you will find at No. 14420?—I shall no doubt read it this afternoon when I have the evidence.

Lord Zouche of Haryngworth.

15061. Do you make any calculation as to the cost of each bed?—Yes.

15062. Can you tell us what it is; first of all, how do you set to work to make your calculation: on what basis do you make it?—I take first of all the total expenditure for the year; I then make a calculation as to the cost of the out-patients; I deduct that, and then I divide the remainder by the number of occupied beds.

15063. Then would you take the whole of the expenditure, the gross expenditure?—The gross expenditure.

15064. Including everything that is put upon the expenditure side of the account?—Unless it were something very extraordinary; for instance, last year we paid 400 l. balance of cost of an hydraulic lift; that is an expenditure that comes once for all, and will never recur; I should not include that; we painted the outside of our hospital last year, which is an expenditure that does recur at intervals; I should include that.

15065. And how would you calculate the
(24.) e

Lord Zouche of Haryngworth—continued.

expenses of the out-patients?—It is partly actual and partly estimated. I am able to arrive at the exact cost of wages, coals and gas, and so on, and also of repairs, and of printing; but what baffles me are the drugs, Bandages I can arrive at, because it is booked, and I know how many are given out, and also lint; but when drugs are taken out of the same bottle, both for the in-patients and the out-patients, I can only arrive at it by a more or less correct guess. I go through the drug ledger with the dispenser, and he guides me, because he knows more or less what drugs are used for the in patients, and what for the out-patients.

15066. The expenditure on drugs altogether amounts to a considerable sum?—About 700 l.

15067. You have to divide that amount as you best can in order to get an estimate?—As I best can. I do not think our estimate is very much out of the way; probably we do not charge the out-patient quite enough. I believe it is reckoned to be a virtue to bring the cost of each occupied bed as low as possible; and, therefore, I do not wish to overload the out-patient.

15068. Then, with regard to the expense of painting, for example, would you include what is spent in one year or take an average?—No; I should take what was spent in one year, and charge it to that year.

15069. And can you tell us what the cost per bed of the hospital is?—Last year it was 62 l. 18 s. 4 d.; the previous year it was 66 l. 5 s. 6 d.; and the previous year to that 62 l. 18 s. 9 d. It is always a little higher every second year because every second year we paint and whitewash the hospital from top to bottom, and, of course, that involves cutting down the patients, so to speak; I mean we reduce our number of patients; and if you do that, and are not able to, reduce your expenditure in proportion, it will naturally make the cost per patient more.

Lord Thring.

15070. As to your constitution you have got a general court, and a house committee, and an audit and finance committee, and some other committees; I presume, as a practical question, about 30 governors, more or less, take an interest in the affairs of the hospital in those various bodies, do they not?—More than that I should say.

15071. Thirty or 40?—Forty, I should say.

15072. They divide themselves practically then among those various bodies, those who take an interest in the hospital?—It must at least be 40; there are 36 members of the house committee alone.

15073. Do the 36 members of the house committee attend regularly?—I was looking before I came, and the average attendance last year was 19 exactly. Of course in August and September the attendances are much less than they are in the other months of the year.

15074. That makes about 20 very active members indeed, and about 20, more or less, active members?—We had 27 members of the house committee last year, none of whom attended less than 27 times.

G G

15075. I wanted

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Lord Thring—continued.

15075. I wanted to ask you about your floors; what are your floors made of?—They are made of teak, parquet floors.

15076. Throughout?—Throughout the wards.

15077. And you polish them, I suppose?—Yes, with turpentine.

15078. With respect to your food; as a matter of fact, do the patients complain about the food?—No, not at all.

15079. Never?—I cannot say that I have never known a complaint; but it is exceedingly rare.

15080. As a general rule there are no complaints made at all?—As a general rule, none.

15081. And do you supply them with tea and sugar, and every description of food?—Yes, and butter.

15082. And they never complain?—No; we supply them with everything.

15083. And supposing they did complain, I presume they would complain to the sister, would they not?—I expect they would, or to the house visitors. The house visitors are very keen about complaints, and they go to the wards and ask the patients. Some are not content with saying, "Have you any complaint to make?" they put it even more strongly than that.

15084. Then you are satisfied, as far as your own impression goes, that the food is good throughout?—Yes, I am. I partake of it myself pretty freely, and I find it quite good.

15085. And the nurses, do they complain of their food ever?—Perhaps you will ask that question of the matron, because I think they would complain to her, if they did complain at all.

15086. Have you got a mortuary?—Yes.

15087. And when patients die, what happens; if you have a post-mortem examination, where are they placed?—I do not quite understand the drift of the question.

15088. With respect to the patients who die, and are dissected more or less in the hospital, is there anybody charged with the duty of seeing that the dissections are conducted properly; and more than that, that when the dissections are completed the bodies are so treated as not to affront their relations?—Yes; with regard to the first part of your question, the pathologist, who is one of our assistant physicians, is the responsible officer to see that nothing more than is necessary is done in the way of post-mortem examinations. After the body has left his hands it is then in the hands of the mortuary porter; and we have, I think, a very good arrangement, by which the porter is paid half-a-crown for each post-mortem examination that he attends, and it is his duty to sew the body up and prepare it after the post-mortem.

15089. And what class of man is the porter?—He has been with us 24 years, and he is a man in whom I have very great reliance.

15090. You are satisfied, in your own mind, that the whole thing is conducted decently, and with propriety?—Yes. The payment for this work used to be 1 s., but the house committee, I think wisely, increased it to 2 s. 6 d. It is very disagreeable work, and must be done carefully,

Lord Thring—continued.

so as not to shock the relatives when they come afterwards.

15091. No sister or nurse attends those cases?—No sister or nurse attends.

Earl Spencer.

15092. With regard to the management of the hospital under this agreement, I notice that all questions practically of discipline are settled finally by the nursing joint committee, but that there are certain other questions between the hospital and the nursing institution, which cannot be referred to the nursing joint committee, and they are then referred to two referees. Now what sort of questions are they?—It would be a quarrel between the two institutions, I suppose. I would say with reference to the nursing joint committee that it has only met once, and that was to appoint the chairman; Lord Knutsford is the chairman of the nursing joint committee. It has never had to consider any questions, because nothing has been referred to it.

15093. But I was referring to the referees, have there been any cases referred to the referees?—No, certainly not.

15094. Then I notice in the case of one very important officer, that is the lady superintendent, if the lady superintendent had to be removed, and the common consent of the hospital and home is not given, that matter is referred to the referees?—Yes.

15095. Who would be the referees; would they be persons connected with the hospital?—No, I think it is provided that they should be connected neither with the hospital nor with the home.

15096. Would not it be rather a serious thing that the whole of the matter of the removal of that officer should be decided by persons who do not understand anything, perhaps, of the working of the institution at all?—I presume that the persons who are pointed at in that clause would be such persons, for instance, as Lord Bramwell. Lord Bramwell is one of our vice-presidents; if we had anything very serious like that we should most likely ask him to be one of the referees.

15097. Lord Bramwell might give a very good legal opinion, but would he give a very good opinion (perhaps he would, but not necessarily) as to the conduct of the matron?—I suppose that the referees would call evidence.

15098. You never contemplated, probably, the possibility of her dismissal?—Probably not.

15099. But still such a case might arise?—Yes.

15100. And would it be satisfactory that it should be decided by persons entirely separate from the hospital?—I think so.

Earl of Kimberley.

15101. Would not this be rather awkward; the matron might not be efficient (of course it is not very likely, but that might happen in the opinion of the hospital authorities), and supposing that the case was sent to the referees, and the referee appointed by the hospital was of opinion that she should be dismissed, and the other referee, appointed by the nursing home, was of opinion

26 February 1891.]

Mr. QUENNELL.

[Continued.]

Earl of Kimberley—continued.

opinion that she should remain, and therefore the umpire there being that difference of opinion among the referees decided, as he probably would decide, that she should remain, would not it be a very awkward thing that the matron should remain after the hospital authorities had come to the conclusion that she was inefficient?—I believe that any matron whose efficiency was questioned would retire.

15102. But you have heard, I suppose, of cases where people will not resign, because they think it involves a slur on their character?—Exactly.

15103. With regard to your drainage system, have you any periodical inspection of it?—No. The last alteration that was made in our drains was in 1883, when, at the advice of our architect, all rain-water pipes and all pipes from sinks were cut off from the main drain and were made to discharge into aired traps outside the walls of the building, and at the same time the main drain of the hospital was ventilated.

15104. Then is it the case that you have no inspection of the working of your drainage?—I have done it frequently; and we flush our drains pretty regularly; it depends of course upon the weather. In very dry weather we should do it often; we have a very good supply of water, force enough to send a stream of water 50 feet. I have the hose placed in the drain, and let it run half an hour. By taking up the traps I can see what is at the bottom of the drain, and see whether everything is good.

15105. You have no special experience as a sanitary engineer, I suppose?—No, but I can see quite well whether it is clear.

15106. Do not you think that in a large establishment like a hospital, it is desirable that there should be a yearly inspection by an outside authority appointed for the purpose, to see that the drains are in satisfactory working order?—I think that might be, but I hardly know; it is difficult for an outside person always to tell; I think our own architect would help us more.

15107. What difficulty can there be in an experienced sanitary engineer giving an opinion on your drainage; surely none?—No; what I was rather thinking was this: that of course drains have to be covered, and our architect has had them all up, and knows exactly where they are, and that sort of thing. It would be rather inconvenient for a sanitary engineer to be having the pavement up, and digging down to see where the drains are. Besides, sanitary engineers are not in agreement among themselves as to the correct system of drainage.

15108. It would be more inconvenient, would it not, if there were a defect in your drains?—Certainly.

15109. Therefore, whatever inconvenience it was necessary to incur for the purpose of seeing that your drains were in order ought to be incurred?—I quite admit that.

15110. With regard to the appointment of a central body, would there be any danger if there was a central superintending body over the hospitals, that subscribers might resent the interference and withdraw their subscriptions?—I am afraid it might be so; I think they might get an idea that they were like hospitals under the control of the Local Government Board, or something like that.

(24.)

Earl of Kimberley—continued.

15111. But supposing it was a body not appointed by the Government, or by a municipal authority, but a central body appointed by the hospitals themselves?—I am half inclined to think it would affect our subscriptions.

Lord Clifford of Chudleigh.

15112. Do you find that your small legacies not such a legacy as the 24,000 *l.* which you mentioned, come to something like an average year by year?—Yes, the last 20 years our legacies have averaged very nearly 6,000 *l.* a year; if we take out that large legacy they would average 5,000 *l.* a year.

15113. It is so near that you can positively count upon it as a yearly income?—Yes, I always reckon upon 5,000 *l.* a year. If we get only 1,000 *l.* one year, I expect 9,000 *l.* the next.

Lord Monkswell.

15114. With regard to the drainage, you probably would think that the public would be induced to subscribe more freely if they were satisfied that your drains were efficiently inspected?—I think they are satisfied.

15115. Do not you think that if you had some periodical inspection from outside by some eminent sanitary inspector the public might be inclined to think that they had a greater guarantee than they have at present, that your drains are all right?—I am afraid that the public would not know anything about it. We try to supply our governors and anybody else with as much information as we can; but I very much doubt whether they really digest the information we give them already.

15116. You think that the public are perfectly satisfied as long as there is no infectious illness in your hospital; then they consider that everything is right?—Yes.

Chairman.

15117. Do you send out to maternity cases from your hospital?—Yes.

15118. Have you any particular radius within which you attend to those cases?—One mile.

15119. And how many cases of that description did you treat last year?—Two hundred and thirty-six.

15120. When you cannot take persons into your hospital do you suggest that they should go to some other hospital or to the poor house or to the infirmary, or what course do you pursue; do you just say "We have not room for you"?—Patients frequently say "What are we to do?" and we advise them to the best of our ability. Other hospitals do not very much like cases being sent on we find; I have had a remonstrance once or twice from the resident assistant physician at St. Thomas's; so that we are not in the habit of saying, "You had better go to St. Thomas's"; but we say, "Perhaps you will find room at another hospital; the nearest hospitals are Charing Cross and St. Thomas's and St. George's."

15121. You have spoken of a remonstrance, but in your opinion surely such a remonstrance ought to come from the committee or the board of the hospital; would you pay attention to the remonstrance of any assistant physician of another hospital?—I receive his letter and answer it. It generally takes this form: "It is a pity that you should

26 February 1891.]

Mr. QUENNEL.

[Continued.]

Chairman—continued.

should send cases to us. We are just as badly off as you are, and it only embarrasses us."

15122. Do you think that that sort of inter-communication is desirable between different hospitals?—I suggested to him that it would be well if his board would get their hospital put on the telephonic system; and I believe that good results follow from such communications.

15123. Do you have to bury many patients?—None at all.

15124. Do you have many collection boxes about?—Only outside our own building.

15125. You have a staff of clerks, I presume?—I have one clerk.

15126. Does he or you or anybody get a commission upon subscriptions?—Not the slightest.

15127. Does the collector?—We have no collector.

15128. What is the number of the medical and surgical staff?—We have three physicians; four physicians who see out-patients, on obstetric physician, an assistant obstetric physician, a physician for diseases of the skin; three surgeons, four surgeons who see out-patients, an aural surgeon, two surgeon dentists, and an administrator of anæsthetics.

15129. You mentioned just now that you have got an endowment of 17,300 *l.* odd for an incurable home?—Yes.

15130. Will you tell us something about that?—It is called the Incurable Establishment.

15131. Where is it?—It is at the hospital; it is a very old endowment, principally from a bequest of a gentleman of the name of Andrew Highstreet; and I think it was probable intended to meet one of our rules, which is, that patients should not be kept in the hospital more than two months. That is a rule that is not at all kept now at any rate, but I think it probably was intended to provide for cases of poor people coming into our hospital and getting no better; it was to prevent their being turned out.

15133. How many beds are there in that incurable establishment?—There is an incurable ward. We have seven beds in it, and they are all female beds; but one of the rules, relating to the incurable establishment, is that male patients shall also be put upon the establishment, and that, until a ward is provided for them, they shall be distributed in the other wards.

15133. Then does the interest of the 17,000 *l.* pay the expenses of this incurable establishment?—Yes, it actually maintains those patients.

15134. Do the incurables remain there for life?—They remain there for life.

15135. Have you any convalescent home?—We have not.

15136. Do you subscribe to any convalescent home?—We send a great number of patients away to convalescent homes.

15137. By letters procured?—By letters procured; and there are one or two homes to which the Samaritan Fund subscribes. 208 I see is the number we sent away in 1889 to homes.

15138. You subscribe to one or two you say?—Yes, we subscribe to the Margate one I know.

15139. How much is that subscription?—I might answer your question by reading from our disbursements for the year 1889: "Annual subscriptions for 1889–90: Bath Mineral Water

Chairman—continued.

Hospital, 10 *l.* 10 *s.*; All Saints' Convalescent Hospital, Eastbourne, 10 *l.* 10 *s.*; St Andrew's Convalescent Home, Folkestone, 13 *l.* 13 *s.*; Home for Poor Children, St. Leonards-on-Sea, 13 *l.* 13 *s.*; Metropolitan Convalescent Institution, 10 *l.* 10 *s.*; Royal Sea Bathing Infirmary, Margate, 20 *l.* Total, 78 *l.* 16 *s.*

15140. And do you find that answer the number of calls you have upon you?—I think so.

15141. Now as to the cost of beds on which a question was asked you just now; your cost per bed last year was 62 *l.* 18 *s.* 4 *d.*?—Yes.

15142. We have had a memorandum put in here by the Charity Organisation Society, and the cost, per bed, as given in that varies between 100 *l.* and 60 *l.* But none of these returns are of the slightest use, are they, unless they are on the same basis; we do not know what is included in the cost, per bed, of one hospital, as compared with another?—I would hardly say that they are not of the slightest use. I think as long as the method by which the result is arrived at is set forth they are of great use.

15143. If they are on the same basis, that is to say?—Even if they are on a different basis, if you can check the method you can institute a comparison.

15144. But taking an ordinary hospital subscriber, who does not know what the difference in estimating it in the different hospitals is, the return is of no use to him, is it?—It depends upon the amount of information available to him.

15145. But take the ordinary subscriber; he does not know much about these questions, does he?—I do not think that any subscriber who was to examine into the method by which we calculate it would find any difficulty, because we set forth how it is done.

15146. But would it not be simpler to have one system of hospital accounts, or would you rather not have that?—I am in favour of one system of hospital accounts in principle, though I think it would be difficult to carry it out fully in detail.

15147. Why difficult to carry it out fully in detail?—Because different hospitals have different methods.

Earl Spencer.

15148. About the incurables; how long has your incurable ward been established?—I cannot charge my memory with that, but it is a long time, a hundred years or more.

15149. Can you say at all what the average length of time a patient remains in it is?—Now it is very short, because much worse cases are recommended than used to be.

15150. What do you call "very short"?—It may be six months, or it may be a couple of years. If they are very bad cases we take them in just to end their days.

15151. A great many people do get the benefit of it?—Yes, certainly.

Chairman.

15152. Would you put cancer cases in there?—We have a cancer case at present.

15153. With regard to the Samaritan Fund, do you out of the Samaritan Fund help the families

26 February 1891.]

Mr. QUENNEL.

[Continued.]

Chairman—continued.

families of any patients in the hospital?—I think not; I am afraid it is not large enough. The income that the Samaritan Fund has to deal with is about 335 *l.* at present.

15154. Where does it come from; voluntary subscriptions?—Voluntary subscriptions, a little comes from dividends, and we get an occasional offertory from Westminster Abbey.

15155. The chaplain of the hospital administers that fund, you say?—Yes.

15156. Does he present his accounts to the finance committee?—No; there is a Samaritan committee.

15157. How often do they meet?—Once a month.

15158. And they check these accounts?—They check these accounts.

15159. Have you anything else you wish to say?—I think that it has come before your Lordships that the hospitals of London were in an insanitary condition and ought to be pulled down, and so on. I made some little inquiry with reference to the mortality in hospitals, and I found that the mortality in our hospital would compare very favourably with the mortality in one or two country hospitals about which I inquired.

15160. What is the percentage of mortality in your hospital?—The percentage last year was 8·52, the year before 8·14, and the year before that 8·30; but I made inquiry of the hospital at Leamington, of the Sussex County Hospital at Brighton, and of the Royal Infirmary at Bristol, and I found that the mortality in our surgical wards compared very favourably with the mortality, for instance, at Brighton.

15161. Will you put in a list of all your

Chairman—continued.

employés and their salaries?—Yes; I have brought that with me (*the same is handed in*).

15162. I believe you wish to correct something in your previous evidence?—I was asked a question about casuals; I am not sure that I made my meaning quite clear. We have the same kind of patients who are called casuals at other hospitals; it is merely that we do not denominate them in that manner; we have the same kind of thing.

15163. What do you call them?—Surgery patients. Then with regard to any resident who might unfortunately misconduct himself, my obvious course in such a case would be to communicate with the physician or surgeon under whom he serves, and also with the *quasi* chairman or some other prominent member of the house committee immediately. I mean to say that it would not be left to run on to the next meeting of the house committee; immediate action would be taken. Then with regard to the drainage, I wish to say that we employ a man whose duty it is to examine every water-closet in the hospital, and every drain every Monday, and to report to me anything wrong; and, in addition to that, I frequently examine into such matters myself. Then I was asked about collection boxes, and I said that we only had them in the hospital. We have a collecting box in the cloak-room of the House of Commons. Then with regard to our subscriptions to convalescent homes, I am not sure that I made it quite clear that that 78 *l.* which is subscribed to them comes from the Samaritan Fund, and not from the main funds of the hospital.

15164. Have you anything else to mention?—Nothing else.

The Witness is directed to withdraw.

MISS MARY J. PYNE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

15165. You are the matron of the Westminster Hospital, are you not?—Yes, and the lady superintendent of the Westminster Nurses' Home as well.

15166. How long have you been matron and lady superintendent?—Ten years.

15167. Do you find this plan of having a separate home for nurses answer?—Yes, I think so. It could not be helped in Westminster, because we have not sufficient accommodation in the hospital to lodge the entire staff, and therefore it is a necessary thing there.

15168. How far is the nursing home from the hospital?—It takes about four minutes quick walking.

15169. Then where do the nurses feed, in the hospital?—The second year nurses live in the hospital; the probationers live in the home.

15170. And we were told by a former witness they have to go out for their dinner?—Yes.

15171. That is possibly a good thing for them?—I do not think it harms them; those that go out to their dinner do not come back again till four in the afternoon generally; some come back at two, some come back at four.

15172. I will get the meal hours from you in (24.)

Chairman—continued.

a minute. Who is the person immediately under you?—The matron of the home.

15173. But in the hospital is there a night superintendent?—There is a night superintendent.

15174. Is there an assistant matron?—No, but the matron of the home renders me a great deal of assistance in the work at the hospital.

15175. Then you have seven ward sisters, have you not?—Eight.

15176. And how many nurses?—Altogether we have 32 nurses, without the probationers; just at present we have 32 hospital nurses, including the sisters, and 23 probationers.

15177. And some of them, of course, do night work?—Yes.

15178. How do you arrange about the night nurses; do they go on for a certain time as night nurses?—We have no specified time; they go on for some months at a time generally, sometimes longer; sometimes they stop on a year or two as night nurses. If they are very well and do their work satisfactorily and wish to remain as night nurses, I do not take them off.

15179. But supposing a nurse found the night work telling on her health?—She would bring it to my notice and I should change her over.

G G 3

15180. Have

26 February 1891.]

Miss PYNE.

[Continued.]

Chairman—continued.

15180. Have you any lady probationers?—Yes, a good many, but no paying probationers. We make no social distinctions between our probationers whatever.

15181. Does that Nursing Home nurse any other hospital?—No, no other hospital.

15182. It is purely part and parcel of Westminster?—We have a large private nursing institute also.

15183. That is for sending out private nurses?—Yes.

15184. What fees do you charge?—We charge a guinea and a-half to two guineas.

15185. Do you send to all cases?—Yes, except to mental cases; as a rule we do not nurse them.

15186. But you send nurses to infectious cases?—Yes.

15187. Would you tell us what the hours are that the nurses work in the hospital?—The sisters go on at 8 and come off at 9, and they have two hours off for dressing and meals during the daytime; and they have three evenings a week from 6 to 9, and four hours on Sunday.

15188. And the staff nurses?—They go on at 7 and come off at 9, and they have two hours three times a week off duty, besides the two hours for dressing and meals every day; and they have four hours on Sunday off duty.

15189. And the probationers?—The probationers have rather variable times; they none of them have less than two hours off duty and many of them have more.

15190. What is that determined by?—It is determined by the kind of work they do. If they are in some of the wards on certain duty they would get from 1 to 4 every day; they would go home to there dinner and get from 1 to 4, and then come back and be on duty in the ward from 4 to 8; that is four days in the week; and two days they would come back in the afternoon from 2 to 5, and be off duty after 5 o'clock.

15191. What is the number of probationers just now?—Twenty-three, but the number varies a little from time to time.

15192. Then the night nurses?—They go on at 9 at night, and come off at 9 in the morning.

15183. Then do they have any food in the wards at night?—Yes; they have a meal in the middle of the night, and they all come down out of the wards at 7 to their breakfast, and then they go back to the ward and finish their duty; they are off duty at 9, and they go to bed at 1.

15194. What does this meal in the wards consist of?—It consists of tea and bread and butter, cold meat, and sometimes an egg.

15195. Where do they take it?—In one of the wards; generally speaking, our night nurses take it in the corridor; our three wards give off to a little corridor, and generally speaking they take it there.

15196. Are the wards large?—No; 10 beds in the surgical and 11 in the medical.

15197. Is that the average, or the largest?—They are all the same size.

15198. How many wards are there?—Nineteen.

Chairman—continued.

15199. How do you divide off your sisters?—We have two sisters who have the charge each of 33 beds; one has the charge of 30 beds; one of 20 and the theatre; one of 20 without the theatre; one of 27; one of 13 cots in the children's ward, and another of 20. They vary from 13, which is the smallest, to 33 beds, which is the largest number.

15200. Then are those wards which they have charge of all quite close to one another?—Quite close.

15201. In the wards, what staff nurses are there?—There are two staff nurses to a charge of 33 beds, and one probationer by day; and there is a staff nurse and a probationer by night to the charge of 33 beds.

15202. One ward, then, is without an attendant?—No, because it has got a probationer.

15203. By night, I mean?—One staff nurse and one probationer do the work by night; they do not sit down very much at night; they go about from one ward to the other.

15204. Where do those feed who feed in the hospital?—They have a dining room of their own.

15205. Have they a separate kitchen?—No.

15206. Have they a housekeeper who dines with them?—My assistant always presides at the nurses' table, the matron of the home.

15207. Does she come for her dinner to the hospital?—No, she always presides there; she has her dinner with the probationers at the home, but always presides at the hospital dinner; and I always have my dinner sent up from theirs every day.

15208. You have your dinner in your own room?—I have it in my own room because it is not convenient for me to dine with them; but I have my dinner always from their table.

15209. Do you ever have complaints of the food from the nurses?—No, not very often; I do not suppose there is any large house in which there are not occasional complaints, but we have very few.

15210. Is the health of the staff good?—Very good indeed. To-day I have no one off duty out of a staff of 122 people.

15211. Have you any idea what the percentage of your sick nurses is?—Out of the whole staff, taking in the private nurses, I should think we have from one to three off duty on the average.

15212. Do the nurses have any holidays?—Yes, they have a day a month, and they have three weeks in the year; the probationers get a fortnight the first year and three weeks the next two years; and the sisters get a month in the year, and they often get a few days besides; if I think they are tired and want a little rest I send them away for a few days.

15213. What is the pay that is received?—The sisters get 35*l.* a year, and uniform and washing; the probationers begin at 10*l.*, and the hospital probationers rise 2*l.* per year to 26*l.*, and then stop; the private nurses begin at 10*l.* and go up to 20*l.*, 25*l.*, 30*l.*, 33*l.*

15214. Do the private nurses get any percentage on their earnings?—No, they get no percentage on their earnings, but all the money over

26 February 1891.]

Miss PYNE.

[Continued.]

Chairman—continued.

over when the expenses of the institution are paid goes to a superannuation fund.

15215. And that takes the place of a pension?—We do pension off old nurses when they cannot work any more.

15216. How do you manage that?—We have a pension fund, and they would be put on to that if they were superannuated and could not work.

15217. Where does that come from?—It is the money we have earned. The starting point was that we had the money given to start a home in memory of Dean Stanley and Lady Augusta Stanley; now most of the money comes from what we earn ourselves.

15218. The Nursing Home pays its own expenses?—It pays its own expenses.

15219. It does not come on the hospital at all?—No, it has nothing at all to do with the hospital; it is under separate management, and there are separate accounts.

15220. Do they keep any ward maids at the hospital?—No, not by that name; we have not any room for them. We employ scrubbers who live outside.

15221. Do these nurses have to perform what are termed menial duties?—Yes, a good many; they have to sweep and dust and wash up and to keep their sculleries clean; they have to do everything except the floors and grates. We have no ward maids but we have 11 scrubbers who come in by the day.

15222. Would you not like to see some of these heavier duties taken off the nurses and intrusted to ward maids?—No, because I do not think they are over-worked, and I think it gives a much better tone in the wards not to have so many ward maids and scrubbers there. I think the work is much better and more conscientiously done by the nurses than by ward maids, or scrubbers; and I have been in hospitals where there were ward maids. Before I came to Westminster I was seven years in the Royal Infirmary at Edinburgh; so that I have worked under both systems.

15223. Then the nurses have to send down to the dispensary sometimes?—Yes.

15224. Do they send a probationer on such an errand?—The medicines are all brought up to the ward; of course if they want an extra thing one of the nurses would go down for it.

15225. Then there is not much running about?—Very little running about.

Earl Spencer.

15226. I suppose you have not had many nurses yet who have come for superannuation on your fund?—No, we have not, although our institution is already 17 years old.

15227. Is any of their own pay kept back for the purpose?—No, none at all.

15228. You expect to meet the superannuation out of your income and the earnings of the home?—We do; we have nearly 4,000 *l.*; it amounted last year to over 3,000 *l.* capital on the superannuation fund.

15229. How is that superannuation fund formed?—By the surplus earnings of the nurses, (24.)

Earl Spencer—continued.

and also by some few subscriptions and donations.

15230. Specially for the superannuation fund?—Yes.

15231. You keep that fund distinct from the other fund?—Quite distinct; and when anybody makes a present to the home or sends any money, it is put to the superannuation fund and does not go into the general expenses at all.

15232. Is there a superannuation fund for the nurses in the hospital, and the nurses that you sent out also?—Yes, for all our nurses.

15233. Do you think that the capital fund you have got will meet the charge after a time; the charge will increase of course as you go on?—Yes, we hope so; I do not see why it should not.

15234. What are the funds of your home made up of?—By the payments from the hospital and the payments from private nursing.

15235. What profits do you get from the private nursing?—I cannot tell you the exact profit.

15236. Will you give us the amount as you have them in your balance sheet?—These are the receipts: “Westminster Hospital, for nurses’ services, 1,955 *l.*; private nursing, 4,162 *l.*” Then there are various other small sums that make it up to 7,380 *l.*

15237. Now with regard to the 4,132 *l.*, a portion of that is really profit?—A portion of that is; of course not all, because we paid last year 2,839 *l.* 14 *s.* 9*d.* for wages alone, and then there are the other expenses, the housekeeping of the home, and the nurses’ dress and payment for everything that we have.

15238. Have you any landed property or any endowment?—No, nothing at all except that our house belongs to us; our house is freehold and it belongs to us.

15239. You have rather heavy rates, probably?—Yes; our rates are nearly 150 *l.* a year, considerably over 100 *l.*

15240. What are the subscriptions to your home?—Last year the subscriptions to the superannuation fund were 68 *l.* 2 *s.* *d.*, and 75 *l.* 14 *s.* donations.

Lord Clifford of Chudleigh.

15241. Do all your probationers go into the hospital?—Yes, we train all our own nurses.

15242. You train them all in the hospital?—We train them all in the hospital.

15243. What is the condition upon which you admit probationers?—A three years’ agreement. We take them first of all on a month’s trial, and then if we think them suitable we enter into an agreement with them, and they bind themselves to stay with us three years, and we train them on those terms.

15244. Who selects them?—I do.

15245. Do you select them on account of their physical capabilities?—Not only their physical ones, but their capabilities all round.

15246. You have no restrictions as to who are admitted?—We have restrictions as to age.

15247. But not as to their social circumstances?—No, none whatever.

1548. The home was founded in memory of
G G 4 Dean

26 February 1891.]

Miss PYNE.

[Continued.]

Lord Clifford of Chudleigh—continued.

Dean Stanley?—Yes; and Lady Augusta Stanley.

15249. You have no religious qualification?—No, none at all; we take all denominations, and always have done so.

Lord Monkswell.

15250. I do not think you told us what the regular hours of the probationers were; you mentioned the hours of the sisters and the nurses, but what are those of the probationers?—They go on at 7 in the morning, and they come off at 1, and go to dinner; four days a week they come back to the hospital at 4 o'clock, and are on duty till 8.

15251. That is a full day?—That is a full day.

15252. That is nine hours?—Yes; and the other two days they come back at 2, and they are off duty after 5.

15253. And their hours are much lighter than those of the nurses and sisters?—Yes, their hours are much shorter.

15254. Then as regards the night nurses, you said that their hours were from 9 to 9, and that they had a meal at 7 o'clock, how long have they for that meal?—About half-an-hour.

15255. And how long do you suppose they take over the meal which they have at night?—I do not know; I suppose it depends upon circumstances.

15256. They have to be at work?—They are there on duty, and have to be attending to their work.

15257. So that practically the night nurses are at work for 12 hours, all except the half hour for breakfast?—Yes; and strangely enough they are the healthiest class of the community.

15258. I suppose your accounts show the surplus year by year of revenue over expenditure in your nursing home?—Yes; I have the report here if you wish to see it.

15259. I mean you do calculate, of course, exactly how much the home costs you, how much you pay in salaries and uniform and housekeeping expenses, and so on, and how much you receive both from the hospital and from the private nursing?—Yes.

15260. And you strike a balance every year, and, I suppose, always have a surplus?—Yes.

15261. Have you any pensions now?—Yes.

15262. Then you have a scale of pensions?—No, the committee have never made a regular scale of pensions; they have always said that they wish to judge each case on its own merits.

15263. Does not a nurse, therefore, take her pension subject to the possibility of its being diminished by there being a number of other nurses who ought to have pensions?—I do not know how that is managed.

15264. As far as you have gone you have always had a surplus?—Yes.

15265. And no nurse knows what she is entitled to in the way of pension?—No, there is nothing fixed.

15266. It rests with whom to settle that?—The nursing home committee.

15267. You would advise that committee, I

Lord Monkswell—continued.

suppose?—I should give them the data; how long the nurse had served, and so on.

15268. How many are there on that committee; is it a large committee?—Yes, a large committee; there are a good many on it; I cannot remember exactly what the number is.

Earl Cathcart.

15269. You are lady superintendent in one institution, and matron in the other?—Yes.

15270. I always lament the distinction. I think "matron" gives so much better an idea of what her duty is; that she should be the mother of the family?—So do I.

15271. You agree with me in that view?—I do.

15272. You mentioned your Scotch experience of seven years; is the nursing system analagous in Scotland to what it is in England?—At the Royal Infirmary, Edinburgh, it was, because they sent down nurses from St. Thomas's Hospital, and it was nursed on the same system.

15273. But does the same system prevail in Scotland generally?—I do not really quite know; it is so wide a question. I think in Glasgow they have much the same.

15274. You have mentioned the operating theatre; do you make the poor persons insensible by anæsthetics before you take them in there?—Yes, we have a little room by the side of the theatre where they have the anæsthetic administered.

15275. And that is a very merciful course to take?—Very.

15276. Now, with regard to the social position of your nurses; from what classes do you usually recruit them?—From all ranks.

15277. We had a sort of analysis here once, giving all the professions; do you take nurses from every class?—Yes.

15278. Ladies?—Yes, a good many.

15279. And from the families of commercial men?—And officers' and doctors' daughters.

15280. But you do not give any particular preference to one class over another, only you would require that they should have sufficient education?—And that they should be good women.

Earl of Arran.

15281. When was the nursing institute first started?—In 1874.

15282. You say, I think, that it is very fortunate it has been started, inasmuch as there is no room in the hospital to lodge any nurses?—There is room to lodge thirty-five nurses, but the entire nursing staff, including the probationers, numbers about fifty-five.

15283. How was the nursing done before the institute was started?—They had fewer nurses in those days; they were the days before they had trained nurses at all.

15284. When they were forced to do with fewer nurses?—They used to do with many fewer nurses.

15285. How many nurses have you for the out work; nurses that you send out to families?—Sixty-seven.

15286. And

26 February 1891.]

[Continued.]

Earl of Arran—continued.

15286. And are they mostly employed?—Yes, they are almost always employed.

Chairman.

15287. Who keeps all these accounts you mentioned just now?—I do.

15288. In addition to all your work in the hospital?—I do not keep the superannuation account; the treasurer keeps it; I keep the nurses' wages and housekeeping accounts.

15289. Have you got any clerk to assist you in that?—No.

15290. Is the number of nurses you have got sufficient for all the needs of the hospital?—Quite sufficient.

15291. Then in the case of your wanting extra nurses for special cases you never have to go outside?—No never; we can draw from our private staff if we want any extra nurses.

15292. But if you drew from the private staff would not the hospital have to credit you with the amount of money for those extra nurses?—They can get a trained nurse from us for 3 s. 6 d. a day or 3 s. 6 d. a night; but the hospital only pays in that way for those over the number of 28; I mean that we are bound to supply the hospital with 28 trained nurses and we cannot charge for any extra ones unless they are beyond the 28.

15293. And then in the case of an extra nurse being required the 3 s. 6 d. is paid which goes to the general fund?—To the nursing home fund.

15294. Have you any male attendants on the nursing staff?—No, we go to the Hamilton Association when we want them.

15295. And do you find that satisfactory?—Yes. We have porters of course always on the place and if anything desperate happens we can call a porter at once. Our bill for male nurses last quarter was 16 l. 18 s.

Chairman—continued.

15296. You are the matron of the hospital, but you receive no salary from the hospital?—No.

15297. You reside in the hospital?—I live there.

15298. And get your board?—Yes.

15299. May I ask what salary you get from the Nursing Institution?—£. 180 a year.

Lord Monkswell.

15300. How often do you go through the wards?—Every day.

15301. And if you dismiss nurses is your dismissal subject to any appeal?—I cannot dismiss any nurse or sister without appeal to my home committee, but I have the full power to dismiss a probationer.

Chairman.

15302. How long do you train your nurses before you send them out as private nurses?—It depends on what the nurse is like. It is a variable time; I do not send them out under a year unless they have had previous experience.

15303. That is left to your discretion?—That is left to my discretion.

Lord Monkswell.

15304. I understand you to say that you cannot dismiss nurses in the hospital without appeal; but can you dismiss the nurses in the Home?—No I cannot dismiss a private nurse either without referring it to my committee.

Chairman.

15305. Do you have to place your accounts before this nursing home committee?—Yes.

The Witness is directed to withdraw.

MR. WILLIAM HENRY ALLCHIN, M.B., F.R.C.P., is called in, and having been sworn; is Examined, as follows:

Chairman.

15306. You are the Dean of the Medical School, are you not, of Westminster Hospital?—I am. I am one of the physicians to the hospital. I am one of the lecturers on the Principles and Practice of Medicine, and I am the Dean of the school; and I may say also that as an independent appointment I have the medical charge of the nurses, an appointment which is made by the nursing home, and not by the hospital.

15307. By the committee of the nursing home?—By the committee of the nursing home; and I have had the medical charge of them since the home was founded in 1874.

15338. Were you formerly a student at the hospital?—No, I was at University College as a student and teacher eight years before I came to Westminster.

15309. As regards the school, first of all how many students have you in the school?—Calling those students who are not qualified (there always being a certain number of just qualified men about) we have 100 exactly.

(24.) e.

Chairman—continued.

15310. Is that the usual average, or more than the usual average?—It has been almost exactly the same number for the past few years; we have very much increased within the past 10 years.

15311. Is that as many as your school could carry?—No, we could accommodate certainly half as many again.

15312. What are the fees these gentlemen pay for the curriculum?—The fee for the complete curriculum if paid in one sum is 105 l.; if in two payments it is 110 l.; and if in five payments it is 120 l.; and then, of course, there are partial fees for a partial amount of instruction.

15313. Then the income of the school is composed of these fees, is it not?—It is entirely.

15314. And how much are the expenses of your school?—The average receipts of the school (perhaps I might mention it first in that way) for the past five years have been 1,860 l. annually, and the average expenses have been 913 l. If I may be allowed to do so I would mention in re-

H H

ference

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Chairman—continued.

ference to that a very important point, and that is this: a few years ago, in 1885, the school was removed from the hospital premises where it had been for some years, namely, from 1852, and was established as a separate building in Caxton-street, about four minutes from the hospital. The establishment of the separate building and separate school, of course, very largely increased the expenses. The school was founded in 1834.

15315. Does the hospital help you at all?—It helps in this way: the hospital bought the site, and built the school, and the school building and site belong to the hospital, for which we pay an annual sum of 160 *l*.

15316. Do you know what it cost to build the school?—I can tell you exactly. The exact cost of the site was 4,617 *l*. 0 *s*. 11 *d*., and the cost of the building was 9,218 *l*. 8 *s*. 8 *d*., making a total of 13,835 *l*. 9 *s*. 7 *d*.

15317. And for the whole of that you pay 160 *l*. a year rent?—Yes; but there is a certain explanation of that which I think it is only due to state, namely, that when the school was moved from the hospital premises a special appeal was made for the double purpose of improving the hospital and building a school, and a sum of 6,000 *l*. was raised in that way. There was also 1,000 *l*. paid down by the lecturers of the school so that, of course, the 160 *l*. can scarcely be regarded as the interest on that total amount, but as the interest of the amount, less those sums which I have mentioned.

15318. Then, taking the 913 *l*. expenses out of the 1,860 *l*., that leaves 900 *l*. odd?—Yes.

15319. Does that provide the fees for lecturers and teachers?—It does. The staff receives nothing from the hospital. We have, of course, certain standing expenses.

15320. Are those beyond the 913 *l*.?—No, the 900 *l*. average is divided amongst the staff, amongst the lecturers.

15321. Could you tell us on what principle it is divided; is it according to shares?—It is done in this way: I may say that there is at the present time an alteration being effected in the method of doing it, but the principles are really very similar; it merely means a little adjustment of the proportion; but the way in which it is done at present is that the gross fees are taken and a certain proportion of them is apportioned to what we call the school payments, and a certain proportion to the clinical and hospital payments. But perhaps it would be desirable to say that, of course, the hospital existed many years before the school, and clinical teaching in the hospital was carried out long before the school was established, and it is a remnant of that arrangement which is continued to the present time; but the total fees taken from the students are apportioned, a certain proportion to the school fees, and a certain proportion to the clinical fees; and then the expenses are taken from both in certain proportions. The clinical fees contribute to the printing, to the advertising, and to the scholarships of the school; and the rest of the school expenses, that is to say, the maintenance, the rates and the other items that I will mention presently, of special expenditure, are provided for out of the school fees. So that both the clinical fees and the school fees contri-

Chairman—continued.

bute to those expenses, and it is a little difference in the adjustment of proportions that is now being effected.

15322. On what basis do you make the division?—We have what we speak of as shares; that method, I believe, has already been brought before your Lordships, and that is the way we do it, by shares. The different shares according to the different duration of the lectures, whether they are winter or summer courses; that is to say, six months' or three months' courses, have certain values, and according to the number of lectures given.

15323. Could you tell us what is the maximum amount of money that a first-rate man would receive?—You see that the great majority of the hospital staff are also lecturers in the school, consequently they draw some from both sources; and with regard to the maximum since I have been connected with the school, which is 20 years as a teacher, the maximum certainly has not exceeded very little more than 100 *l*. a year.

15324. From both sources?—From both sources. Yes, there was one year in which it exceeded that, but certainly 100 *l*. is beyond the average.

15325. And the minimum?—The minimum of some of the lectureships is only a few guineas; viz, those with a very few lectures. May I mention the heads of expenditure?

15326. If you please?—I mentioned the rent to the hospital, which is 160 *l*. a-year. We pay the rates of the building also, which this past year were 71 *l*. odd; we pay the insurance; and I may say that our agreement with the hospital compels us to pay the rates and insurance of the building; and then porters and servants of the school cost us 200 *l*. a-year, and the librarian 100 *l*. a-year; and last year 90 *l*. was devoted to the library and laboratories. Then we have an average of about 50 *l*. a-year for repairs, and every fourth year it costs 150 *l*. to re-paint the building.

15327. Are you strongly in favour of the individuality of the schools as opposed to having some central body, or central university, to control them?—Might I ask to what extent your Lordship means that to go?

15328. Of course, the clinical instruction must take place in the hospitals; but there are a large number of lectures to which you referred just now; could that work be done with advantage, do you think, in a central university?—I think it could be done with very great advantage by some amalgamation amongst some of the smaller schools, but I certainly do not think it would be advantageous to have one central building for the whole of London for teaching those preliminary subjects of medical education.

15329. Would you like to see the students when they arrived at the medical schools more thoroughly prepared than they are at present in general subjects?—I certainly think that that is one of the directions in which improvement is very much to be desired. Your Lordship is probably aware that the general medical council, which is practically the governing body in these kinds of matters in respect to education, has recommended, and it is now under the consideration of the examining boards that the period of study

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Chairman—continued.

study should be extended from four to five years. The present period of study by law is practically four years; it is proposed to be extended to five; it is probable, I think, that in the adjustments of education and examination which will be entailed by such an extension of time, provision will be made for ensuring the better education of the students at the beginning.

Lord Kimberley.

15330. Would you approve of what is termed the preliminary scientific examination being entirely gone through before the medical student goes to the school for instruction?—Yes.

15331. Might it not be possible that though there would not be a central body for examinations, the teaching being done by such bodies as were approved of by the medical council?—Yes, entirely.

15332. You would approve of that if there were certain bodies in London which were considered by the medical council to afford efficient teaching, just as now they consider certain hospitals to afford efficient teaching; so that a student could be taught at any of these places, and then he might pass an examination at the central institution, after which he might go into a medical school?—Yes, that is exactly the case.

Lord Monkswell.

15333. Mr. Gould was examined about the proposal of a scheme of the University of London, and he said he considered that it would be desirable to have teachers of all the London medical schools who would together form a faculty which should have the power of sending a certain number of representatives to the senate of the university, and appointing a board of studies; would you be in favour of some such scheme as that?—Entirely. During the last four or five years I have actively worked in connection with that scheme, and been largely concerned in arranging for it, from the point of view of the Royal College of Physicians.

15334. I will go now to the question of infirmaries; do not you think that infirmaries might be utilised more than they are at present?—Most distinctly.

15335. How would you suggest that they should be utilised?—Dr. Barnes thought it would be a good thing to put the paid infirmary officials under some celebrated physician or surgeon, as they do at the hospitals; do you think it would be as well, if possible, to have some sort of officer over, say, two or three infirmaries, or a separate official, as it were, for each infirmary; I mean some very celebrated physician who might take charge of the students as they do in hospitals, and might to a certain extent have authority over the officials in the infirmary?—I think if I may say what I understand you to mean, it is in this way: that, of course, the physicians and surgeons at present have ample scope in the existing London hospitals to do the clinical work that is required; they have ample scope, for instance, at Westminster; and the question is whether there should be also physicians and surgeons of standing, who should be associated with the infirmaries for purposes of instruction

(24.)

Lord Monkswell—continued.

there, which, I apprehend, is what your Lordship means. I certainly think that such should be done, and this extra year that I referred to just now, which will be no doubt introduced into the medical curriculum, will almost certainly be applied in the direction of increasing the time of clinical study; and that might be done in part at the infirmaries.

15336. Then independently of appointing physicians and surgeons to superintend the studies of medical students at the infirmaries, a great deal might be done, I suppose, by sending them round and allowing them to have the advantage of the superintendence of the present infirmary officers?—Certainly, but, as your Lordship knows, that is against the law; or, if it is not against the law, it certainly is against the custom; we have no right to teach in the infirmaries.

Earl of Kimberley.

15337. You are aware that the year before last an Act was passed enabling infirmaries to be thrown open for teaching purposes?—I was not aware of that.

15338. Enabling them to be thrown open; but it does not therefore follow that they are thrown open?—No.

15339. For certain purposes they are already thrown open to some extent?—Yes.

Lord Monkswell.

15340. I suppose the permanent officials, the doctors now over the infirmaries, are not quite of the same class as at the hospitals?—Not of the same class as the visiting physicians and surgeons at the London general hospitals.

15341. Therefore, it would be desirable probably that medical students should be in charge of other persons?—Other persons would have to occupy of course the same kind of position towards those resident medical officers that we do at the present time towards our resident officers in the hospital.

Earl Cathcart.

15342. It is of the essence of clinical teaching, is it not, that there should be a multiplicity of schools, inasmuch as wherever the beds are, there the professors and the students will gather together?—Quite so.

15343. It must be so; it is inseparable from it?—Yes.

15344. Have you any means of keeping your students together by way of a residence or club or anything of that sort?—We have no residence; we have not entered upon that; from what we have understood and heard we regard that as being a very expensive matter and have not entered upon it.

15345. Have you any sort of reading room or a room where the students can have luncheon?—We have in the school building a club, a reading room and a bar, and a dining-room, where they lunch and dine together.

15346. You have no difficulty as regards discipline?—No; the discipline falls upon me; I have to maintain it.

15347. You have not a great deal of trouble; not more than might be expected?—Not more than

H H 2

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Earl Cathcart—continued.

than might be expected with a number of young men.

15348. Is the apparatus, microscopes and so on, provided by the professors or by the school?—In the main, by the school. I named a certain sum that was spent last year, and it was devoted to providing material for some of the laboratories. Of course, the lecturers, all of them, have their own private instruments as well.

15349. Great complaint was made at our last meeting with reference to the difficulty of getting subjects; have you any difficulty of that sort?—That does not come actively under my control. I daresay your Lordship is aware that the arrangements in regard to subjects within the past few years have been a little modified; the teachers of anatomy in the different schools work together in regard to that; but we have no difficulty more than other schools. Certainly a few more subjects in the year would be desirable, but we have no ground to complain.

15350. But you have not heard many complaints on that score?—No, not many; we certainly should like a few more subjects.

Earl of Arran.

15351. Do all your physicians and surgeons hold the London diploma?—They have to by the laws of the hospital.

15352. And you do not think that you lose any good men by insisting on that arrangement?—Not at all; I think it is a most desirable arrangement for several reasons.

15353. Could you name any of your reasons?—I know that that is a question which has engaged your Lordship's attention with most of those witnesses in my position who have been before you, and I have carefully thought over the matter as to what I should say. One very important reason, I think, is this: For the purposes of the London hospitals, the general hospitals I mean (my remarks apply only to those, of course, which have medical schools connected with them; I am not expressing opinions about other hospitals, but am speaking in regard to the general hospitals), I think it is of great advantage that they should have these London qualifications for this reason; not by any means what might at first appear to be the reason that the holding of these qualifications ensures a higher professional standard, because I have no doubt your Lordship knows that the examinations of these colleges are not to be regarded in the same way as the examinations, for instance, of the London University; we look rather to the universities, in the case of physicians, for the professional qualifications; but the Royal colleges in London exercise a disciplinary control over their members and fellows to a very considerable extent; and I may say that the London Royal colleges possess the control to begin with, and that they exercise it with far more certainty than do the colleges in Scotland or Ireland. That is one reason, the value of which, of course, I think would at once be apparent when you have teachers in schools who have to teach a number of students, not only as regards the actual methods of inquiring into disease, but

Earl of Arran—continued.

their methods of behaviour in regard to sick people. Further, also, the position which necessarily is attached to an individual connected with a London hospital is a very powerful one for influencing medical opinion in one way or another; and it is highly desirable that those who are in that position shall be of the highest possible character, and shall be subject to such control of a disciplinary character as will ensure that they will not give way to practices which we should regard as unprofessional. That is one kind of reason which I venture to think would be a very powerful reason. Perhaps I might say that my authority for that statement in regard to the differences in the disciplinary control exercised by the Royal colleges in London and the colleges in Scotland and Ireland is information which is published in the Minutes of the General Medical Council. Then again another kind of reason, which is a very important one, although perhaps it would not be of the same general character, and might not appeal to your Lordship in exactly the same way as it would to me as a teacher, is this: The greater number of our London students necessarily go to the London qualifying bodies for examination, and it is therefore desirable that the teachers of those students should be associated with the colleges where those examinations are held. I do not put that on the same level as the former reason. But, to put it the other way, supposing that the teachers in the London schools were not members or fellows of the Royal Colleges in London, but belonged to the Royal Colleges in Scotland or Ireland, it could not be worked so conveniently, at any rate with regard to the teaching and examination. I hardly think that it would be looked upon as a hardship in any way that any one should be called upon to pass those examinations; because we know of several illustrations; I might mention one distinctly: The late Dr. Matthews Duncan, a most distinguished physician in his line, already a most distinguished physician, first, perhaps, in his department, before he came to London a few years ago, notwithstanding that he held that position, submitted himself to the Royal College of Physicians for the purpose of becoming a member, and subsequently, as he did, becoming a fellow.

15354. Could you tell me whether hospital appointments in Dublin and Edinburgh are mostly confined to the members of the medical profession holding diplomas of the Dublin and Edinburgh schools?—Whether there is a restriction of the same kind there, you mean?

15355. Yes?—I have no knowledge; I do not know at all.

Lord Zouche of Haryngworth.

15356. Would you say that this insisting upon the membership of the College of Physicians or Surgeons runs the risk of depriving you of the services of eminent men; that question has been frequently asked of other witnesses during this inquiry, and therefore I put it to you?—I should say not at all. With regard to the various appointments which occur in the London hospitals,

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Lord Zouche of Haryngworth—continued.

pitals, of course, one knows as a matter of common knowledge, that there are many applicants for them, and there is no risk whatever, I should say, of perfectly competent men not coming forward to fill them; there is no loss from that restriction, in my opinion.

15357. You think that there would be no difficulty whatever in any eminent practitioner, even, so to speak, late in life, if he wished to hold an office in London, submitting himself to and passing a difficult examination?—The case of the late Dr. Matthews Duncan exactly illustrates that.

15358. But possibly he might have been one in a thousand?—One could mention others who have submitted to that. I do not think there would be the slightest difficulty whatever. Perhaps I might mention to your Lordship that, of course, the fellowship of the College of Physicians is not conferred by examination; the fellowship of the College of Physicians is obtained by election from amongst the members, and consequently there is no question there of any difficulty in examination.

15359. The examination merely relates to the membership?—In the case of the College of Physicians, and to a certain extent in the case of the College of Surgeons. The fellows of the College of Surgeons are some of them fellows by examination and some by election; but at the College of Physicians they are all by election from members of a certain number of years standing.

Lord Thring.

15360. Do you not think it is rather a bad example for London to set, because if London restricts its degrees to its own people, surely then Dublin or Edinburgh, or any other place, might plead that as a reason why they should restrict theirs to their own people, and that certainly would be injurious?—I do not know that it would be injurious; but may I say again that it is not a question of restriction to London degrees; the degrees of the university are not the question; it is a question of the qualifications of these Royal Colleges which exercise a control other than the purely professional standard.

15361. I quite understand that; I may have used the wrong term; but supposing they require as a qualification for a man to be an officer of a London Hospital, that he should be a Fellow of the College of Surgeons, or a Fellow of the College of Physicians in London, would it not clearly have a detrimental effect, in this way, that it would justify the Dublin College in making the same restriction, and saying that nobody shall have a place in their hospitals unless he has a Dublin qualification?—I think it might quite justify their doing so, but I am not aware that any definite evil result would follow. I think they have a perfect right to do it.

15362. Then if no definite evil result would follow, I do not understand why you should insist upon the London qualification; why should you make the London qualification a *sine qua non* if you consider the Dublin qualification as

(24.)

Lord Thring—continued.

good?—The reasons that I am adducing in support of the method which is followed, are those two which I have just mentioned to his Lordship who questioned me just now.

15363. I am quite aware of that, but I ask this question: I will put it in another way; do not you think it would be a great disadvantage to Dublin, for instance, that nobody should be allowed to be an officer of a great Dublin hospital unless he had a Dublin qualification?—I really do not know exactly how to answer that, because if I said yes, it would imply that I thought therefore necessarily that the London qualification was so much better. It is not on the ground of the professional qualification, it is on the ground of the control which these bodies exercise that I am urging the point.

15364. I do not understand the control; they exercise it over the members of the profession generally, do they not?—Only over those who are their own members and fellows.

15365. And what particular control do you mean?—I mean in this way; that persons who practise certain kinds of remedies, who offer to treat persons with liquid electricity, for instance, if they were members or fellows connected with the Royal Colleges of Surgeons and Physicians in London, would most assuredly have their diplomas taken from them.

15366. But I thought that under the general medical law a doctor who did anything improper could be deprived of his status as a doctor?—May I explain that to your Lordship? It occurs in this way: The disciplinary control over the medical profession is exercised by the general medical council, so far as striking the name off the register; and an individual who has his name taken off the register, to all practical purposes ceases to be a practising medical man; he has no right to practise then. His name would be taken off the register at once by the medical council if he was convicted of any felony or crime against the laws of the country. Unprofessional conduct is included in the Act under the term “infamous conduct,” for which the name can be removed from the register by the licensing bodies taking the name off their own lists, first, and reporting to the medical council. Now what I have just said is that many of the licensing bodies, other than in London, either do not possess those powers to the same extent as the London colleges, or if they do, they do not as certainly exercise them; and it is on that that I base my reasons for thinking it better that we should have men belonging to the London colleges connected with the London schools.

15367. I cannot see the force of that; because, surely it is almost in the highest degree improbable that a man coming, we will say, from Dublin, and elected for his great eminence (because they would not be too ready to elect an outsider to be a doctor of one of the London hospitals) could be guilty of anything which would require a more severe law than the general medical law; what possible chance could you conceive there would be that any doctor of great eminence so elected would require this extra control over him?—I should not like to think that he would do anything that would require it.

H H 3

15368. Then

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Lord Thring—continued.

15368. Then why should he require this control; I should have thought it was the very thing that a doctor would not require?—I say that a certain number are appointed to the hospitals before they become such great doctors.

15369. The long and short of it is this: I cannot conceive why you require the special disciplinary control of two particular London Colleges over such a man as would be elected to a London hospital when we have got the general medical law; and therefore it seems to me that imposing the London qualification is a restriction that ought not to be enforced; I do not see the force of your argument?—I do not know that I can state it in any other words; it is a form of argument that I must confess occurred to me as being cogent.

Earl of Kimberley.

15370. Admitting, at all events, for the sake of argument, that this disciplinary control is so valuable that those who are elected to a hospital ought to be subject to it, could not that be met by a very simple provision that every person not holding the qualification of the London colleges should, on his appointment to a hospital, engage to submit himself to the rules of those colleges on pain of dismissal if he did not do so; would not that meet the difficulty?—I can quite conceive such an arrangement as that being made.

15371. It is open to the hospital to annex any conditions of a reasonable kind to the appointment, and if it be (I do not myself give any opinion) on certain grounds desirable, in order to prevent what is termed unprofessional conduct, that this control should be exercised, would there be really any difficulty in imposing that condition upon any person who was elected, and would it be likely that any person elected would object to subject himself to a condition which is imposed on all London physicians?—Except that it would be somewhat invidious to suggest that an individual who does not belong to an institution should be subject to the laws of it.

15372. But if the laws are considered reasonable why should a man object to that, any more than to pass an examination to place himself under those laws?—It could be done.

15373. Would it not come to the same thing; it would leave to the hospital the power of selecting without an examination; at the same time if such a control is desirable they could enforce it?—Certainly.

Earl of Arran.

15374. This danger might arise perhaps supposing these appointments were open to men of every school, that the appointments in London might be so sought after that it would tend to all the most eminent men gradually collecting in London and rather denuding the other parts of the country of excellent men?—I should rather doubt whether it would practically come to that, because there certainly has been within the last few years (doubtless it is associated with the greater facilities of communication) a far wider spread throughout the country of those

Earl of Arran—continued.

who would be called eminent men, rather more than have been concentrated in London. There are many, that is to say, in the provincial towns, and in Scotland and Ireland; or, limiting ourselves to England, there are many provincial towns in England where some most eminent men are in practice, a greater proportion than would have been the case many years ago.

15375. I had in my mind at that moment more distant parts, Scotland and Ireland?—You mean whether it might not attract a large number of them from those countries to London?

15376. Yes?—I think it is possible that it might do so.

Chairman.

15377. Who keeps all the accounts of the schools?—The accounts are kept by one of my colleagues, the treasurer of the school; but it is only right to say that in the readjustment which I mentioned the accounts will be kept by the secretary of the hospital; because the school is under the direction of the School of Medicine Committee, which is a body of the governors, as the secretary told your Lordships just now.

15378. Are there any professional members of the weekly committee?—Yes, a certain proportion; there may be nine professional members.

15379. Does the hospital give anything in the way of scholarships to the school?—It gives one; that is to say, the governors do. May I be allowed to put that prospectus of the school in for the information of the Committee on some of those points (*handing in the same*).

15380. As regards the resident medical men in the Westminster Hospital, when a vacancy occurs what do you do; do you advertise it at all?—It is advertised in the hospital. Of course naturally we appeal to our own students whom we have educated.

15381. But supposing you have none suitable among them?—Then we should advertise outside; I have known that to be the case before the school was as large as it is now.

15382. Are you prepared to speak about the out-patient department of the Westminster Hospital?—Yes.

15383. We were told the number of cases that occurred in the out-patient department; will you tell us what happens when a patient first of all comes to the hospital; who sees him first of all?—Not a surgery patient, you mean?

15384. Take anybody you like who comes to the hospital for the first time?—Of course there are those two great groups of those who come to the hospital who will not be in patients; assuming that they will not be in-patients, the two great groups I mean of surgery patients and out-patients.

15385. Supposing I came to the hospital, where should I go; what should I do?—That would somewhat depend upon the nature of what was the matter with you; and it would also depend upon what time of the day you came. I will take two kinds of illustrations which will show what I mean. An individual meets with a slight accident, cuts his finger, or has a cut head. He goes to the hospital, and goes into the surgery, where he is seen by one of the resident officers, the

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Chairman—continued.

the house surgeon. Or supposing, for instance, that it be a child who is in a fit, and is taken into the hospital, he would be seen by one of the house physicians in the surgery. Those are what are called surgery patients, or, to use the expression your Lordship used just now, casualty patients. Those are not what we call the out-patients proper. Those patients in the surgery amounted during the year 1889, in the form of surgical accidents, to upwards of 5,000; medical cases in the surgery, 4,500; and separately, what are known as diarrhoea patients, 1,100.

15386. Then who determines whether this person is to go to the surgery, or to the out-patient department?—He determines that, one may say, of himself, because those are the cases that occur at all hours of the day and night. But the real out-patient department, is managed in this way; it is practically free; practically the governors' letters are not used, but it is practically a free department; and the patients go to the hospital, the doors are open at one o'clock and remain open from one to half-past; and then generally by the character of their ailment, they are apportioned to the out-patient surgeons or out-patient physicians. The regulations of the hospital which have been mentioned to your Lordships are, that no out-patient officer shall be obliged to see more than 20 new cases per day; but, I may say (and I have made inquiries particularly, it being some few years since I was an out-patient medical officer) that that law is interpreted very liberally indeed, and the number of new patients are seen directly at half-past one by the medical officer attending as out-patient physician; he makes his own selection. I am rather desirous of emphasising that point, it not being the arrangement, as your Lordship knows, that obtains very often elsewhere. The selection of the cases he shall see, he makes himself, so that he is thereby responsible for the whole thing. If the number only slightly exceeds the number of 20 they are all seen; and on the heavy days in the week which happen at Westminster to be Tuesday and Thursday, two out-patient physicians sit; so that although there are a certain number of cases sent away, they are the least important, and the great majority of them are actually seen. With regard to the surgical out-patients, and the out-patients in special departments, ear, eye, skin and so on, those are all seen.

15387. When a man attends at the out-patient department do you give him any letter for so many attendances?—Virtually the prescription paper or letter as it is called is unlimited.

15388. He goes on until he is cured or does not come back?—Yes.

15389. Are you of opinion that the out-patient department is necessary for teaching purposes?—Absolutely necessary; in some respects the most important department of the hospital for teaching.

15390. Is your out-patient department so crowded that it is inconvenient for teaching purposes?—No; the accommodation for the out-patient department in Westminster was constructed when the school was removed, and is very commodious and convenient. We have not a

(24.)

Chairman—continued.

large school, therefore it would not tell in the same way with us as with a very much larger school.

15391. Were you an out-patient physician yourself?—Yes, I was; I had to serve so many years in the out-patient department, till a vacancy occurred on the senior staff.

15392. Is it your opinion that the charity was abused when you were connected with that department?—Very seldom; there would be exceptional cases; that is my experience, and it is the experience of most of my colleagues; in fact, of all that I have asked. Occasionally there is a case of abuse. An exceptional case occurred only a day or two ago.

15393. But those cases do not occur in sufficient numbers to require an inquiry officer, in your opinion?—I should think not myself; that is my own opinion.

15394. What was the particular case to which you allude?—It was the case of a lady who came with her child to one of the special departments and brought her nursemaid with her. It was thought that a lady who had a nursemaid for her child, was not a fit and proper person to be a recipient of the charity. That did not occur to my own personal knowledge; I am quoting from others in mentioning it. Another case was that of a lady who applied to one of the out-patient physicians a week or two ago, and from something that she said, he made inquiries, and she turned out to be the wife of a colonel in the Army, who lives in the west-end of London. He wrote to the husband afterwards, and ascertained that that was the fact. Such cases are very exceptional, as I mentioned to you.

15395. Now have you ever heard any opinion expressed as to the effect of the free out-patient department upon the profession; that is to say, upon what is known as the poor practitioner?—I have heard that very often; it is one of those vexed questions that one naturally hears a great deal about.

15396. What is your individual opinion?—My individual opinion is that, it does not press particularly hardly upon the poor practitioner.

15397. Do you have many people sent to you for consultation to the out-patient department?—There are cases sent, no doubt, at the present time. For the past ten years, during which I have been one of the senior physicians, I have had a fair number sent as in-patients for consultation; but I know that they are frequently sent to the out-patient department also for consultation, and they were to me when an out-patient physician.

15398. That is to say, sent by practitioners?—By practitioners in the neighbourhood, and in the country, and by old students particularly.

15399. To return for one moment to the subject of the school; have you any opinion as to whether a school is a great expense to a hospital?—On the contrary, I do not think it is in any way an expense to the hospital. I think, owing to its existence, a large amount of necessary hospital work is done for nothing. The work of the resident officers and clerks, and dressers, in looking after the patients, is done

H H 4

absolutely

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Chairman--continued.

absolutely free; to say nothing of the fact that, wherever a medical school is attached to a hospital, it necessarily insures a high standard for the medical staff, who have to teach.

Earl Cathcart.

15400. In your experience in that particular neighbourhood especially, do you find that successive crops of children tend to deteriorate; that the children of this day are inferior to what they were some years ago?—I am not prepared with any figures in answer to such a question, but my impression would be this; that if you were to take ricketts, which is essentially a disease of towns, and of bad feeding, I see much less ricketts now than I used to.

15401. But still there is a great want of milk among that population, is there not?—No doubt; and that complaint is always one of the results of improper feeding.

Chairman.

15402. Is there anything else you wish to say?—If I may do so, I should like to mention one or two points which have occurred to me. It was mentioned to your Lordships by Miss Pyne that the wards were small. Of course there are certain small wards besides, but the average size of the wards is 40 feet by 24 by 14.

15403. Totting it up what does that give in cubic feet?—It gives about an average of 1,200 cubic feet per patient, which as your Lordship knows is very good. I should also like to say that from my position in respect to the nurses, which is an independent position, it falls upon me to select the nurses from a physical point of view; when they first come, before they are actually engaged, it falls upon me to consider them from that aspect, and I may say that the health of the nurses generally is excessively good; I very seldom have much to do with nurses that are ill, except for very trifling ailments, and within the past five years there have been only two deaths of nurses, and within the past ten years only four deaths. I should like also to be allowed to say that my experience, and it is entirely the experience of my colleagues on the medical staff of the hospital, is one of unqualified satisfaction with the present nursing arrangement, the existing of a nursing school independent from the hospital itself. I had experience of the hospital before that arrangement came into force, and I have a knowledge of other hospitals as well, and I have no hesitation in saying that my own individual opinion is strongly in favour of the arrangement that we have at Westminster; it works most satisfactorily. I might say something also in regard to a question which a noble Lord asked with regard to the post mortem examinations. You were told that the pathologist makes the post-mortem examinations; but the right is retained for the medical officers to make their own if they choose. I am the only member of the staff who exercises that right, and I make my own post-mortem examinations, and I have, therefore, special knowledge of the conditions. Everything is done in order to ensure decency and consideration for the feelings

Chairman--continued

of the friends; and we have a very large proportion of *post-mortem* examinations made upon patients. Possibly your Lordships would like to know those figures; because it is not likely we should get so many if there was any dissatisfaction, as the power of refusal rests in the hands of the friends. In the year 1889, 226 bodies were taken into the mortuary; of these 17 were brought into the hospital dead, leaving 209 who died in the hospital; and of those 226 who were in the mortuary, *post-mortem* examinations were made on 208, and exactly a similar number occurs for 1890. There is one other point which, if I might be allowed, I would refer to; it is as to a matter that has not been touched upon in any question that I have been asked, but it is one which, as I know, has engaged your Lordships' attention, judging from the inquiries addressed to other witnesses; I refer to the question of the special hospitals, as to any limitation of those. I should like to be allowed to express the opinion that there should be distinctly some limitation of them.

15404. What is your principal reason for objecting to special hospitals?—My special reason is this: that I think that with very, very few exceptions the work can be done better in the general hospitals. I think that they are necessarily the means of diverting funds for the expenses of such hospitals, which funds, perhaps, I am prejudiced in thinking, should more properly go to the general hospitals. I think these individual special hospitals should be made to justify their existence. And also I feel very sure that they do draw away a number of cases which are of great clinical interest for teaching purposes, and that they are, in the greater number of cases, but very slightly available for such a purpose. In that sense they starve the clinical field for the general hospitals.

15405. Would it also operate in this way: that by accepting the payment of small fees they starve the poor practitioner?—Yes, still more than the out-patient department of the general hospitals. Those special hospitals, I mean, that do insist upon a fee; and when they do it becomes worse, in my judgment.

Earl of Arran.

15406. Should you like to see some system of licensing enforced?—I should like to see some system of licensing enforced.

Earl Spencer.

15407. Does your objection to special hospitals extend to all hospitals; we have had witnesses who held the same view as you have expressed, but who made some exceptions; would you make any?—I should make some exceptions; first the infectious hospitals; and also I should make exceptions of children's hospitals; also, I should be inclined to make exceptions of hospitals for essentially chronic cases of all kinds; but beyond those I am not at all clear that I would approve of any special hospital.

15408. I think some witnesses have mentioned that they would except eye hospitals?—Yes, I know one or two members on the staff of hospitals have expressed that opinion; I believe Dr. Ord and Dr. Barnes expressed that opinion.
As

26 February 1891.]

Mr. ALLCHIN, M.B., F.R.C.P.

[Continued.]

Earl Spencer—continued.

As those eye hospitals exist, well and good, but I do not exactly see the justification for them.

15409. You think that those patients would be as well treated in the general hospitals?—I think they would.

Lord Clifford of Chudleigh.

15410. Whatever the limit of the control, your contention is that there should be control of hospitals?—Yes.

15411. And would you exercise that control with regard to hospitals which do not appeal to the public for subscriptions?—I have never thought of that. I do not suppose there would be the same ground for doing so in their case.

Chairman.

15412. Do you know any hospital which does not appeal to the public?—I do not know of any.

Lord Monkswell.

15413. Dr. Barnes said that specialists were very often hampered in the general hospitals, and he said that in his own department these specialists are under the command of the staff of surgeons and physicians who exercised their authority in rather an arbitrary manner; that when a specialist first comes in, though a good man in his profession, he is treated with great contempt by the others; what do you say to that?—That I do not agree with. I think that refers to an arrangement at St. Bartholomew's, especially where particular operations of a character with which Dr. Barnes is associated are not performed by the physician in charge of

Lord Monkswell—continued.

those cases at St. Bartholomew's, but by one of the surgeons, and it is a rule which obtains elsewhere.

15414. Would you think that that rule is desirable; do you not think that a specialist ought to be allowed to go on with his own case?—I think so, but I am rather disposed to think at the same time that he should not call himself a physician. But I am afraid that that is a professional question.

Earl of Kimberley.

15415. I want you to recur to the out-patient question; did I understand you rightly that the medical officer alone determines which of the patients are fit to be treated in the out-patient department?—Yes, he alone determines on the fitness as regards disease; should he suspect any person to be out of the range of what he considers to be fit subjects to be treated, he refers them invariably to the secretary.

15416. And does he make any inquiry, or merely judge by the appearance of the people?—Of course by experience he soon forms some notion; and especially by ascertaining the occupations of the individuals, and then whether they are married, and how many children they have, you can roughly come to a conclusion.

15417. Then inquiries are made on points such as you have mentioned?—Yes, but those are initial inquiries in relation to the case.

15418. But the answers to those inquiries enable you to judge if the case is one which you ought to entertain some doubt about?—Exactly.

The Witness is directed to withdraw.

MR. SIDNEY M. QUENNELL, is re-called; and further Examined, as follows:

Chairman.

15419. Do you pay rates for your hospital?—We do.

15420. How much?—£. 125 last year.

Chairman—continued.

15421. And what is your assessment?—£. 600 gross, 500*l.* net.

The Witness is directed to withdraw.

MR. CLINTON THOMAS DENT, is called in; and, having been sworn, is Examined, as follows:

Chairman.

15422. ARE you a surgeon or a physician?—A surgeon.

15423. What are the qualifications you hold?—I am a Fellow of the Royal College of Surgeons of England.

15424. Are you engaged in practice?—In practice.

15425. And are you an honorary member of the staff of St. George's?—Yes, at St. George's.

15426. Have you ever considered at all how far the out-patient department of a general hospital might be made to work in with the provident dispensary?—Yes, I have considered the point. At a hospital where the number of out-patients is limited, I do not think it interferes with the provident dispensary at all. I am thinking chiefly of the view that is put forth that the provident dispensary could do
(24.) e

Chairman—continued.

equally well as the hospital the out-patient work. I think that is quite impossible. Where the number of patients is limited, the dispensary and the out-patient department of a general hospital practically do not cross each other's path.

15427. But do you think that the capabilities of the provident dispensary are insufficient?—I think so for this reason largely: that hitherto, at any rate, it has not been found possible to get people as highly qualified, at all events as regards diplomas, to become physicians and surgeons to a provident dispensary as it is possible to get for a general hospital. Attachment to a general hospital is looked upon, as you can understand, rather as a prize; the attachment to a dispensary is of course a wholly different matter.

15428. But is not one reason for that that the
I I provident

26 February 1891.]

Mr. DENT.

[Continued.]

Chairman—continued.

provident dispensary movement is rather in its infancy?—It does not seem to grow and thrive; it has lived some time, but it is rather stunted in its growth.

15429. Is not one of the reasons of that because everybody can be treated at a general hospital?—To a limited extent only. I have always thought from the inquiries that I have made to a great extent among patients themselves, who are of that class of patients, that a large number of out-patients (I am thinking of those who come to a general hospital) come there because they believe that a guarantee is given that they will be efficiently treated. They will be treated by people of a certain standing or status, and they know that. With regard to the class of out-patient, a hospital patient generally knows an astonishing amount of the way in which hospitals are worked, their inner working.

15430. And therefore, these persons put more faith in the management of the hospital; the reason they go there is more because of their faith than because they are absolutely unable to pay for their own medical treatment?—They have to be sifted; I think that they ought to be sifted where abuses come in; that is to say, where a patient comes who is unfitted to be a hospital patient. Very often he comes because he wants an opinion; he would often be anxious to pay something; but it is the duty of a hospital to protect itself against such; it must not treat those people who could afford to pay.

15431. Would you like to see an inquiry officer at every hospital?—I think the hospital staff (I speak only for the one I know best in this matter, and one or two others which I know to some extent) are, as they ought to be, perfectly capable of doing that for themselves. We at St. George's have supplemented the work of the enquiry department, I think, for a few years past, possibly less, by the Charity Organisation Society; we refer doubtful cases to them.

15432. Do you know at all what proportion of cases you find abusing the charity, or is that very rare?—It is an extremely small proportion. At our hospital I think it must be because a patient has to go through three separate inquiries, as it were. He comes before the secretary or an assistant who takes down the particulars; he is next seen by the resident medical officer of the hospital who sorts the surgical and medical cases, but also again notes the position of the applicant; and then again he comes before the out-patient physician or surgeon. Those would be the three. I have known this occur; I have seen a case, and it struck me from manner, dress, or bearing that the patient might, possibly, be in a superior position, and I have referred back to find out; and in one or two instances they were dressed in borrowed plumes, and were extremely poor. The Charity Organisation Society inquired most carefully into one such case, and it was found to be altogether of a class which might properly be treated at a hospital on the score of extreme poverty.

15433. Then as regards general practitioners in the neighbourhood, are they very much starved by the out-patient department?—Not if the number of out-patients is limited.

15434. Before it was limited at St. George's

Chairman—continued.

was the work very much in excess of what the officers could properly attend to?—At first we limited the number of out-patients to 20, and then for the whole of the nearly 11 years that I have been on the staff the number has been 15 to each medical officer: 15 to the surgeon, and 15 to the physician. Previously to that, I cannot speak by book, ever since I have known the hospital, the number has been limited, and that is about 19 years now.

15435. Then you are fully in favour of the out-patient department for teaching purposes?—It is absolutely essential for the instruction of the students in the cases which he will meet with much more often than any others in after life. He would not see in-patients, as we call them; that is to say, the severer cases. He will be largely concerned with the class we know as out-patients.

15436. Those include every description of disease, do they not?—Every description of disease.

15437. Then have you any opinion as to the waste of material for instruction in the infirmaries?—I should very much like to see the infirmaries and the chronic cases which they harbour used for purposes of clinical instruction. There is a wonderful field for that. The unfortunate thing at hospitals is that cases are pushed through quickly; the moment that it is possible to draft them off to a convalescent hospital, or send them out, it has to be done.

15438. Are you speaking now in the interests of education or in the interests of the patient?—I am speaking in the interests of both, because I believe the better you educate a medical man the better it will be for that patient and for any future patient; and it is the basis of all clinical instruction.

Earl of Kimberley.

15439. What kind of standard have you in your mind in determining whether a patient is a fit subject for relief by the out-patient department? I will take, for instance, an imaginary case: supposing the child of an artisan, who has a wife and four children, and in the receipt of 30s. a week regularly, is brought to the out-patient department, and the case is not a very serious or alarming one, would that be considered to come fairly within the rules of the hospital as a free charity?—Such matters are inquired into by the secretary's department first. I should imagine that such a case would be probably rejected if there were over the prescribed number of 15, if 16 presented themselves.

15440. But supposing that they happened not to be over the number of 15, would such a case be received?—Probably it would be received.

15441. Should you think that such a case as that should be received?—I should think that such a case as that would be perfectly fit for the opinion which a great number of the patients come for. It is not for treatment but for a consultation opinion that a large number come.

15442. But supposing it was not a case for consultation or an opinion, but some case that might be considered not to be a serious injury, but one which could be treated by any ordinary medical man, do you not think that a man in that position ought to pay for medical attendance himself?—

I have

26 February 1891.]

Mr. DENT.

[Continued.]

Earl of Kimberley—continued.

I have hardly reckoned up the case. He would be a man when in work just able to hold his own.

15443. My question really is whether you think that a man in that position ought to provide himself with ordinary medical attendance?—I think he ought through his club, and they mostly do.

15444. Would he not be tempted by the proximity of the hospital not to trouble himself about providing for it through the club, but to come to the hospital whenever he was in need of medical attendance?—It is not my experience that they do that much. They come for a skilled opinion much more than is generally thought. I am bound to say that a great number of them do not altogether believe in any opinion unless it is backed by a bottle of physic.

Earl Cathcart.

15445. The space in your out-patient department is very cramped, is it not?—Very cramped.

15446. Those four little dens or cabins must be very difficult to officiate in?—We are better off on our side, the surgical side, than the physicians are; I have practically two rooms.

15447. But still the space is too confined?—It is too confined and too noisy; but we are on the eve I hope of better things.

Chairman.

15448. Have you got any view with regard to the centralisation of medical education in the earlier parts of the curriculum?—That is to say, chemistry, anatomy, physiology and such like; those are the subjects I am speaking of, or the preliminary science as it is called. I believe that if that were taught at a central institution or institutions in London for the London students, there would be a considerable saving of expense; and I am inclined to think that the schools, especially the small ones, might do their

Chairman—continued.

work more efficiently. They are hampered by having to have a complete staff of teachers, sometimes almost as many teachers as students; there will be a single student or two students (I have known such a thing happen) for one particular subject, and you are obliged to provide a teacher. Obviously no small school can afford that. I believe that the centralization might be effected very well by the amalgamation of some of the smaller schools; but I do not think that a central institution should be out of London. I am thinking of universities such as are being established, or such as it is sought to establish in Wales or in the provinces, and so forth. I do not believe that the teaching, broadly speaking, would be as effective there as it would be on the spot in London.

15449. Then you would amalgamate these small schools for the lecture purposes, and let the clinical instruction go on in hospitals?—That would go on in hospitals with lectures and so forth in the later subjects, that is to say, the education that follows after the passing of the first examination, the first examination being their chemistry, their anatomy, their physiology. A student is then passed on into the wards, and he begins to learn about disease, and that is a kind of work which, I believe, a hospital alone can do.

15450. Is there anything else that you desire to state?—No. It is chiefly about the limited number of out-patients and the value of that department when worked in that restricted manner which I have described, that I have come to give evidence.

15451. You cannot speak too strongly in favour of the out patient department for educational purposes?—I think that it is absolutely necessary for instruction, and that nothing you could devise would replace it.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 2º Martii, 1891.

LORDS PRESENT:

LORD ARCHBISHOP OF CANTERBURY.
 Earl of LAUDERDALE.
 Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
 Lord SANDHURST.
 Lord FERMANAGH (*Earl of Erne*).
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. NEWTON H. NIXON, is called in; and, having been sworn, is Examined,
 as follows:

Chairman.

15452. You are the Secretary, are you not, of the University College Hospital?—I am.

15453. Would you tell me please where that hospital is situated?—It is situated in Gower-street, St. Pancras.

15454. And is it what is known as a free hospital?—It is practically a free hospital, but there are governors' letters issued.

15455. And do those governors' letters have the same power as at other general hospitals that we have had before us?—Precisely.

15456. That means to say that the qualification for admission is the severity of the disease, and that there is not any favour shown to a governors' letter?—Just so; it is practically merely a pass to the doctor.

15457. When was your hospital started?—It was started as the University Dispensary in Gower-place in 1828, and was founded as a hospital in 1833.

15458. Has it a school attached to it?—Yes, a very large school.

15459. What is the number of beds in the hospital?—207.

15460. And what is the average number of beds occupied?—181.

15461. Is there an out-patient department?—Yes, a large out-patient department.

15462. And are they badly-off in that district for other free medical assistance, or are there a large number of other hospitals and dispensaries?—There are only two dispensaries to my knowledge, the Bloomsbury and the St. Pancras, in the immediate district; and with regard to the hospital accommodation, the nearest hospitals would be the Middlesex and the Royal Free Hospitals.

15463. How far are you from the Middlesex Hospital?—About six minutes' walk.

15464. Very much the same remark therefore I suppose would apply to University College
 (24.)

Chairman—continued.

Hospital, as was made by a witness in reference to Middlesex Hospital, in regard to the number of other hospitals and dispensaries within a radius of a mile?—I have not made a calculation, but it would be practically the same.

15465. He quoted the hospitals and dispensaries from a certain medical directory, and he stated that there were about 2,000 beds within a mile of the Middlesex Hospital; you think the number in your case within the same radius would be practically about the same?—Yes.

15466. Do you ever have to send away patients from your hospital because you have not sufficient beds for them?—Yes.

15467. And is the out-patient department largely attended?—It is very largely attended.

15468. Will you just give us the figures. I should like to have first of all the number of new cases?—The new cases are as follows. Ordinary medical and surgical cases, 4,389; lying-in-women that are attended at their own homes, 2,265; ophthalmic cases, 1,124; skin cases, 840; diseases of women, 714; throat diseases, 97; ear diseases, 388; dental cases, 185; casualties, 29,476, making a total of 39,478; and to those we add patients whom we call ward out-patients, 963; those are patients who have been in the wards, and where it is thought desirable by the medical man for the in-patient physician or surgeon to continue the treatment outside; so that those patients would remain under that officer.

15469. Would remain under what officer?—Under the officer who had charge of them in the wards. And then there are those seen on the recommendation of local and other medical men: 1,291; making a grand total of 41,732.

15470. Are those all new cases?—Yes, all new cases.

15471. And do you keep your number of attendances?—We do not keep the attendances;
 I I 3 it

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

it is found almost impracticable to do so; but there is a rough sort of average total of three and a-half attendances per patient.

15472. What do you base that calculation upon?—Experience, really; you find, checking it from time to time that it works out in that way.

15473. But if you can manage to keep a record in that way, could you not keep a record for the whole number?—Yes; but it would increase the staff very much indeed.

15474. Anyhow you say it is an average of about three and a-half?—Yes.

15475. That would make it from about 130,000 to 140,000 attendances?—Just so.

15476. How many lying-in women do you attend outside?—2,265.

15477. And then there was another item: 1,291; I did not quite catch what they were; they were not the ward patients?—Those are patients who are sent in on the recommendation of local and other medical men who send their card with a special application that the patient shall see a special physician or surgeon.

15478. That is to say, treating your hospital more as a consultative body?—Yes.

15479. For superior advice, in fact?—Yes.

15480. Would you tell us what is the constitution of your hospital; by which, I mean, what is the organisation and management, beginning with your annual meeting down to the duties of the secretary, or the executive, or whatever it may be?—There is an annual meeting, summoned by circular and advertisements, of donors and subscribers.

15481. Are those necessarily governors?—Yes.

15482. Is there any minimum subscription by which governorship can be attained?—Yes, a guinea subscription and upwards.

15483. But you take subscriptions of less than a guinea, I presume?—Yes, we take subscriptions of half a guinea.

15484. Do not subscribers of half a guinea attend the annual meeting?—I think I misunderstood your Lordship; I was thinking of election to the committee. All subscribers attend the meetings, subscribers of half a guinea and upwards.

15485. And are able to vote?—Able to vote.

15486. That is the annual meeting. Then what is the next body below that?—The hospital committee.

15487. How often does it meet?—Every fortnight.

15488. And how is it composed?—The hospital committee is composed of fourteen donors and subscribers, seven nominees of the Council of University College, and three delegates from the medical committee.

15489. Are they practically the executive of the hospital?—Yes.

15490. And have they any sub-committees from their body?—Yes; there is a committee called the house and finance committee, and the Samaritan funds committee; those are the fixed sub-committees.

15491. Is there not a nursing committee?—No, because the sister superior is summoned to the house and finance committee once a month.

Chairman—continued.

15492. The house and finance committee meets once a month then, does it?—No, it meets once a fortnight, but the sister superior is summoned to it once a month.

15493. What are the duties of the first body; I think you called it the house committee?—No, the hospital committee.

15494. What are the duties of the hospital committee?—The hospital committee is practically the executive committee, and of course the minutes are read as usual, and the minutes of all the sub-committees are read and recommendations from those sub-committees are considered; and they also read the minutes of the medical committee, who make recommendations, which are generally carried out; but still they are subject to the decision of the hospital committee. Then there is the book called the "Proceedings Book," giving details of the work in connection with the patients, and the financial state during the past fortnight. The appointments of resident officers, clerks, and dressers are considered on the recommendation of the medical committee. The decisions of the council of University College are also considered. Then there is a book called the "Visiting Governors' Report Book," which is brought up; one member of the board acting as the visiting governor by appointment from time to time. Then the rest of the business is any miscellaneous matter that it may be necessary to bring before the board.

15495. Then the business of the hospital has been done in detail already by these sub-committees?—To a great extent; so far as possible, matters of principle are dealt with by the hospital committee, and matters of detail, by the sub-committees.

15496. Then all the small books and the various housekeeping books, and so on, and the banking pass-books are examined by the house and finance committee?—Yes.

15497. Perhaps you could tell us what the house and finance committee's duties are?—The house and finance committee, as its name implies, has to audit all the accounts fortnightly; they recommend payments to be made on bills and salaries; they examine the dietary and stimulant accounts, the housekeeper's store accounts, and the out-patient porter's diary, which is a record of the rota of officers and the work that they have, and any special circumstances requiring attention; such as sending away a scarlet fever case, or anything of that sort; and, of course, the appointments of porters and servants; that is their business.

15498. I will come to that directly; and what are the duties of the Samaritan Committee?—The Samaritan Funds Committee deals with the administration of the Samaritan funds; its accounts are audited by the Samaritan Funds Committee; it makes payments practically for what is called grants and allowances to poor patients; those are sums of money, either a half sovereign or sovereign, or so much a week given to the friends while the father, mother, or friend is in the ward.

15499. To maintain the family while the bread-finder is in the wards, in fact?—Yes, just so. Then they have a report upon the invalids' dinner table

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

table, which is an outside body, to which they pay part of the cost.

15500. What is the invalids' dinner table; that is something we have not heard of before?—The invalids' dinner table was started many years ago by a private individual, and the management was afterwards taken over by the hospital. Every medical officer in the out-patient department has a book in which he can order a certain number of dinners for patients requiring support in that direction, as well as medicine, then they go to this dinner table and eat those dinners.

15501. Then they are convalescent?—Then they are convalescent, practically; and private people can buy books of tickets also, and give them to anybody they like.

15502. Where does that dinner take place?—At Woburn Buildings, near St. Pancras Church.

15503. Is that close to the hospital?—Yes, it is about three minutes' walk.

15504. Then with regard to your own position, first of all I will just ask this; what is your salary?—My salary is 600 *l.* a year, made up as follows: 500 *l.* as secretary to the hospital; 50 *l.* for collection of subscriptions; and 50 *l.* as secretary of the Samaritan Fund.

15505. And you have no other commissions?—Nothing whatever; and the appointment of myself to look after the subscriptions was in order to do away with the collector.

15506. You have no collector?—No collector.

15507. Do you have board and lodging?—No, only luncheon.

15508. You live out?—Yes.

15509. Who assumes control when you are absent?—An officer living on the other side of the road, called the clerk and steward; my duties devolve upon him.

15510. And he also lives out of the hospital?—Yes, across the road.

15511. What powers have you got as secretary; you are the hospital committee in the absence of that committee practically, are you not?—Well I suppose I am.

15512. Then supposing that any egregious conduct took place, would you have power to suspend any officer?—Do you mean lay or medical?

15513. Either; anybody?—I should only have the power of suspension in the case of servants. In the case of lay officials I should consult the treasurer; in the case of medical officials I should consult the dean of the faculty of medicine, who is chairman of the medical committee.

15514. Does your treasurer live on the premises?—No.

15515. Does he live near at hand, or far away?—He lives in Westbourne-terrace.

15516. That is some distance off, is it not?—Yes.

15517. And the dean of faculty lives some distance off, practically?—He lives in Harley-street.

15518. So that there is no actual head in the absence of these gentlemen?—The resident medical officer is a paid official; he lives in the place.

(24.)

Chairman—continued.

15519. Is he superior to you?—No; our duties are independent of each other's.

15520. There are then two independent heads so far as that goes?—Yes, generally; but in the general work you cannot be independent entirely of one another.

15521. So that, practically, in your hospital are there not three independent heads; the resident medical officer, yourself, and the head of the nursing staff?—Yes; in the nursing there is a separate head, and in regard to general medical questions there is a head who works under the medical committee, and the dean.

15522. That is two?—But I have the general management as the rules provide.

15523. Perhaps you will read the rules?—"The secretary is charged with the general superintendence of the hospital, with the preservation of order throughout the building, and the control of the officers and servants of the establishment, except the nursing staff, but is not to interfere with matters placed under the control of the resident medical officer by Section X. He is to communicate with the medical and surgical staff, to supervise the condition of the building, as to general working order, structural repair, and cleanliness, &c., and to bring before the hospital committee any matter which, in his opinion, may require their attention." That is practically a summary of my position.

15524. The house and finance committee has the financial control of the hospital, I understand?—Under the hospital committee.

15525. Would you tell us where the money comes from for the support of the hospital?—From annual subscriptions. Do you want the amount?

15526. Yes?—Annual subscriptions, 2,020 *l.*, I need not give the shillings; dividends, 2,944 *l.*; legacies, 1,973 *l.*; fees of students for clinical instruction, 596 *l.*; people's contribution fund in aid of the hospital, 500 *l.*; donations, 7,853 *l.*, which include the Sunday Fund grant of 1,250 *l.* last year, and 232 *l.* from the Saturday Fund.

15527. That is about 1,500 *l.*?—Yes. Those are the principal sources of income.

15528. Have you any landed property?—No.

15529. What is the total of all your receipts added up together?—The total amounts to 19,334 *l.*

15530. That is what you received last year?—Yes.

15531. And what was your expenditure last year?—£. 19,560.

15532. Then your deficit was only about 200 *l.*?—Just so.

15533. Was that an unusually good year?—No, I cannot say that it was an unusually good year.

15534. In what respect was it deficient?—The legacies were extremely low.

15535. Could you give us any idea what the average of your legacies has been during the last 10 years?—The legacies have been about 4,300 *l.* a year during the last 10 years; but it would be fairer to consider 3,300 *l.* the average, because one very large exceptional legacy came in of 11,000 *l.*

I I 4

15536. Have

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

15536. Have you any large dinner that accounts for the large sum of 5,000 *l.* in donations?—Yes, we have always a dinner. One year we had a special appeal, but the rule is to have a dinner.

15537. Do you find that you get more money from one special appeal than from a continual system of appealing?—My experience is that they ought to go together. We send out something like 60,000 appeals a year.

15538. In fact you find the best plan of getting money is to keep always advertising?—To keep always advertising and applying.

15539. Then as to the 2,900 *l.* in dividends; is that all from stock, or does it include any rent?—No, stock only.

15540. Was it the interest on any permanent endowments?—Partly; it is partly drawn from permanent endowments, and partly from money bequeathed for general purposes. I can give you the figures if you like.

15541. I should like to know what your permanent endowment is, first of all?—Shall I divide it?

15542. If you please?—For investment only, 62,515 *l.*; invested for general purposes, 13,488 *l.*, and Samaritan fund, 36,048 *l.*, making a total of 112,042 *l.*

15543. And you cannot sell out the principal of that?—We can only sell out that for investment only, of which the present value has been calculated at about 18,000 *l.*

15544. The other is permanent endowment?—Permanent endowment.

15545. Then was there not an item among the sums you gave us of rents?—There is a very small sum of 3 *l.* 1 *s.* 6 *d.*

15546. Is that the only money you derive from rents?—Yes; and that is money collected by the College about which we know little or nothing.

15547. Does this sum of money enable you to keep all your beds full?—They are always full.

15548. All the beds you have got are full?—With the usual hospital margin for emergency.

15549. And you do not have to keep any beds closed for want of funds?—No.

15550. Who admits to your hospital; what is the system of admission for in-patients?—The resident medical officer admits them in the first instance; but then a large number of patients are admitted from the out-patient department by the out-patient staff; beds are kept for that purpose in order that they may be admitted.

15551. Does the resident medical officer admit to both departments, surgical and medical?—Yes.

15552. Is he a gentleman of standing in his profession?—Yes.

15553. What is his salary?—£. 150 a year with board and lodging.

15554. Then every case filters through his hands?—Every case which is sent directly on a governor's letter, or some other form of recommendation.

15555. Then he does not see all that come through the out-patient department?—No.

Chairman—continued.

15556. Who admits them?—The officer on duty.

15557. Is he what is termed a resident?—No, he would be a member of the staff of the hospital, either the physician or surgeon in charge of the out-patients.

15558. Do you make any inquiry as to the circumstances of in-patients or out-patients?—In regard to in-patient's letters, the responsibility is thrown upon the governors, and it is distinctly stated that admission is necessarily conditional on there being vacant beds at the time of their application, as well as on the fitness of the cases in the judgment of the medical officers.

15559. Do you take all sorts of diseases?—Not infectious diseases.

15560. What course do you pursue if an infectious case presents itself?—An infectious case is at once isolated in a separate ward for the purpose, and a telegram sent to the Metropolitan Asylums Board; an ambulance comes with a nurse, and the case is sent off at once to one of the hospitals for infectious diseases.

15561. Is scarlet fever the only infectious disease you do not take?—We take diphtheria from the door if it is a very severe case; that is to say if there is danger to life.

15562. Do you isolate such cases?—Yes, there are separate wards for the purpose, separate nursing and separate attention.

15563. Then all other infectious diseases, small-pox, &c., you do not take?—No.

15564. And lock cases?—Not as such; I should hardly think we should. We have a certain amount of that treatment in the out-patient department, but it is rather in the secondary stage. I think that that question had better be put to one of the staff.

15565. You have no beds set aside for that purpose?—No.

15566. Who makes the contracts for the food of your hospital?—In the first instance they go before the house and finance committee, and they recommend the hospital committee to select a firm that they think the best.

15567. Is it done by open tender?—Yes.

15568. Do you advertise for tenders?—Yes, we advertise for tenders for food.

15569. But the contract is made under the responsibility of the committee, is it not?—Yes.

15570. Then who takes the food in when it is supplied?—The steward.

15571. Does he take it in in person always, or does he delegate that duty to some other person?—He has an assistant, but he generally receives it himself.

15572. What sort of man is the assistant, a clerk?—He is an old Army man.

15573. What, a pensioner?—Yes, he was a colour serjeant.

15574. But, as a matter of fact, you consider that the steward does actually take the food in?—Yes.

15575. What sort of standing has the steward; what sort of position in life, I mean to say; what are his wages, that will give one an idea. He gets 250 *l.* a year; but then he holds a composite appointment; he is the officer of the college as well as the officer of the committee, he is practically
night

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

night custodian of the College and they give him a salary and a house in the College grounds in return for those services.

15576. He is subordinate to you, I think I understood you to say?—Yes, they are all subordinate to me.

15577. Would you have power to suspend him?—I should take upon myself that responsibility, certainly.

15578. Suppose the food is not good, how do the complaints from the patients reach the ears of the authorities?—If there were any complaints, they would go to the sister first.

15579. You say if there were any complaints; is your hospital absolutely free from complaints?—I never heard of any complaints being made.

Earl of Kimberley.

15580. You are quite perfect, I suppose?—I do not say that, my Lord; but I do not hear of any complaints.

Chairman.

15581. But the course that would be pursued is that they would complain to the sister?—Yes, and then they would come to me.

15582. So that as far as you know, there never is a complaint made?—So far as I know. The question of the quality of the meat is dealt with before it reaches the patients.

15583. How is that?—The steward sends it back.

15584. But some damage may possibly occur in the cooking, which will even in the best regulated family sometimes occur; a patient or a sister may complain; then what happens?—It would come to the steward if there were a complaint of that sort; but anything touching the deliveries of the tradesmen I should hear of.

15585. The steward is responsible that the food is good when it comes to the hospital; I am not disputing that?—Yes.

15586. But supposing that it has been burnt, or that a large number of dinners are all bone or gristle, which will occur from time to time, the sister would discover it?—The sister superior would then make a representation to the cook, and the steward would also do so.

15587. But you have no practical experience of such complaints?—No, I have never had any.

15588. But would you consider that you would hear of it if complaints were made?—Yes; I do not say that occasionally a few chops may not be slightly scorched, or something of that sort; but I am talking of real complaints.

15589. But that is what I am endeavouring to get at. If a chop is scorched so that it is uneatable, especially in the case of a patient, what would happen?—It would have to go down to the kitchen, and they would have to supply something in place of it.

15590. You would not be told of that?—Not in that case.

15591. Do you not think that that is serious enough to get to the proper authority?—It does, to the steward, who sees the dinners served up.

15592. Do you think that is sufficient, that it

(24.) e

Chairman—continued.

should go to a subordinate officer?—Yes, for a single occasion; but if it were repeated I should deal with it.

15593. If you heard of it?—I am about every day; I am in the kitchens three or four days a week, and in the wards every day.

15594. And are you quite satisfied with the arrangement as it stands?—I am fairly well satisfied, certainly.

15595. And your committee is too?—Yes.

15596. Who is the officer who is responsible for the sanitary condition of the hospital. I think you mentioned that that was in your charge just now; but is there any skilled officer who has to deal with it?—We have a surveyor.

15597. Is it his business to make any annual report on the state of the drains, or state of the hospital generally?—No.

15598. Is he frequently in the building?—Constantly.

15599. Then supposing a sister at the head of a ward discovers a bad smell, whom would she go to, the surveyor or you?—She would come to me, and the resident medical officer would also be called into consultation.

15600. With the result that the surveyor would be called in?—The surveyor would be called in. If it were urgent, I should send for him myself at once without any instructions from the committee.

15601. Have you a plan of the drains?—Yes.

15602. Is that kept up to date?—Yes (*handing in the same*).

15603. Is the surveyor an honorary officer or salaried?—He is paid by commission.

15604. Commission on all the works, do you mean?—On the works that are carried out.

15605. On all works of every cost?—Yes.

15606. What is his commission?—It would be five per cent.; but he has not had to deal with large amounts, so that I cannot say what the action of the committee would be with reference to large accounts.

15607. But his actual pay is five per cent.?—Yes.

15608. I think the Sister Superior is here, is she not?—Yes.

15609. She will go into the question of nursing, I suppose?—Yes.

15610. Is it nursed by a Sisterhood?—It is nursed by the Sisterhood of All Saints, in Margaret-street, under contract.

15611. I will not go into details; I will only ask one or two questions; is that a Church of England Sisterhood?—Yes.

15612. Do you admit any nurses to your hospital who are Roman Catholics, for example?—Anybody.

15613. You admit any nurse?—Any nurse.

15614. Do you find the plan of having a Sisterhood to nurse in your hospital, answer?—Excellently.

15615. You have not had any difficulty from the division of authority?—Not the slightest.

15616. One other finance question I want to ask you; do you pay rates?—Yes; the average payment for the last ten years was 72*l*.

K 11

15617. What

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

15617. What is your assessment?—£. 305.

15618. And how much land do you cover, do you know at all?—I am afraid I cannot say; I can give you the area of the wards, but I cannot give you the land exactly.

15619. Do you employ a chaplain?—Yes, of the Church of England.

15620. What is his salary?—£. 70 a year.

15621. Does he reside on the premises?—No.

15622. Then are Roman Catholic priests admitted?—Certainly; there is a rule to that effect hung up in every ward, that the ministers of all denominations are admitted at any time.

15623. Have you separate wards for children?—We have one separate ward for children; but there is a large sprinkling of children in the general wards.

15624. Are those male children that are put in the separate wards?—The children's ward is divided into male and female by a light partition; they are all under 12 years of age.

15625. And the other children are dispersed about the wards?—Just so.

15626. Do you know whether that is considered a good plan; have you any opinion yourself?—Yes, I have an opinion myself.

15627. Will you tell us what that opinion is?—I think it is convenient for the staff, no doubt, to have certain cases in their own wards when they have not charge of the children's ward, and of course also for the purposes of teaching; but, personally, I should like to see the children's ward, for young children specially, separated from the adult wards.

15628. You think they disturb the patients?—I think they do to a certain extent.

15629. Do you ever have to bury any patients?—No.

Earl of Kimberley.

15630. Is your drainage an old system, or has it been at all improved of late years?—It has been twice improved.

15631. Recently?—In the year 1879 half the drainage was done and other considerable improvements carried out in the direction of sanitation; and the last alteration of drainage was completed in 1888; I can give you the data, if you like.

15632. I do not want the particulars of it; I want it generally. Is your surveyor a skilled sanitary engineer?—I think he would hardly be styled so.

15633. Have you had any inspection by an expert?—Yes.

15634. When was that?—In 1888.

15635. Do not you think it would be an advantageous thing in your hospital, and in all other hospitals, that there should be a yearly inspection by an outside expert wholly unconnected with the hospital, who should report whether anything was wrong with the drains?—I think it would be a very good thing indeed, if the right sort of person were selected.

15636. At the present time it is possible to find such an expert sanitary engineer?—Yes.

15637. And you agree with me that it would be a great security to the hospital, and a protection?—Yes.

Lord Saye and Sele.

15638. You stated that 2,265 confinement cases were attended in their homes by the hospital?—Yes.

15639. Where did they come from?—They were drawn from an area extending a mile and a half in two directions, and others locally.

15640. Are the cases of single women also attended in that area?—The question is sometimes put I gather, from the obstetric physician, but I should not think that is often inquired into.

15641. Who attends to the confinement cases?—There is a rota of students told off for the duty, under the supervision of the obstetric physician and the assistant obstetric physician; and in addition to that there are the resident obstetric physician at the hospital, and three out-door obstetric assistants.

15642. Do those physicians always attend the cases?—The senior physicians do not, but the assistant obstetric physician would naturally be called in to assist the obstetric assistants if they required it, the obstetric assistants being qualified I would beg to point out.

Earl of Kimberley.

15643. Has there not been some dissatisfaction on the part of the hospital authorities with the buildings being old and not furnished with all the modern appliances?—Yes, but the building in its present state is as workable as you could expect.

15644. Has it recently been improved?—Not structurally; but the drainage and everything else has been put in thorough repair, of course the hospital is an old hospital.

15645. But it is structurally inconvenient, is it not?—Yes. It is contemplated to rebuild the hospital.

15646. You have a certain number of houses in connection with the hospital?—Yes.

15647. What are they used for?—Four are used for the nursing staff, and the rest we let off at a rental; the All Saints' Sisters of Margaret-street have rented three houses of us for a nursing home.

15648. They adjoin the hospital, I think?—Yes, they are all in the quadrangle.

15649. Would you tell us what the connection between the hospital and University College is?—The hospital was originally founded as the medical school of University College, and the first of the hospital rules is this: "The government of the hospital and the making and altering of the rules for its management are vested in the council of University College."

15650. Therefore the ultimate control rests with the council of University College?—Yes.

15651. And they appoint, I think, a hospital committee, to act on their behalf do they not?—No, the hospital committee is appointed as I have already explained; there are seven delegates from the college told off.

15652. Then the hospital committee reports to the council; that I know?—On matters requiring the council's sanction, yes.

15653. And the hospital committee's minutes are regularly laid before the council?—Yes.

15654. Therefore the council could intervene if

2 March 1891.]

Mr. NIXON.

[Continued.]

Earl of *Kimberley*—continued.

if they thought there was anything requiring their intervention?—Yes, certainly.

15655. With regard to the finances of the two bodies; are they entirely separate?—Entirely separate, the College merely acting as trustee for the hospital funds; they hand over the dividends and leave the hospital to deal with them, as they may think best.

15656. In point of fact, however, from the fact of the medical school being connected directly with the council, the professors are really the lecturers, are they not, in some cases for the medical school?—In some cases, certainly.

Lord *Monkswell*.

15657. How much power is exercised by the annual subscribers?—The people attending the annual meeting would have power to vote for the committee, if they subscribed to the rules. The fourteen donors and subscribers who are appointed on the committee are practically elected at that meeting.

15658. Is that all the meeting does?—They hear the report on the condition of the hospital during the past year.

15659. Supposing that they disagree with anything that is reported to them, what power would they have to set the matter right?—I should say they would have power to call a special meeting.

15660. And then who would compose that special meeting?—Here is the rule for the requisition. "If a requisition in writing signed by the treasurer, the chairman of the hospital committee, any five members of the hospital committee, or any ten of the persons mentioned in rule 7, requiring an extraordinary general meeting to be held for the purpose of considering a matter stated specifically in the requisition, be presented to the hospital committee, or to the secretary of the hospital, the hospital committee shall appoint a time for holding such meeting not more than twenty-one days after the service of the requisition, and shall convene the meeting by seven days previous notice."

15661. What meeting would they convene?—This special meeting, I take it, of the subscribers.

15662. Then the subscribers in the last resort would really have the whole management of the hospital in their hands; if they chose to object to anything they could do so?—Yes, up to a certain point they could, no doubt.

15663. In point of fact you have never known that done?—I have never know it done.

15664. How long have been secretary?—Fourteen years next May.

15665. Then in point of fact, the annual meeting is a very formal matter?—Very formal.

15666. You say the rule is that you are not to interfere with matters under the control of the medical officer; are those duties strictly defined in your rules?—Yes; but practically his position is that he has to watch the cases under the care of his immediate superior officers during their absence; they pay periodical visits to the wards, and he is responsible for them; and he looks after cases in charge of the house physicians and house surgeons in the wards; and is appealed to in all cases of emergency.

(24.)

Lord *Monkswell*—continued.

15667. About the conduct of the medical students, the Dean, I suppose, would be called in if you saw anything that you thought required his intervention?—I should immediately bring it before the Dean.

15668. Then I suppose you might perhaps suspend a student if you could not see the Dean at once?—No, I should not suspend him; I should report it at once to the treasurer as well; he might suspend him perhaps.

15669. With regard to these letters, I understand that patients must have a letter, or if they have not, they must be admitted through the out-patient department. I suppose that is not necessarily so; they need not necessarily go to the out-patient department first to be admitted if they have no letter?—They go to the out-patient department if they have not a letter constantly, and then they go to the sister in charge.

15670. Supposing that a person very ill were driven up straight to the hospital, would he not be taken in at once?—Certainly, that is only cases that are in too bad a condition to come there by themselves.

Archbishop of Canterbury.

15671. I gather that you do not think there is any difficulty in the relations between the hospital and the college?—None whatever.

15672. No modifications of the relations are required at all?—I do not see any.

15673. Are the medical classes of the college identical with the students in the hospital; are they the same persons in all cases?—I would rather that you should address that question to the dean.

Earl *Cathcart*.

15674. The drawback to your hospital appears to be that it is semi-detached; that is to say, that you have not got the aerial zone which is thought so important?—It is open all round.

15675. But it is abutted on by the street on one side; you have three fronts open, but the fourth is abutted on by the street?—There is a street all round.

15676. But the street actually leans upon one side of your hospital?—University-street, Gower Street, and Huntley-street are almost in touch with the area; at the back there are houses.

15677. I refer to what is called an aerial zone in the technical hospital term, and you have not got that now; you have not got a circulation of air all round the hospital?—No.

15678. In case of rebuilding, could you obtain the houses which abut upon the back of the hospital?—We have obtained a good many of them now.

15679. In case of rebuilding, would you be able to have them all?—I trust that the whole site would be occupied.

15680. That is to say, the back would not be covered by houses belonging to the street?—No, it would all be used simply for hospital purposes.

Earl of *Kimberley*.

15681. And in point of fact the hospital authorities have been endeavouring to buy the premises

2 March 1891.]

Mr. NIXON.

[*Continued.*]Earl of *Kimberley*—continued.

premises for that very purpose?—Yes, they have been buying up the leases.

Earl *Cathcart*.

15682. The fault of the site is, that you have no aerial zone, and every hospital ought to have an aerial zone; is not that so?—Yes.

15683. With regard to the drains I have nothing to say; your plan seems to have been kept up down to date, viz., 1887; but you have already stated to the noble Lord your opinion about an annual inspection, and I entirely concur in your view, that there ought to be an annual inspection of all drains in every large establishment?—I think so.

15684. That is an efficient test, is it not?—I think it is a protection.

15685. With regard to water, how is your water supply?—It is constant.

15686. Have you ever estimated in your own mind how many gallons of water per head you ought to use?—I cannot say that I have; but in our place it is unlimited.

15687. Are any precautions taken about fire? Yes.

15688. What do you do about fire in the way of precautions?—First of all there is a bell between the college lodge and the Great Portland-street Fire station; then there is a bell between the hospital and the college lodge; and then we have electric communication with the resident officers' bedrooms, and the nurses' bedrooms, all of which ring in three places; on each landing we have large tanks always full of water, with a tap, and brief instructions by the side; we have extinguishers, garden engines, and fire pails.

15689. Have you thought in your own mind how you would get your patients out in case of fire?—Yes; on the occasion of my visit to the head quarters at Great Portland-street, I said to the inspector, "What would your first step be?" and he said that the first step would be to remove the patients; and we have the college to go to to put them in, if necessary.

15690. With regard to the 2,265 midwifery cases, are you quite satisfied in your own mind that not one of those cases could afford to pay 10 s. 6 d.?—I cannot answer that question; but I can tell you that the lowest wage has been 15 s., and the average has been 19 s.; but if anything up to 30 s. came, a medical officer would consider before he ordered attendance upon the case.

15691. Then in that case, the poor practitioner who would get 10 s. 6 d., has no reason to complain of your arrangement, you think?—I think the arrangement is excellent.

15692. I mean in the way of interfering with his practice?—Not at all; I do not think they are the same class of cases.

15693. And you take care that they are not so?—Certainly; a person having a wage of two pounds would not be treated.

15694. Have you more cases than you require for instruction?—No. The department is very comfortably arranged at present.

15695. But I mean that you do not take more cases than you absolutely require for the instruction of your students?—We take all who come.

Earl *Cathcart*—continued.

15696. But seeing that your students only require absolutely 25 cases here, why should you take everybody who comes; is not that hard upon the poor practitioner?—I do not think so, because the class of cases is so extremely poor.

15697. You are satisfied in your own mind, that it does not interfere with the poor practitioner in any way?—Perfectly so.

Earl of *Kimberley*.

15698. Is not such a system as that a directly pauperising operation; you are creating a number of paupers by your charity?—It is difficult to define what is a pauper.

15699. Do you think it is a desirable thing that there should be a system by which people should know beforehand that they need not provide for the expenses attendant upon the births of their children, but that they will have them provided by the parish or by a charity?—I do not think that enters into the consideration of working men at all.

15700. But do not you think that it ought to enter into their consideration?—That is a wide question. I think it ought, myself, to enter into their consideration.

15701. Do not you think it a very undesirable thing that in any hospital in London more cases should be taken of this kind than are necessary for the purposes of instruction, which are, of course, indispensable?—I find it difficult to answer that question, because I think the cases are really of the very poorest.

15702. But I must press you upon it. I do not in the least affirm that the cases are not poor, but what I want to know is whether you do not think that any system whatsoever which tends to encourage people to make no preparation for the expenses of the birth of their children is not essentially vicious in principle?—Socially I think it is bad, certainly.

Earl *Cathcart*.

15703. You have not much knowledge of the country generally probably?—I have a fair knowledge, but I should not like to answer any special questions.

15704. You do not know, of your own knowledge, that very poor people in the country are generally very particular about making arrangements for confinements with a private practitioner?—I cannot say.

Earl of *Kimberley*.

15705. Would you be surprised to hear that in a district that I am acquainted with it is an absolute rule that there shall be no relief given under the poor law except in very extreme poor cases of midwifery?—I am afraid that is rather hard upon the poor people.

15706. Would it surprise you to hear that it is a regulation of which there is never any complaint?—I should certainly be rather surprised.

Earl *Cathcart*.

15707. To go to another subject now, do you think it would be possible that the various hospitals should be put in telephonic communication with one another, so that in case of an overflow

of

2 March 1891.]

Mr. NIXON.

[Continued.]

Earl Cathcart—continued.

of patients in one hospital they could be received in another hospital?—I have been thinking about that.

15708. And what is the result of your deliberation?—I was thinking that in the interest of the patients it would be very useful indeed; but it is very difficult to define what sort of case would be accepted by the other hospitals. For instance, one might decide that a case was a suitable case for admission, and yet could not take it in; and one might send it on, and the patient might go from pillar to post and never be taken in.

15709. But I want you to answer my question. Do you think it desirable that the various hospitals should be put in telephonic communication one with another for such a purpose?—So far as in-patients are concerned I should not object to it.

15710. I am talking now entirely of in-patients; do you think it would be desirable, if your hospital were full, that you should be able to telephone to another hospital: "Here is a very serious case, will you take in"?—I should like to do so myself.

15711. With regard to vacant beds, you said that about 10 per cent. of your beds were kept vacant for emergencies?—I do not know the exact percentage; but they cannot practically be called vacant, because you cannot put a medical case into a surgical ward, and you cannot put a surgical case into a medical ward.

15712. But 10 per cent. is a fair allowance for cleansing purposes, and one thing and another?—Yes.

15713. Do you snub complaints when they come to you?—No.

15714. You are of a sympathetic nature?—There are distinct instructions that I should see everybody who has a complaint.

15715. And if any case of real importance came to you, you would investigate it?—Yes, and the patients when they are discharged go through the hands of the steward every day at 3.30 p.m., and are asked where they are going.

15716. You consider it your bounden duty in every case not to snub complaints, but to listen to suggestions?—I should listen to every suggestion.

15717. With regard to the laundry, it must be a most convenient arrangement, having a laundry in the house?—We have no laundry in the house.

15718. It is marked on the plan?—That is the position of the old laundry; that is used as a sorting and drying-room. We have a contract with the Nine Elms' Mission.

15719. What is the Nine Elms' Mission?—It is an institution where a benevolent lady employs discharged prisoners, I believe.

15720. With regard to the nurses, you admit anybody, I understand; Presbyterians, Wesleyans, Roman Catholics; you do not ask questions with regard to their religious profession, but you take anybody who is efficient?—Anybody is taken.

15721. There is no religious test?—No. It is known what their religion is.

15722. But there is no exclusion because they are of a certain religion?—No.

(24.)

Lord Thring.

15723. What are the floors of your hospital made of?—Deal.

15724. And you wash them?—Yes.

15725. Do not they get very foul?—No, they are washed twice a week all over.

15726. Have you ever taken up a floor and looked to see what is beneath it?—Yes, and we do not like the condition underneath.

15727. Have you found them extremely foetid underneath very often?—No; they are very dirty.

15728. Does it not stand to reason that your floors ought to be renewed?—I should very much like to see them renewed.

15729. And that they are, in fact, in an unsanitary state?—They are old-fashioned deal boards; we keep them as clean as we can.

15730. You do your best with the bad floors?—That is so.

15731. With regard to the food, I understand you to say that during the 14 years that you have been secretary, you have never had any complaint of the cooking, or any complaint of the meat?—I do not say that. I have had no patients' complaints about the food, and I constantly talk to them myself; the constant remark is upon the general excellence of the food.

15732. Then in the 14 years you have been there you have had no patients' complaints of the meat or the cooking?—I have not.

15733. Do not you think that a very strange thing?—No, because the complaint would be noticed by ourselves; the sister of the ward would immediately notice anything of that sort, and the cook would be dealt with accordingly.

15734. It is in the hands of the sister in the ward then?—The sister in the ward receives the diets as they come up from the kitchen, and if she is not satisfied she sends it down at once.

15735. The sister in effect does hear complaints?—She would.

15736. She does as a matter of fact?—I cannot not say. I should like you to ask the sister that.

15737. Very well, I will ask her. What wages does your cook get; is your cook a man or a woman?—£.25 a year; the cook is a woman.

15738. What assistance has she?—A kitchen-maid and a kitchen porter.

15739. Do I rightly understand then that the patients' complaints of the food would not practically come to you?—Unless there were anything serious.

15740. Do not you consider then, as the noble Lord said, that the very complaint of food by a patient is a serious thing?—I should consider it a serious thing if it came to me, and I should take immediate steps to rectify it, if I could.

15741. However, you are satisfied that there is no occasion for it?—I am satisfied that the general food distribution is very good indeed.

15742. Are you aware that in general in a number of hospitals unfortunately, the patients are very fastidious and complaints of the food are constant?—I have heard patients say to me that they come to us because the food is so good.

K K 3

15743. Have

2 March 1891.]

Mr. NIXON.

[Continued.]

Lord Thring—continued.

15743. Have you never heard to the contrary?—I have not.

15744. Do you boil your milk?—No.

15745. Have you got a mortuary?—Yes.

15746. With regard to the examination of bodies, what is your course?—They go down to the post-mortem room after the death.

15747. Who superintends in the post-mortem room?—We have a porter to look after it, but it is under the resident medical officer.

15748. Who sees that decency is observed in the post-mortem room, and that bodies are properly sewn up and delivered up to the relatives?—Either a sister or a nurse goes down with the friends when the body is sent away.

15749. And is in attendance?—And is in attendance.

Earl of Lauderdale.

15750. Is your hospital insured against accidents by fire?—Yes.

15751. What is the amount you pay on?—£. 20,000.

15752. It is insured for 20,000 *l.*?—Yes.

Chairman.

15753. You mentioned in giving us the details of the receipts of the hospital fees from students 596 *l.* for clinical instruction, is that apart from the school, or how do you get hold of that?—The clinical fees last year amounted to about 2,000 *l.*, and it is the rule that the medical officers of the hospital should take two-thirds and the hospital one-third. When the hospital started the medical men gave up their claims upon the fees generously; but as the hospital became more prosperous there was a redistribution.

15754. You go round the hospital frequently?—Yes, every day.

15755. And you are in a position to see if beds are kept empty?—Certainly.

15756. Have you ever had to complain that beds were kept empty for what are termed interesting cases?—No; indeed, it is generally too full; patients waiting to come in.

15757. Can you tell me what paid staff there is in the hospital; the secretary and medical officers?—I can give you a return for the whole staff.

15758. I should like to know the senior officers?—I have already given the chaplain and myself; the resident medical officer I have given, 150 *l.* with board and lodging; surgical registrar, 75 *l.*; clerk and steward, 250 *l.*; dispenser, 225 *l.*; assistant steward, 124 *l.* 16 *s.*; clerk, 50 *l.*; senior assistant dispenser, 120 *l.*; two junior dispensers, each 60 *l.*; making 10 officers.

15759. That is the first I have heard of the assistant steward; who is he?—He is practically downstairs; he looks a good deal after the men servants, and sees that they attend to their duties; and he draws the wines and spirits and that sort of thing.

15760. Then there is the kitchen porter?—He has to do the rough work of the kitchen, and carves the joints on a hot-water dish to go to the wards.

15761. Is he an expert carver?—I think he becomes so. If I see the meat cut up in a rough and chunky sort of condition, if I may say

Chairman—continued.

so, I immediately seek him myself and tell him that he must be more careful in carving.

15762. Have you had any complaints of the carving?—Yes, and that is why I have done that.

15763. Where do the officers of the hospital dine?—They dine in the hospital.

15764. They have a separate dinner table of their own?—Yes, they have a separate dinner table of their own; the committee allow them to use the board room as our space is limited.

15765. Where is their dinner cooked?—In the hospital kitchen.

Lord Monkswell.

15766. You say that you insure your buildings; I have been told that only half the premiums are sufficient to pay for fire losses, and that the rest goes for expenses and dividends. If that is so do not you think that it would be a good thing if all public buildings came together and insured themselves as a sort of mutual insurance company?—I am not conversant with the management of insurance companies, but off-hand I should say that was rather a good idea.

15767. That is an idea which was put before the London County Council, when it was stated, and it was not contradicted, that half the premiums only were sufficient to cover fire losses. If that is so you will agree that it would be a good thing?—Anything that would decrease expenditure we should welcome.

Earl of Cathcart.

15768. Would you tell us what you were before going to the hospital?—For six years I was a principal clerk of the School Board for London.

Lord Zouche of Haryngworth.

15769. Do you take paying patients into your hospital?—No.

Lord Saye and Sele.

15770. Does the chaplain perform any other duties outside the hospital?—Yes, he has a living in the neighbourhood.

15771. Is that why he does not administer the Samaritan Fund, as is usually the case in other hospitals?—I cannot say: the question has never come up; it is much more convenient as it is.

15772. In all other hospitals the chaplain administers the Samaritan Fund, but in this case you receive 50 *l.* a year for administering the Fund?—Yes, and it is very convenient in many cases for the out-patients to come to me because I am always there.

15773. By that means you get a larger salary and the chaplain a smaller one?—That I cannot express an opinion upon.

Chairman.

15774. Is there anything else you wish to call the attention of the Committee to?—I should like to make one suggestion, my Lord. It is this: It occurs every now and then that cases of mania break out in the wards when the patient becomes dangerous to himself and to the other patients, and very annoying and noisy. It is then necessary to remove that patient, and the whole machinery has to be gone through of the relieving

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

relieving officer; and all I wish to suggest is that it would be a very great convenience to the hospital staff generally, I believe, if the certificate of the officer under whom the patient had been in the wards was accepted as sufficient to send the patient in our ambulance direct to the workhouse or the infirmary. The relieving officer is permitted by law to spread the business in any particular case over three days; after that he is subject to heavy penalty. We have cases every now and then when it is very dangerous to keep the patient in, and the relieving officer takes his time.

Earl of Kimberley.

15775. But in a case where the patient is really in such a state as you have described it would be necessary, would it not, to remove him to a lunatic asylum?—There is a difference between cases of mania and actual lunacy. In a case of lunacy they send to the relieving officer, and he would bring the district medical officer who would certify to the man's condition; then a magistrate would be called in, and the patient would be removed at once. Also a case crops up sometimes when a man is not actually a pauper, he might be a man in a fair condition of life, and the relieving officer would say, "Your friends must take care of you;" and it is a very serious thing to send a man home with only a woman (and perhaps two or three children) to look after him.

15776. Why should you not look after those cases in the hospital?—We have no accommodation for looking after them in the hospital until we can relieve ourselves of them in a proper manner.

15777. In cases of lunacy the machinery is provided as you have correctly stated; but there are cases of what we may call violent delirium;—Yes, and sometimes temporary.

15778. Ought not the hospital to provide for those cases themselves; why should they be sent to the workhouse?—I should argue myself that when a person is not competent that person becomes the property of the State.

15779. But was it ever intended that workhouse infirmaries should relieve hospitals of that particular class of cases?—I do not know what the workhouse infirmaries are for, but I take it that they are simply receptacles for transmission in due course to asylums.

15780. But I am speaking of those delirious cases. If the patient is a pauper of course the workhouse will be bound, if application is made, to take charge of him?—Yes.

15781. So it seems to me to be rather inconsistent for a charity to send them away to a workhouse. Assuming there is no means of attending to them in the hospital, of course they have to be transferred to the workhouse; but have you ever considered whether it would be consistent with any of the principles of the administration of the poor law that the workhouse should take charge of patients who are able to provide for themselves. I understood you to mention just now, that there were patients who were not paupers, and you thought they ought to be transferred to the workhouse?—I consider that a patient in a state of mania is a danger to

(24.)

Earl of Kimberley—continued.

the community, and that he ought to be looked after; and we have no machinery for that purpose.

15782. Just let us clear the matter up. If it is the case of lunacy the State has provided the proper steps to be taken?—Yes.

15783. There we may dismiss the case. I understand that these are cases not of lunacy, but of what from the illness of the patient I will term delirium (I know no better term), and violent delirium?—Yes.

15784. And requiring some special control?—Yes.

15785. If that patient were a pauper his friends would be entitled to apply for parish relief for him of course, and he would be received into the workhouse infirmary?—Yes.

15786. But supposing the case is not one where the patient can be called a pauper, do I understand you to say that you think that the workhouse authorities or the State ought to take charge of that person?—No, not if the people have proper provision at home. My point is, that there is not always proper provision at their home. They go home and transfer the dangerous condition to one private room perhaps.

15787. Is that not a case in which it is absolutely necessary that the workhouse authority should have time to make inquiry as to what the nature of the case really is?—We should allow them to do that if they raised that point.

15788. But I understood you to say that the inconvenience arose from the time they took to make the inquiry?—Just so.

15789. They ought to take reasonable time, and that reasonable time must be allowed, must it not?—Yes; but I think the inquiry could be made when the patient is in the workhouse afterwards.

15790. Why should such a patient be received into the workhouse because your hospital does not provide the proper means to treat him?—We should treat them in every way properly until we got rid of them. My point is the delay.

15791. I would ask you the same question perhaps over again. Why should there be any State provision of any kind to relieve a hospital from one of its duties?—I do not think it is the duty of a general hospital for the treatment of the sick to take in cases of mania and treat them.

15792. It has nothing to do with mania at all. I understand that these are cases that come into the hospital for other reasons, and being there, become delirious, and that you have no means of treating them, or controlling them; and I ask you again, do you consider that a proper state for a hospital to be in?—I should like to see a padded room, but if you have not the space, you cannot provide padded wards.

15793. Is it not a matter for the hospital to diminish its accommodation in order to provide for such cases, rather than to continue its present accommodation, and not to be able to provide for them?—That is a matter for the hospital committee.

15794. But what is your opinion?—I should like to see it done.

K K 4

15795. You

2 March 1891.]

Mr. NIXON.

[Continue d

Lord Archbishop of Canterbury.

15795. You refer to cases of acute mania?—Yes.

15796. And you cannot say whether it may stop or become permanent; but while it is going on they are as bad as they can be?—Yes, and require special attendants.

15797. Would you not require a special staff and special wards for such cases?—Certainly.

Earl of Cathcart.

15798. The majority of such cases in hospitals are cases of delirium and delirium tremens, are they not?—I should not like to say so.

15799. A great many at any rate are cases of delirium tremens?—It does break out sometimes, no doubt, after accidents.

15800. And you could not shunt those cases out on to anybody else?—We should not shunt cases of delirium tremens; we treat those cases as long as we can.

15801. But delirium tremens is very frequent in hospital treatment?—Yes.

15802. In cases of that sort, what do you do for male nurses?—We tell off one of our own staff.

15803. Have you always a sufficient number of your own staff to deal with cases of delirium tremens?—No.

15804. Then what do you do in such a case?—Then we send out and engage one from one of the recognised homes.

15805. To what homes do you refer?—There is one in Henrietta-street, Covent Garden.

15806. Is that under the Hamiltonian Society?—No; I do not think so.

15807. I do not understand what you mean by the term “recognised home”?—I mean a home where they let out duly qualified nurses.

15808. Have you never heard of the Hamiltonian Institute for providing male nurses?—I have read of it in the evidence, but not before.

Earl of Lauderdale.

15809. Is the number of such cases, to which you refer, numerous?—No; but while they last they are very troublesome.

15810. What is your average, taking five or six years?—We have not struck an average.

15811. Could you give me any rough idea of the number?—We might receive 12 cases a year, perhaps, speaking roughly from memory.

Lord Clifford of Chudleigh.

15812. Would not such cases be just as objectionable in a workhouse infirmary as they would in a hospital?—No; because they make, I think, special provision for them.

15113. Are you certain of that?—No; I am not certain of it; I conclude so by their taking them.

15814. Would any of these cases be cases which would be rightly forwarded to a lunatic asylum?—Some of them.

15815. And in those cases, I suppose, it would be an advantage if you could transfer them

Lord Clifford of Chudleigh—continued.

direct from your hospital to a lunatic asylum, in the same manner as they would be transferred from the infirmary of a workhouse to a lunatic asylum?—Yes; the object is to have them provided for, out of the general wards of a general hospital.

Earl of Kimberley.

15816. Is there anything to prevent a lunatic being transferred straight from your hospital to a lunatic asylum?—Only what I say; that the medical officer of the district has to certify the case, and he calls in a magistrate, and the magistrate gives an order. But I am talking of the other cases; cases of mania.

15817. But there is, I think, a confusion in the matter. If a person is suffering from acute mania, you are aware, no doubt, that he cannot be detained in a workhouse, he must be transferred to a lunatic asylum; if he is not suffering from that, I do not understand why you cannot treat him yourselves; but I will not press it further?—

Chairman.

15818. Do you find great difficulty in getting the medical officers to give certificates?—That is the difficulty.

Lord Archbishop of Canterbury.

15819. Do you mean that there are three classes of cases, or two?—Three.

15820. Do you mean that between delirium and lunacy there is a class of cases that you cannot treat now?—I refer to cases of acute mania, in which the medical officers will not certify that they are lunatics.

Lord Thring.

15821. I do not understand how there can be a case of acute mania in which you cannot get a certificate of lunacy, because lunacy includes every species of mental aberration: acute mania, imbecility, and everything; the Act includes everything, and certainly, eminently, acute mania. What do you mean?—I mean simply that the doctors do not give their certificates in such cases. I do not mean cases of lunacy where they will not get well, but I refer to cases of mania where they may get well.

15822. Do I rightly understand you to tell us that your medical officers will not certify that a case of acute mania is lunacy within the meaning of the Act?—I would rather that you should ask one of the medical officers that question.

15823. But you have been telling us that they will not. Do you mean to tell us that, so far as you know, your officers will not certify a case of acute mania to be a case of lunacy within the meaning of the Lunacy Acts?—There would be a difficulty according to my experience.

The Witness is directed to withdraw.

2 March 1891.

THE SISTER CECILIA (Miss CECILIA PHILLOTT), is called in; and, having been sworn, is Examined, as follows:

Chairman.

15824. You are the head of the nursing staff of University College Hospital?—I am.

15825. Do you belong to a sisterhood?—Yes, to the Community of All Saints; the Sisters of the Poor we are.

15826. Do you reside in University College Hospital?—We have houses at the side; it is the same thing, our houses adjoin the hospital; we live there entirely.

15827. Would you tell us what the staff of nurses is that you employ?—There is myself filling the post of matron; there are two night superintendents, who alternate every three months night duty and taking charge of a ward; nine ward sisters, 56 nurses, and 13 probationers.

15828. Are there any, what have been termed lady probationers amongst those, who pay?—We have no lady probationers now; we are just giving that up and taking them all on the same standing.

15829. Is that for greater convenience of administration?—I think it is a better arrangement. We have a great many gentlewomen among our nurses, and I think it a better arrangement to have them all on one standing.

15830. You have nine ward sisters, you say?—Yes.

15831. How many wards are there?—There are 17 wards, but some of the wards are small wards, and one sister manages several. There is one ward sister between two or three wards.

15832. And what would be the staff in a large ward?—There is a sister between two wards; one charge nurse, one assistant nurse, and one probationer; in some of the wards we have two assistant nurses, one assistant or two according to the size of the ward, and one probationer; that is by day.

15833. Does the hospital employ any ward maids?—No, none; we have scrubbers to do the rough work in the morning.

15834. That is by day. Then by night what is the arrangement?—On night duty we have one charge nurse, and one assistant to each ward, except of course a small ward that has one.

15835. Then by night you have three people in each ward?—Two people in each ward.

15836. One night nurse and one assistant?—Yes.

15837. Could you tell us what the hours of the nurses are by day and night; at what time

Chairman—continued.

they begin in the morning in the ward?—Probationers go on duty at 8.30 a.m. and come off at 9 p.m.; the charge day nurses go on duty at 8.45 a.m. and come off at 9 p.m.; the assistants go on at 8.45 a.m. to 9 p.m.

15838. And the sisters, at what time do they begin?—The sisters are practically on duty from six in the morning until 10 at night; they have times off, of course, but they are liable to be called on to go into the wards at any time. They go into the wards at a quarter-past six in the morning to take the night report.

15839. Then the hours of the night nurses?—The night nurses go on duty at 10 minutes to nine at night and come off at nine in the morning: each duty overlaps for about 10 minutes.

15840. Have you got sufficient nurses in your staff for the whole needs of the hospital?—Yes, quite sufficient.

15841. Then in regard to very severe cases requiring special nurses, what do you do?—I am bound to bring them in. The contract is that the hospital committee pays us so much for the nursing, and we are bound to supply nurses for whatever is required. If a nurse is required the resident medical officer asks for one.

15842. She comes from your sisterhood?—From our private nursing staff; we have a large private staff.

15843. You have not to go out to the public as is the case with some other hospitals?—Never.

15844. How are the nurses paid; does the hospital pay you so much per annum?—The hospital pays us 195 l. 5 s. every month.

15845. Will you kindly read your contract?—I have not got the contract; the secretary has it, I think. (*The secretary hands the document to the Witness.*) This is the old agreement before we increased our number; it does not give us quite so much money as we have now.

15846. That I am afraid is of no use?—It is on the same basis, but that is the old agreement.

Chairman.

15847. We will ask the secretary to read it, and then, if necessary, you can tell us where it has been altered.

The Witness is directed to withdraw.

MR. NEWTON H. NIXON, is re-called; and is further Examined, as follows:

Chairman.

15848. WILL you read the agreement, please?—“Memorandum of agreement, entered into between the committee of University College Hospital and the All Saints' Home, Margaret-street, 23rd April 1862. It is agreed that the entire arrangements of the hospital, as far as they apply to the nurses and female servants of the establishment, shall be committed to the charge

All Saints' Home for a period of one year,
(24.) e

Chairman—continued.

from the 2nd of June next, subject to the following conditions: (1st) That All Saints' Home shall provide and maintain at all times in the hospital at least the following staff: one head sister, one sister (head nurse) to each pair of the six main wards, and one to ward No. 7; two nurses to each main ward; two nurses to Ward 7; two nurses to Ward 8; one housekeeper, and the following servants: one cook, three housemaids,

L L

one

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

one kitchen maid, two laundry maids; and shall also provide such assistance as shall be necessary for efficiently performing all the scrubbing required throughout the hospital; it being understood that this does not include the annual cleaning required in consequence of repairs or alterations in the buildings. (2nd) That, for the above service, the committee shall pay to All Saints' Home the sum of one thousand pounds in quarterly payments of 250 *l.* each, commencing on the 2nd of September next. (3rd) That All Saints' Home shall refund to the committee out of each of these payments such sum as shall be ascertained to be the cost of the board of the sisters, nurses, and female servants during the preceding quarter. (4th) That the appointment of the head sister and of the housekeeper shall be subject to the approval of the committee. (5th) That the committee will appoint and pay the wages of house steward and the male servants of the hospital. (6th) That the house steward shall have the charge and the ordering of all the stores, and the charge of the patients' library, and shall see to the daily provisions being properly distributed; shall give out the wines and

Chairman—continued.

spirits, and shall be responsible for the men servants, and keep the general accounts. (7th) That the housekeeper under the head sister shall have the charge of the linen, lint, bandages, and other medical stores of that character. (8th) That the head sister shall be responsible for the good discipline and order of the nurses and female servants; shall make to the committee, at their fortnightly meetings, a written report of the state of each ward during the preceding fortnight, and shall attend the committee when requested to do so, in order to give such information and explanations as may be required. (9th) It is especially understood, as an essential condition of this agreement, that no one connected with the home shall in any way, by word or deed, or by the distribution or withholding of books, interfere with or attempt to influence the religious opinions of the patients. (Signed) H. Brownlow Byron, Mother Superior of the All Saints' Home." Then follow memoranda adding to the staff, which was rendered necessary by the enlargement of the hospital in 1879.

The Witness is directed to withdraw.

THE SISTER CECILIA (Miss CECILIA PHILLOTT), is again called in; and further Examined, as follows:

Chairman.

15849. THE staff of nurses has increased since that contract was made I understand?—Yes.

15850. The hospital feeds these nurses we understand?—They give us so much money and we board them; they give us a certain sum of money and we board ourselves out of it.

15851. You board yourselves where?—In our own houses.

15852. Therefore the hospital has no responsibility for your food?—The hospital has no responsibility for our food. They give us lodging also.

15853. And they pay the lodging as well?—They give us house room, furniture, coals, and candles, and our allowance of money; and out of that we do everything else; we pay the nurses' wages and uniforms, and board them, and ourselves.

15854. That includes yourselves too?—Yes, that includes ourselves.

15855. Then your Sisterhood makes arrangements for the nurses' holidays?—Yes, we are responsible for that.

15856. Where do the nurses breakfast, in their home?—Yes, they have a dining room; a large dining room.

15857. What time are they allowed off duty for their dinner?—They have two hours off duty three times a week, and after six months they have leave from 6 to 10 at night once a week; occasionally that leave from 6 to 10 is extended and they sleep out, by asking leave; and sometimes they have leave for the long pass sooner than six months. Each nurse and probationer has occasionally longer leave of a day, sometimes a day and a night. Each nurse of one year's standing has a calendar month's holiday in each year; and under a year's standing, their holiday varies from two to three weeks according to what

Chairman—continued.

I think they require; some nurses sometimes are not so strong as others.

15858. Then the whole responsibility for the welfare of the nurses rests with the Sisterhood, and not with the hospital?—Entirely.

15859. What number of nurses have you in your Sisterhood altogether?—I think the number goes up to 112; but we have private nurses as well at the private nurses' home.

15860. But those nurses have nothing to do with the hospital?—I bring them in if we want help.

15861. You merely carry out your contract?—We carry out our contract.

Lord Clifford of Chudleigh.

15862. How many nurses have you besides the sisters?—Fifty-six in the hospital and 13 probationers.

Lord Monkswell.

15863. I did not hear you say how long they have for dinner?—They have about half-an-hour for dinner; they go to dinner in two detachments.

15864. And they go on duty at 8.45 after their breakfast?—Yes.

15865. Then they only have dinner between 8.45 a.m. and 9 in the evening?—No, they have a good deal more than that; they have breakfast at 7.45, tea and bread and butter, and always meat for the nurses nursing in the diphtheria wards; luncheon at 9.30, coffee or beer and any odds and ends we may have.

15866. How long have they then?—That lasts half-an-hour; they go down and take it as they like. They have tea at 4.

15867. How long do they have then?—They have

2 March 1891.]

Sister CECILIA (Miss Cecilia Phillott).

[Continued.]

Lord Monkswell—continued.

have half-an-hour for tea; it depends a little, they very often sit over their tea if they have time. They have supper at 9; they are supposed to have half-an-hour for supper but they sit over it if they are inclined.

15868. They go off duty at 9 o'clock?—They go off duty at 9 o'clock and go straight down to supper when the bell rings.

15869. That does not come out of their work time?—No.

15870. Then they have $12\frac{1}{2}$ hours a day, with about two half hours off and two hours three times a week?—Yes, and they have often more than that if they ask me for it.

15871. If they want more they ask for it?—Yes; we are not very strict about the time.

15872. And the sisters have 16 hours you say?—Sixteen hours; during which they are liable to be called on duty; I do not say that they are on duty all that time.

15873. And they go away for breakfast; they do not breakfast at 6 o'clock in the morning?—No they breakfast at 8 o'clock.

Chairman.

15874. Do they have to go out of the home before breakfast?—No, we have a covered way to the hospital.

15875. The night nurses have some food in the wards?—The night nurses have hot dinner at 9 o'clock in the morning and they have supper of meat or pudding at 8 o'clock before they go on; they also have a meal in the night.

15876. Does that come out of their board wages, or does the hospital provide it?—We provide it; not the hospital. The night nurses also have their tea at 4.30 p.m., but it is taken up to them in bed.

15877. But that is out of the responsibility of the hospital altogether?—Yes.

Earl of Kimberley.

15878. If any complaint is made of the conduct of the nurses it comes to you, I suppose?—Yes, it comes to me.

15879. And you would deal with it?—I should deal with it.

15880. Do you go round the hospital every day?—Every day, always, and sometimes oftener; sometimes at night.

15881. I conclude that you take some holiday in the year?—I have a calendar month generally.

15882. Who takes your place then?—One of the ward sisters.

Lord Archbishop of Canterbury.

15883. Do the nurses ever receive complaints from the patients with regard to their food?—I do not think so; occasionally if the food is not nicely cooked the sister would send it down to the cook at once, and she would send up something else at once, in case of an accident, such as its being smoked or underdone or burnt, the ward sister would take it down at once and get something else. If the cook refused to send up anything else the sister would come to me about it, but I do not think I ever remember that occurring.

15884. And with respect to the quality of the

Lord Archbishop of Canterbury—continued.

food in the hospital, what do you say?—It is quite good.

15885. You never have complaints from the patients about it?—I do not think so; I never heard of them, and I go round pretty often.

15886. But there is an instant remedy of complaints?—There is an instant remedy for complaints if anything is said: sometimes if patients are delicate they will want little different things.

15887. But that can be met?—That can be met.

Lord Thring.

15888. The food of the nurses is provided by your establishment, is it not?—Yes, by us entirely.

15889. The hospital has nothing to do with it?—Nothing to do with it.

15890. With respect to the death-rate of the nurses; do you lose many nurses by death?—No. I have been Sister Superior for the last nine years, and I think we have had five deaths. I have been in the hospital 21 years. One was from typhoid; two were from operations; not anything to do with the hospital at all; and one was a case which really had nothing to do with the hospital, it was cerebral hæmorrhage. I think that is all I can remember.

15891. Do you think that the nurses, including yourself, get holiday enough; is one month only in the year enough?—It is a calendar month, it is a full month; I think it is quite sufficient.

15892. Do you consider that the nurses are injured often by nursing, apart from death?—I do not think so. I think that every nurse, when she becomes a nurse, knows that she takes 10 years off her life; but I do not consider they are injured at all.

15893. You do not consider they are injured at all, but you consider that they take 10 years off their lives?—I think every nurse considers so when she becomes a nurse; but I do not think so.

15894. Is there any reason why they think so?—The work is hard and the area confined. We all of us expect not to live as long as other people.

15895. That is the very thing; do you not think it would be wiser to have more nurses, and for the hospital to go to greater expense rather than to work the hospital cheaply at the expense of the lives of the nurses?—I do not think they are overworked; I do not think that has anything to do with it.

15896. Then, what do you think occasions it?—I think it is the constant coming in contact with disease, and also a certain amount of risk to the nurse from infectious diseases; I mean it in that way.

15897. I am struck by your saying that in the nine years you have been there there had been only five deaths. That does not mean that they contract deadly diseases, but that they contract a state of health that shortens their lives at an earlier period; they are overworked or underfed, in fact

2 March 1891.]

Sister CECILIA (Miss Celicia Phillott).

[Continued.]

Lord Thring—continued.

fact?—I should not say it was from that at all; I do not think they are overworked, and I do not think they are underfed.

15898. Then to what do you attribute the shortening of their lives?—To the constant coming in contact with disease, it is not one's normal condition to live in constant contact with disease.

15899. Do you mean that it is a physical strain or a mental strain upon them, or both?—I mean that nurses must run the risk of taking the diseases of the patients they nurse, and that if they do they may die; and therefore they must understand, when they become nurses, that there is a certain amount of risk to their lives.

15900. I am sorry to trouble you, but you see, according to your account, they do not take deadly diseases as a general rule; in your experience, only five nurses have died in nine years, and two of those died of diseases which were not contracted at the hospital; therefore, three nurses only have died in nine years. I think the question is very material. What I cannot help thinking is that if, as you consider, the nurses are not killed by contracting deadly diseases, they are killed either by mental strain or physical strain or overwork or under-feeding; is not that the fact?—I suppose it is.

15901. Can you tell me the average time for which a nurse remains at the hospital?—One of our nurses has been there very nearly 20 years.

15902. I asked you for the average time?—On the average, I think, that the nurses we have in the hospital now have been there eight and six years. After they have been there about eight or ten years, I generally pass them on to the private staff.

15903. And do they contract the disease, I forget what it is called, of the foot coming down flat?—New probationers do occasionally.

15904. Is not that from over-standing?—I think it comes from the first going about in the wards and on the floors, which are not carpeted; but it passes off again, and it is only with new probationers.

15905. It passes away, does it?—Yes.

15906. Then you cannot suggest, from your

Lord Thring—continued.

experience, any way in which the lives of the nurses could be lengthened?—I do not think I can.

Lord Clifford of Chudleigh.

15907. What is your reason for supposing that the longevity of the nurses is very much affected; have you any statistics which would show that?—I do not know that I have.

15908. Is it only a general impression upon your part that nurses do not live as long as they possibly might otherwise?—That is so; I cannot say exactly why.

Earl of Kimberley.

15909. What you mean is, that, looking at it on the whole, it may be considered an unhealthy occupation as compared with some others?—Yes.

15910. And you would be in favour of mitigating it by every possible means?—I take every care I can. If I see them flag at all I give them rest.

Chairman.

15911. Are the nurses medically examined by a doctor before they come to you?—Yes.

15912. Is there anything else you wish to state to the Committee?—No; I do not think so.

Lord Archbishop of Canterbury.

15913. You engage the nurses, do you not?—Yes.

15914. Do you engage them from any denomination?—From any denomination.

15915. Do you make any inquiry as to what religion they are of?—Yes; I send them a paper like this (*handing in the same*).

15916. And they have to enter their religion on it?—Yes.

15917. Do you give any preference on account of any religious profession?—None whatever.

15918. You go by their qualification as nurses?—I go by their qualification when they become nurses, but I do not give any religious preference.

15919. And there is no interference with any denominations?—None.

The Witness is directed to withdraw.

MR. THOMAS BARLOW, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

15920. You are on the staff of the University College Hospital?—I am.

15921. How long have you been connected with the University College Hospital?—I have been on the staff for 10 years.

15922. What are the qualifications you hold?—I am Doctor of Medicine of the University of London, and Fellow of the Royal College of Physicians.

15923. You have to do at this moment, have you not, with the out-patient department?—I have to do with the out-patient department and also with the medical beds in the children's wards.

15924. Will you tell me, briefly, what is the

Chairman—continued.

system of organisation in your out-patient department, taking it from the first moment of the arrival of the patient?—The out-patient department consists of two portions, the casualty department and the out-patient department, strictly so-called. The casualty department is operative strictly between 12 and 1; that is to say, any cases of urgency are seen at any time, but between 12 and 1 people can come for small ailments, and be seen for, say, a couple of visits.

15925. They are casuals for a couple of visits?—Yes. That department is worked by the hospital residents and the dressers and clerks. The out-patient department, strictly so-called, is managed in the afternoons only between half-past

2 March 1891.]

Mr. BARLOW, M.D.

[Continued.]

Chairman—continued.

past 1 and 4. Then there are certain visits also in the morning in some of the special departments. In order to gain admission to the out-patient department there are three modes, either of which are required; in the first place, there are governors' letters, which entitle to admission; in the second place, there are urgent cases from the casualty department, which require further treatment; and, in the third place, there are cases sent by clergymen, medical men, and others.

15926. Then in the casualty department there is a certain amount of sifting, as it were?—Yes.

15927. Who does that?—It is done by the residents; the house surgeons and house physicians.

15928. Supposing the house physicians are in doubt, to whom do they apply?—To the resident medical officer, who is the chief of the residents.

15929. Is he, therefore, in the capacity of the chief of the out-patient department?—He is the standard of reference.

15930. So that it might be possible, if there were no one to apply to, that a young man might send away a patient who ought to be taken as an out-patient?—But it does not occur.

15931. Do you teach in the out-patient department?—Yes.

15932. Do you find you are very much crowded and over-worked?—We are not over-crowded, because although the hospital is not by any manner of means perfect, the out-patient department is very satisfactory indeed as to space. We lately have spent a considerable amount of money upon it; we have now a fairly satisfactory waiting-room for the patients in which they are classified; good-sized examining rooms and several small rooms into which we can send the patients whom it is desirable to partly undress.

15933. You teach the students in your room?—Yes.

15934. The students never do anything to a patient without your being there, do they?—No, they do not. I am now speaking of the department of which I have cognisance. In the medical out-patients' room the patients are never prescribed for by students; they are seen either by the physician or his qualified assistant.

15935. Is there any limit of time within which you may see your out-patients in your own department?—The hours commence at half-past one, and the period varies between half-past one and four; may I ask, do you mean the hours within which the patients can come, or during which the medical officers stay; if you mean the latter, he stays, either he or his assistant, until all the cases are done; he never leaves whilst there is a patient to see.

15936. Therefore, there is no limit of time?—No.

15937. But there is a limit for the entrance of patients?—There is no number limited, but there is a time-limit, between one and half-past two.

15938. Is there any inquiry made into the circumstances of an out-patient?—There is no systematic inquiry, but if one sees a well-dressed individual, one makes inquiries, and our medical staff have the right to refuse to continue the

Chairman—continued.

treatment of a case they deem unsuitable in point of circumstances.

15939. Supposing that somebody, a well-dressed person, although that is really no criterion, presented himself to you, and you considered that he was not a fit person, would you merely refuse to treat him, or would you report to the secretary that you had doubts?—I should prescribe for him that time, or give my opinion, and tell him not to come again, and if he had a paper I should make a note that he should not come again; a stamp is used for that purpose, setting forth that no further attendance is required.

15940. But you would not be able to carry your inquiry very far?—That is very true.

15941. Do you think it is desirable to have an inquiry officer in the out-patient department?—I think it is, but it is a matter which requires to be dealt with in a very broad way; it should be done by a superior person, not a mere mercenary individual, because the system requires to be interpreted in a very elastic fashion.

15942. You are very much in favour of out-patient departments yourself, are you not?—Yes, very much so.

15943. Do you find that you have sufficient material for teaching purposes in them?—Yes.

15944. Not too much?—Not too much; the average of new patients upon the medical side is about from 18 to 22; the surgical ones are a smaller number than that.

15945. Per diem?—Yes, and the old patients average about three to one new one.

15946. Do a great many people send to you for consultative purposes?—A considerable number; many doctors send cases in that fashion.

15947. What class of practitioners is it who send those cases?—They are generally good men who send them, working of course chiefly in mixed practice; mixed poor and lower and middle-class practice; those are the sort of men.

15948. Do you consider that you at all starve the so-called poor practitioner by your thus giving advice?—I would not like to say that is never done, but with regard to our own hospital I do not think we do. I am quite certain that in the surgery department we greatly relieve the poor doctors. In many of the surgical cases, fractures and wounds which require careful dressing, it is a considerable relief to poor practitioners to send their cases on; and, as a matter of fact, many of the club doctors send their patients to the casualty department in large numbers, as the number of attendances and appliances that they need could not be supplied within the limits of their remuneration.

15949. Are you satisfied with the nursing arrangements at University College Hospital?—Yes.

15950. Do you think the dual control works well?—It works very well; it is not an ideal plan, but as a matter of experience it works extremely well.

15951. Are you, as a medical man, satisfied with the state of the wards and the walls, and so on, in the hospital?—I think it is eminently desirable

2 March 1891.]

Mr. BARLOW, M.D.

[Continued.]

Chairman—continued.

desirable that we should have a new hospital, but I think the place is sanitary, and practically it is very difficult to lay hold of anything overt which shows its defect; that is to say, which shows its ill effect upon the patient.

15952. In fact in your hospital, as in some other hospitals, constant supervision is required?—Yes, precisely.

Earl Cathcart.

15953. For instance, the drainage is all non-scientific; you have all your soil pipes coming down through the building, and that sort of thing, which is inseparable from the circumstances of the building?—More or less.

15954. You would prefer an aerial zone, would you not, all round if you could get it?—Most decidedly.

15955. Do you think any of your midwifery cases could afford to pay 10 s. 6 d., and that you, therefore, interfere at all with the poor practitioner?—I do not think so.

15956. I believe you take a great number of poor cases, amounting to 2,600 in a year?—I think the number was 2,265 in 1890.

15957. Is it absolutely necessary for instructive purposes to take so many midwifery cases?—It is very much a matter of opinion as to how much is necessary. I heard a noble Lord mention the number of 25 as being required; our men attend on the average between 40 and 50 cases, and of course obstetrics is the one department in which it is exceedingly imperative for the public good that men should have very large experience; they should be very carefully trained for it under proper supervision.

15958. Only that midwifery is not a disease?—It is not a disease, but still in our crowded cities it is a thing in which disease is very likely to supervene, and is responsible for a very large number of deaths of poor women.

15959. I think Dr. Steele told the Committee that 25 cases were the necessary number for the examining board?—That is so.

Chairman.

15959.* Have you any system of giving letters to out-patients; for instance, a man coming first to the casualty department, he is then sifted, as you call it, and he then becomes an out-patient?—He may.

15960. If he becomes an out-patient do you give him a letter or a bone, or what it may be, which is good for so many attendances?—Yes, a letter which is valid for two months; at the end of the two months there is a stamp applied by the porter which indicates that his card should lapse, and if the physician thinks that it should be continued, he notifies that, and it is authorised to go on; and we have then the governor's letters, which receive the same kind of dealing.

15961. Do you think that there are no cases of abuse of the charity?—It is a very difficult question to answer; there may be some cases of abuse, but I do not think there are many. It sometimes happens that a well-dressed person, when one catechises him or her about it, states that he or she has been attending a doctor for a long time, and that his resources are exhausted;

Chairman—continued.

many of the seeming cases of unfitness are really suitable.

15962. Do not you think you get people who could pay sometimes in some of the special departments, the skin or eye, or whatever it may be?—I think we do; undoubtedly the officers in those departments very frequently suggest to people that they should go to their own doctors, and the answer that they get is, "I have attended my own doctor for so long, and I have received no benefit."

15963. As regards the mass of casualties, you do not think there is much abuse?—That is a difficult question to answer absolutely, but I do not think there has been great abuse.

Lord Zouche of Haryngworth.

15964. It has been suggested to the Committee once or twice that all out-patients should come provided in the first instance with a letter of recommendation, either from some member or medical officer, before they were allowed to become patients of the hospital, with the view to diminishing the over crowding and the over pressure upon the department; have you ever considered that question, or would you think it a system which would be likely to work?—The fundamental difficulty of all these suggestions is that very often the most urgent cases for hospital relief are those in which acute illness comes on suddenly; and when you are very exacting in regard to a recommendation of that sort, you run the risk of the patient becoming seriously worse; a very dangerous delay happens. It appears to me that a good general hospital has to allow a very considerable margin with respect to the admission of any downright ill person coming to its doors.

15965. Would you say that that which I have suggested was a system which would work in cases which were not very urgent; take the ordinary run of out-patients who, no doubt, have complaints, but are not in a state of great danger?—No doubt the system of governors' letters partly covers the difficulty.

Earl of Lauderdale.

15966. What is your rule with regard to midwifery cases in the case of single women?—It is not the rule to attend single women; it is understood that the people who come to us for attendance in that way are married women, but now and again it happens, generally by mistake, that one or two cases of that kind are attended.

15967. That is to say, if you knew she was a single woman you would not have her attended?—I do not think I should be entitled to say that, but it is understood; I am not quite positive at this moment, but I think it is on the paper, that the people applying are supposed to be married women.

15968. But in the case of single women, what would be the result?—I do not think that single women would be refused.

15969. But as a matter of fact, they do not apply, do they?—Now and again; I remember when I myself was obstetric assistant one or two of that kind who had applied under false pretences, told a lie, in fact.

15970. Does

2 March 1891.]

Mr. BARLOW, M.D.

[Continued.]

Chairman.

15970. Does your hospital take Lock cases?—Not as such.

15971. How do you mean “not as such”?—Many of the venereal cases do not need, in the primary stages, to come into the hospital; they can be treated as out-patients; if there came one case apparently of very great severity, the patient suffering extremely, it might be taken in just as any other case.

15972. But you do not keep any beds for such cases?—No, not specifically set apart for them.

15973. Have you a ward for women?—No, not a ward set apart for that purpose.

15974. Is there any suggestion that you wish to make to the Committee in addition to your direct evidence?—I should be glad to answer any questions as to the relationship of the students to the poor. I believe there is a misconception abroad, in this sense, that the medical school, as such, is not favourable to a hospital as a charity; that is to say, that the presence of a number of students in the wards of a hospital in the out-patient department is not thought favourable to the interests of the poor as objects of charity.

15975. Upon that I will ask you this question: Do you think that the poor suffer in a hospital from the presence of students in the wards?—I think the poor are distinctly benefited by it; I have verified statistics which show that clearly. I find that those hospitals which have medical schools attached to them are those which are most popular amongst the poor, and that those hospitals in which the medical school element is most predominant, are the hospitals which stand largest in the number of attendances.

15976. Is not one reason of that because they are the largest hospitals?—No, not at all; for example, our own hospital is one of the smallest hospitals, but the number of attendances is very great indeed.

15977. The number of attendances has to do with the out-patient department?—Yes, and the fact of the filling of the wards.

15978. But we are told that no accurate return is kept of the attendance of the out-patients?—It is very difficult to get exact figures, but approximate estimates can be obtained; and, secondly, we hear from many sources, district visitors and others, that the school hospitals are the most popular amongst the poor. So far from the poor resenting examinations being made by students, they feel it is a security to them that their cases are more thoroughly considered; and with regard to the midwifery cases, I think I may say without any hesitation that the precautions we are able to take are greater than can be obtained in any general practice. In the first place our students are not allowed to attend until they have got into their fourth year, when they are fairly grounded in medicine and surgery, and they are not allowed to do any other kind of work whatever while they are attending to this department; and we have always three qualified obstetric assistants, who are at their beck and call, and in fact who see every woman either at the time of her confinement or within 24 hours after it.

(24.)

Earl Cathcart.

15979. We were told that in St. George's Hospital the women were all interrogated by the board as to whether they were satisfied with the treatment they had received in the midwifery cases; is that the case with you?—No; they are not interrogated, but they have the opportunity of making complaints. It has happened that they have made complaints, and then such complaint is thoroughly investigated.

15980. But in St. George's they can come up to “return thanks,” as it is called; have you that system?—We have not that system.

Chairman.

15981. Is there anything else you would desire to add?—I should like to be asked further about the health of the nurses in the hospital; I have had a great deal to do with that, because for many years I examined all the nurses who came to the hospital.

15982. Is the health of the nurses generally good in your hospital?—I think it is very fair.

15983. Could you give the Committee an idea as to the percentage of nurses that have been disabled by sickness?—I do not know that there are any figures beyond those which the Sister Superior read out.

15984. There were seven deaths in five years I think?—Five, I think, in nine years.

15985. Upon what do you base your statement that the health of the nurses is very good?—Only from the sort of cases one is asked to see, and that the cases of break down amongst the nurses are comparatively rare.

15986. That is possibly because of the care with which they are examined previously to their admission into the hospital?—I think it mainly arises from the care that is taken of them during their work in the hospital; there has been a progressive improvement in many of the hospitals, and with the rise in tone of the superiors of the nursing system the health of the nurses rises with it, because more care is now given to their recreation and food and to the sanitary protection of the nurses than was formerly the case.

15987. Did your hospital ever feed its own nurses?—I think it did before the sisterhood took charge.

15988. Do you remember whether that was satisfactory or not?—I think it was in many ways unsatisfactory.

15989. The present system is preferable?—Yes.

15990. What diseases do the nurses generally suffer from?—They get hospital throats and they get a certain amount of dyspepsia which in part arises from the same causes as the doctors get it from; that is from all the work being crushed into the middle of the day and the time for food being hurried.

15991. Therefore, you would like a longer time for them to take their food in?—That is one of the greatest difficulties with the hospital nurses, the crowding between 11 and 4 in the afternoon; the work tends to get massed into that part of the day; although time is allowed for meal times, now and again it happens that it gets infringed upon.

L L 4

15992. Is

2 March 1891.]

Mr. BARLOW, M.D.

[*Continued.*]*Chairman*—continued.

15992. Is 11 to 4 the most crowded time?—It is the most crowded time.

15993. What time do the house assistants do their work in?—They begin work at 10 and they are supposed to be done at 12.

15994. Then the afternoon visits?—Doctors come at half-past 1. and sometimes at 2.

15995. Do you find that the residents get out of the wards before 12?—Yes, generally.

15996. What supervision is there of them?—They are under the direction of the Resident Medical Officer, a man of good standing.

15997. And it is his business to supervise and to report?—Yes.

Earl Cathcart.

15998. You could hardly accept the statement that ten years is taken off the life of every nurse who enters into a hospital?—I think that was an over-statement.

15999. Would they be called good lives for insurance?—My opinion is that they are bad lives in the same way that doctors are bad lives; they have anxious times; the nature of their work is anxious; they have to get their meals in a hurry, but I do not think, so far as our hospital is concerned, that there is any special wear and tear.

16000. But an insurance company would not consider your life a bad life because you happen

Earl Cathcart—continued.

to be a doctor, would it?—I cannot say that, but the Registrar General's statistics prove that doctors as a class have a bad mortality.

16001. And you would apply the same rule to nurses?—I do not think we have numbers enough to put it in black and white, but that would be my impression, and I should say it was inevitable.

Earl of Erne.

16002. The wear and tear and the bad air of the hospitals would necessarily tend to shorten life, would it not?—Yes, it would.

16003. Without the presence of any specific disease?—Yes.

Chairman.

16004. Do not the nurses get acclimatised after the first year?—Yes, they often get a bad throat just after they come to the hospital, or when they come back after their holidays.

16005. That would be owing to the change of food and the system altogether?—Yes.

16006. Is the system the same upon the surgical side as upon the medical side in University College Hospital?—Yes, very much the same, but Mr. Barker will be able to mention any differences that there may be.

The Witness is directed to withdraw.

MR. ARTHUR BARKER, F.R.C.S., is called in; and, having been sworn, is Examined, as follows:

Chairman.

16007. You are a surgeon on the staff of University College Hospital?—I am.

16008. How long have you been one of the staff?—Since October 1875.

16009. Were you formerly a student at the hospital?—No.

16010. May I ask what qualification you hold?—I am a Fellow of the Royal College of Surgeons of England, and a Fellow of the Royal College of Surgeons of Ireland.

16011. You have to do with the surgical side of the out-patient department?—Yes.

16012. Is your system exactly the same as was explained by the former witness just now?—Yes, in most respects it is the same.

16013. It would shorten matters if you would tell the Committee in what respects it differs as regards organisation?—In regard to the organisation, it is practically the same.

16014. As regard casualties the people come in as out-patients, or possibly as people admitted to the hospital?—Yes.

16015. Then you have dressers and clerks?—Yes, we have dressers and clerks; and an assistant, that is a qualified assistant, who sees the patients who only require their medicines to be repeated, so as to save their time and our time. Of course a number of patients come in who have been there before, and who merely require to have their bandage or their splint set right, and to have their medicine repeated; and the assistant up at the other end of the room sees to them, and if there is anything about a case that requires our attention he sends it round the screen to us.

Chairman—continued.

16016. Do you find that the out-patients come to you in such droves as to render your diagnosis and your teaching difficult?—No; I think a few years ago we were, perhaps, overcrowded; but at present we are not overcrowded; we made a stand against it, and we are now I think within reasonable limits. I myself personally see the largest number of the surgical out-patients of the hospital. Mondays and Thursdays are always busy days, but I do not find the new comers are too many for me.

16017. It is a time restriction?—Yes.

16018. But there is no restriction upon the number of cases?—No, there is no restriction upon the number of cases, but I find that the daily average number of new patients for the year is eight and a decimal; it is under 10.

16019. How long do you take to see those people?—From half-past 1 till 4 o'clock or half-past 4 or 5; I used to be there frequently from half-past 1 till six.

16020. Do you find that you have sufficient surgical material for teaching purposes?—Abundant.

16021. Are you a strong upholder of the out-patient system?—Yes; I am a very strong upholder of the out-patient system.

16022. Do you go so far as to say that it is the most useful part of the teaching which can be carried out before the students?—Yes, I do. I am strongly of opinion that the out-patient department is as valuable as any other part of the system, and perhaps more valuable.

16023. Do you consider that the free out-patient department wrongs the poor practitioners much or at all?—I think not; there is a class of practitioners

2 March 1891.]

Mr. BARKER, F.R.C.S.

[Continued.]

Chairman—continued.

tioners who no doubt have a grievance against us, but I question whether they are anything but a very undesirable fringe to our profession. Every profession I take it has such a fringe which is simply struggling and fighting for practice any how. I believe that we do interfere with those, and I believe it is a very desirable thing that we should do so; that a poor patient should be at the tender mercies of that fringe, I think very undesirable indeed; that class of patient I think should have charitable relief and of the very best kind.

16024. In regard to the examination of women in the out-patient department, are there nurses always present?—Nurses are always present, and frequently a friend. I might explain that there is a little difference upon the medical side. We of course frequently have, perhaps more frequently than on the medical side, to make examinations of a very private character indeed. That is invariably done in a small room, which will contain only a very few people; there are generally a few students present; perhaps one, perhaps none. I always exclude any students when the patient objects or appears nervous. There is a nurse, and sometimes a nurse and a sister, and frequently a friend in the room. The examination is just as private as it would be in one's own consulting room. I might add this in answer to a part of your earlier question: I asked for a return of the number of practitioners who recommended patients to us, taking the year 1889, as I thought it might interest your Lordships. I find that a very large number of medical men made use of the hospital. This list before me shows that many of them have sent more than one patient.

16025. Is it too much to say that that is making use of the out-patient department in its highest sense?—Very often it is used as a consultative department, and very frequently they send out-patients to be treated.

Earl of Erne.

16026. Is that a return of medical men unconnected with the hospital?—Unconnected with the hospital.

Chairman.

16027. Unconnected with it at present, but many of them may have been students?—Yes.

16028. Whereas students from the other hospitals would recommend their patients to their own hospitals?—Yes, very often; but very frequently we get patients from men who were not students at our own hospital. There were seen upon doctors' recommendation in the special out-patients' department, 206; in the ordinary out-patients' department, 207. That was in 1889.

16029. Will you hand in that Paper?—I will (*handing in the same*). Then there was another matter which I thought might be of interest; it is this—I have read the evidence in the Blue Book of last year—namely, the number of cases which came from the immediate surroundings of the hospital, from the suburbs, and from the country. Taking the out-patients, out of the total of 2,762 treated from the 1st January to the 31st December 1889; there were from London and the immediate neighbourhood, 2,475; from the

Chairman—continued.

suburbs, 114; and from the country, 173. Then of the in-patients, out of a total of 3,007, 2,485 were from London and the suburbs; from the country, 329; and from abroad, 3.

16030. So that the bulk of all your patients come from London?—Yes, the enormous majority; but still a considerable proportion, 11·6 per cent., of the in-patients came from the country, and they come from great distances to us also.

16031. Is there any payment made for those patients who come from unions or from individuals?—The secretary informs me that those in-patients are charged 1 s. 6 d. a day.

Earl Cathcart.

16032. We are very much indebted to you for having brought that precise statement about private patients coming to the out-patient department, because hitherto we have had nothing but vague statements; do those patients bring cards or letters, or how do they come furnished?—They as a rule bring a medical man's visiting card, and from that my list is compiled; there is a column in the register for "By whom recommended."

16033. What might be the minimum fee to a private practitioner in your neighbourhood; not going to the extreme point of the fringe you spoke of, but taking the ordinary poor man's fee?—I am not in a position to say; I have never been a general practitioner.

Chairman.

16034. You are honorary officer; you receive no pay?—Not from the hospital.

16035. Is that the case with all the staff?—I believe so.

16036. Is there any other matter that you desire to mention to the Committee?—There is just one point of which I made a note, that was, that it appears from our returns that the hospital is pretty largely used for consultative purposes. Now I do not see any reason why it should not be more largely used. I think that would, in a large measure, get over the difficulty of the provident dispensary question. That question would be in great measure affected by the question whether the hospitals as they are now could be more freely used for consultative purposes or not; I think they might be.

16037. Do you favour the provident plan?—I do not. I think there are great difficulties in the way of it. I think if the present system were properly supported by the public and properly worked there would be no need for it. I think we should meet the wants which are not met by the conscientious practitioner.

16038. Do you think that the public have great confidence in the general hospitals of London?—Very great confidence, and the poor patients also seem to have the same who have been under treatment elsewhere; one hears that every day.

16039. Do you find you have very often people refusing to undergo operations?—Very rarely; men occasionally, but women much more rarely.

The Witness is directed to withdraw.

2 March 1891.

MR. BERKELEY HILL, B.M., is called in; and, having been sworn, is Examined, as follows:

Chairman.

16040. You are, or have been, dean of the medical school at University College?—I was so some years ago in my turn; all the professors are dean in their turn.

16041. Does the same system prevail now as prevailed when you were dean?—I think so.

16042. Do you know the number of students that there are at present upon the books of the school?—I have a copy of the College Calendar here which will tell us; there are 353 upon the books of the college as students of the medical faculty. You are aware that University College has several faculties.

16043. Would you explain the various faculties?—There is a faculty for arts and laws and fine arts; there is a faculty for science; there is a faculty for medicine. The students studying in those different branches of knowledge are separated into those different categories, and they are controlled in their teaching by professors who are arranged in the different faculties. I belong to the faculty of medicine, and I do not teach in in any other department.

16044. The 353 includes all the students in the faculty of medicine?—Yes; there are about 1,500 together in all the faculties in University College.

16045. Is that 353 a larger number than usual, or is it about the average?—I think it is about the average; perhaps it is a little larger; the school fluctuates from year to year, but I fancy that is a fair average.

16046. What do the gentlemen pay when they enter the school?—If they pay the whole of the fees at once, the fee for the ordinary curriculum would be about 120 guineas; some of them do not need instruction in all the different courses for the curricula required by the examining bodies, and they pay proportionately less or they pay the fee by instalments.

16047. What was the income of the school in the medical faculty last year?—These questions concern the Secretary of University College; the medical professors do not receive the income of the medical school. I have here a statement with regard to the amount of fees paid for the entire medical curriculum, if the Committee wish to see it (p. 138). (*Handing in the Calendar.*) I also hand in a copy of the Report of the Council of University College presented at the annual meeting of the members, 25th February 1891. On page 6 it states that the fees paid last year for instruction in the faculty of medicine amounted to 5,589 l.

16048. How are the lecturers and teachers paid at University College?—They are paid according to a scale of which this is a printed copy (*handing the same to the Committee*). The student pays fees in guineas. This is an extract from Calendar of University College, p. xxx:—“8. The twenty-first part of the gross amount of fees paid in a session for the class or classes of any professor or other teacher is first deducted and retained by the college. When, after such deduction, the fees so paid do not exceed 125 l., nine-tenths of the amount are to be paid to the professor or other teacher; when they are above that sum, but not more than 300 l., the professor or other teacher shall receive 100 l. and one-half

Chairman—continued.

of the remainder; when they are above 300 l., two-thirds of the amount shall be paid to the professor or other teacher.

16049. What is the minimum amount that a teacher receives?—It depends upon the number of students who apply to be taught in his class; I do not think any of them are worth more than 400 l. or 500 l. a year.

16050. We may take that as the maximum?—Yes.

16051. And the minimum might be what, 50 l.?—Less than that; I have one down at 10 guineas. That would be a small class upon a particular subject.

16052. Is payment made for clinical teaching?—These payments are for teaching in the college. For clinical teaching the student pays a proportionate fee, included in the general fee of 120 guineas, and then a third of that goes to reimburse the hospital for providing the medical education; the other two-thirds is divided amongst the teachers in the hospital as distinct from their work in the college, the hospital being only a part of the college.

16053. Therefore, one professor might possibly get fees for his lectures, say 400 l. a year, and so much for clinical teaching?—Yes, the professor of medicine or the professor of surgery would have two sources of income; he would have his fees for teaching in his chair of surgery in the college and fees for teaching in the wards of the hospital in addition.

16054. Assuming that the income of the school is about 3,000 l. for one year is there anything to come out from that sum excepting the third which goes to the hospital for clinical teaching; are there any school expenses?—The school expenses are paid by the council of the college, from those portions of the students' fees reserved for that purpose by the college. The one-third share of the fee for clinical teaching, which goes to the hospital, is to pay for the expenses incurred in the hospital by the clinical teaching, they do not come from the funds of the charity in any way.

Earl of Kimberley.

16055. With respect to the Professor of Anatomy for instance, and the Professor of Physiology, what would their emoluments be; simply from their pay as professors of the college?—Exactly.

16056. They of course discharge their duties in fact as professors to the college?—Yes, they have no concern with the hospital.

16057. But the lectures they give are directed to that part of their education which is necessary for the students?—Yes, but it is no part of the hospital teaching.

16058. There must be professors of anatomy and physiology, and so on, to give that instruction in the medical school, but owing to the peculiar constitution of University Hospital in connection with the college that class of instruction which is not clinical is given by professors of the college?—Yes, and in the college quite distinct from the hospital.

16059. You were speaking of that as the general system; do not you think that that general

March 1891.]

MR. HILL, B.M.

[Continued.]

Chairman—continued.

general system has advantages over the system where the medical school connected with the hospital has to provide all the instruction, not only clinical, but instruction in anatomy, physiology, and so on?—I do not quite follow your question; in all the schools the student pays his fees as he does with us.

16060. In your particular institution the lectures upon those subjects are not lectures provided by what I may call the medical school of the hospital, but they are rather the lectures of the college as an institution which are upon such subjects as the medical students can attend; is that, in your opinion, a more convenient system than the system adopted elsewhere where the professors of those subjects must be provided by the medical school itself; it has been suggested to us that there are advantages in that system?—I do not see how our system can but be greatly superior to that where the medical school is a private concern of the medical staff of the hospital, who have to provide teachers for all subjects from a limited choice.

16061. From so many professors being connected with the college, may there not be more facility in obtaining eminent persons who will devote themselves to instruction than there could be in a small school?—Quite so; and University College has always provided itself with instructors and professors by going out into the open market and getting the best it can find; there has been no preference, so far as I know, given to any candidate because he has been educated at University College.

Earl Cathcart.

16062. We have heard a great deal about the importance of having a preliminary examination, so that the students who come up to any of the schools in London should, by having gone through a preliminary examination, show that they have an elementary knowledge of the subjects before going through the schools; have you ever considered that matter?—Yes. I am one of the examiners of the College of Surgeons, and one has occasion to consider that matter a good deal, because the council of the College of Surgeons arranges the curriculum for candidates for its diplomas.

16063. It seems to be thought desirable that all students coming into the schools should be subjected to a preliminary examination, so that the schools should not have to teach them elementary subjects such as botany and so on?—I think one reason for that opinion is that a student now has so many things to learn, and has only the same time to learn them in as when the number was much less, so that it would be of advantage for him to get rid of all the generally scientific portion of his curriculum before he began his medical studies proper.

16064. It would be of advantage that the medical schools should not be called upon to teach subjects which could be equally well learned outside?—It would be a question whether you could get such good teaching, it is not every botanist who can teach. I am an examiner, and I do not believe much in tests. I believe much more in individual teaching. What I mean is that if there were a syllabus for each individual candidate before he began his medical education I think it would be a routine and useless knowledge he would acquire, whereas if he comes to a large

(24.)

Earl Cathcart—continued.

London medical school like St. Bartholomew's or University College, he is certain to have good teaching in every subject he is instructed in.

16065. Even this uniform preliminary examination would chiefly benefit the very small medical schools?—I do not think it would benefit them at all; perhaps it might by relieving them from the necessity of employing as teachers men who have not paid special attention to the subjects which they teach.

Earl of Kimberley.

16066. I do not know whether you are aware that there has been a suggestion that you might disconnect from all medical schools the examination upon those subjects which would not require to be taught in the hospital itself, so that the students might qualify themselves in such subjects as anatomy, physiology, and other branches which are not clinical, before they entered the medical school proper; do you think that that system would be a desirable one?—I think not, for this reason, that in some respects the instruction that would be given would also dissociate itself from the medicine and surgery which are to be the man's business in life; therefore he would learn anatomy in not a medical or surgical way; it would be general anatomy; and so with other branches; his chemistry would not be medical or physiological chemistry, it would be general chemistry.

16067. Therefore you prefer the present system?—I do.

16068. There would, perhaps, be some objection to the small medical schools that a sufficiency of good medical teachers could not be found?—There is no compulsion upon students to learn all the subjects at one particular medical school. If they think proper, by the regulations of the examining bodies, they may pick up the instruction which is wanting in their own school at another school. It so happens that some branches are believed by students to be better taught at University College than at other schools, and there are certain men who come to University College for those subjects, and then go back to King's or Guy's, or some other school to continue their education. The fact that they had been partly trained at University College makes no difference to the Examining Bodies when they come before them.

16069. Does not that point to the advantage of having more means of instruction than you can give in University College?—Quite the contrary. The good teaching at University College brings students thither from other schools. Again, if you multiply the colleges and schools, you diminish the income of the individual teacher at any rate.

16070. Do you think that London is sufficiently supplied with teaching appliances in medicine and surgery?—It is difficult to find money to pay for the appliances. Some of the medical schools are well and some are ill equipped; but there are plenty of teachers for the medical curriculum in London.

Earl Cathcart.

16071. Would it not be of advantage if there were some system of training in the town from which the student came, that he should learn those

M M 2

2 March 1891.]

Mr. HILL, B.M.

[Continued.]

Earl Cathcart—continued.

those elementary subjects in the town in which he lived, and not be subjected to the dissipations of the town?—I think not.

16072. The dean (of Charing Cross Medical School) mentioned that he thought it was desirable that a student should have a general view of botany or chemistry before he took to medical botany and chemistry?—They would have to learn their medical botany and chemistry afterwards. The pressure upon the candidates is so great at the present day that a young man only learns in these preliminary subjects what will pass him, and if he were expected to have a general knowledge of a subject as well as a medical knowledge, he would not get any knowledge at all, probably.

Earl of Kimberley.

16073. Do you think that the medical profession suffers at all from the education of students being so much narrowed to medicine and surgery, from their not having sufficient general education?—I think that is a matter which is correcting itself. We find that the student of the present day is better educated than he was ten years ago, and certainly far better than he was fifteen or twenty years ago.

16074. You would be in favour of students having a greater amount of general culture?—Certainly, of culture, not cramming, the more the better for the students when they come to the hospital.

16075. Also that it should not be too exclusively professional, so that he should not have any knowledge beyond that?—That is quite true. The best educated lads are those who take either a degree at the University of London, or at Oxford, or Cambridge, where there is an Arts curriculum which precedes the medical studies.

16076. You are quite alive to the disadvantages of too narrow an education?—Certainly, the endeavour of the licensing bodies is to widen the range of preliminary knowledge, but then a certain standard is required in even these subjects, not a mere smattering acquaintance; that is what I was arguing against.

16077. I mean knowledge capable of being tested in an adequate manner?—Yes.

Earl Cathcart.

16078. It is most essential in order to be a thoroughly scientific medical man that the student should know French and German, so as to be able to read the different periodicals or publications in those languages?—He is at a great disadvantage if he cannot.

Lord Monkswell.

16079. You say you are rather afraid that if the preliminary examination were altogether severed from the various schools of clinical instruction the subjects taught would not be kept sufficiently medical in their nature?—Yes, that the teaching of them would become so general that they would aid the student but little.

16080. Could not you by quarterly examinations so modify them as to do away with that defect?—Then they would become medical examinations in a certain case.

16081. You might give instructions that anybody who wanted to be a medical student and go

Lord Monkswell—continued.

in for clinical instruction must be properly educated in certain forms of chemistry we may say?—That is already done in this sense that the regulations of the licensing bodies prescribe particularly what kind of chemistry shall be taught before they proceed to study subjects more specially belonging to medical education.

16082. But I understand that these preliminary examinations are rather conducted by the various bodies very much as they please; how do you know that a person has been properly instructed in preliminary subjects at head-quarters?—Only by testing him when he comes up for examination, which is done in this way, that the candidate is not examined alone in medicine and surgery, but is examined in physics and other branches.

16083. But I rather understood that each school insisted upon its own standard?—The schools have nothing to do with fixing the standard; it is the examining bodies who do that.

16084. I had understood that at the preliminary examination each school said to its students, "You pass our preliminary examination, then we will admit you to the hospitals; you shall walk the hospitals, and get clinical instruction"?—No, they have to pass the preliminary examination laid down by the examining bodies.

Earl of Kimberley.

16085. Have you in University College Hospital sufficient means for the clinical teaching of the medical students in the college?—We have plenty of patients, and we have sufficient means generally I should say. Of course, we are very exacting; we are always wanting more apparatus; every faculty is always wanting more.

16086. Have you a sufficient number of beds?—The beds are not enough for the patients who apply, but the patients for whom we have room are sufficient in number to give us instruction for the students, excepting that all medical students, not only of University College, but of other medical schools, suffer, because we have not means of giving them appropriate instruction in infectious diseases, because the introduction of such cases would affect the other patients.

16087. Therefore, I take it, that it is necessary, in your opinion, that the students should be admitted to the fever asylums?—It would be a very great improvement if that were done.

Earl Cathcart.

16088. How far would they have to go from your hospital to find such an asylum?—They would have to go to Hampstead.

16089. That would occupy time?—Yes; it would not be possible to take the ordinary students. It would be the advanced students who could do that.

Earl of Kimberley.

16090. Taking such a disease as measles; you have no opportunity of instructing your students in measles?—No. I believe sometimes they get into the out-patient rooms, and then they are sent into an isolated room as quickly as they can be. It is a great want in our system of medical education that we have not access to hospitals for ordinary infectious diseases, such as measles, scarlet fever, and so on.

16091. I suppose

2 March 1891.]

Mr. HILL, B.M.

[Continued.]

Earl of Kimberley—continued.

16091. I suppose it is almost essential that some such instruction should be found somewhere?—I suppose we learn it after we begin to practice.

Earl of Kimberley—continued.

16092. What kind of examination would a student who had been to no university have to pass?—He would have to go to the examining bodies, and pass their preliminary examination.

The Witness is directed to withdraw.

Mr. R. BRUDENELL CARTER, F.R.C.S., is called in; and, having been sworn, is Examined, as follows:

Chairman.

16093. You, I believe, are a Fellow of the College of Surgeons?—I am.

16094. Have you any very decided opinion as to the advantage of general over special hospitals, or *vice versa*?—I have a very strong opinion from the point of view of the relative effects of the two upon medical education. I am a member of the General Medical Council, with which rests practically the control of the medical curriculum, both preliminary and professional, and I am able to say that the effect of special hospitals in London is to a very great extent to deprive the general hospitals of means of teaching which are greatly required for the proper instruction of students. I would take as a special example, if I may do so, the question I probably know most about, the question of special eye hospitals. Forty years ago, when I was a medical student, no cases of eye disease were treated in a general hospital at all, so that as a student I never saw one. I was educated at the London Hospital. There was, I believe, only one eye hospital in London at that time, namely, that in Moorfields, and for the men who wanted to learn something about eye disease, it was a very valuable institution, they went there, and learned something on the subject. About 1860, or thereabouts, a very considerable impulse was given to the study of diseases of the eye, and their connection with a great many diseases of the general system was rendered very apparent, so that it became exceedingly important for medical practitioners generally to be more or less conversant with them. About 1866, I think, special eye departments were founded at the chief general hospitals; I think Guy's took the lead, it was followed by St. George's, and ultimately by the others. All those institutions suffer very much, so far as their teaching power is concerned, by the withdrawal of a very large number of patients to special eye hospitals, of which there are now six or seven, at which there are no students, or only a few occasional ones; men who have finished their curriculum and gone there for a month or two to see something of eye work, but where the work is liable to be very much less well done as regards the patient, because there is nothing which is so valuable a stimulus to a physician or surgeon in doing his work as the presence and inquiries of medical students; they keep a man constantly on the alert; it is impossible to look at any case negligently, and they form the best possible antidote to that fatigue which comes to most practitioners about matters which to them are matters very much of routine. Where a man has a very large succession of out-patients passing before him one after the other, and no students

(24.)

Chairman—continued.

around him, these patients do not as a rule receive the same amount of careful scrutiny that they would in a general hospital, where students were present and were asking questions.

16095. We were told the other day by a witness here that one of the disadvantages of general hospitals in treating special cases, was a certain amount of professional jealousy, have you had any occasion to remark that there is not the same facility given for examining special cases in general hospitals as in special hospitals?—I think there is no reason to say that; at St. George's we have 20 beds set apart for ophthalmic cases; at Guy's there are, I think, fifty; at Bartholomew's they have 30 or 40 beds set apart for them, and not used for other cases. The greatest possible facilities have been afforded me for the last 20 years at St. George's to do everything in the way of treatment and teaching. The officers of the special hospitals, all the more distinguished of whom hold office in general hospitals also, might be utilised at the latter. The only officers of the special hospitals who, as a rule, do not hold office in general hospitals, are comparatively young men who have chanced to get a special appointment first, and who hope to get a general one by-and-bye.

16096. You think that the patients do not benefit by that system?—The patients do not benefit at all by it; on the contrary, I think, they get a less amount of attention than they would in a general hospital. Then there is another objection that I feel very strongly, and it is this: when the special departments were first established at the general hospitals, each had only one officer in it. I was, for perhaps 10 years alone at St. George's, and the students at St. George's got in that department the teaching of only one man, whereas in general surgery they got the teaching of six, and they were able to see and compare the practices of different men. Now at most of the hospitals they have two ophthalmic surgeons, and it would be an enormous boon to medical education, and no loss to the patients, if all the special ophthalmic hospitals were shut up to-morrow, and their staff transferred to the general hospitals to carry on the work.

16097. You think that now the general hospitals have these departments, the functions of the special hospitals have passed away?—Yes, no doubt the special hospitals have had their field of usefulness; no doubt Moorfields was very useful some 40 years ago, but the system tends to become fossilized, while still absorbing funds and materials for teaching.

16098. Do you express disapproval of all the special

M M 3

2 March 1891.]

Mr. CARTER, F.R.C.S.

[Continued.]

Chairman—continued.

special hospitals?—No, there are some which I should look upon as mere asylums where people go who are not valuable for teaching purposes, where people who are often incurable go to have their last moments soothed. For example, there is the Consumption Hospital, which deals with a disease which is greatly more common than the requirements of teaching; so that there would never be a difficulty in meeting the requirements of teaching elsewhere, even although that hospital is always full. There are some which may be looked upon as impediments to teaching, and others as survivals; others are mere speculations, open to everybody just as a greengrocer's shop is.

16099. Would you except the Hospital for Children?—I think that a Hospital for children has many disadvantages in the sense of interfering with medical teaching, because children's wards are perfectly practicable in general hospitals. At the London Hospital there was a children's ward in which children under the age of eight years were received, which was practically a special hospital within that hospital. We have no arrangement of a similar character at St. George's. I am constantly called on to treat children as in-patients, and I have to send them to the women's ward, where they may be very troublesome to the other patients. I think children's wards might be placed generally at all general hospitals.

16100. Would you apply your observations to the Lying-in Hospital?—I have no knowledge upon the point, but I think I may add that owing to the use of antiseptic precautions they are no longer open to the charge of producing an undue mortality as they once were.

16101. Or the Lock Hospital?—The introduction of a lock ward into a general hospital would be objectionable for certain reasons. It would be obviously undesirable that respectable women in the ward of a general hospital should be called upon to mix with prostitutes; for that reason I think the prostitutes are best in a place by themselves.

Earl of Kimberley.

16102. What difficulty would there be in establishing a special ward for those where they would not mix with the others?—It would not be impossible; but cutting up a hospital into a great many special wards would become a matter of difficulty; it would tend to diminish the average number of beds available, because if you had one ward intended for the reception of venereal cases and you had that only half full, you could not, under the supposed conditions, put other people there.

16103. Does not that conflict with your opinion that special wards supply all the necessity for that class of patients?—What I think is, that we see in general hospitals quite a sufficient amount of syphilitic disease for teaching purposes; and I do not think any of the surgeons or physicians would complain of the paucity of material on that score; the material is only too abundant.

16104. Then looking at the matter now, not only from a teaching point of view, but looking at the matter from the point of view of the health of the population, is not the existence of sufficient

Earl of Kimberley—continued.

lock hospitals for the treatment of diseases of that kind as important as that of any department of medical science can be?—Certainly; there is further a difficulty in the way arising from the circumstance that the governing bodies of some London general hospitals forbid the admission of venereal disease into the wards; no doubt this is a mistake; a mistake made, however, mainly through ignorance.

16105. They may do that for the reason stated just now, namely, the objection to the mixing of that class of patients with the other classes of patients; does not that point to one of two things, either that you ought to have special hospitals for this purpose, or that the general hospital ought to have separate wards?—Yes; and if it were not for the very large number of separate establishments there would be funds available for increasing the wards at the general hospitals.

16106. It has been the opinion of some very competent men that, in the interests of medical science it is desirable that there should be some special hospitals, because it is contended that in the general hospitals there is apt to be not the same openness of mind towards new discoveries and experiments, and that things are very apt to go very much in a groove there, and that in that view special hospitals, when they are under the control of competent men, lead to the advancement of science?—There is sufficient human nature in medical men generally to make the profession desirous to do all they can for their patients. I do not think there is much in that objection, but there is this: that the progress of medical science sometimes reminds me of the movement of an amoeba, which puts out processes now in this and now in that direction from its surface, and engulphs everything it comes in contact with. In the same way medical science is putting out its processes in various directions to certain points of investigation which for a time may be in the hands of only a few men, and I think it is very desirable that there should be arrangements made by which men making such investigations should have sufficient opportunity for their work. As an instance of that, I would take the hospital for the epileptic and paralysed, the place where Mr. Victor Horsley has been doing some very remarkable work in brain surgery, and where Dr. Ferrier and other physicians have done some very remarkable work in the way of localising brain disease so as to bring it within the reach of the surgeon, and it may be very useful that those who are engaged in work of that kind should have greater facilities for performing it than would be afforded them in a general hospital. But after six or seven, or ten years, the tendency of medical progress will be in some other direction, and then what is now comparatively new will become part of the general practice of the profession: it would then be desirable that patients should be distributed, so that their cases could be brought as fully as possible under the notice of medical students. My very complaint against the special hospital is that it tends to remain as a survival after the period of its utility has passed away.

16107. I thoroughly understand that; but by what system can you secure the benefits of both those

2 March 1891.]

Mr. CARTER, F.R.C.S.

[Continued.]

Earl of Kimberley—continued.

those arrangements, that is to say, that there shall not be those survivals, and at the same time that there shall be those opportunities for special scientific investigation?—I do not go into details. My scheme would be rather that there should be some controlling body over the hospitals, something such as there is in Paris, and that opportunities should be given of devoting certain buildings, and certain funds, to such purposes as medical science might from time to time require.

16108. Assuming for the moment that there might be great difficulties in establishing such a central body, or that at all events it might not be found practicable to establish it; do not you think that in that case the special hospital, even with all the disadvantages you have pointed out so clearly, is necessary?—I very much doubt it; no doubt no change that I could suggest would be an unmixed benefit whatever it might be; but I think the advantage of doing away with the special hospitals would probably, in any circumstances, be greater than the disadvantage; and I have no doubt whatever that the advantage would be far greater if the funds could still be applied to hospital work; if, for instance, by getting rid of half a dozen small special hospitals we could open another large general hospital in the north of London where it is greatly wanted.

16109. It would be a comparison of advantages and disadvantages: are you prepared to say that the advantages of special discoveries in medical science, though they may be rare, and, in many cases, may not be the result of particular hospitals, would not outweigh the disadvantages you have put forward of the particular hospitals?—I do not think the discoveries are generally made by the perpetuation of particular hospitals; I think they are generally made through general hospitals.

16110. I meant rather to refer to what you explained just now, namely, the possibility of such an improvement in medical science, as you pointed out, might be taking place at present in reference to the paralytic and epileptic hospital; I have no cognisance of such matters, but assuming that those discoveries are very valuable, would they not outweigh a great deal of the disadvantage which arises from the withdrawal of funds for the special hospitals?—No doubt it might be so if funds for general purposes were not urgently wanted every day.

16111. It is a question of comparison; do you think that a provision of funds upon a much larger scale (which, after all, is partly an extension of charity, in itself not always an unmixed benefit), would outweigh the advantages of any special opportunities for scientific investigation such as you have mentioned?—I think it would.

16112. Of course I assume in my question that no way could be found of reconciling the two?—The work would be done at general hospitals one way or the other; the main difference would be this: Continuing, if I may, the case of the hospital for the paralysed, we have there an institution which from its nature brings into a focus a large number of cases of a particular class, and brings those cases under the observation and treatment of a small number of men

Earl of Kimberley—continued.

who have devoted special attention to that class of cases. If that hospital did not exist the patients would be distributed over a larger number of centres, and their treatment would be in the hands of a larger number of men who would still have every possible inducement to master the conditions with which they were called upon to deal. The difference would be that a larger number of men would get some experience, which would be an advantage; the disadvantage might be that a small number of men might not get so much, and the result which now we may arrive at next month we might have to wait three months for in the other event; the amount of clearing up of doubts upon a particular point, for instance, which we now get in a certain time, we should be slower in getting, because it would be got by the experimental work of three or four men, none of whom would have quite such large opportunities as fall to those who are now in possession of the material.

16113. Is it not the tendency of all science now to specialise?—I am not sufficiently conversant with the whole field of science to be able to say, but no doubt as that field extends men are obliged to confine themselves more and more to particular departments.

16114. Is not that a very strong argument in favour of specialising medical knowledge?—Not quite so much as it is in some other departments. You cannot divide a man into pieces, and there is probably no malady to which the frame is subject, which does not re-act from the organ in which it has its original seat upon all others. The symptoms which tell us that there is a tumour in a particular part of the brain, and that it may be removed, are symptoms which affect every organ of the body, and every function, and it is very important that every general practitioner who sees those symptoms should recognise their significance.

Chairman.

16115. As regards what you referred to just now, that if there were a special department in each hospital for various diseases you would require to have a large hospital; is it not the fact that those special departments are for out-patients?—No, I have plenty of beds at St. George's for my ophthalmic patients.

16116. As regards the other hospitals that we have heard of before which have departments for the skin and eye; have they beds?—All the eye departments have. With regard to the skin the great majority of the skin patients can be treated as out-patients; a certain number could be treated as in-patients, and there would be no practical objection, generally speaking, to their being admitted to the general wards.

Earl Cathcart.

16117. Practically, you could hardly get an authority strong enough to step into a special hospital and to say: "You have pottered over such and such a special disease long enough, we will close your establishment and confiscate your property"?—No, but if the public which supplies the money thoroughly understood the question they would know that their money would go twice as far in general hospitals as in special hospitals.

M M 4

16118. Bu

2 March 1891.]

Mr. CARTER, F.R.C.S.

[Continued.]

Earl Cathcart—continued.

16118. But the money comes frequently, does it not, to special hospitals by the gifts of persons who have suffered from that particular complaint; and perhaps been relieved and desire to assist in the relief of others?—That is so no doubt, but still their action is not according to knowledge.

Lord Monkswell.

16119. I suppose your contention rather is that the general hospitals were starved of experience and observation in certain diseases because those diseases are dealt with in special hospitals?—Yes, that is so.

16120. That is the way in which you would deal with Dr. Barnes's objection when he says that there are not a sufficient number of diseases in special departments of hospitals to give students a proper knowledge with regard to them. You would say that would be a reason not for having special hospitals, but for having those special diseases dealt with as ordinary diseases are, because in that case you would have a great many more persons with those diseases in general hospitals than you have now?—Precisely; I should like to have 50 beds instead of 20 beds for eye diseases at St. George's.

Chairman.

16121. I have only one more point as to these special hospitals; you said there were some small special hospitals which were really speculative ones?—Yes.

16122. And also have as a rule a very small number of beds?—Yes.

16123. Consequently would not their administration be very costly?—Very I will not name the institution, but I am acquainted with the details of a special hospital which was founded by a gentleman now deceased, who for various reasons was unable to obtain an appointment in one of the large London hospitals. He was a man of some means, he had some influential friends, and he established what he called a hospital which consisted of two ramshackle London houses with a stucco front put to them, with their sanitary and other arrangements in a most deplorable condition, and with very inferior nursing. That went on for a great many years, and took a great deal of money out of the pockets of the public, whilst doing no equivalent amount of good to anybody.

Earl of Kimberley.

16124. But putting a considerable amount of money into the pocket of the proprietor?—The

Earl of Kimberley—continued.

patients were only asked to pay a small amount if they could. The way in which it benefited the proprietor was that it gave him a status and position, which enabled him to put himself forward as an authority upon certain matters.

Chairman.

16125. Would you like to see anybody outside the Government departments whose function it should be to licence a hospital or to endorse the building of a hospital?—I should, very much indeed. I should think that such a body as the General Medical Council might do work of that kind, with an appeal to the Privy Council.

16126. Enough machinery exists, if it is only put into force?—I think so.

16127. Might not such a body, or whatever it was, have also the audit of the accounts, and have the right of testing the accounts from time to time?—A body might, not the General Medical Council, because it meets only twice a year, and has no means of conducting such an audit.

16128. Still it might have a sub-committee?—It might have an executive sub-committee for the purpose. I mentioned the Medical Council, because its thirty members are drawn from the three divisions of the Kingdom, and comprise provincial as well as urban men, so that practically all interests are represented, and it is a body established by Act of Parliament for the control of medical education.

16129. You are a governor of one or two hospitals, I believe?—Yes, of St. George's amongst others.

16130. Do you think it would be a good plan if possible to have all the accounts of the various hospitals upon the same basis?—I do not think so. It appears to me that in all human affairs a certain variety is desirable, a certain scope for originality. If a governor of one hospital struck out an improved method of keeping accounts, I do not see why all the rest should be compelled to follow it.

16131. At the present time any calculation or comparison as to the cost of a bed or of an out-patient is liable to be erroneous?—No doubt it must be more or less erroneous, but still I do not think the principle of the stereotype is generally well applied to human affairs.

The Witness is directed to withdraw.

MR. NEWTON H. NIXON, is again called in; and further Examined, as follows:

Chairman.

16132. You stated that your beds were always full, that is to say, as many as you could keep full?—Yes.

16133. And also there was a very good attendance in your out-patients' department?—Yes.

16134. From that do you consider that the medical relief in your district is insufficient?—I think the medical relief in the out department is sufficient, but that we could readily fill 100 more beds.

Chairman—continued.

16135. Is everything provided in your hospital for the patient free of charge?—With the exception of tea, sugar, and butter.

16136. In the case of a very poor patient does the Samaritan Fund provide him with tea, sugar, and butter?—It does, and washing.

16137. Otherwise they provide their own washing?—Yes.

16138. Then in the case of a patient coming from the country being sent up by the parish or by

2 March 1891.]

Mr. NIXON.

[Continued.]

Chairman—continued.

by an individual, do you make any charge for him?—It is the practice to send a form to the workhouse from which the patient is sent up which they have to sign agreeing to pay 1 s. 6 d. a day.

16139. But for a private patient coming from a long distance off do you make a charge?—We make no charge whatever.

16140. But you charge the workhouse 1 s. 6 d. a day?—Yes, because we pay rates.

Earl Cathcart.

16141. You have shown me a paper in regard to your sanitary arrangements, and so far as the paper goes I am perfectly satisfied that they are as perfect as could be?—I am glad to hear it.

16142. What uniform do the nurses wear?—They wear print and a kind of blue serge.

Chairman.

16143. I thought we understood that they wore the costume of the sisters?—Those are the religious sisters; they belong to a Sisterhood, but the nurses are ordinary paid nurses like those of any other hospital.

Earl of Kimberley.

16144. I suppose if a workhouse subscribed to your hospital they would have the same privileges as other governors?—We do not charge them.

Ordered, That this Committee be adjourned to Thursday next, at Twelve o'clock.

Lord Clifford of Chudleigh.

16145. What would be the serious objection to the hospital providing tea, sugar, and butter?—So far as we are concerned, the cost; I worked it out a few years ago, and it came to 400 l. a year.

16146. Of course they are not considered from a purely medical point of view necessary?—Precisely so.

Earl Cathcart.

16147. Did you take tea, sugar, and butter at 1 s. a week?—I cannot remember the basis of the calculation, but I remember some years ago I got it out in the hope that the committee would supply those articles and not require the patients to provide anything at all; but the cost came out at 400 l. a year, and the committee would not look at it.

Chairman.

16148. Do you make the tea in a large teapot for all the ward at once?—No, each patient makes his own; this is the rule: "In-door patients are required to provide themselves with the following articles; tea, sugar, butter, teapot, cup and saucer, spoon, knife and fork, soap and towel; also a change of body linen, and to provide for the washing of the same."

The Witness is directed to withdraw.

Die Jovis, 5^o Martii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
Lord SANDHURST.
Lord FERMANAGH (*Earl of Erne*).
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.

THE LORD SANDHURST, IN THE CHAIR.

MR. CONRAD WILLIAM THIES, is called in; and, having been sworn, is Examined, as follows:

Chairman.

16149. YOU are secretary of the Royal Free Hospital, are you not?—I am.

16150. How long have you occupied that position?—For the last three years.

16151. Previously to that had you any hospital experience?—I had not.

16152. What was your line of business before you became secretary to the hospital?—I had been for 21 years with a large firm of merchants in the City.

16153. A business trade, in fact?—In which I had acquired a thorough knowledge of book-keeping and general business arrangements.

16154. Is the Royal Free Hospital a general hospital?—A general hospital.

16155. And with a school attached?—The students who attend the hospital are attached to the London School of Medicine for Women; they only come to the hospital for their clinical instruction.

16156. At the same time it is a hospital to which students are admitted?—Undoubtedly.

16157. Is it a free hospital?—Entirely.

16158. Are there any governors' privileges or letters?—The governors have no privileges whatever in respect to the admission of patients; we issue no letters whatever. All cases are received entirely at the discretion of the medical officers.

16159. Would you explain to us shortly, if you please, what the constitution of your hospital is?—The government of the hospital is entrusted to a court of governors, to a committee of management, and to a weekly board. The governors meet annually and appoint a committee of 30 governors. The committee at their first meeting after the annual meeting appoint a chairman for the year, and they also appoint the weekly board, consisting of 12 members of the committee. The weekly board at their first meeting appoint a chairman for the year also, and also the finance committee; and the weekly board meet every Thursday at 4 o'clock, one or two members of the finance committee attending earlier than that hour in order to examine the accounts in detail.

(24.)

Chairman—continued.

The weekly board manage all the general business arrangements of the hospital; but any matter of importance they refer to the committee, and if necessary they call a committee meeting for the special purpose of considering any special question. The committee meet regularly once in every quarter, the weekly board sending to each member of the committee a printed report of all their proceedings, together with a statement of the accounts, receipts and expenditure, and medical returns for the past quarter; that is sent to every member of the committee at least a week before the meeting of the committee.

16160. Did you tell us how many members there are of the weekly board?—There are twelve members of the board.

16161. And about what number generally attend?—From six to seven.

16162. Then are there many members or any members of the committee who are members of the weekly board as well?—The whole of the members of the board are members of the committee. The committee nominate 12 members from their own body to form a weekly board. It is practically a sub-committee of the committee.

16163. Then practically the weekly board is the executive of the hospital?—Undoubtedly.

16164. And you are secretary to all the committees?—I am secretary to all the committees, except the medical committee.

16165. As regards your own duties and responsibilities, have you supreme power in the absence of the board?—I will read the rule for the secretary, laid down in the general rules of the hospital. "The secretary shall be the representative of the committee and of the board in the general administration of the hospital in accordance with the regulations relating to his office," and I have to act entirely for the weekly board and report to them at their meeting, or, if necessary, call a meeting beforehand if anything of importance takes place.

16166. I will put you a question which I have put to a great many witnesses holding your position

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

position in a hospital; supposing that some extraordinary case of insubordination occurred, or some special case with regard to a medical officer of the hospital or an official of the hospital subordinate to you, would you have power to suspend him?—Undoubtedly, until the next meeting of the board. I should see, and of course consult with the chairman, but I should act independently of that if it were necessary.

16167. Supposing it were such a gentleman as the taking-in officer (if such an official exists in your hospital) and this occurred in the middle of the night, you could suspend him until you had had an opportunity of consulting with your chairman or with the board?—Yes.

16168. You are supreme, in fact, in the absence of the board?—I am.

16169. And responsible to the board?—Responsible to the board.

16170. How many beds have you in your hospital?—One hundred and sixty.

16171. And what is your working average?—One hundred and thirty-five; 134, I think, was the number for last year.

16172. And as regards the diseases that you take, do you take all diseases?—Except infectious diseases.

16173. Have you any special foundation for any special disease?—No, we have not. I might mention with regard to that matter that at the time of the last cholera epidemics in London the Committee threw the hospital open entirely for cholera patients and took in a very large number. I could give the figures and data if your Lordships would like to hear it.

16174. If you please?—In the year 1832, 700 cholera cases were taken into the hospital, and in 1849, 3,000, and 6,000 in 1854.

16175. How did you manage to accommodate all that large number in your hospital?—I do not know how it was managed.

16176. But that is a fact?—That is narrated in the history of the hospital; the hospital was, at the times mentioned, given up entirely to cholera cases.

16177. Do you know whether the hospital has had to keep any beds empty at any time from want of funds?—No, never.

16178. You have gone on eating up your capital in order to keep yourselves going if necessary?—Quite so.

16179. Do you know whether there is much other means of medical relief in your district besides your own hospital; you did not tell us where it was, by the bye?—The Royal Free Hospital is in the Gray's Inn-road, near the Great Northern Railway Station at King's Cross.

16180. Are there any other hospitals close to it?—The nearest hospital eastward of us would be St. Bartholomew's, which is probably about a mile and a quarter away; to the west, University College Hospital is within a mile; and a little further to the west there would be Middlesex Hospital; and King's College Hospital is to the south west.

16181. Do you ever have to turn away patients because there is not room to take them in?—Every week.

16182. From your experience in the last three years do you consider that medical relief is

Chairman—continued.

lamentably deficient in your district?—I can only speak of course from my own experience of the particular hospital with which I am connected; but I may say that the hospital is a very popular one; we get a large number of people coming to us, strangely enough, who pass the doors of other hospitals; we are constantly having cases of that description, and upon asking the people why they come they say that they have been accustomed to come, or that they knew the hospital, or there was some personal reason.

16183. Is there not a corresponding side of the account; that a certain number of people would go from your district to Charing Cross or St. Thomas's?—I believe that among the poor there is a very decided preference for particular hospitals. If they have lived in a neighbourhood, and have been to a hospital they will sometimes come long distances to attend the same hospital. There was a case of a man yesterday, about whom I had some doubt as to whether I should allow him relief, he had come from Hertfordshire. I put the question why he had come to us, and he said that he had formerly lived in the neighbourhood, and had more confidence in coming to the Royal Free Hospital than in going to any other hospital, or to any local practitioner. I mention that as a case in point.

16184. Then you consider that the poor do migrate very much for their medical relief?—Undoubtedly.

16185. Do you make any inquiries as regards their business and means of living before taking them into the hospital?—Our system is as follows: At one o'clock in the day the out-patients' departments are opened, and the porters admit all who appear there; up to half-past one for men, and two o'clock for women; they are then seated in the men's or women's out-patients waiting room. The senior resident medical officer goes down at one o'clock and begins to see these cases; he then distributes tickets, 25 tickets for the surgical side, and 30 for the medical side of the hospital.

16186. That is for admission?—For new cases. He selects them from a larger number of applicants who are there; generally speaking, some have to be sent away; we strictly limit the new cases that can be seen to 25 on one side and 30 on the other.

16187. Are they in-patients or out-patients?—Out-patients. He selects these patients for what he considers to be their medical need, and, so far as he can judge, without going into any inquiry, he takes care to notice what their social position appears to be, and if he sees any of them according to his view too well dressed, he does not make any inquiry but simply eliminates them so far as he can. The case thus selected is then seen for the first time and is given a treatment paper, which is not taken away when the patient leaves, but which is left with the dispenser when the patient gets his medicine, the patient taking away the original card given him, which is his card for reference in future, and which is numbered. On the occasion of his second visit, upon showing his card, he has given back to him his treatment paper by the porter, and then it is the duty of two lay-officers to go round and see the

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

the papers and make personal inquiry in every case as to what their social position may be.

16188. Where do they see the papers?—In the out-patient's room, where the patients are seated in order; the officers go round from patient to patient, making what inquiries they deem necessary. If they are satisfied, they sign the paper in coloured pencil in the corner, so that it can be plainly and quickly seen. If they are not quite satisfied with the results of the inquiry they make, they send the patient up to me in the office, and then I make my own inquiry.

16189. Who is the gentleman who makes the first observation as to whether the patient is well dressed?—The senior resident medical officer.

16190. Not the porter?—No, not the porter.

16191. Then he becomes an out-patient?—He becomes an out-patient, and from the out-patients the in-patients are fed; our beds are filled in that way.

16192. That means to say that any person whose case requires a bed gets it if there is one?—Undoubtedly.

16193. Who determines that such a person is a fit or unfit person for a bed?—The physician or surgeon who has seen the case.

16194. This senior resident medical officer?—No; the senior resident medical officer only makes a preliminary inquiry; then the patient goes to the physician or surgeon of the day who is sitting to see out-patients.

16195. And who is on the staff?—Yes, a regular member of the staff; he decides. If he thinks that a case ought to come into the hospital he passes that case into the hospital.

16196. Then the admission to the hospital is in the hands of the staff?—Yes.

16197. Did you ever see any objection to that?—None whatever.

16198. Have you ever had any difficulty in regard to filling the beds, from the fact that there is sometimes a disposition on the part of surgeons to keep beds empty for interesting cases that may occur, although there may be plenty of cases that ought to come on the charity?—I can only say from my experience that I have never found that to be the case at our particular hospital.

16199. Do you go round the hospital?—It is my duty to go round at least once a week. I make it my duty to go round some part of the hospital every day, and I make a written report of everything I think necessary for the board to read.

16200. You think that you are in a position to see if there are any empty beds?—We have a return day by day.

16201. Do you study it every day?—No, the senior resident medical officer studies it; and if he has any remark to make, he makes it in his weekly report to the board; in which he reports how many patients there are, and how many beds. We judge from that what the average may be.

16202. To return to the constitution of the hospital, you told us, I think, that the weekly board met once a week, and that two members of it come rather earlier than others, to go through

(24.)

Chairman—continued.

certain accounts, and so on; what accounts would be included in that?—The whole of the accounts.

16203. Would you include the stock books too?—We do not keep a stock book.

16204. Well, whatever you do keep, the housekeeper's book or the steward's book?—They examine everything. I will explain the whole system, if it is not too much to tell you.

16205. Pray do?—The system of accounts with us is as follows: I have in my hand a copy of one week's account, which I thought might possibly be useful (*handing in the same*).

16206. I think the simplest way will be for you to read it?—I will explain the system in detail from it. Every week a cheque is drawn for what is called the weekly expenses, and a voucher similar to that in your Lordship's hand is made out. The first member of the board who attends makes it a rule to examine each item of that particular account, and if he is satisfied to initial it. Then the following week every item in that account has to be examined again to see that the money has been paid for which the cheque was drawn. Those papers are the vouchers for that particular week. Then when those papers are examined again by the member of the board, he also signs it, and you will observe that it is countersigned, showing that everything up to that date has been accounted for by a separate receipt for every item in that particular account; that is to say, that every person who is paid wages gives a separate receipt.

16207. Then these two gentlemen are practically a sort of sub-accounts committee?—They are a part of the finance committee.

16208. But you have a finance committee?—The finance committee is appointed by the members of the board, and any member of the finance committee can examine that account; but it must be a member of the finance committee.

16209. Then these small accounts come really into the duty of the finance committee?—Yes, they undertake everything in connection with the accounts. Then they examine, in addition, every receipt, and initial the counterfoil of every receipt for money received; and then they initial the cash-book, and see that the balance in the cash-book agrees with the banker's book; and they check every item of the account in the banker's book. In addition to that they examine what we call the provision and alcohol account, that is provisions supplied by the steward, showing exactly what provisions come into the hospital in the course of the week, and what have been used. This account is analysed in order to ascertain what each department of the hospital may cost. The particulars are read out (after it has been examined and signed by the members of the board) at the board meeting as part of the usual formal business. Also we read out the exact cost of alcohol consumed during the week, and in what part of the hospital it has been consumed. Then once a quarter, when the quarterly accounts are paid, two members of the board probably will arrange to come a little earlier in order to have time to examine them in detail.

16210. Then do the finance committee examine
N N 3 and

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

and check the pass-books from the bankers?—Undoubtedly.

16211. How often does that occur?—Every week.

16212. Who compose this finance committee; merely the two members or two treasurers?—Eight members of the weekly board.

16213. Do those include the treasurers?—No, they do not include the treasurers. The treasurer, chairman of the committee, and trustees are *ex-officio* members of all committees and all boards; but the treasurer does not attend the board, generally speaking, except when any special business calls him.

16214. Now as regards your funds, where do they come from principally, at least entirely?—I can read you a statement of the receipt of funds for the last year. The annual subscriptions for last year were 1,013 *l* 3*s.*; donations including the alms boxes at the hospital were 2,255 *l* 16*s.* 11*d.*; grants from the Hospital Sunday and Saturday Funds, 1,197 *l* 3*s.* 4*d.*; the dividends on invested property were 934 *l* 12*s.* 5*d.*; the receipts from the nurses training school were 625 *l* 5*s.*, that includes the probationers' fees; the sale of kitchen waste and sundry receipts 22 *l* 16*s.* 4*d.*; making a total of ordinary income of 6,048 *l* 17*s.* The legacies received last year were 6,855 *l* 14*s.*; showing a total income from all sources of 12,904 *l* 11*s.*

16215. Was that an extraordinarily good year or an average year, do you consider?—I have worked out an average for 10 years, thinking that you might ask for it possibly.

16216. That is just what I was going to ask for?—From 1881 to 1890 the ordinary income of the hospital averaged 5,028 *l.*; the legacies averaged 7,370 *l.*, showing a total income of 12,398 *l.* as the average for 10 years.

16217. Your income last year was very nearly 13,000 *l.*?—That was our income, rather less than 13,000 *l.*

16218. And what was your expenditure last year?—Our expenditure last year was 10,671 *l.* 17*s.* 4*d.* We had a balance of income over expenditure last year of 2,232 *l.* 13*s.* 8*d.* I may mention in this connection that last year we were fortunate in getting some money out of the Court of Chancery that had been lying there a great many years to the extent of over 3,500 *l.*

16219. Under what head did that come?—That came under legacies.

16220. What were these dividends from, invested stock?—Invested stock. I can give you a summary of the investments belonging to the hospital at present. Would you like me to read them all, or a summary of them.

16221. You might read a summary of them?—The convertible investments, that is investments which the Committee have the power to sell at any time consist of railway stocks: Great Western, London and Brighton, South Eastern, and North Eastern Railways, each 3,000 *l.* nominal value; and Metropolitan Consolidated Stock, altogether amounting to 14,718 *l.* nominal value; I suppose they would be worth about 19,000 *l.* The inconvertible investments consist of special trusts, and samaritan funds, the special trusts amounting to 4,937 *l.*, and the samaritan funds to 1,276 *l.*, showing a total of 6,213 *l.* of funds that we cannot realise.

Chairman—continued.

16222. Those are special endowments?—Yes.

16223. Is that the whole special endowment that you have?—That is the whole special endowment, the total of all our investments at the present moment 20,931 *l.*

16224. Were the 2,200 *l.* donations, which is an exceptionally good year, the result of a dinner or anything of that kind?—No; but we received one donation of 1,000 *l.*; that was an exception.

16225. Do you appeal to the outside public much for subscriptions?—No, we have not done so; but we are now about to issue an appeal on a large scale.

16226. What is the particular object of your appeal to be?—The hospital was founded in the year 1828, and in 1842 the hospital was removed from Hatton-garden to Gray's Inn-road, where it occupied some old barracks which were formerly occupied by the Light Horse Volunteers. Owing to the receipt of large legacies in the past, the committee have been enabled to rebuild three sides of the quadrangle, which forms the present hospital buildings, without appealing to the public at all; and the only remaining part of the old building is the present front. That present front is now in such a dilapidated condition that unless we spend a very large sum of money upon it, we shall probably have the roof coming in, or some serious damage arising to the buildings.

16227. Then it is for building operations that you are going to make this appeal?—The committee now wish to obtain funds to rebuild this front.

16228. It is for building operations?—Yes; we very much need the extra accommodation.

16229. Which of these bodies, these committees, makes the contract for food?—The weekly board.

16230. And do they do the same thing for drugs?—No; there is a special committee called the drug committee, consisting of three pharmaceutical chemists who are not necessarily governors of the hospital even, but who give their services. One of the members of the present drug committee is a member also of the weekly board; he is a member of the Pharmaceutical Society. This drug committee examine the drugs and report to the board, who accept their report as to the tenders to be accepted. This is done once in every six months.

16231. Are the contracts open; do you advertise for tenders?—They are quite open.

16232. Then who receives the food and sees that it is up to contract?—The steward receives all the food.

16233. He receives it and weighs it?—He receives it and weighs it, and he is responsible that it is of good quality, according to the contract.

16234. Supposing it is not up to contract, what course would he pursue?—He would report to me.

16235. And would you then get other food and charge it to the contractor?—Undoubtedly.

16236. Then, supposing that the sisters of the wards, or whatever you call them; do you call them

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

them sisters?—No; we call the head nurse in the ward a staff nurse.

16237. Supposing that the staff nurse were dissatisfied with the quality of the food or the dinners, she would complain to whom?—To the lady superintendent.

16238. And she would complain to whom?—The lady superintendent attends the board every week, and brings a written report, which is read.

16239. But to whom would she report in order to get the thing remedied at once?—She would first report to myself, and then also to the weekly board.

16240. So that you would see the thing remedied?—Yes.

16241. Do you find that there is much cause for complaint?—No; we have had minor complaints from time to time; but that is almost inevitable, I think, in any large establishment, but nothing of a serious character. I may say that the board have paid very special attention to that question. The chairman of the board attends, I think, without exception every meeting; he spends two or three hours every Thursday afternoon in the hospital; he arrives at the hospital shortly after two, and will spend two hours at least going round the hospital and inquiring personally into matters; so that if any person has a complaint, and feels any diffidence about making it to myself, they can make it to the chairman of the board, who knows every nurse in the hospital intimately. I have before me a list of the diets prepared by the steward, which is brought up and read to the board every week, and signed by the chairman of the board, giving full particulars of what the resident medical officers have had for their dinner, and also the nurses' breakfasts and dinners for the whole week.

16242. Have you got any gentleman who is responsible for the sanitary condition of your hospital?—The architect.

16243. Is he a sanitary expert?—I do not know whether he would call himself a sanitary expert, but he is undoubtedly a man who has a thorough knowledge of all sanitary matters.

16244. Do you keep a plan of the drains?—Yes.

16245. Is it posted up to date?—It is kept up to date. The system is as follows: the steward is responsible, according to the rules of the hospital, for seeing that the drains are kept well flushed; and that is done every week regularly. We have a very good water service and so forth. The steward would immediately report to me if he heard anything that was not satisfactory in reference to the drainage. It is his business to examine all through the hospital, the water-closets and all the general arrangements. The architect, I may say in addition, comes to the hospital I should think once every fortnight at least, sometimes it is once every week, and he takes more than a professional interest, he takes a real personal interest in the hospital; he has been connected with it for a good many years.

16246. Is he an honorary officer?—He is paid
(24.)

Chairman—continued.

a commission upon all new works, but he undertakes quite *con amore* to do all the ordinary work of supervision, which he does in the most thorough manner. The drains are tested about once in a year by the smoke test, and the peppermint test, and it is in contemplation in connection with our new buildings to revise the whole system of drainage. When the new part of the hospital was built the St. Pancras Vestry declined to make the drain in Gray's Inn-road deep enough to carry off the drainage. The consequence was, that the drainage had to be carried backwards down to the old Fleet ditch, which really was the old drain; the disadvantage is that we have to carry our drains right through Messrs. Cubitt's yard, at the back of our premises, into this old Fleet ditch. The new scheme for rebuilding will reverse the present system of drainage, and carry it all into the deep drain which has been constructed in the last two years along the Gray's Inn-road, so that the whole of our drainage will then run into this new drain. I have personally taken a great deal of interest in this question of drainage; I make it a point in my visits to the wards to go into the lavatories and pry about with that matter in view, because I have a strong feeling about it; and I have never yet had the slightest suspicion, or heard from anyone in the hospital, of anything being wrong with the drainage anywhere. I do not think there is a bad odour to be detected in any part of the hospital.

16247. Supposing that a staff nurse discovered, or thought that she discovered, something wrong from smells, or whatever it might be, she would complain to you?—She would complain to the lady superintendent immediately. The lady superintendent visits the ward two or three times a day at least, and I should immediately hear of it from her, or else the steward would tell me, and if it were necessary, I should send at once for the architect, but I have never heard of anything being wrong, except occasional damage that might arise.

16248. Does this architect make an annual inspection?—He makes an annual inspection of the drains. I may say that he is so frequently at the hospital, and he sees me on every occasion, that I am always kept informed of everything which, in his opinion, is necessary, and he writes at once to the board if he thinks it needful.

16249. Who is the head of your nursing staff?—Miss Barton.

16250. What is she called?—Lady superintendent.

16251. Is she salaried?—She receives 100*l.* salary.

16252. And board and lodging?—Yes.

16253. Will you tell us what staff of nurses you employ?—We have a lady superintendent and 40 nurses consisting of the following: ten staff nurses in charge of wards, all of whom are fully trained. We have a system of training for three years, and give a certificate at the end of three years after the nurse has passed an examination on medical and surgical nursing by members

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

members of the staff. There are eight nurses in their third year; 15 probationers in their second year; five in their first year, and two paying probationers, making a total of 40. Of these nurses, 27 are engaged upon day duty, and 13 upon night duty.

16254. How many wards have you?—We have 10 wards, nine of which have 16 beds, and the other ward, the small ward, has only six beds.

16255. So that in any case you have one attendant in the ward all night?—Yes, always. Our wards touch each other, opening on to the same landing, thus two nurses are in immediate communication during the night. But, in addition to that, there is one night nurse who is free to go everywhere, and it is a part of her duty to move about wherever her help is required.

16256. Is that a staff nurse?—No, not a staff nurse; one of the night nurses.

16257. Who is at the head of the night nurses?—The lady superintendent.

16258. That is the same person who is in charge of the day nurses?—Yes; we have no night superintendent.

16259. Are you nursed by a sisterhood or do you train your own nurses?—We train our own nurses.

16260. And supposing that you require more nurses than the 40 whom you employ, where would you be able to get them from; have you any extra nurses on the staff; or do you have to send out to some institution?—We have a private nursing institution connected with the hospital, with 12 nurses, any one of whom must work for the hospital if necessary; that is part of the arrangement made with them. Our staff of nurses has been increased, and we now consider that we are well staffed with nurses.

16261. When was it increased?—Within the last three years we have been steadily increasing the number of nurses. At the present time our average of patients to nurses is 3.35; that is, taking the number of patients and dividing it by 40, we have one nurse for 3.35 patients.

16262. You say that you have private nurses who go out to do private nursing?—We have a private nursing institution in connection with the hospital.

16263. They number 12?—They number 12.

16264. And how much do you charge for them when they go out?—From two to three guineas per week.

16265. Do you give the nurses any percentage of their earnings?—No; we pay the nurses as follows; nurses on joining the institution in their first year get 26 *l.* and a 5 *l.* bonus at the end of the year; for the second year at the institute they get 28 *l.* and a 10 *l.* bonus; for the third year they get 30 *l.* salary and a 15 *l.* bonus; and for the fourth year they have 30 *l.* salary and 20 *l.* bonus, so that a nurse connected with the institute in her fourth year would be earning 50 *l.* a year besides uniform and washing and so forth. That is a comparatively recent introduction; the institution only started two years since, and the board have been watching the result of it; and they made this arrangement

Chairman—continued.

for last year, so that the nurses who worked through last year were paid according to this scale.

16266. Do you find that this nurses institution pays?—Yes.

16267. With regard to the other nurses, what pay do they get, the nurses employed in the wards?—The salary of probationers is 10 *l.* for the first year; 14 *l.* for the second year; and 20 *l.* for the third year; then they rise from the 20 *l.* by 1 *l.* yearly until they reach 23 *l.* or until they are promoted to the position of a staff nurse. The staff nurses, who must be certificated nurses, receive for their first year, 23 *l.* and increase 2 *l.* each year, until they reach 35 *l.*; and they are provided with uniform and so forth.

16268. Is there any pension for any of these nurses after a certain period of years?—That is a subject which is under consideration at the present time. I may say that we have only in recent years introduced the present nursing arrangement. Previously we had an arrangement with the British Nursing Association, which ultimately came to grief. We only commenced our own nursing in 1884, and our staff is at present a rather recent staff for that reason; but the committee have under consideration some scheme for providing pensions for the nurses.

16269. And how much do the lady probationers pay?—They pay a guinea a week, and they are taken on for six months; they are taken on for three months at a time, and if they give satisfaction at the end of three months they are allowed to go on for another three months; but we limit the number to two.

16270. The lady superintendent is the head of the nursing?—Yes.

16271. Has she the same power with the nurses as you have with the rest of the hospital, that is power of suspension?—Yes, reporting the same to the weekly board at the next meeting.

16272. But she has not the power of dismissal?—No.

16273. Now will you tell us the hours of these nurses?—The nurses on day duty work from seven in the morning until 8.30 at night, which makes a total of 13½ hours; but every nurse is off duty every day for two hours; it is a strict rule that she must if possible leave the hospital for two hours, and she has two and a quarter hours allowed her for meals, that is four and a quarter hours during which she is out of her ward during the day. This leaves a total of 9½ hours during which she is working or on duty, but there are times, in the afternoon for instance, when perhaps she is not actually at work although she has to remain on duty in the ward. In addition to the regular time off duty every nurse has one whole day every month given to her; she has also four hours off duty once every month and six hours once in three months. There is a system of giving the nurse the chance of being out occasionally for an evening. She has thus one evening a month in which she can go to her friends, and at another time, instead of being away two hours a day, she can have four hours, so that she can go a little further than in the two hours.

16274. The day nurses begin at 7 a.m., and have

5 March 1891.]

MR. THIES.

[Continued.]

Chairman—continued.

have two and a-quarter hours for meals. When do they have breakfast, before they go in at 7?—They have breakfast from 6.40 to 7 o'clock.

16275. Then when is the next meal?—The next meal is at 9 o'clock; they have luncheon in the wards.

16276. Of what is that composed?—That consists of bread and butter and so forth, some light thing, bread and cheese, not meat, unless they have anything they take for themselves.

16277. Then how about dinner?—The staff nurses dine from 12 to 12.45; that is, they have three-quarters of an hour; and the probationers dine from 12.45 to 1.30, at which time they are supposed to return to their work.

16278. That is to say the probationers have what time the nurses leave over?—No; the staff nurses must leave the dining-room before 12.45; then the probationers come in. They have tea in the dining-room from 4.30 to 5; there is no tea served in the wards. They have supper from 8 to 9.

16279. That is after they come out of the wards?—Yes.

16280. And then at 9 o'clock their day is done?—Yes, their day is done then.

16281. Now with regard to the night nurses?—The night nurses have their supper from 8.30 to 9, and they have a meal provided in the wards consisting of eggs, fish, or bacon, something of that sort, whatever they may fancy; they eat that meal in the wards during the night. They have dinner at half-past 9 in the morning, and luncheon at 12 o'clock.

16282. Then for the whole of the nurses, what holidays do they get annually?—The holiday is about three weeks, made up as follows; there are 17 days clear, but, in addition to that, when the wards are being closed, it is the rule of the lady superintendent that the nurse belonging to the particular ward that is closed is relieved, so as to give her four days extra; so that, all round, every nurse has four clear days sometime during the year, when they can be arranged for her. I might mention, with reference to the nurses, the average of illness in four years. I had a long talk with the lady superintendent on this subject last evening, and she tells me that there have been only four cases of illness, since she has been at the hospital (that is for four years), two of which were doubtful cases; they were not quite certain what they were, but there was one case of diphtheria, and one case of scarlet-fever, both of those cases being contracted from patients and definitely known to be so. There has been no death among the nurses since we have started the nursing.

16283. Where do the nurses dine; have they their own dining-room?—Yes.

16284. Have they their own kitchen?—Yes; but the meals are prepared in the general kitchen. There is a kitchen attached to the nursing quarters in which all small matters are attended to.

16285. Does any high official dine with them, such as the housekeeper?—The lady superintendent is always present at the meals; she

Chairman—continued.

does not dine actually with them, but she is present, and carves.

16286. Where does she dine?—She dines in her room.

16287. That is not a dinner sent from this meal, I suppose, but a different meal?—Yes, a different meal; she has what she wishes.

16288. At what time in the day do they get that two hours off?—In the afternoon.

16289. Before 5 o'clock?—Before 5 o'clock, if possible by daylight.

16290. That is what I wanted; do you have any ward maids?—No, we have no ward maids; but every morning scrubbers come in and do the heavy work in the wards, that is to say cleaning fire places and so forth.

16291. Have the nurses any sweeping to do?—During the day they have to keep the wards tidy, from the time the scrubbers leave.

16292. And who appoints all these nurses, the board?—They are practically appointed by the lady superintendent, who reports to the board, and if the board think it desirable they see a particular nurse, but the chairman of the board, if he sees a new nurse in going round the wards, talks to her and consults with the lady superintendent about her. Every appointment is reported in the weekly report of the lady superintendent to the board.

16293. Then who appoints the officers and servants of the establishment, the board?—Which particular officers do you mean?

16294. The secretary, and you spoke of the resident medical officer, to which I am coming to directly?—The secretary is appointed by the committee, but the weekly board appoint all the other officers, and the resident medical officers, except the members of the medical staff, who are appointed by the committee.

16295. Have you any chaplain?—Yes.

16296. What does he get?—£. 100 a year.

16297. Is he resident?—No; but he lives within five minutes walk of the hospital; he visits the hospital every day, and makes a written report stating what particular wards he has visited, with the time he came and the time he left.

16298. Is there any salaried medical man in the establishment?—The senior resident medical officer receives 100 l. a year and board and lodging; the juniors, of whom there are three, in addition to the senior, receive only board and lodging.

16299. Are those temporary appointments?—The junior appointments are made for six months, on the recommendation of the medical staff, and are eligible for re-election for a further six months, but not beyond that period.

16300. Is the senior resident medical officer a gentleman of some standing?—He is a Fellow of the Royal College of Surgeons, and is appointed for one year, being eligible for re-election for a second year.

16301. Do you take lock cases?—No.

16302. None?—Not that I am aware of; I have never known such cases taken in.

16303. Do you take diphtheritic cases?—Unless it were a case of emergency we should

O O

not

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

not take it in, but we should take it in if it were a case of emergency. With regard to your question about the lock cases, as you are aware, we have lady students, and cases of that description in the out-patient department are seen separately; they are always kept to the last, and seen by the surgeon of the day and the resident medical officer, the lady students having been previously sent away.

16304. You have lady students, and female clerks and dressers?—Yes; the whole of the students in the hospital are women.

Earl of Kimberley.

16305. What is the reason why the lady superintendent dines in what I may term solitary grandeur; why cannot she dine with the nurses?—I think it is almost a personal matter; she prefers to do that.

16306. Does she consider that they are of a class below her?—I do not think that is so; but I think if you look at it from the point of view that she has to carve for the whole body of nurses, and it takes some time carving for 30 people, 15 at a time, it would hardly, I think, be likely that she would care to be eating her food at the same time with the constant disturbance she must have; she would hardly get any real rest in her own meal. She has to attend, you see, three dinners a day, one for night nurses, and two for the day nurses.

Lord Clifford of Chudleigh.

16307. I did not quite understand about the bonus which is paid to the nurses; is the bonus a constant quantity?—The bonus is a constant quantity, on the nurse completing a year and giving satisfaction during the year.

16308. Then it is like the wages, which are liable to reduction if their conduct is not satisfactory?—Quite so.

16309. Is this reduction ever made?—The scheme has only been in operation for one year, and there was no reduction made last year, but it is quite possible under the rule, for it is understood that if a nurse does misbehave or gets an unfavourable report she may lose her bonus.

16310. But who would decide?—The weekly board.

Lord Monkswell.

16311. Did you tell us what your salary was?—I did not. My salary is 250 l. a year, and I have lunch in the hospital.

16312. You have no residence?—No residence.

16313. How many are there on the committee of management?—Thirty.

16314. Where do the patients who are not admitted go to?—They are told to come again another day.

16315. I suppose they go off somewhere else; where do you suppose they go, to poor law infirmaries or other hospitals, or do you not know?—It is impossible for me to say where they go; but I may tell your Lordship that there are a large number of cases among the poor who come as chronic cases. There is not very much the matter with them, but they come as a matter of habit and the senior resident

Lord Monkswell—continued.

medical officer soon ascertains those that are trivial cases.

16316. Then you suggest that the patients who are not admitted are generally patients who are not very much in want of assistance?—Undoubtedly.

16317. Do you take midwifery cases?—No; we have a special department for diseases of women, but we do not take midwifery cases.

16318. The students are all ladies you say?—Yes.

16319. Would they have any opportunity for studying such cases?—They only come to our hospital for clinical instruction in our wards and out-patients departments; they complete their education by attending at other hospitals.

16320. Then there perhaps they would get their experience in midwifery?—Undoubtedly; but I would rather, if you would allow that subject to be dealt with by Mr. Berry or Dr. Calvert, who will follow me.

16321. I understand you to say with regard to the resident medical officer that sometimes he will refuse peremptorily to see patients whom he considers by their dress or appearance to be of a class superior to that which ought to have gratuitous relief from the hospital?—Yes.

16322. Is that not rather hard, because you always do apparently make inquiries. You treat a man, at least as I understand, give him first treatment, and then always make very careful inquiries into his means; is it not rather hard that any man should be peremptorily refused, because the resident medical officer seems to think that he is too well clothed, or is of an appearance that seems to indicate that he is not a proper subject?—Your Lordship will understand that every day the senior resident medical officer has to select some 55 new cases, and he uses his own judgment; if he should see a man who was in his opinion, medically in great need, he would take that into consideration, and his social position would be quite a secondary consideration; the first consideration would be the medical need of the patient.

16323. Then I understand you to say that he would not refuse to give a man first treatment if he saw he was badly in want of it, whatever might be his personal appearance?—Certainly not.

Chairman.

16324. Do you provide everything free at the hospital?—Everything except tea, sugar, and butter, and I may say that that question is under consideration, and has been for some time past; it is really a question of expense, and the board have that matter under consideration at the present moment.

Earl Cathcart.

16325. We have understood that it is almost the invariable rule for the matron to dine separately, and I suppose there is some special reason for that; she is very much worried and hurried, and that sort of thing; it seems a rest for her?—I think your Lordship would understand from the explanation I gave just now that it would really hardly be fair to her; it would

5 March 1891.]

Mr. THIES.

[Continued.]

Earl Cathcart—continued.

would take her appetite away to have to sit so long, and have so many meals to carve.

16326. It is of the utmost importance that she should be present at the meals of the nurses herself, to carve and to see that things are properly conducted?—Undoubtedly; it is the rule that she should be present at all meals.

16327. With regard to your site, I rather gathered from you that you have elbowroom on your site?—We have.

16328. And you have a free circulation of air all round the building?—A very good circulation indeed.

16329. And you say that your water supply is constant?—Yes.

16330. And with regard to fire; have you taken any precautions in regard to that?—We have a fire-hose, and on every floor we have buckets which are always kept filled.

16331. Have you thought what you would do in the way of getting your patients out in case of alarm of fire?—We have iron-proof doors constructed between the various wards to give double exit, and we hope, when the new building is complete, to have a complete circuit round the building. The circuit is broken at present, because the buildings are not all of the same height and the same level.

16332. And when you get the new drain into Gray's Inn-road you will have a better fall?—Yes.

16333. In fact a first rate fall?—Yes.

16334. What do you do with the ward slops; where are they put?—There are special flushing places for them, special traps.

16335. With disconnections in each place; is that the arrangement of it?—I could not tell the absolute construction of it, but I know that they were specially constructed for that purpose.

16336. The slops are not poured down the waterclosets?—No; there is a strict rule against pouring them down the waterclosets.

16337. With regard to things that you cannot pour away, such as dirty bandages and nasty poultices, what is done with them?—They are removed at once and burnt; we have a special furnace for them.

16338. You have an apparatus for the purpose?—Yes.

16339. And that is of very great value to you from a sanitary point of view?—It is of enormous value; it was constructed some years ago.

16340. And you have had no complaint from your neighbours?—None whatever.

16341. With regard to telephonic communication, do you see any advantage in having telephonic communication in case of an overflow of in-patients, or people desiring to be in-patients, so that you could send them to some other hospital, or at all events, ascertain whether some other hospital could take such patients?—It would be an advantage on certain occasions possibly, but we have not found it to be a matter of serious moment, and the expense would be considerable.

16342. But you mentioned St. Bartholomew and other hospitals as being in the neighbourhood; would it not be an advantage if you had telephonic communication with either of them to say "We have a very serious case here, can you

(24.)

Earl Cathcart—continued.

take it in"?—We are always ready, I think, to take in very serious cases. There may be cases which would appear not so serious, in which we should say they had better go to King's College Hospital or some other hospital.

16343. As an abstract principle, do you think that telephonic communication between the different hospitals would be advisable?—Undoubtedly.

16344. Have you anything in the nature of a two months' book?—We have a book which is read at the board every week called the six weeks' book. The senior resident medical officer comes to the board every week, and reads the medical reports, and amongst the medical reports is what is called the six weeks' book, which gives an account of every patient who has been in the hospital form ore than six weeks, and reports how that particular patient is getting on.

16345. And have you anything in the nature of a ward temperature book?—No, we have not a book of that description.

16346. You mentioned a very large bonus that is given to the nurses; there must be a reason for that bonus; is it that you may withhold the bonus in case of want of merit?—The idea is that a nurse who has been working for two or three years should be paid more than a nurse who has only just come upon the institute. It was a question of consulting with the nurses as to whether they should receive a bonus or a percentage upon their takings; and we found that, generally speaking, the nurses in the trained nurses institute thought that they would like to have a definite fixed amount, so as to know what their income was to be in a particular year, rather than to trust to the uncertainty of a percentage.

16347. Is there an idea that you might withhold the bonus or part of it in case of want of merit?—The board would not withhold it. Supposing that a nurse had a valid reason for leaving before the year was out, and had a good report, she would receive the proportion of bonus for that period.

16348. But at the end of the year, would she get it, whether complaints were made against her or not?—No; if complaints were made against her it would be withheld; the board have that power.

16349. Has that power been exercised?—Not at present, it has never been necessary.

16350. Have you any regular female medical officers?—No; the only student who has any office at all is the curator of the museum; that office is filled by a woman; but they act as clerks and dressers.

Lord Zouche of Haryngworth.

16351. Are you of opinion that your hospital is abused at all as regards the out-patient department?—No, I think not; I think that the precautions which we take are sufficient to avoid abuse. In addition to what I have said, I may say that we are in touch with the Provident Medical Association, and we have a system of sending cases to them. For instance, if cases come to me and I have my doubt, I advise the patient, and say, "I think you ought to go to a provident dispensary; there is one in Lambs' Conduit-street, close by. I will give you this card and you can take it on to them." I have arranged also to put a placard

O O 2

up

5 March 1891.]

Mr. THIES.

[Continued.]

Lord Zouche of Haryngworth—continued.

up in the out-patient room giving the terms charged by the provident dispensary. I believe that a free hospital like our own should be in touch with the provident institutions in the neighbourhood, so as to draft on such cases as may appear able to pay the charges of such an institution.

Earl of Lauderdale.

16352. In quoting from your rules just now, you said that your duties were performed in accordance with the regulations of your office; are those regulations elaborated in your rules, or are they separate?—There are a separate series of rules.

16353. Are they printed or in manuscript?—They are printed. This is the rule book.

16354. They are printed from time to time?—As they are revised; these rules have been in force for some years.

16355. With regard to these patients who are selected every morning, 25 of one class and 30 of the other, are they 25 medical and 30 surgical?—No, 25 surgical and 30 medical.

16356. What becomes of the remaining persons that are there for medical treatment; are they sent away?—Yes.

16357. Without being attended to at all?—Without being attended to that particular day; it is quite left to the discretion of the senior resident medical officer, if he should find great pressure on a particular day, to send in one or two more, and he would do so occasionally.

16358. But, in round numbers, you only treat 55 out-patients a day?—Fifty-five new cases per day.

16359. And the other persons are sent away?—No doubt.

16360. Can you give us the number of in-patients and out-patients treated last year?—Yes.

16361. Will you give us the total number?—I will give the total number. Would you like me to give them separately, as medical and surgical, and so forth?

16362. You might give us the total of each?—The total number of out-patients for the year was 17,263, classed as follows: Medical, 9,043; surgical, 6,260; ophthalmic cases, 667; diseases of women, 591, and dental cases, 702. In addition to these there were 10,804 casualty cases.

16363. What do you call casualty cases?—Casualty cases are slight cases that are treated in the casualty room at 12 o'clock, and at other times, when the out-patients department is closed, coming in from the street at all times of the day and night.

16364. They are practically out-patients in one sense?—We call them casualty cases. Supposing that a man is brought in with some slight wound, and it is necessary for him to be treated again, because the case becomes of such a character that the resident medical officer thinks it necessary for him to become an out-patient, then he is drafted on to the out-patient department; but first of all he is treated as a casualty case. Most of these cases are only seen once or twice.

16365. Would none of these cases which are

Earl of Lauderdale—continued.

sent away every afternoon, in addition to the 55, be treated in that way?—They could be treated in that way, if they were cases of slight emergency requiring to be treated quickly.

16366. You have no landed property, have you?—No, only the property upon which the hospital is built, which is freehold.

16367. Are you insured?—Yes.

16368. For what sum?—£. 35,000.

16369. With regard to these holidays for the nurses, you give 17 days and four days?—Yes.

16370. Those are two separate periods; they are not given concurrently, but they are different periods of the year, I suppose?—Yes.

16371. Can you tell me the average age of your probationers?—I should have to tell you that quite from personal observation.

16372. What would you say is their average age?—We will not accept any one under 20 years of age, but I should think that the average age would be 24 or 25.

16373. This bonus scheme has only just been introduced I understand?—It has only been introduced for last year.

16374. Have you given any bonus yet?—Yes, we have paid bonuses for last year.

Chairman.

16375. What is the maximum age at which you admit a nurse?—Thirty-five.

16376. Will you tell us what you are assessed at?—We are assessed at the present time at 500*l*. I may mention that two years since I made an application to the St. Pancras vestry to consider our assessment. We were assessed at 800*l*., and I thought, comparing that sum with what I knew to be the assessment of similar institutions in the parish, we were over-assessed. I made a special appeal to the vestry on the subject, and they reduced our assessment from 800*l*. gross to 500*l*. gross; we pay upon 431*l*. net. I may say that at that time I found that the assessment of the hospitals of London, which I enquired into right through, was of the most extraordinary character; I do not know whether you would wish me to say what it was.

16377. Pray do?—Take, for instance, St. Thomas's Hospital opposite, which was paying something like 2,500*l*. a year, speaking from memory.

16378. £. 2,300?—The London Hospital covers quite as large a space of ground and was paying 51*l*. a year. And that is simply a specimen of what I found to be the case. The National Hospital in Queen-square, within a half a mile of us, was paying about five times as much, I think, as we were paying, because it is in a different district; it is in Holborn, and the vestry of Holborn make the hospitals pay much more in their district than the St. Pancras vestry in which we happen to be.

16379. How much would that sum be, about five times more than you were paying?—They would be assessed at about 2,000*l*.

Earl of Kimberley.

16380. Do you know at all what basis is taken for this assessment?—No; I think it is a purely arbitrary one.

16381. And

5 March 1891.]

Mr. THIES.

[Continued.]

Earl of Kimberley—continued.

16381. And when you appealed, what ground of appeal did you take?—I appealed on the ground that University College Hospital, which is in St. Pancras, and which is a larger hospital than our own, was assessed only at 300 *l.* or 250 *l.*; I am speaking from memory; and I thought that we, a small hospital covering less ground, should not be assessed at a higher rate, more than double the rate of another hospital belonging to the same parish.

16382. But in point of fact, the law, which I dare say you are acquainted with, as to assessment, which says that it shall be the amount which the property would really be let for from year to year, is no guide as to a hospital at all?—It is no guide at all. I may mention that when this matter was under consideration, I made a careful examination as to what I thought we saved St. Pancras, by the fact of our being there, that is to say, that very probably the larger proportion of the patients who come to us would be driven to go into the local parish dispensaries, and I estimated that we were saving the parish something like 2,000 *l.* a year.

16383. That argument that you are urging would apply to the exemption of hospitals from assessment altogether would it not?—I think so.

Chairman.

16384. As regards the pay of the different members of the staff, you told us that you got 250 *l.* a year; do you get any commission on the subscriptions?—I have no commission whatever; that is the full amount of my salary.

16385. What does the senior resident medical officer get?—£. 100, with board and residence.

16386. And the steward?—I will give your Lordship a list of the officers if you wish it.

16387. If you please?—The secretary 250 *l.*; assistant secretary or clerk 130 *l.* a year, with his meals during the day, but no residence; the senior resident medical officer 100 *l.*, with full board; and the junior resident medical officers no salary, but they have their full board; the chaplain 100 *l.* a year, and no residence; dispenser 170 *l.* a year with meals during the day; assistant dispenser 78 *l.* a year; steward 78 *l.*, with full board and residence, he resides on the premises; housekeeper 52 *l.*, with full board and residence.

16388. Is that junior dispenser a fully qualified man?—He is a fully qualified man; he has what they call a minor qualification.

16389. The qualification has been latterly altered, has it not?—I believe it has; I do not understand the technical qualification; I know that when he was appointed (he was only appointed a year since), we went into the matter, and it was necessary to have a man with what they call a minor qualification.

16390. Are any of these salaries increasing salaries?—Not by any strict rule; there is no rule as to increasing the salaries; the salaries are increased according to the discretion of the board.

16391. Then they are all liable to be increased, if the board think fit?—If the board think fit.

16392. How do you get at this 78 *l.*?—We pay by a weekly payment, of so much a week, 30 *s.* a week, for instance.

(24.)

Chairman—continued.

16393. When you gave us the details of your receipts just now, I did not notice anything from the Hospital Sunday Funds; do you get anything from that source?—Yes, I can give you that.

16394. You told us of about 2,000 *l.* by special donations?—I ought to have mentioned the item of grants from special funds, namely, from the Hospital Sunday Fund, 947 *l.* 18 *s.* 4 *d.*; and from the Hospital Saturday Funds, 249 *l.* 5 *s.*, making a total of 1,197 *l.* 3 *s.* 4 *d.*, in addition to the donations.

16395. Do you ever try and work out the cost of a bed?—Yes, the cost of a bed for last year was 66 *l.* 11 *s.*, for every bed occupied.

16396. Do you think that that is a reliable estimate?—The difficulty of making a reliable estimate of the average cost of in-patients is, that you have got to deal with the question of out-patients, but, after a very careful examination of the subject, I came to the conclusion that our out-patients costs us 1 *s.* 3 *d.* each, because the numbers I have given you are not the numbers of attendances; we register every patient once as an out-patient, we do not reckon how many times they come again; we take it as an average that patients will attend three times, perhaps three and one-third. I have done it on a small scale, but the number is very great.

16397. Then it is purely based upon estimate?—The 1 *s.* 3 *d.* is from trying to work out the cost with a small proportion of the cost of drugs.

16398. And officials?—Yes, and officials and servants, the rating and keeping the rooms clean, and all that sort of thing, I have made it out very carefully; because formerly, when I first went to the hospital, I found that we had been reckoning it at 10½ *d.*, which I found was the lowest of all the hospitals in London. The London Hospital, for instance, reckons 4 *s.* 1 *d.* or 4 *s.* 3 *d.* I could not understand the discrepancy, and I came to the conclusion at last that it cost us about 1 *s.* 3 *d.* each out-patient, and I have made that my basis.

16399. That is your opinion?—That is my basis for the last year.

16400. Should you like to see any similarity of accounts between the various hospitals?—Yes. I have drafted my accounts this year entirely upon the basis of the Hospital Sunday Fund suggested form of accounts, making one or two modifications which I think are necessary; but it will be of enormous value, because at the present time the comparisons made between the various institutions are most fallacious in consequence of the different methods in which the accounts are kept.

16401. But at present a comparison is really impossible or useless, is it not?—On certain points. On certain points we can get definite information, and I have myself carefully analysed the accounts of most of the hospitals for the purpose.

16402. Do you think that the charity is abused at all by persons coming for relief who could afford to pay a private practitioner?—No, I do not. I have been in the out-patient department of nearly every general hospital in London, and I think, from personal observation, that there is very little abuse.

O O 3

16403. What

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

16403. What parish are you in?—St. Pancras.

16404. Where is the workhouse infirmary of St. Pancras?—It is about a mile-and-a-quarter or a mile-and-a-half from us.

16405. Is that one of the new ones of 1867 or 1868?—It has been built quite recently.

16406. Is it on the pavilion system?—The infirmary is, but the workhouse is an old building.

16407. Do you have a very large number of accidents?—Very large. I suppose for our size we are the largest receivers of serious accident cases in London.

16408. Is there any particular cause for that?—I should like Mr. Berry, one of our surgeons, who is present, to give your Lordships evidence on that. The cause of it is that we are in close proximity to the Great Northern, the Midland, London and North Western, and the Metropolitan Railways; and from all these railways we receive constantly a large number of cases. We receive nearly all the cases from the Great Northern Railway for many miles, and are seldom without one or two cases. I have prepared a memorandum for the consideration of the Great Northern Railway Company, of which it might interest your Lordship to hear a portion read. The register of patients at the Royal Free Hospital for the year 1890 alone furnishes the names of 71 persons who were in the actual employment of the Great Northern Railway Company, and who were admitted as in-patients in that year. The time during which these patients remained in the hospital was 1,857 days, that is equal to 265 weeks. Taking the average cost of each in-patient per week as shown by the published accounts of the hospital, at about 1*l.* 3*s.* 11*d.* per week, the above 71 in-patients cost the hospital about 317*l.* 4*s.* The list of 71 persons does not include passengers on the Great Northern Railway admitted into the hospital, suffering from injuries inflicted on them while travelling on that line of railway, nor does it include labourers and others employed on that railway by contractors, but simply those actually employed by the company; and the list does not include patients treated at the hospital for slight injuries occurring on that railway, but fortunately not sufficiently severe to require admission into the wards. Taking all these facts into consideration, we reckon that the cost to us from patients received from the Great Northern Railway, both in and out, is not much less than 500*l.* a year.

16409. What is the object of that appeal; to secure greater subscriptions?—We want to get the Great Northern Railway Company to help us about this building scheme.

Earl of Kimberley.

16410. In point of fact, your application to the Great Northern Railway Company would be based upon this: that you are of opinion that in case of accidents to persons in their employ they ought to provide hospital treatment for them gratis?—Hardly that; we feel that we have a great claim upon them, and that they ought to help us in our need.

16411. Let us see what the claim is based upon?—Upon the fact that we receive a great

Earl of Kimberley—continued.

number of accidents from that particular railway.

16412. Would it not apply to each case; the number does not make any difference; the same argument would apply to every case. There might be three employers, from each of whom you got 50 cases; would not the same argument apply to each of those employers?—Undoubtedly.

16413. And is it your contention that every employer ought to provide medical attendance for all persons in his employment gratis, in case of accident?—I think he should do what he could in that direction.

16414. Would not that carry it rather far?—Yes; if it were carried out logically it would mean some system of making the employer responsible for accidents to his servants.

16415. And the natural consequence would be a reduction of the pay to that extent?—Undoubtedly.

16416. Then what would be gained?—I have to deal with a practical difficulty; we want funds, and I have to use every means I can to obtain them, and I find that the best means to obtain them is to apply to people who are benefited and who are in a position to help the hospital.

Chairman.

16417. It comes to this, does it not, that very likely there might be some employers who send a large number of people to the hospital, who are very likely subscribers to the hospital, and therefore think they have a right to send them?—Yes.

16418. And you wish the Great Northern Railway Company to take the same view of the case?—I do not put this forward as any complaint against the Great Northern Railway Company; I mentioned it because your Lordship raised the issue. But a case in point occurred the other day. A large fire occurred, and we had to receive certain cases; and I found that the employers of these people had not subscribed. I applied to them, and they immediately sent a subscription. Every secretary has to be on the watch for such opportunities of making known the needs of the hospital to those whom he thinks can support him.

16419. Are you well locally supported?—We have been rather better lately, but we are not well supported; we have been supported by legacies.

Earl Cathcart.

16420. Have you ever received any money from these large railway companies?—We certainly at the present time receive subscriptions from them.

16421. What sort of subscriptions?—The Great Northerns subscribe 50*l.*, and the Midland 25*l.*, and from the Metropolitan Company we receive 10 guineas a year.

Chairman.

16422. I will ask you a question that I have asked with regard to every hospital; have you a mortuary attendant?—Yes, we have.

16423. Is great care taken when friends come to see the bodies that they are in proper order, and so forth?—Certainly.

16424. Is

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

16424. Is there any nurse in attendance there?—No.

16425. No female attendant?—No.

16426. Have you ever had difficulties from complaints of the friends?—No, none whatever. We are very particular to instruct the post mortem porter; it is part of the rules, in fact.

16427. Do you bury many patients?—None.

Earl of Arran.

16428. I think you say that it is proposed now to supply tea, sugar, and butter; it is under contemplation?—I think that may be the result of the consideration, but it is only under consideration at present.

16429. Have you formed any idea what additional expense that would throw upon the hospital?—I believe it would cost the hospital 240 l. a year.

Earl Cathcart.

16430. Do you pay the post mortem porter so much for every post mortem examination, for sewing up the body and making things tidy?—No, we do not give any additional pay for that work.

Chairman.

16431. Is there any restriction as regards the officers on the staff of your hospital; must they have a certain qualification?—Yes; physicians must be members of the Royal College of Physicians. If you will allow me, I will read the rule: "The physicians, assistant physicians, and the physician for the diseases of women, shall be fellows or members of the Royal College of Physicians of London; the surgeons and assistant surgeons, and the ophthalmic surgeon, shall be fellows of the Royal College of Surgeons of England; the surgeon dentist shall be a fellow or member of the Royal College of Surgeons of England, and also a licentiate in dental surgery."

16432. May your residents, the three young men who have six months' appointments, come from anywhere?—Yes.

16433. Do you advertise the appointments?—Yes.

Lord Monkswell.

16434. About these Great Northern employés, do I rightly understand you to say that you consider everybody who is employed on the Great Northern Railway a fit subject for hospital treatment, guards and people who get usually a weekly or quarterly salary?—We never raise any question if a man is injured, we receive him immediately.

16435. I suppose many of these railway servants would be in clubs, and get medical attendance if the accident was not very serious?—Yes.

16436. So that you would raise some question, perhaps, if the accident was not very serious; if you thought it could be properly treated by his own doctor?—Yes, of course. You understand, that in any case of serious injury there is no consideration whatever but the medical need, but if a man should come with a trifling com-

(24.)

Lord Monkswell—continued.

plaint from the Great Northern Railway, we should treat him as any other patient.

16437. Are there boxes where patients can put in what they think they ought to?—Yes.

16438. How much do you get from those boxes?—The amount received last year from all the boxes at the hospital was 19 l. 14 s.

Chairman.

16439. Do you find those donations increase or decrease?—I think they are slightly increasing.

16440. Whereabouts do you put these boxes, in the warehouses of the great employers near you?—No, we have no boxes out in that way.

16441. Have you a collector?—No, we have no collector.

Lord Monkswell.

16442. You say that you have a chaplain. What do people do in the hospital who want religious ministrations, and who do not belong to the Church of England?—They are allowed to see any minister they may wish; a Roman Catholic priest comes every week. We make no restrictions at all.

16443. Do other ministers come from time to time; Presbyterian, and so on?—Yes, just as they are needed.

Earl Cathcart.

16444. Do you enter the religions of the patients as they come in?—No.

Chairman.

16445. Does the chaplain keep any record of the religions of all the patients?—I think not; he knows personally in his own mind, and if he finds a Roman Catholic he sends word at once to the priest, with whom he is in friendly touch.

16446. You mentioned the Samaritan Fund; who has the administration of that?—I have charge of the Samaritan Fund. The method at present is this; that the lady superintendent receives information from the nurses about any case that requires help, and she then, after personal inquiry, writes an order for a small grant on a printed form; that is sent into my office, and I pay the patient or the nurse according to the case.

16447. You have a certain endowment, have you not?—We have a certain amount.

16448. And that is increased by subscriptions?—We have no subscriptions to it except casual subscriptions. The year before last I had 10 l. from somebody; but there is no regular subscription list. The income last year for the Samaritan Fund was 51 l., and we spent about the same amount.

16449. Then I understand that from that small amount you only assist people who have been in the hospital; you do not assist the families of those who have been in the hospital?—We have occasionally given temporary help. If a man in the hospital has a wife in distress, we should not hesitate to give her a few shillings to help her temporarily.

16450. That is the practice, is it?—The lady superintendent judges each case on its merits;

O O 4

she

5 March 1891.]

Mr. THIES.

[Continued.]

Chairman—continued.

she knows what money we have and uses her judgment.

16451. Is there anything else that you wish to bring before the Committee?—No. With regard to the question of the female medical students,

Chairman—continued.

I should prefer that inquiry should be made of the members of the medical staff who have to deal with them.

The Witness is directed to withdraw.

MRS. ELIZABETH GARRETT ANDERSON, M.D., is called in; and having been sworn, is Examined, as follows:

Chairman.

16452. You practise medicine, do you not?—Yes.

16453. Do you practise medicine in connection with the Royal Free Hospital?—No, not exactly. I am dean of the medical school for women, where the students take their systematic medical training; but my practice for medicine has not anything to do with the Royal Free Hospital; it has to do with another hospital, but not with the Royal Free Hospital.

16454. You are not on the staff of the Royal Free Hospital?—No.

16455. Would you explain to us how the school is worked in connection with the Royal Free Hospital?—The students have all their class teaching at the women's school in Handel-street, and they go to the Royal Free Hospital for their bedside or clinical instruction; so that they get their practical work at the Royal Free Hospital, and the theoretical work at the medical school in Handel-street.

16456. What is the medical school in Handel-street, it is the first time we have heard of it?—It is called the London School of Medicine for Women. It is exactly like any other medical school. I have brought the reports and prospectus of it; it has a complete list of officers, and the teaching is exactly on the lines of the men's medical schools. All the same subjects are taught, and the same length of courses and number of lectures is required on every subject. We have, of course, to conform exactly to the regulations of the general medical council, and there is very little difference between any of the schools, because they are all bound by the same regulations of the council.

16457. Do these ladies pay a fee on entering?—Yes; they pay very considerable fees; they pay 105 l. altogether for the school and hospital, if the fees are paid in one sum. Of that we take 70 l. for the college teaching, and the hospital staff gets the rest; it varies a little according as it is paid in one sum or three, but it is either 35 l. or 40 l.; each student pays for her bedside teaching in the Royal Free Hospital.

16458. Do you have to keep up any buildings out of these funds?—Yes, we have two houses, which we have added to, and altered very much. We spent a considerable sum of money last year, nearly 1,000 l. in alterations to buildings. We have now very good class-rooms, an exceedingly good anatomy-room, one of the best in London, I am told, and a very good chemical laboratory.

16459. How many students have you?—We have 107 at this moment.

16460. Is that an increasing number or stationary?—Last October's entry was the largest

Chairman.

have ever had, we had 34 new students. The students go up for a good many of the examinations that are open to men. Women are not yet admitted to all the examinations; the College of Surgeons and the College of Physicians of London still refuse to admit them, so that they are restricted and if they cannot get the London M.D. degree, they must go either to Edinburgh or Dublin, or they must be content with the Apothecaries Society in London. If they want the M.D., they have to take the M.D. of London, or the M.D. of the Royal University of Ireland, which are the only two M.D. degrees open to them. A very considerable proportion of our students are going for the London degree, I think, perhaps, a larger proportion than in any school in London. At this moment we have 43 students studying for the two most difficult examinations, namely, the London, and the Royal University of Ireland; and I think that 43 out of 107 is really a larger proportion than you would find in any other school. That is partly due to the fact that the easier M.D. degrees are not as yet open to women.

16461. Is this the only hospital that you know of where there are female students?—It is certainly the only hospital in England where there are women studying, and it is the only school in England. There are two schools in Edinburgh, both of them considerably smaller, and both very much hampered for want of adequate hospital practice; and there are two now in Glasgow.

Earl of Kimberley.

16462. Can you tell us how many of your students have passed the examination for the M.D. degree of the London University?—For the final degree a very small number, but we have a good many who have taken the M.B. degree.

16463. Have any passed for the M.D. degree?—Only one, Mrs. Scharlieb.

16464. And some have passed for the M.B. degree?—A considerable number have passed for the M.B. degree. We sent up nine last summer for the M.B. examination, and they all passed.

16465. Passing for those examinations implies a high qualification, does it not?—Very high indeed, I believe only one per cent of the men who enter the medical profession get the M.D. degree of London.

16466. Are the lecturers at the Free Hospital, and in your school, both male and female?—It is necessary to discriminate between the Royal Free

5 March 1891.]

Mrs. ANDERSON, M.D.

[Continued.]

Earl of *Kimberley*—continued.

Royal Free Hospital and the London School of Medicine for Women.

16467. In the school, I mean?—In the school they are mixed. I am a lecturer, and there are two other ladies lecturing; all the rest of the staff are men. At the Royal Free Hospital the staff is composed entirely of men.

16468. But you use the hospital for clinical instruction, of course?—Yes; the female students are trained to act as clerks and dressers, and to do everything that students do in other hospitals, and they have the hospital practice entirely to themselves; there is no mixture of students at the Royal Free Hospital.

16469. Is the course of instruction precisely the same as the course of instruction for men?—As nearly precisely the same as we can make it. The organisation of the various hospitals differs a little in proportion to the zeal of the staff. I think, for instance, you will find that in University College there is a great deal of organisation, because they aim at getting a great many of their students through the London degree. We follow the lines of University College as much as possible, and the arrangements are practically much the same.

16470. Is there any midwifery practice in connection with the Royal Free Hospital?—None at all. We are hoping soon to establish an out-door midwifery department in connection with the New Hospital for women, which is close by, and which is worked entirely by women; but at present our students have a great deal of trouble in getting their practical midwifery practice. Of course, they are taught the subject theoretically in the school; many go to Clapham, where there is a considerable maternity charity worked by one of our past students; some go to Dublin to the Rotunda, and others go to the various lying-in hospitals in London.

16471. You probably consider it very desirable that there should be some out-door midwifery practice in order to qualify your students?—It is more than desirable, it is a necessity; the question of cost is also important to the students.

16472. You would like to see it in connection with the Royal Free Hospital?—If we could persuade them to create such a department; but we are two bodies, and we cannot have everything exactly as we like. We have to wait. We have asked them twice to consider the starting of a maternity department, and they have declined the proposal.

16473. Then, how do you do for your students with regard to infectious diseases, such as are only now received into asylums in connection with the poor law?—They have been going to the Fever Hospital in Liverpool-road, Islington, and some have been in the habit of going to Homerton. There is one lady there now working under Dr. Colley at the Homerton Hospital.

16474. Taking such a case as measles that are not received into general hospitals, how do you get any instruction in the treatment of measles?—They see cases when they are at the Liverpool-road Hospital, and they have, of course, a chance of seeing cases among the out-patients. If a child is brought in with measles a student can follow it and see it at home.

(24.) e

Earl of *Kimberley*—continued.

16475. But still it must be imperfect?—Yes, I think it is. I think the machinery for teaching the treatment of infectious diseases is very imperfect.

16476. In the same way do you not think that access should be given to your students to the large asylums to which these patients are sent?—I think it is most desirable that that should be given. I think it inevitable that they must go into practice exceedingly ignorant in that respect.

Earl *Cathcart*.

16477. Do you find that the ladies take to dispensary sort of work at all; has that been done at all; do you think ladies are employed in dispensaries now?—In dispensing we always have pupils at the New Hospital for women, where the staff is entirely composed of women. Every year we have a considerable number of pupils in dispensing.

16478. But they are not so employed at the Royal Free Hospital?—No.

16479. Are there any special difficulties which you would like to tell their Lordships of about instruction in medicine, or anything that you complain of, any matter that you would like to bring forward with regard to obstruction and difficulty?—I think the stage of obstruction is really past. We have formed our own school, and we have it now very well organised.

16480. What do you do with regard to anatomy at the Royal Free Hospital?—Nothing at the Royal Free Hospital; that is all done at the school. We are exactly on the same lines as other schools. The inspector of anatomy supplies us with material, and there is a very large anatomical class going on there always.

16481. You mentioned asylums just now; do you not think that it would be greatly for the benefit of asylums if there were to be clinical teaching there, as it would bring the medical faculty and the students among better cases if the asylums were thrown open to them?—I think it would be a very great advantage to the patients. I think it is perfectly certain that if you get many hundreds of people with one medical officer, and no inspection, the medical work will tend to be done in a perfunctory and hasty way.

16482. There is a tendency to stand still, you think, when there is not the sort of impetus that is given by inspection and visiting?—The tendency is to do very little indeed in the way of medical treatment.

16483. With regard to nursing, we have heard a great deal about nursing; have you any views you would wish to express about the nursing of hospitals?—I do not think I have.

16484. You must have had great experience; you must have seen a great many of the London hospitals?—I have not seen a great many very intimately; but we have no very great difficulty in getting good nurses. I think it is very important to pay them properly, and to treat them considerably. I think that in very many of the larger hospitals they are overworked and underpaid; but we have not much trouble in getting good nurses and keeping them.

P P

16485. And

5 March 1891.]

Mrs. ANDERSON, M.D.

[Continued.]

Earl Cathcart—continued.

16485. And in your own private practice, when you want nurses, where do you go to look for them?—To several agencies.

16486. You do not go to any of the large hospitals?—Never.

16487. You prefer the agencies?—Yes. I think one gets personally known to the managers of the nursing institutions, and they are more anxious to suit you.

Earl of Arran.

16488. Could you tell us how many of your students whom you have taken, and who have become properly qualified medical practitioners, are in practice at this moment?—I cannot say off-hand; there are about 115 or 120 qualified women on the medical register, and they are nearly all in practice.

16489. Are they chiefly in practice in London, or scattered about?—A great many are abroad, a great many in India, a considerable number are in London, and others are gradually settling in the large towns in England.

16490. And, having regard to the fact that you told us your school was increasing, medicine is evidently becoming a lucrative profession for women to take to?—Yes; I think as women go it is a very good profession for them. Perhaps we are not quite so ambitious as men are of making very large incomes, but I think we have every reason to be satisfied. I do not know of any cases of what I should call failure, except where it has been due to continued ill-health, or to the absence of the qualities always needed for success.

16491. That you might find in either case?—Yes.

Lord Zouche of Haryngworth.

16492. Do you think that the number of female practitioners is increasing yearly?—Certainly; there is no doubt about that.

16493. Not only in London but throughout the kingdom?—There is only one school, so that the increase must be in London; there is no other place where they can take their degree except London, Edinburgh, and Glasgow. But I know the number on the register year by year, and it is always increasing considerably.

Earl of Lauderdale.

16494. Do you know of any hospital where lady practitioners are employed at all in a medical capacity?—In connection with men does your Lordship mean?

16495. Yes?—They have been several times appointed house surgeons. One was appointed house surgeon to the Women's Hospital in Birmingham, and one, I think, is on the staff of the same hospital; it is the one Mr. Lawson Tait is on; he has a colleague, a lady; and I think that a lady at Bristol has some sort of hospital appointment. There are a few rather minor appointments of that kind which they have held.

Chairman.

16496. In reference to an answer you gave to Lord Cathcart just now in which you said that if you wanted a nurse for a case of your own, you would rather have one from an agency for nursing than take one from one of the large hos-

Chairman—continued.

pitals who send out nurses; can you give me any reason why you prefer them from the agencies?—I think perhaps it is a reason not founded upon very much experience; I have never sent to any of the large hospitals. I happen to know several good agencies close to me, and it is convenient. I know the managers, and it is very convenient to write or telegraph to them to send a nurse; and I have been satisfied.

16497. You mentioned that you had been in practice at another hospital; what hospital was that?—The New Hospital for Women in the Euston-road, which, in a smaller form, was for nearly 19 years in the Marylebone-road. It is a special hospital in the sense that it only admits women and children, and that all the medical staff are women. In fact we may say that all the staff, both medical and dispensers, and the clerical staff too, entirely consists of women.

Lord Zouche of Haryngworth.

16498. And the surgical staff?—Yes; we do almost everything. We have some consulting surgeons behind us, and in very special cases we may ask them to see a patient, and occasionally to operate, but we do, as a rule, everything ourselves.

16499. Do you perform operations?—Yes, we perform ovariectomy, and similar operations.

Earl Cathcart.

16500. Do you think that women have strength enough of wrist to do those things?—Yes.

16501. Do you have any difficulty in getting anatomical subjects?—We do not want them there.

16502. At the school have you any difficulty?—We had a few years ago; but all the schools have to be on the alert to get supplied early in the session. We always make application before the summer holidays; and lately we have been better off than we were at first.

16503. You have nothing to complain of on that score. I asked the question because we had a complaint the other day?—I am rather afraid to speak off-hand about it; it is a department that I have nothing to do with; and I should like to be a little guarded as to whether we have been quite sufficiently early in the session supplied with subjects; but I think we have.

Earl of Kimberley.

16504. Are you in favour of special hospitals as compared with general hospitals?—Yes, I think I am; but ours is a special hospital only in a certain sense. We take all sorts of cases at the New Hospital, except infectious cases; but it is special in the sense of our all being women. I think it is a great advantage in many cases to have people concentrated upon one class of subjects. I think that you get more advance in a particular class of disease if the minds of the medical staff are specially directed to that one line; as, for instance, at the Samaritan Hospital, which is almost entirely connected with one class of disease. I think we should not have had the same advance in abdominal surgery if we had not had such a hospital as that.

16505. Probably

5 March 1891.]

Mrs. ANDERSON, M.D.

[Continued.]

Earl of Kimberley—continued

16505. Probably you are in favour of separate children's hospitals?—Very much so.

16506. What are the special advantages of the New Hospital which recommend it to you?—The New Hospital is the only place where women can have public hospital practice. But for it the students who left the Royal Free Hospital would have to go out to India and do all sorts of very serious operations, never having even assisted at an operation. It would be a tremendous disadvantage to them to have no direct work of their own before they go. At the New Hospital we appoint a great many of them juniors on the staff. If we know that a woman is going to India she gets the preference, and she not only does many smaller things herself, but she is much more responsible for the work that the senior medical women do than she is at the Royal Free Hospital where the house surgeons are all men. At the New Hospital the house surgeon is a woman.

16507. That is to say the New Hospital is essential for educational purposes?—It is not essential in a legal sense.

16508. But for the reasons you have given?—Yes, I think it is extremely valuable. It is not legally essential, because it is not big enough to be considered a qualifying hospital by the medical council; they insist on students studying in a hospital of 150 beds; we have only 42.

16509. Apart from that reason, do you consider that such a hospital is desirable?—It is desirable to have a hospital officered by women. It is extremely welcome to the poor women themselves, the patients; they like it very much; and it is of course extremely good for the medical women of London that they should have a place where they can have hospital practice.

16510. Otherwise you would not regard hospitals specially devoted to women as necessary, I suppose?—No, I do not think so; except that the diseases of women are, I think, very much better treated on a smaller scale in buildings not very large, and not exposed to other surgical risks. I think that in that way there is a decided advantage.

16511. It would be a principle, would it not, of general application, that there is some danger connected with very large hospital establishments?—Yes; I am inclined to think that all hospitals have a tendency to get too big; that it is a good thing not to have them very large.

16512. There are two reasons for that; one being that there is some danger of disease arising from bringing together so large a number of patients; and another being the difficulty that always exists of managing a large institution well?—Yes.

Earl Cathcart.

16513. What would your maximum be, about 200 beds?—Yes; I should think that is not too large.

16514. The same idea has occurred to my mind often. You are strongly of opinion that it would be better if hospitals were scattered and not too large?—Of course you cannot possibly keep up much interest in the individual patients if the number is very large; nobody can know very much about the people. On the other hand the cost of administration is relatively larger in the smaller hospitals. With regard to the hospitals being scattered, they must be placed where patients can readily and cheaply reach them.

(24.)

Earl Cathcart—continued.

16515. Might I ask you whether your lady students attend the operating theatre of the Royal Free Hospital?—Yes.

16516. Every sort of operation?—I do not know about every sort of operation, but I think almost every one.

16517. How many might you have there at a time?—It is a rather badly arranged room; many who are there can see little or nothing; it requires a great deal of improvement.

16518. Might you have 20 at a time?—Yes, 20 there, but not 20 who can see.

16519. Do they always administer chloroform or anæsthetics outside the theatre in an ante room?—I have been there once or twice when they have administered anæsthetics in the operating room, but have just lifted the patient on to the table from another bed.

16520. It is a merciful thing, is it not, when it can be done, to administer the anæsthetic in another room?—Yes.

16521. And probably ought to be done?—Perhaps so.

16522. What is your view about that, that it should be done if possible?—It is always prolonging it, and the patients have to be disturbed and carried after the anæsthetic is given.

16523. But it is generally the case, I think in London that the anæsthetic is administered outside the theatre in an anteroom?—In the hospital I have seen most operations; at the Samaritan Hospital it is never done. The patients are brought in, the instruments of course are covered up, and everything is made to look as nice as possible.

16524. But in the case of a female patient brought in with some 50 or 60 male students looking on, it must be disagreeable, must it not?—It need not be so. The students or on-lookers could come in after the patient is unconscious.

Lord Clifford of Chudleigh.

16525. Is there any difference in the education and training of a nurse whom you would get from an agency and one from a hospital nursing institute?—I should think not, because they have all been trained, no doubt, at one of the hospitals. The training at the different hospitals differs a good deal, however.

Chairman.

16526. Is there anything else you would like to say?—I do not know whether you would like to ask me anything about the out-patient department.

16527. Certainly, if you wish to say anything about it; are you in favour of the out-patient department?—Very much indeed. I think it is one of the most precious and valuable parts of the teaching of the hospitals. It all depends on how it is worked; but if it is worked by zealous people who wish to teach from it, I think it is enormously valuable for students.

16528. Do you think that the out-patient department is too much overcrowded for the proper diagnosis and special teaching?—I have no means of judging; I have never been allowed to see the out-patient department of ordinary hospitals. At the New Hospital we have to limit the number of new cases admitted daily to 20. Of old cases there are often over 100.

P P 2

It

5 March 1891.]

Mrs. ANDERSON, M.D.

[Continued.]

Chairman—continued.

It is impossible, of course, to help keeping people waiting. If you see the people conscientiously, and you have to see 100 or 150, they must wait.

16529. But in the interests of the medical profession, are you in favour of keeping up the out-patient department?—I think it would be ruinous to do away with it. So much of the work that you see in the wards is disease almost past cure; but you see it under more or less curable conditions in the out-patient room and in a very much less stereotyped condition.

16530. Would you kindly put in the report of your school?—Yes (*handing in the same*).

Earl of Arran.

16531. Would your experience lead you to think that it takes your lady students longer to get used to the terrible sights and scenes in the operating theatre than it would men students?—I have had very little experience of men students. I do not know that I have ever heard of any of our women fainting; I have heard of men fainting occasionally; but I daresay it takes both of them a little time to get used to it. I have never known of a woman leaving off the study of medicine because she found it too dreadful. They soon become deeply interested in it.

The Witness is directed to withdraw.

MR. JAMES CALVERT, M.D., is called in, and, having been sworn; is Examined, as follows:

Chairman.

16532. You are Assistant Physician to the Royal Free Hospital, are you not?—Yes.

16533. How long have you been on the staff?—Two years and-a-half.

16534. May I ask what qualification you hold?—M.D., London, and M.R.C.P., London.

16535. Does your work place you in the out-patient department?—Yes.

16536. Would you kindly explain to us what course is pursued by a would-be patient from the moment he first arrives in the hospital?—I can only speak, of course, according to my own practice.

16537. Obviously?—The patients are in the receiving room.

16538. He has to get into that first of all?—I am taking my own course.

16539. Quite so?—I come down at two o'clock; the patients are at that time all seated either in the male or female receiving room, and I pass along them and examine each patient carefully to determine in my own mind as to whether the case is serious or comparatively trivial. Those cases which I think are serious I see myself; the more or less trivial cases I leave the house physician, who is sitting on the other side of the table, to see.

16540. But if you consider them bad enough you make them out-patients, I believe?—These are all out-patients.

16541. Have they become out-patients?—They have become out-patients before I see them, by the action of the senior resident medical officer.

16542. Then you treat those that you think are bad enough?—Yes.

16543. Do you teach at the same time?—Yes.

16544. Do you find you have material enough for teaching?—Yes.

16545. But sometimes have you not too much?—No, not too much, because, you see, the numbers are restricted.

16546. Has that restriction of numbers always taken place at your hospital?—Always in my time; but I believe that before that the numbers were unlimited.

Chairman—continued.

16547. And you have had some experience now of these people; do you think that the charity is abused or not?—No.

16548. You think that the out-patients are, as a rule, a very poor class of patients?—Yes, very poor.

16549. And supposing that yours was not a free hospital, they would have to go the workhouse dispensaries?—I should think so.

16550. So far as you can judge?—Yes.

16551. Do you keep a return of all the cases that you see?—Each patient has a letter which is a clinical record of my observations, and all these letters are kept, so that I can turn up any one of them at any time.

16552. Who furnishes them with that letter?—I furnish it myself.

16553. Is that when you see them for the first time?—When I see them I write all their history down on the paper; and after the examination I write the result of the examination also on the letter, then the treatment is put upon the letter, and the letter, with the patient, is sent to the dispenser.

16554. You are strongly in favour, I suppose, of the retention of the out-patient department?—Strongly.

16555. For the reason that it is indispensable as regards teaching?—Certainly.

16556. Do you ever have patients sent to you for consultative purpose by medical men?—Certainly.

16557. Is that done as a rule by people who are known to the hospital?—I should say, in my case, that they are people, as a rule, from general practitioners who are known to myself.

16558. You have heard, no doubt, that a great many small practitioners say that they are being starved by the free out-patient departments of the hospitals; do you consider that that is the case, or not?—Well, they may lose a very little; but I am bound to say from my experience that they must lose very little.

16559. Because, you mean to say, the people are so poor that they could not pay?—Yes.

16560. Do

Mr. CALVERT, M.D.

[Continued.]

Chairman—continued.

16560. Do you teach young ladies?—Yes, I teach them in my out-patient room, and I am medical tutor.

16561. What does that duty consist in, giving lectures?—Yes, I give lectures.

16562. Where do those lectures take place?—In the hospital. Our connection with the ladies is simply at the hospital. We have no part in the London School of Medicine for Women.

16563. Do you have to lecture to the nurses also?—I do not give lectures to the nurses; but they are given.

16564. Do you receive a fee for the lectures to the lady students?—Yes.

Earl Cathcart.

16565. Are you hampered at all in your consulting-room by these ladies attending; are they in your way?—No, not at all; they are very useful.

16566. Do they, a good many of them, come at a time?—Yes; they come by appointment; but any student has the right to come.

Earl Cathcart—continued.

16567. How many of them have you in your consulting-room at a time when you are seeing out-patients?—I should say from six to ten.

16568. Then they do not embarrass you more than the nurses do?—No; on the contrary, in some cases they are useful.

16569. But in some cases you turn them out, do you not?—No; but there is a certain class of cases that are seen separately.

16570. And you have to ask them to go away then?—No; those patients never come into the room until the others have been seen.

16571. In fact you are not hampered or embarrassed in any way by the presence of these ladies?—No, not at all.

Chairman.

16572. Is there anything else you wish to say to the Committee?—No, I think not.

The Witness is directed to withdraw.

MR. JAMES BERRY, M.B., B.S. Lond., F.R.C.S., is called in; and, having been sworn, is Examined, as follows:

Chairman.

16573. You are a surgeon of the Royal Free Hospital, are you not?—Yes.

16574. Do your arrangements as regards out-patients resemble those which have just been explained to us by the last witness?—At present I do not see out-patients; I have just been appointed surgeon. I saw out-patients until the end of last year, but I have now only in-patients within the last two months.

16575. But still the arrangement have not been altered in the out-patient department during the last two months, I suppose?—No, they have not.

16576. Are they the same for the surgical cases as those for the medical cases?—They are very similar.

16577. Are they more crowded on that side than they are on the other?—No, on the contrary, there are not so many surgical as medical cases.

16578. Is not that rather rare; or is it generally the case?—It is usually the case; there are always more medical cases than surgical.

16579. Did you teach when you were in the out-patient department?—Yes.

16580. Had you enough material for teaching purposes?—Yes, on the whole.

16581. Could you have done with more, or were you overcrowded?—On some days I had more than I wanted; on other days the material was rather short.

16582. Do you know whether owing to this restriction in numbers, which I think is 25 surgical cases, a large number of patients are turned away?—I do not know about that. I know some are turned away; but of course I do not see them when they come first of all, so I cannot tell.

16583. Are you satisfied with the sanitary state of your hospital?—Yes, quite.

(24)

Chairman—continued.

16584. You are not a salaried officer of the hospital, are you?—No.

Earl Cathcart.

16585. Do you have notes or cards from outside practitioners asking you to look at patients for them?—Very often.

16586. You have made no collection of those cards, so as to know the actual figures, I suppose?—No.

16587. But the greater tendency on the part of outside practitioners is to send surgical rather than medical cases, is it not?—Yes, because many of the cases require operation.

16588. And appliances also?—Yes.

16589. You think you never have patients who could afford to pay a fee to an outside practitioner?—I will not say never; I think we do sometimes; much depends upon the nature of the case. Obviously outside practitioners are often unable to undertake serious operations that requires hospital nursing.

16590. I am talking of the out-patient department?—Even in the out-patient department a certain number require operations which outside practitioners could not very well undertake; and many cases are sent into the wards from the out-patient room.

16591. Speaking generally, you are of opinion that you are not injuring outside practitioners by the out-patient department?—I should say, speaking generally, we are not.

Lord Zouche of Haryngworth.

16592. In the case of an operation, if the patient is anæsthetised in a separate room from the theatre, does not that deprive the students of the chance of watching the effect of the anæsthetic?—The students might be in the separate room

5 March 1891.]

Mr. BERRY, F.R.C.S.

[Continued.]

Lord Zouche of Haryngworth—continued.

room also, one or two; the general body of the students would learn nothing from seeing that at a distance, or practically nothing.

16593. Even if they saw it?—They would learn very little indeed.

16594. But that is a very important branch of surgery, is it not?—Yes, very important; but the students learn administering of an anæsthetic by actually administering, and also by being there close to the patient; they cannot learn it at a distance of many yards; they cannot see the pupil or feel the pulse; they can see nothing really worth seeing.

16595. Then they learn as you say by actually administering it themselves or being near?—At most hospitals the patients are anæsthetised by the regular anæsthetist who at the same time teaches one or more students. I may say there are some objections to that plan of anæsthetising the patient outside the operating theatre; namely, that it is very often very undesirable to move the patient after the anæsthetic has been given.

Earl Cathcart.

16596. But any anæsthetic is perpetually being during renewed during the whole operation?—Yes.

16597. So that you could give an extra whiff after you had brought him in if necessary?—Yes; but there are objections to moving patients from a couch on to an operating table; they are not very great objections certainly.

Lord Clifford of Chudleigh.

16598. Most of the hospitals that have been before us which have schools and students attached them, visit a certain number of midwifery cases in their own homes. I understand that you do not do that in your hospital?—No, we have nothing to do with that; the students do their midwifery elsewhere.

16599. But have you any particular reasons for deviating from the usual habit of hospitals?—Simply that no arrangements have been made for any midwifery for them.

16600. Have you in contemplation the making of any arrangement for that purpose?—There has been some talk about it within the last few months.

16601. But nothing definite has come of that?—So far as I know, nothing.

Lord Monkswell.

16602. You heard what Mrs. Anderson said: that the students have great difficulty in seeing; that the operating room was badly arranged, what have you to say to that?—I think there is some justice in it. If the operation is a very important one or one very interesting to the students, a large crowd of students will come, and then naturally a great many cannot see.

16603. But Mrs. Anderson said that if only about 20 were there they could not see?—That is because they have a tendency to crowd round the patient.

16604. You think that if there were a little more discipline kept, 20 might very well see?—Yes.

Lord Monkswell—continued.

16605. If they had their appointed stations and were made to stay there?—I will not say that the operating theatre might not be more conveniently arranged.

16606. Still you would say that at least 20 students might very well see an operation supposing they were placed in the most advantageous position?—Yes. Again that depends a good deal upon the operation. An operation on the inside of the mouth can naturally only be seen by one or two; an amputation of a leg can be seen by 50.

16607. You agree rather with Mrs. Anderson, that your theatre might be made more commodious for students?—For a large number; but as a rule there are not 20 students there or anything like 20.

16608. You say that as a rule you think that the theatre is sufficiently adapted, and that it is only on occasions that the accommodation falls short?—Yes, certainly.

16609. Have you ever thought whether it would be desirable to send students round to infirmaries?—Yes, I certainly think it would be desirable. I think they have a vast amount of clinical material there which is at present wasted, or nearly so.

16610. What would you suggest as to that; would you suggest that a student should go round with some medical officer attached to the hospital, or in what way should you think they ought to get their instruction?—Either that they should go round with a medical officer of the institution, or that other surgeons and physicians should have the right to take classes there.

16611. Would you consider that it would be enough for them to go round with the medical officer of the institution; that is to say, of the infirmary?—That would depend upon who the medical officer is.

16612. Just so. I suppose as a general rule you would say the medical officers of those institutions are hardly equal to the staff you have at the hospitals?—Only in that they are not so used to teaching.

16613. Probably you would prefer on the whole that the students should be sent round with somebody accustomed to teach them?—I think so on the whole. There are difficulties in the way of doing it, in that the teachers would not then know so much about the cases on which they were teaching.

16614. Supposing that you did send round your students with one of your own staff, do you think the head of the infirmary or one of his assistants would mind going round with them?—I am afraid there might be difficulty. It would be a very difficult and delicate matter.

16615. They would rather resent the intrusion, in fact?—I think so.

16616-17. I think it was said that in your hospital the London qualification was necessary for the staff?—Yes; the surgeons must be fellows of the Royal College of Surgeons, and the physicians must be members of the College of Physicians.

16618. Do you think that is desirable?—Yes, certainly.

16619. Why; on account of the teaching, or
on

5 March 1891.]

Mr. BERRY, F.R.C.S.

[Continued.]

Lord Monkswell—continued.

on account of the discipline; that is to say, on account of the character of the men, or on account of the superior teaching you consider is given in London. We have had two reasons given; one is, apparently, that some people think the London qualification is a better qualification than that of Edinburgh, Dublin, or elsewhere, and others say, whether it is a better qualification or not, at all events the morals of those who get this qualification are better looked after than they are in other towns. What is your view of the matter?—I think the London qualifications are good qualifications, and that it would be inadvisable to admit other qualifications, which are very often inferior.

16620. In fact, you yourself have not the same trust in the other qualifications as you have in the London ones?—In some I have; in some I have not. I mean, there are so very many.

16621. Exactly; then I suppose you would say that it was unnecessary to restrict the qualification simply to London; that there are one or two other qualifications which you consider might very well be added?—Speaking of the surgical qualifications, I do not know that I could name any other qualification that is as good an all-round qualification as the Fellowship of the Royal College of Surgeons.

16622. Must the members of the staff not only be members but fellows of the College?—Yes.

16623. And the physicians?—I am not in a position to answer that.

16624. Do you think there are too many schools; some doctors have given it as their opinion that there are too many schools, and that it would be better to amalgamate the smaller schools?—I have no very decided opinion on that point.

16625. Would you think it would be more desirable that the schools should be separated

Lord Monkswell—continued.

from the hospitals or attached to the hospitals?—I think it is essential that the students should be attached to the hospitals for, at any rate, a portion of their work, for the last two years of their career. At all events, I think that in the first two years of their career the work might be done very well somewhere else, either at a central institution or, as in the case of our own hospital, at a separate school.

16626. You have a separate school?—We are in a different position from most of the other hospitals, in that the school of medicine for women is much more distinct from the hospital than the medical schools of other hospitals. We, for example, on the staff of the Royal Free Hospital, have nothing whatever to do with the teaching of the students in their first two years of study; we have them only in their third and fourth years.

16627. You think that is a plan that might be well adopted elsewhere; that is to say, that there should be schools attached to the hospital for the third and fourth years' teaching; but that the primary instruction might very well be given at other schools not so attached?—It could be done; and I think that, if the schools combined, the teaching might be given better. For example, physiology might be much better taught at a central institution.

Chairman.

16628. Have you ever heard of starving what is termed the poor practitioner, by the free outpatient department?—Certainly.

16629. Do you think that that complaint is well sustained?—I should say not very often.

16630. You consider there is not very much in that?—No.

16631. Is there anything else you would like to say to the Committee?—No, I think not.

The Witness is directed to withdraw.

MR. FREDERICK HENRY ALDERSON, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

16632. You are a practising physician in London, are you not?—I am a general practitioner, physician and surgeon.

16633. May I ask what qualification you have?—I am a doctor of medicine of St. Andrew's University, a member of the Royal College of Surgeons of England, a licentiate of the Society of Apothecaries, and a licentiate of midwifery of the Royal College of Surgeons.

16634. Are you attached to the staff of any general hospital, or have you been so at any time?—I am not on the staff, but I am one of the managing committee of the West London Hospital. I have been house surgeon at three London hospitals, and I have been President of the West London Medico-Chirurgical Society.

16635. Will you tell us at what hospitals you were house surgeon?—I was house surgeon to the West London Hospital for nearly two years; I was assistant house surgeon at the Poplar Hospital, and I acted as *locum tenens* for the house surgeon of the Middlesex Hospital.

(24.)

Chairman—continued.

16636. Will you tell me in what part of London your practice is now?—In Hammer-smith. I have been there getting on for 30 years.

16637. Is that in the immediate neighbourhood of any large free hospital?—I do not know whether you would think it a free hospital, but it is very close to the West London Hospital, which is supported by voluntary contributions; but they have letters, so that it is not quite a free hospital.

16638. But it has been explained to us by several witnesses that practically the letters are no restriction, that the cases are taken in according to the severity of the disease?—That is so; any who come, whoever they might be, are taken in if their case is urgent.

16639. So that it is practically a free hospital?—It is.

16640. Do you consider at any rate that the competition of that free hospital acts unfairly upon your means of gaining your livelihood?—I

P P 4

do

5 March 1891.]

Mr. ALDERSON, M.D.

[Continued.]

Chairman—continued.

do in this way: that they very often receive people who could well afford to pay. If for instance an accident happened to any gentleman we should say nothing about the hospital attending to him immediately, and we should expect that that gentleman would thoroughly recompense the hospital, although they do not always; but we do maintain, supposing anyone here present dislocated his arm or his shoulder, and the hospital replaced it, that we have the right to object to their going on attending it till the completion of the cure, instead of rendering only temporary assistance, referring such a case to the regular medical man. I say nothing about a hospital attending such cases at once, although their own medical man might be as well able to do so, and they would have an infinitely better chance of being attended to, because it is by no means certain that they would have the attendance of men with the practice of their own medical man. They take their chance of whether they get one of the staff; they must run their risk of that. So that it is not for their own interests always to go to a hospital.

16641. Do you consider that the charities are much abused in the metropolis?—Yes, I do think that they are abused; there is no doubt that they are abused. I may mention a case in point. Last Monday week I had two patients who came to me who had been refused at the hospital, and when I charged them what I considered a fair fee, viz.: 3 s. 6 d.; one paid for himself and wife 7 s. and the other 2 s. 6 d. in one day. They were sent to me from the hospital by the house physician because he considered that they were unfit for hospital patients; but I might observe that that would not have been done only my son was the house physician; otherwise I do not suppose that it would have been done.

16642. Those are two instances we will say. On what ground do you base your opinion that the charities of the metropolis are abused?—On my own experience. I have suffered from it indirectly and perhaps directly, but not perhaps so much from the hospitals as from the dispensaries. Every medical man knows positively that people go to the hospitals and dispensaries who can well afford to pay a private practitioner. I might illustrate my evidence by a case that happened quite recently. A patient of mine, a gentleman, and a M.A. of an university, in a good position, thought nothing of taking his child up to the Great Ormond Street Hospital for advice; he did it without consulting me and quite independently of me.

16643. You mean to say that he had consulted you once?—He had consulted me, and I had treated the child properly.

16644. And then he took the child to the hospital after that?—It was impossible to radically cure the child without an operation. I suggested that I was perfectly willing to meet anyone in consultation, but independently of me, he took the child up to the hospital. I quite understand how anxious a father must be, the child being a nice little baby girl; therefore, I was willing to meet any specialist he liked; and the child's aunt said of course the father was willing to pay a fee; however, he went up to the hospital.

16645. Still it would be very difficult, would

Chairman—continued.

it not, to determine who were the right recipients of charity?—In many cases it would; it would take time. But at the present time charity is very much abused. No one hesitates at all now; no one minds saying that they have been to a hospital for treatment. There is no proper feeling in the matter; they think the hospital is as much for them as for the poor. And with regard to the interests of the poor, it takes up time that would be better devoted to them. I know that the hospitals are very crowded, that there are quite sufficient poor for them to treat. I will grant that, and I do think that sometimes the poor have the best of it. Occasionally we do meet cases where people can hardly afford to pay the fees of an expert physician or surgeon, and sometimes we should be glad to call in an expert, but we may hesitate because we know that the fee of a guinea or two guineas, although a man may be in a very fair position, is a serious consideration. But that would not be any consideration in the case I have last mentioned. The only idea, no doubt, was to get the very best advice which he thought could be obtained at the Hospital for Children. And it is the case, I am sure, that special hospitals are much more abused than general hospitals. As I have said, the hospitals are crowded over and over again with out-patients, and it is almost impossible to prevent certain cases escaping notice that ought to be noticed. And I have no doubt that that is how diphtheria spreads; people go with very sore throats, and because the sore throat is supposed to be slight are not properly attended to; diphtheria may in the early stages be easily overlooked or even impossible to detect. Diphtheria is very prevalent in my district just now, and I have no doubt that it is spread by people going about casually. I know that certain things are overlooked at hospitals, and it is impossible to prevent it because of the great multitude of out-patients.

16646. You think I gather that as well as starving the practitioner, and admitting of the abuse of charity, there is a danger, in your opinion, of the spread of infection owing to the out-patient department?—I think that "starving" the practitioners is a very severe word; I do not consider that I have been starved; but I consider that my practice has been injured, and it militates against deserving young men making a practice, and tends to lower the profession in many ways by enabling men to resort to practices that are most reprehensible.

16647. What sort of practices do you mean?—I mean open dispensaries, and things that they would not do otherwise. I have too much respect for the profession to mention them, but you may see them occasionally. Many a man who would have scorned to procure abortion at one time of his life has been gradually led to do such things by failing to get a practice by legitimate means. I do not put it stronger than that but I say that such things do happen; it is lowering the tone of the profession which is not as good as it was 10 or 20 years ago, I am sure, because they feel that they must live.

16648. Then there is great inequality of fees, is there not?—Very great; a great deal too much so between what an honest man, and, in some cases, an overreaching man will charge. I think

5 March 1891.]

MR. ALDERSON, M.D.

[Continued.]

Chairman—continued.

I think we want some code the same as the lawyer has.

16649. A recognized code?—Yes, and that no medical man should be allowed to attend at a lower scale of charges. We must provide for the poor, of course. I approve to a certain extent very highly of the development of the provident system which was advocated by a committee presided over by Sir Spencer Wells. I thought that was very fair and good, and that a man could take office under it. But that is a very different thing from a medical club, and attending the whole family for twopence a week, which is most derogatory.

16650. Can you give us any idea what, in your opinion, such a recognized code ought to be?—I think I can because I have talked the matter over with a great many. I for myself, certainly, would rather not attend any person under 3 s. 6 d. or 5 s. a visit, including medicine, because I hate charging for medicine, unless it were under a provident system, which I should be pleased to see developed. But it is not considered etiquette for a medical man to have a private dispensary of his own, although I should like to see it, because it is open to abuse when it is private. I think, of course, that every poor person ought to be attended to, and, I think, in some cases, medicine ought to be free. I have attended cases which I know I shall not get paid for. I have this morning paid a visit on my way here to the sister of a medical man who has been in a good position, but who has no means; she is above going to a hospital; and I think that many a clergyman, many an artist, and many a poor professional man is very much worse off than the poor for medical advice. I have often been quite sorry for them; and occasionally I have attended them when I have known that the chances were most remote that I should ever get paid.

Earl Cathcart.

16651. Did you and the medical officers of the hospital agree about the treatment of this little child?—I did not learn the result; but I hope she is going on with what I advised. In my opinion I did not think an operation desirable, as an infantile hernia may be cured by time, and operation is not always a success.

16652. My question was simply whether you and the medical officers agreed?—I have not heard the result. I have seen the father since, when he said he wished me to understand it was from no dissatisfaction with myself that he took the child to the hospital.

16653. I want to ask you further, was the father of that little child in a position to pay a two guinea fee to a consultant?—I am quite certain that that was no object with him; his object was to get the best advice he could.

16654. Have you ever sent any cases of your own to a hospital with your card?—I get them in myself: I am a good subscriber to the West London Hospital; I have plenty of letters indoor and out.

16655. But as an outside practitioner you do occasionally send a patient up to the out-patient department?—I do.

16656. Is there anything practicable that you

Earl Cathcart—continued.

could suggest for the better management of the out-patient department in regard to the interest of out-door practitioners?—I think if it were limited to a certain number of urgent cases it would be very desirable, instead of having them thronging there and being the focus of disease, and making it a rendezvous for idle folk; instead of which, I think that the hospital committees rather encourage it because it looks well in the reports to have a large number attending.

16657. What did you do when you were a medical officer yourself in the out-patient department?—The system has developed largely since then.

16658. Did you take a very jealous interest and care in those days of the outside practitioners?—No, I do not suppose I did; I might have done so.

16659. Then I suppose when you were a medical officer of an out-patient department of a hospital you acted honestly and fairly to the best of your judgment to the cases you took?—The system was not so developed then. I was only house surgeon, and was not specially confined to the out-patient department.

16660. You do not mean to say, do you, that in your opinion the medical officers of the out-patient departments do not act fairly and honestly in rejecting people whom they do not think proper subjects of charity?—I do not think they can; in the case I mentioned, to some extent I think they did, because I have heard since that they did refuse to take the case into the hospital.

16661. Do you think that lock cases are as frequent in your private practice as they used to be?—I have not so many of them.

16662. You think there is a diminution in their number?—My practice you see is better than it was, not more, but of a better class.

16663. But still, as the result of your general knowledge, do you think that that class of patient is declining?—In my limited experience of it, I think it is.

16664. Do you think that the disease is of a less severe character?—I think so; I do not see so many cases as I did when I was younger.

16665. What did you say was the lowest fee which you would suggest that medical men should take?—I think 3 s. 6 d.; I take less than that occasionally; but, at the present time, such a system would not do; we must have the provident system more developed, which it soon could be; there is plenty of means already for developing it; the Metropolitan Provident Association is trying to do good already, but they have not had the support hitherto of the profession, because the fees named are too inadequate.

16666. What are those fees that are so inadequate?—The fees have been, I believe, as low as 3 s. a year; but I approve of the terms sanctioned by the committee, of which Sir Spencer Wells was chairman, and the fees that were suggested, they were very low.

16667. My own mind is very open to conviction, but I am bound to say that, so far as you have gone yet, you have not quite satisfied me that there is any gross abuse in regard to the

5 March 1891.]

Mr. ALDERSON, M.D.

[Continued.]

Earl Cathcart—continued.

the management of the out-patient department ; if you have anything further to say, specifically, on the subject it would be very acceptable to me ?—I have given one or two illustrations, and I could give more ; but I feel that it would, perhaps, not be right for me to mention cases.

16668. But in a matter of importance to your profession there should be no delicacy. I think you should say what you want to say when you come here ?—I have mentioned one case, and I could multiply it, I am sure. Personally the medical officers of the hospitals are most friendly to medical men, and I do not think that they personally encourage any abuse.

16669. It comes really very much to this, does it not, that the medical profession, like every other learned profession, is overstocked ?—Yes.

16670. And there is more competition ?—There is no doubt about it. If I may make a suggestion, I should like to develop the teaching power of the infirmaries. It seems to me that the teaching power is very much curtailed, and that we are making no use of the magnificent infirmaries that we have. I would suggest that if the out-patient department of the hospitals was limited we might want more power of teaching.

16671. How would you do that ; are not the medical officers of the infirmaries already fully worked ?—You could increase the staff. But I think that the great blot on our profession is that so many hospitals have a bye-law excluding general medical practitioners, just because they are general practitioners, from the staff of an hospital. I should myself have liked a few years ago to be on the staff of the West London Hospital, because I was house surgeon there ; but because I am a general practitioner, although I had been house surgeon, and often used to treat the cases entirely, I am excluded.

16672. But you have gone off from the point ; we are on the infirmaries now ?—I think it would be a good thing if we could utilise them in some way ; it would want thought and development, but I think there is a large field, and there are splendid buildings now with plenty of room.

16673. But the point is that the infirmary officers are worked up to the highest pitch, and would have no time to take people round and teach them ?—But their staff might be increased, I think, with advantage. If I might be allowed to suggest another thing, I should like also to say that one reason for my wishing to come here was because I think that there ought to be some disciplinary power over the profession. I think it would work better for the hospitals, and better for the public. I also think that there is not sufficient means provided for the professional class of getting remuneration in cases where they could. I rather approve of paying-patients in hospitals under certain conditions, but not with the low fees that I saw advocated in the Royal Belfast Hospital, only 5 s. or 10 s. a week. I think that the general practitioner ought to be allowed to have some part in the treatment of the cases that go from him to a hospital ; that in certain cases he should be allowed to follow his cases into hospital. As you have asked me for cases I will tell you of one as an illustration of

Earl Cathcart--continued.

how that hurts us. Some time ago a patient of mine, the son of a builder, fell off a church steeple ; he was taken up with a slight concussion, and had done some injury to his nose. I was asked by his father to go and see him at the hospital, and I went. Being one of the committee, I did not feel it as much as anyone else would ; but I did feel it to some extent that I had no right to be there, although I knew I was welcome as a member of the committee ; but I could not go and treat that patient. Whereas, I think if I had been allowed to follow him in and treat him as my patient ; of course, if he wanted trephining, or any severe operation, then it would have been my duty to have called in one of the staff of the hospital, and he ought to have been able to charge his full fee. In my opinion, by that patient being admitted into the hospital the hospital was put to the unnecessary expense of his board, and I was debarred, from my professional position, of the right of attending him, and an expert was done out of a fee had an operation been required that could well have been paid if he had been out of hospital. It was quite right to take him in because it was nearer and better for him. But there is a great deal too much gratuitous treatment. The hospitals are so beneficial that I want to be very careful in condemning them ; they do so much more good than evil ; but because they do so much good there is no reason why we should not remedy the evil.

Earl of Kimberley.

16674. You, I conclude, would be in favour of there being such a number of out-patients at the hospitals as are absolutely necessary for medical instruction ?—I think so ; but I think they would be better selected if the house surgeon, or house physician, knew that he must only take a certain number as they do at St. George's Hospital now, where they take good care only to admit the cases that are most urgent for clinical instruction.

16675. Therefore you would desire that the number should be limited to those which are absolutely necessary for medical instruction ?—Yes.

16676. But apart from that, would there not unavoidably be a certain number of urgent cases brought to the hospital which it would be necessary to deal with at once for the sake of the patient ?—Yes, I think there might.

16677. Those cases you would also accept ?—Yes, I would accept such cases as those ; but I think if they were able to pay, it should be known that the hospital could recover the expense, and that it should be the duty of the secretary to recover it. There should, of course, be no question of payment at the time, and no paltering about a fee ; but when the time is over if a man could pay he should not merely be attended to in a hospital, and receive the benefit, and get off scot-free without any payment whatever.

16678. Your view, as I understand it, is this. That in the case of any patient who for some good reason was admitted into a hospital and was well able to pay, the hospital should, after treatment, be entitled to recover such payment as was reasonable ?—And that it should be their duty to do

5 March 1891.]

Mr. ALDERSON, M.D.

[Continued.]

Earl of Kimberley—continued.

do so. That would prevent a great deal of abuse, and would bring in a large sum of money that was being lost. It should be compulsory upon the committee of management to see to that. At present the charity is very much abused. The feeling is, "Oh, we can go to a hospital." I wish to say that I cannot speak too highly of the hospitals.

Lord Clifford of Chudleigh.

16679. Do I rightly understand you to say that you object altogether to the hospitals being used for consultative purposes?—That would involve a great deal of time. I think that the consulting work ought to be done out of hospital. Now and then it would be convenient to us to take a patient there for consultative purposes; but that would occupy so much time that I do not think that would be a good thing generally in the interests of the public.

16680. You do not think that is one of the offices of a hospital?—No. The hospital is to provide for the poor.

16681. But do not you think that a hospital may well provide for the very poor entirely; and for those who are above the very poor, who are able to employ a local practitioner, it might be used for the purposes of consultation?—I think it might. Occasionally I myself sent in a patient. The other day I was down at Slough seeing a young lady with a tremendous wound, it had been attended to and it had not. I saw that the poor girl, although her relatives were comparatively well off, was needing hospital treatment and I got her in, though I felt I had no business to do so; but I took care that her relatives paid something for it. It was a necessity in her case because she wanted proper attention, and because her aunt was old and there was nobody to look after her. But in that case there was no loss, because I took care that the aunt paid something, and she sent more than was sufficient. In another case I sent the child of an employé of a brother of mine, but he sent 50 *l.* directly afterwards, and in that case the hospital benefited; but other people might not have done as he did, he is a most generous fellow. On the other hand, I think that it was most unfair to the surgeon who did the operation, because my brother would have been equally pleased to give him a 10 *l.* or a 20 *l.* note out of it; therefore an injury was done to that young surgeon. I think that young specialist surgeons have more cause to complain than anybody; they do a tremendous deal of work for nothing, scientific work, and splendid work for the public; and yet they are half-starved and go and commit suicide sometimes because they cannot get a living. In that case the gentleman who performed the operation on the child ought, I am certain, to have had a 20 guinea fee put into his hand for it.

Earl of Kimberley.

16682. Taking such a case as I know actually occurs in practice, when somebody in the country suffers from a disease, and requires a difficult operation, and the surgeon attending him recommends that he should go to one of the hospitals in London that that operation may be performed by one of the most skilful operators, you would

Earl of Kimberley—continued.

say that if he was able to pay, you would make it a condition that he should pay some reasonable fee for that?—Certainly.

16683. But you would have no objection to his obtaining those services in that way?—Not at all. I will tell you another case; I will mention it because it is a most important case, and refers to the same surgeon. I had a case of a youth who had stone in his bladder. I thought so; I called in a consultant; the same surgeon who performed the operation on the child; he agreed with me after sounding the youth that he had stone, and he agreed with me that he was willing to do this operation for a small fee, and the father could well afford to pay that fee; and I was in hopes that he would perform the operation. The next day the father said to me, "Well, we shall not have that operation done at home, it would be very awkward; he could not have such good nursing." I said, "If he must go to a hospital I will give you a letter and get him into the West London Hospital, so that Mr. Keetley shall do the operation; I have great faith in him." He said, "No, I need not trouble you, I can get him into St. Peter's Hospital," and he had no trouble or difficulty whatever to get him in; it was as easy as possible. A little time since I read an account of the father of the youth having retired, and he must have retired on a very fair income, because he was a wholesale tea merchant. He was a very worthy man who had made his money, and he could easily and willingly have afforded to pay any fee that a surgeon liked to ask. Now I was done out of my patient, Mr. Keetley was done out of his fee, and the expense was thrown upon the subscribers of St. Peter's Hospital. I have now in my pocket an account of a dinner given to celebrate his retirement, showing that he is a man of some influence; and I have also a letter from Mr. Keetley. I cut the account out of the paper and sent it to Mr. Keetley, and I have his letter which I do not mind showing to any of your Lordships because it will give his views (*handing in the same*). He was done out of his fee in that case.

Lord Monkswell.

16684. I think you said that the profession was overstocked. I have heard it stated that medical students are not increasing in proportion to the population, but that there is rather a dearth?—I do not think there is any dearth. There were fewer at the last entry; but, with that exception, they have been very much increasing during the last 20 years; and I have a proof of that. A young medical man was with me two or three nights ago, and was telling me how much more he would have to pay for a practice now than used to be the case, because whenever a practice is to be sold there are so many willing to buy it; proving that there were so many who do not know what to do; they cannot find work to do, and they cannot find professional employment.

Chairman.

16685. Is there anything else you wish to say?—I think not.

The Witness is directed to withdraw.

Ordered,—That this Committee be adjourned to Monday next, at Twelve o'clock.

Die Lunæ, 9° Martii, 1891.

LORDS PRESENT:

LORD ARCHBISHOP OF CANTERBURY.
 Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
 Lord SANDHURST.
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MRS. ALICE MARGARET ALISON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

16686. YOU applied, did you not, to be a nurse at University College Hospital?—Yes.

16687. And you were objected to on the ground of being a Nonconformist?—Yes.

16688. And did you subsequently get appointed there at all?—No.

16689. I will read you some questions put to the Sister Cecilia and her answers, to which you wish, as I understand, to give a contradiction. At No. 15913 the Archbishop of Canterbury asked Sister Cecilia, "You engage the nurses, do you not? (A.) Yes. (Q.) Do you engage them from any denomination? (A.) From any denomination. (Q.) Do you make any inquiry as to what religion they are of? (A.) Yes; I send them a paper like this (*handing in the same*). (Q.) And they have to enter their religion on it? (A.) Yes. (Q.) Do you give any preference on account of any religious profession? (A.) None whatever. (Q.) You go by their qualification as nurses? (A.) I go by their qualification when they become nurses, but I do not give any religious preference. (Q.) And there is no interference with any denominations? (A.) None." That you found not to be the case?—I had no paper. This lady refused to consider my application on the ground that I was a Nonconformist.

16690. Did you apply to any of the authorities of the hospital on the subject?—No.

Earl of Kimberley.

16691. When was this?—In October 1883.

16692. Do you know whether the head of the establishment then was the same as the present head?—I do not remember of my own recollection, but I have been told since that it was Sister Cecilia.

16693. Did you apply in writing?—No, in person.

16694. Did you receive an answer in writing?—No, in person.

(24.)

Earl of Kimberley—continued.

16695. Was nothing said to you whatever, except that you were asked whether you were a Nonconformist?—I am not sure whether I was asked the question, but I stated that I was a Nonconformist, and the lady who was with me also stated that fact.

16696. And what did the matron then say to you?—That I was ineligible.

16697. Because you were a Nonconformist?—On that ground; there was nothing else discussed.

16698. And you never made any representation to the hospital authorities?—No.

Earl Cathcart.

16699. Had you had any previous experience as a nurse?—No.

16700. You had not been a nurse before you applied to be received as a probationer at University College Hospital?—No.

16701. When you saw this lady was she dressed as a religious person?—She was dressed in the dress of the All Saints' Sisters.

16702. And from that, I presume, you imagined that she was a person of pronounced views?—Yes; but I had with me a lady of equally pronounced views, another sister.

Chairman.

16703. What was her name?—My aunt, Miss Boddy, at that time a member of the All Saints' Sisterhood.

Lord Thring.

16704. As I understand, the only conversation was that you announced at once that you were a Nonconformist?—I told her that I wished to enter as a nurse, and my aunt, Miss Boddy, told her the same thing, and then I was put on one side simply because I was a Nonconformist.

16705. Did you state at once yourself that you were a Nonconformist?—Yes, after I had stated
 Q Q 3 that

9 March 1891.]

Mrs. ALISON.

[Continued.]

Lord Thring—continued,

that I wished to go in as a nurse; because I had been told that there was a very rigid rule as to the admission of Nonconformists.

16706. You stated yourself that you were a Nonconformist to the lady?—Yes.

16707. And did you state what denomination you belonged to?—I cannot say; I do not remember.

16708. However, you stated that you were a Nonconformist, and then the lady replied, "Then you are not eligible"?—That is the best of my recollection.

16709. It was a reply to that effect, at all events?—Yes, it was a reply to that effect.

16710. Would you know the lady again if you saw her?—No, I do not think I should.

Earl Cathcart.

16711. Would you mind saying what your particular religious persuasion is?—Scotch Presbyterian.

Earl of Kimberley.

16712. Have you been a nurse since?—No; my name was Lawrence then, I may mention.

Lord Saye and Sele.

16713. I suppose you know that the religious views of the All Saints' Sisters have nothing to do with their engagement as nurses?—I did not know that; I know it now.

16714. I have been assured that it is not the case that their religious views have anything to do with their engagement?—I have two letters here from the two ladies who were with me at the time.

Earl of Kimberley.

16715. If they are not confidential you will perhaps read them?—Some part of them is confidential. May I read part of them.

Chairman.

16716. Yes?—This letter is from Miss Boddy, who was at that time an All Saints' Sister and who went with me. "I think so far as my recollection goes what you say is true, but I believe the rule about admitting Nonconformists is now kept very strictly, and even when I told you that I thought it might be in your case relaxed, it was only a supposition on my part; I had no

Chairman—continued.

foundation for it. The name of the sister we saw was Sister Cecilia."

16717. What is the date of that?—March 6th, 1891. The other letter is from a lady, the widow of the Rev. Allan Sinclair, who was with me at the time. She says, "As far as I remember our visit to London was in the October of 1883. I distinctly remember the sister seated in the corner of the room in which you interviewed her, but her name I cannot now produce. For some time I remembered her name, for the utter intolerance of shutting out Dissenters impressed me unfavourably on your account."

Lord Thring.

16718. Although you do not recollect the sister who told you that Nonconformists were ineligible, she left the impression on your mind that she had the power to exclude you?—Certainly, because it was the private room of the sister in charge of the hospital to which I went.

16719. You imagined that you were talking, at all events, to a person who had authority to reject you?—Yes.

Earl of Kimberley.

16720. You applied, did you not, to see the head of the nursing establishment?—Yes.

16721. And you distinctly understood that the lady you saw was the head of the nursing establishment?—Yes.

16722. Is Miss Boddy still a sister in that sisterhood?—No; she is now a member of the Kilburn Sisterhood.

Chairman.

16723. I will read again to you this question No. 15917: "Do you give any preference on account of any religious profession?" To that question the witness answered "None whatever." According to your experience, at any rate, that answer is a misrepresentation?—Certainly.

16724. Is there anything else that you wish to state to the Committee?—No, except that I express no opinion whatever as to the justice of the rule; but I saw that statement in the paper, and I thought it right to state to the Committee my own experience.

The Witness is directed to withdraw.

MR. CHARLES H. BYERS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

16725. You are the Secretary of the Metropolitan Hospital, are you not?—Yes.

16726. How long have you held that position?—Four years.

16727. And previous to that, had you any experience of hospital administration?—No; before that, after I left school, I was for 10 years with one firm, underwriters and insurance brokers, at Lloyds'.

16728. Formerly this hospital was called the Metropolitan Free?—Yes.

16729. And why was the "Free" taken out?—Would you allow me just to state first, how

Chairman—continued.

the hospital was started, and to tell you about that?

16730. Yes.—It was started originally in 1836 as a dispensary pure and simple (there were no beds at all) by our present chairman, Mr. Joseph Fry, who was one of the sons of a lady, whose name is well known to most people, Mrs. Elizabeth Fry; and by him and his friends it was started in a very small way. At the suggestion of the late Duke of Cambridge some beds were added; and after that gradually, little by little, it obtained a maximum of 40 beds. The hospital was situated in the heart of the City,

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

City, in Devonshire-square, Bishopsgate; then by the action of the Metropolitan Railway Company they were turned out of that building, and had to obtain temporary buildings in Commercial-street, Spitalfields. When looking about for a site, their attention was drawn to the fact that, in the north-eastern part of London, there was no hospital accommodation at all, with the exception, of course, of the German Hospital; and a triangular piece of ground, bounded by the Kingsland-road, the Enfield-road, and St. Peter's-road, was obtained; and there we found that St. Bartholomew's on the south west, and the London Hospital on the south east, and the Great Northern Central Hospital on the north west, were each exactly two miles from our hospital, the German Hospital, of course, being much closer. The new hospital was then built, at a cost which I can tell you later on, but at something like 36,000 *l.* in all, to accommodate 160 beds when completely full. It is the newest hospital with the exception of the Great Northern Central (it was completed in 1886), and my committee believed, and still believe, that it was built on the best sanitary plans, with cross-ventilation; each ward is not only isolated from every other ward, but at the end of each there is a fire-proof building, or, rather, there are two fire-proof buildings; on the one side are the bath-rooms and the lavatories, and on the other, the closets and the sinks; so that in the event of a very bad fire all the patients in that particular ward, together with all the nurses, would be perfectly free from all danger by going into these fire-proof buildings till fire escapes should come. I may also state that there are two fire hydrants fixed and attached on each floor, and that there is a fire drill conducted by Shand, Mason and Company (who put up all the fire appliances), once a quarter, in which all the nurses as well as the porters, take part. Then, in the early part of 1887 (my predecessor having died in November of 1886), a requisition was signed by the necessary number of governors calling an extraordinary general meeting, and a notice was not only inserted, as the rules demand, in three of the morning papers, but also an individual notice was sent by post to every governor of the hospital, there being some 1,150 in number at that time, stating exactly what was proposed to be done, namely, the alteration in the name of the hospital, changing it from "Metropolitan Free Hospital" to "Metropolitan Hospital"; and at that meeting it was unanimously decided, or, I think, with one dissentient, to drop the old title, and that the hospital should, in future, be called the Metropolitan Hospital. Might I now state what the constitution of the hospital is?

16731. I should like first to ask you a question or two about the provident department. Have you a provident system at the Metropolitan Hospital?—Yes.

16732. Who was the originator of it?—Sir Edmund Hay Currie.

16733. Will you explain that provident system?—I will do so as briefly as I can. Every accident and every urgent case is at our hospital treated perfectly free, being taken in on

(24.)

Chairman—continued.

its merits, and irrespective of the social status of the person. At the same time every person who comes to the hospital is seen for the first time by the doctor on duty, is prescribed for and receives seven days' medicine; after that, certain questions are asked, which it is perfectly optional on his part to answer or not; and I was instructed by the committee at the latter part of 1887 to draw up a set of rules to govern this provident department. I do not know if you would like to have all the rules read aloud; there are some 14.

16734. Yes; will you please state what they are?—“(1.) This provident department is intended for persons living in the hospital district who are unable to pay the usual fees of medical men. (2.) Inquiries, when needful, will be made if it is thought that an applicant is able to pay the regular fees of medical men” (that is to say if their answers, in our opinion, are untrue). “(3.) It is to be generally understood that no single person earning more than 21 *s.* on an average per week (or in the case of a man, wife, and family, 35 *s.*) will be able to become a member of this department.” Perhaps I ought to state here that originally that wage limit was higher, namely, 25 *s.* for a single man, and 40 *s.* for a married man. Then we found that ours was such a very poor district that a man who obtained something like 40 *s.* a week, was comparatively speaking, for that neighbourhood at all events, a rich man; and therefore as we did not wish to do any harm to the medical men in the neighbourhood, we reduced the wage limit, without in the least affecting the class of people who came, I think, because the majority were a great deal poorer than that. The 4th rule is, “Such persons can only become members of this department on payment of the following fees” (and this is the most important clause of the whole), “made regularly in health and sickness. Accidents alone admitted free.” Then the 5th rule states the payments, “Adults 1 *d.* a week, or 4 *d.* a month each. Children (who will not be allowed to join without one of their parents), 2 *d.* a month each; but 6 *d.* a month will include all children in a family under the age of 16. (6.) An entrance fee of 6 *d.* will be charged for either a single person or whole family joining at the same time. (7.) Members of benefit societies, on showing their tickets, will not be required to pay an entrance fee. (8.) No person can receive the benefits of the hospital after 1st February 1888, until payments for two months have been made.” That means to say that a man, because he falls ill and comes there and pays for one month, does not come into immediate benefit; two payments have to be made. “(9.) All medicines will be provided by the hospital, but 1 *d.* will be charged for each time the prescription is made up” (this is practically a registration fee). “For each empty bottle provided by the hospital, 1 *d.* will be charged. Members are therefore advised to bring their own bottles (quart or pint), which must be perfectly clean.” Then comes the heading “Home visits.” I must here state that this provident department is not only an out-patient provident department, but a home department; that all the people who

Q Q 4

belong

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

belong, can, if they send notice at proper times (which I will read out to you) get visited by the doctor of their district at home. If in the opinion of the doctor of that district, the patient is too ill to be properly relieved at his own home he is admitted as an in-patient. Of course the regular fee is exactly the same, a penny a week. The rule reads, "If the doctor receives notice, at his residence, before 10 a.m. that the patient is too ill to attend at the hospital, the patient will be visited free. After 10 o'clock in the morning notice must be given at the hospital, when the charges for home visits will be as follows: After 10 a.m. and before 6 p.m. the charge will be 6 *d.* After 6 p.m. and before 10 p.m. the charge will be 1*s.*" Then "night visits"; for these there is a charge of 2*s.*, and the object of that is to prevent patients hanging on till the last minute, if I may say so, before going to the hospital, waiting till after 10 in the morning, by notice before which time they can have a visit for nothing, and then towards night feeling very ill indeed (there probably being very little the matter with them) and then sending for a doctor when there is no particular reason why they could not wait till next morning. Then comes the heading "Midwifery Cases." "Married women can be attended during their confinements by certificated midwives for a fee of 15 *s.* This fee can be paid in instalments but the whole amount must be paid one month before the confinement. When necessary the midwife can call in one of the doctors of the provident department"; that is to say that the doctor himself does not as a rule attend the confinement.

16735. What is the Metropolitan Hospital's district?—I think I can explain that better if I may put in this (*producing a map*).

16736. How do you calculate the district?—By taking a mile radius (*explaining it on the map*).

16737. How many doctors are there attached to the provident department?—Four.

16738. Are those medical men in receipt of a permanent salary from the hospital?—They are each in receipt of a permanent fixed salary of 100*l.* a year.

16739. What sort of position do they occupy?—They are all very well qualified men who were nominated by our own permanent medical staff, our honorary staff, who sent up the names of three gentlemen in the first instance; the fourth only came on afterwards when the work became too heavy for three; and being nominated by members of their own profession I take it they must be very good men. I can hand you the qualifications of the four medical men at any time; I have it in the report.

16740. Do these gentlemen practise on their own behalf as well?—Certainly.

16741. Do they get any fees beyond the 100*l.* from the hospital?—No, none at all; in any case of home visits the sixpence or the shilling which may be charged for those home visits never goes into the pockets of the medical men.

16742. Then are these gentlemen out-patient doctors as well at the hospital?—Yes; each of these four doctors attends two days a week; and I ought perhaps now to state that there is

Chairman—continued.

attendance at the hospital on Mondays, on Tuesdays and on Thursdays in the morning for provident patients, and on every evening except Saturday; we felt that it was no good having it open on Saturdays, that poor people would not come then, because their weekly marketing was going on, and we found that we could do without opening the department on Saturday morning.

16743. Do you find the work very heavy on Monday morning?—Yes, very heavy on Monday morning, and heavy on Monday night and Tuesday; those are the two heaviest nights.

16744. Are the same number of medical men employed on Mondays and Tuesdays as on the other days?—Yes; that we could not help.

16745. How was this idea of the provident department first started?—The medical men of the neighbourhood, about 90 of them, received notices asking them to come to the hospital, and discuss this proposed plan; of these 90, seven took the trouble to come.

16746. And did they acquiesce?—Since then they have done so. Directly the provident department was started they did object, and they wrote letters to the papers; but lately we have had no complaints; at any rate I have heard of none. The whole argument of my committee is this: while the hospital worked on the old lines my committee did know of abuses in their own hospital (I do not speak as to any other hospital) in the out-patient department; and feeling that there was this abuse, they tried to cure it, at any rate to stop it. They do not say that this provident system is absolutely the only right one; they say that in their particular instance they did the right thing or tried to do the right thing; they tried to make people who could pay a doctor pay a doctor, and allow those who absolutely could not pay to have plenty of time and attention at the hospital; and I think now the medical men in the neighbourhood are beginning to see (especially when we reduced our wage limit from 40*s.* to 35*s.*, in the case of a married man, and from 25*s.* to 21*s.* in the case of a bachelor), that we are not trying to take money out of their pockets. If we ran the hospital as it used to be, as a free hospital, it must stand to reason that the medical men in the neighbourhood would suffer far more than they do now.

16747. Do you have any free out-patients besides the accidents?—Everybody who comes for the first time may or may not be a free patient; in all probability he is a free patient for his first visit; he may join the provident department, and may not; and we have a great many trifling hurts; we have certain small factories near us, ginger beer and soda water factories, and we have hundreds of cases of cut hands and cut heads; they come there, and are attended as free patients, and come back to have their wounds dressed.

16748. Without becoming members of the provident department?—They are asked to become members; but if the doctor in charge of the case says, "I, myself, wish to see that case again," the doctor has a certain margin allowed to him to reserve any particular case that he may

9 March 1891.]

MR. BYERS.

[Continued.]

Chairman—continued.

may wish to see. A patient, for instance, may live a long way off, outside our district altogether; if he comes there, and it is a case which the doctor wants to see again, the doctor would have the right to give him a card to admit him, without his joining the provident department. Of the free cases last year, there were 14,000, and the total attendances of those 14,000 were 23,000 only; so that shows a large majority did join the provident department; because that is less than two attendances per patient; and in the provident department the attendances were 43,000 for the year.

16749. Then do subscribers have any privileges as regards letters in regard to the admission of patients?—There are no letters at all; but if any subscriber took the trouble to write a letter, or send a card recommending any case, we should do the same for him as we should for anybody else; it would make no real difference at all; the case would be taken on its merits.

16750. Is this provident department limited to out-patients?—No.

16751. How does it apply to in-patients?—In this way: that if a patient who belongs to the provident department can come to the hospital as an out-patient, he is supposed to do so; if he is too ill to come as an out-patient he is visited at home: if he is too ill to be visited at home, he is admitted at once (if it is a fit case for hospital treatment) as an in-patient.

16752. Have you any difficulty with the large number of free out-patients, and also the large number of provident members?—There is a separate staff to each; the ordinary medical staff attends to these free patients, but we have a separate staff for the provident department who only treat provident members.

16753. What is the number of provident members?—I have here a return from which I may quote: we started in November 1887, and the people came and paid their money at the hospital; we had no system of getting to the homes of the people to obtain the money; it seemed to me to be a very necessary thing, not only to get the money, but still more important to see when people left their homes, and if they died or went away, because I was certain that we had a large number of people who were supposed to be on our books who were either dead or scattered in all parts of the kingdom. Ours is a very shifting population; it is all round about Hoxton and Shoreditch, and Bethnal Green, and the people seem to think no more of packing up all their belongings and going to the other end of London than an ordinary man thinks of taking a cab; and at the end of last year the committee allowed me to engage two collectors, one to take one division of that map which I showed you just now, and the other the other, with a view to obtain not only the money due from time to time (precisely on the same principle that the Prudential Assurance Company collects small fees for its life assurances); but also to obtain a complete and accurate list of where the people did live. We found then that, instead of having something like 16,000 people on our books, as we had fondly hoped, a good many had gone and left no address; but we have issued since No-

(24.) e

Chairman—continued.

member of last year some 2,500 new books, and there must be some 2,500 on the old; and allowing $1\frac{1}{2}$ persons to each book, the total number of lives would be about 7,000. In three or four months' time, I think, I shall be able to tell you exactly how many members absolutely belong to it. Of course we have a register at the hospital in which a man's name is entered, his state, whether married or single, his occupation, whether he is a warehouseman, packer, labourer, or whatever it may be, and the amount per week of his average wage earnings. A great many people in our part of the world are cabinet makers, and their income is most fluctuating; they may get 5*l.* a week for three weeks, and then nothing for a long time.

16754. Is not that a small number, 7,000, of provident members?—Yes, and it is a very disappointing number. The collectors have only been at work since October, and until they have done their work (and I think one has certainly not more than half completed his district) I cannot give it to you accurately; I have carefully rather underestimated than over-estimated it.

16755. Is not this shifting population a great difficulty?—It is a very great difficulty; it is the greatest difficulty; and will always be the greatest difficulty in London, I am sure; but with a proper system of collectors, who will not exactly be scrutineers, but pure and simple collectors to find out where the people go to, I think there is no reason why this provident department should not be in every way a great success; I think the thing has already proved itself to be sufficiently successful to satisfy the committee that they did the right thing when they started it.

16756. I understand you to say that you have no other hospital within two miles of you?—If you draw a circle of a mile radius round St. Bartholomew's towards our hospital, and round the London and the Great Northern, and then draw one round ours, the four circles just touch at three different points.

16757. Do you limit your membership to individuals, or can a club associate all its members with your provident department?—No, a club cannot. We had an offer, which from a hospital point of view as well as from the company's point of view, would have been very advantageous for us to accept. The North Metropolitan Tramway Company, who employ a very large number of men, wanted to know if we would take in everybody in their employment; they would collect the money, they would send it to me weekly or monthly, there would be no extra clerical labour on our part, on condition that we would take the whole of them. A large number seem to live down Bow and Poplar way; and those would break our rule that it was to be as far as possible a local hospital. It would also break another rule; several of the better class of tramway employes are men in receipt of far larger wages than 35*s.*, not very many, but 40 or 50 altogether perhaps. But we had only the option of taking the whole or none. My committee went into it very carefully, and referred it to the medical committee for their report, and to these four provident doctors for theirs;

R R

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

theirs; and they were very strongly of opinion that if we did do that, we should be doing exactly what we did not want to do; damaging the local medical men to a great extent. These clubs would mean at least 400 *l.* a year; there are plenty of medical men who would start practice with one club, say one that brought in 100 *l.* a year, because it is not only the money that the medical man may get from the men on the club, but the money that comes indirectly from their families, the confinements, and children; so that a club of 100 *l.* a year means a very good nucleus of a nice practice for an ordinary practitioner. And on those lines, and those lines only, my committee felt that it would be wrong to take any club like that, as a club; if they come and join individually and privately, as some have done, that is another affair.

16758. What is the amount of money that you received from provident members last year?—£. 670. 4 *s.* 7 *d.*; in the previous year it was 653 *l.* You see last year we paid 450 *l.* in salaries and rent in the provident department. When we first started we rented four schools in the neighbourhood, thinking to give the people every chance of paying the money; those who lived so far from the hospital as Bethnal Green would not care to walk a mile we thought, and so we went to meet them half way; but we found that the people did not come, and so we thought it better to have collectors.

16759. If you received 670 *l.*, and paid in salaries and rent, 450 *l.*, that leaves 200 *l.*, odd towards the cost of treatment?—£. 200 towards the cost of the drugs.

16760. And what was the total expenditure of the hospital last year?—The total expenditure of the hospital last year was 7,500 *l.*

16761. Have you ever estimated what number of members you would require to make it pay?—I cannot say I ever have.

16762. Have you any Jewish patients?—I am glad you have come to that matter; I should like to tell you about that. Originally in Devonshire-square of course the hospital was surrounded by Jews, and then when the hospital went into Commercial-street, Spitalfields, more Jews probably were treated there than any other community; and the Jews have been very good to the hospital indeed; and when the new hospital was built it was decided that of the 160 beds, which the hospital would be able to accommodate, 40 were always to be reserved for members of the Jewish faith. Not only that, but there are separate kitchens too, so that all the food can be cooked as their rites demand, and these wards would be perfectly isolated from every other ward (which indeed is the case all through the hospital). At the present time we have 12 bed for Jews; we have not opened the kitchen, because with only 12 beds, we can hardly afford the expense. I might add that we have 78 beds occupied at the present time; about half our full number.

16763. Have you any Jews at the hospital?—I should imagine a few, but very few, it takes some time for the people to get to know of the hospital. They crowded round it in the old days where they had known it for years and years; but as

Chairman—continued.

we go on, and as the Jewish Rabbi's are taking up the matter and getting it known, (the Chief Rabbi himself came over the hospital some time ago and said he would send round notice to all the Rabbi's in the neighbourhood), the people will get to know it better.

16764. Where does your 36,000 *l.* come from for the building fund?—We received in donations some 3,400 *l.*; then "special donations," which practically means the City companies, 2,400 *l.*; then legacies, then sale of stock, and the principal of the whole thing was the sale of the Half Moon-street property which we had bought just opposite the old hospital (that was of course much before my time), and it was sold at a very large profit to the Great Eastern Railway Company; we realized over 9,000 *l.* by selling it; then "interest on instalments purchase-money, Great Eastern Railway Company" came to another 2,500; then the "amount transferred from general fund," being practically a donation from that account, was 1,300 *l.* Then on the expenditure side, the purchase of the leasehold of the Kingsland-road site of the hospital, 3,300 *l.* odd, and the freehold 6,000 *l.*, odd, together 9,400 *l.*; "builder" 21,600 *l.*; and then other items making a whole total of 37,000 *l.*, expended on a building which can accommodate 160 patients.

16765. Have you not had some large bequests from a Mr. Jackson?—Yes, but it has been only comparatively recently; and a portion of it has been included in this building fund balance sheet.

16766. Was that money for the poor of Shoreditch?—The destitute poor of Shoreditch; and in consideration of that bequest, we have set apart for the poor of Shoreditch four beds in the men's, four in the women's, and four in the children's ward; but, as a matter of fact, we have a great many more beds than that occupied by the poor of Shoreditch.

16767. Has a scheme been drawn up by the Attorney General with regard to that bequest?—A scheme was drawn up by the Attorney General, of which this (*pointing*) is a copy, which he has ordered shall always be printed in our reports.

Earl of Kimberley.

16768. Your hospital, as far as this provident system is concerned, might be correctly described, might it not, as an assisted medical club standing between people who obtain their relief gratis from the poor law, and those who pay for it themselves either individually or through a medical club?—I have never heard it called that.

16769. But that is what it amounts to, is it not?—No, for this reason: the medical clubs can never take an in-patient, or never have yet done so.

16770. There is that distinction; but in principle, it really is an assisted medical club, the greater part of the expense being borne by the charity, and a portion of the expense by the contributors?—Certainly.

16771. And, therefore, your object, in point of fact, is to obtain such contributions from these people,

9 March 1891.]

MR. BYERS.

[Continued.]

Earl of Kimberley—continued.

people, as they can reasonably pay rather than give them gratuitous medical relief?—That is so.

16772. Leaving on the one side those who are relieved by the poor law to be treated as destitute persons at home, or to be treated in a hospital as destitute, and on the other side not interfering with those who can either through a club or other means pay for medical relief for themselves?—Yes.

Earl Cathcart.

16773. But is there not a danger of taking off the fine edge of their sensibilities, because they may think "we pay this," though it may be an utterly inadequate sum?—Surely it is better to ask a man if he will pay what he can, than to treat him for nothing.

16774. But the payment is altogether inadequate; it only comes to 200 *l.* a year out of 4,000 *l.* or 5,000 *l.* expended?—That 4,000 *l.* or 5,000 *l.* is the whole expenditure of the hospital.

16775. There is only 200 *l.* really received on that provident department account?—As net profit. Of course it was never started to be a profitable concern.

Earl of Kimberley.

16776. Could you tell us what the proportion of expenditure is upon the provident department as compared with the whole expenditure upon the hospital?—I could not, but I will ascertain that.

16777. In the case of the midwifery cases the 15 *s.* charged for the midwife pays her expenses?—She gets 12 *s.* 6 *d.*, and the other 2 *s.* 6 *d.*, goes towards the provident fund.

16778. Are there any other expenses which you bear in connection with midwifery cases?—None at all.

16779. Therefore in that case the man is really providing for the expenses of the confinement of his wife?—Yes.

16780. Except so far as a medical officer may be called in?—A medical officer can be called in, but the man pays nothing for that.

16781. Otherwise the system is self-supporting?—Yes. Originally it was intended that these four doctors of whom I have spoken should attend the confinements, but it was pointed out that there were numbers of men, at any rate in our neighbourhood, who would visit, and did visit confinements for fees of 10 *s.* 6 *d.*; and therefore we thought if good men went for 15 *s.* there would be no question of the patient hesitating between 10 *s.* 6 *d.* and 15 *s.*

Earl Cathcart.

16782. Then the provident system still is really in an experimental stage?—Perhaps you could say so.

16783. And we could not take it as any practical guide till you have carried it further?—We should like to carry it a great deal further.

16784. What sort of sum would you like to have from the provident department?—£. 2,000 a year.

16785. As against 200 *l.* a year now?—As against 600 *l.* I am talking of gross receipts.

(24)

Earl Cathcart—continued.

16786. 'Then their Lordships' can only take it that this provident system of yours is now in an experimental stage and would not be any safe guide as to how far that system has answered or not?—I cannot quite agree with that.

16787. Why do you not agree with that way of putting it?—Because I think that we have done a certain amount of work. We do not think that we have done any harm to the local medical men, which is a very important point, and we are persuading these people to pay something for that for which before they paid nothing.

16788. But still, in candour, you admit in the meantime that you are in an experimental stage?—In our initial stage; it has only been carried on for three years.

16789. We have been told that the competition is more acute as between dispensaries and out-door practitioners than as between the out-patient departments and out-door practitioners; what is your opinion upon that question?—Of that I can say nothing personally.

Lord Thring.

16790. With respect to collecting you have found that it is necessary to apply at the people's houses?—Yes.

16791. In other words, that the poor will not go out of their way to bring their pence, but if you call upon them they will give them?—Yes.

16792. What per centage do you allow the collector?—At the present time the collectors are paid by salary. The first work I wanted them to do was to clear up, and to make sure who did belong to the provident department at the present time, who have died and who have gone away. Therefore, we are paying them now 25 *s.* a week fixed salary, but it is intended in the near future to only pay them a sum, certainly not exceeding 15 *s.* a week with a commission of 10 per cent. on what they may collect.

16793. Then you can obtain an efficient collector for 15 *s.* a week with 10 per cent. commission on the amount he collects?—Yes, I think that would come to considerably more than 25 *s.* a week fixed salary, for which we now get very good men.

16794. Can you give us any idea what sort of space they cover?—Yes, the map would show you easily. The man has to take a distance of two miles that way and one mile that way (*pointing to the map*),—a large area, but not so large as many other collectors have to take.

16795. And that is sufficient to do the collecting in the district?—I shall be glad to see some more; two collectors cannot do the work thoroughly, and we want four.

Chairman.

16796. With regard to midwifery cases, how many do you have of that description?—Very few, indeed; I will give a return of that; but it is a very very small number.

16797. Where do you get your midwives from?—They are certificated midwives who are recommended by the medical staff after having gone through their testimonials and certificates.

16798. As regards midwifery cases, do you treat many others than those that belong to the provident

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

provident department?—No; there are no students at our hospital; there is no medical school at all.

16799. Now, to come to the hospital government; will you tell us what that is?—The hospital, in the first place, is governed by a committee of management, elected from the governors of the hospital. A man can be a governor either as an annual governor or as a life governor; a man must subscribe a guinea or more a year to be an annual governor, and must pay ten guineas to be a life governor. The committee of management consists of not less than 12 nor more than 24 governors, in addition to the president, treasurer, trustees, and four members of the honorary staff who are always *ex officio* members. These four members of the medical and surgical staff are elected by the permanent medical staff as their representatives; one has to retire every year, and is not eligible to be re-elected for another year. The committee, at the present time, consist of 23 persons in all; they meet on the second Friday in every month, when I may state all the books of the hospital are on the table. Then comes the house committee. The house committee is elected from the general committee once a year after the annual meeting of governors, and consists now of nine members who meet every Wednesday; and from the house committee (which is part of the general committee) is elected the finance committee once a year. That consists of three persons. The finance committee meet and examine books once a quarter; after our firm of chartered accountants have examined everything in every book, and have signed the sheet or sheets as correct, the finance committee go through the books (I will tell you exactly what they are), and after that at the next meeting of the house or general committee, as the case may be, they report that the books, disbursement sheet, &c., are all correct; and then, at the committee, in the public room before all the rest of the members, all the cheques are signed by two members of the finance committee. The finance committee do not meet and sign the cheques themselves, but at the open board; that is to say, the cheques are signed by those persons who have satisfied themselves as to the accuracy of my figures. All the accounts are paid quarterly. The way in which the finance committee examine the books is, that they go through the counterfoils of my receipt-book (I have no collector), and they satisfy themselves as to the accuracy of that. The total of that book once a week is entered into the main cash-book; that I have here if you like to see it; and everything is paid into the bank once a week. The pass-book is examined with the cash-book.

16800. How often is the pass-book examined?—It is always once a quarter examined and ticked by the auditors, and by the finance committee; I do not say every time they meet, but certainly more than once a year, they go through the question of food supply, and see that the sister of the nursing staff, in charge of that particular department, is perfectly satisfied that the meat, and so on, is good. They examine also the different tradesmen's accounts, together with the disbursement sheet; that is to say, they

Chairman—continued.

go through the account, say, of the butcher, and they ask the reason why this quarter his account is larger than it was last, and questions of that sort.

16801. I understand that these books are put on the table; they are not checked every week or fortnight?—Not necessarily; anybody can look at the books who likes. The house committee meet every week and ask questions, and satisfy themselves as to the accuracy of my replies.

16802. But those books are not checked by the house committee every week?—Not every week; the pure checking is done entirely by this firm of chartered accountants, who are paid, and by the finance committee.

16803. Then I understand there is, first of all, an annual meeting, and then a quarterly meeting?—Not a quarterly, but a monthly meeting.

16804. And then there is this house committee which meets every week?—Every week.

16805. And a finance committee?—A finance committee which meets always once a quarter, and oftener if necessary.

16806. Will you tell me what is your position?—With regard to my position in the hospital, there are no particular rules to specify it; and I think the reason why the committee do not draw up a list of rules stating what I might do, and what I might not do, was that they intended that I was to be responsible for everything; if they specified something, then I could say that I was not responsible for what was not specified. I am, in their absence, the head of the hospital, with the exception of the nursing staff; I have no power, myself, over the nurses. If one of the doctors on the honorary staff were to complain of any nurse's incompetency or insubordination, the most I could do would be to report the case to the head of the nursing staff, and demand that the particular nurse be suspended.

16807. Would you have power to suspend an officer of the hospital?—Yes, and then I should report it to the next meeting. Of course I could discharge porters for intemperance, and report it at the next meeting of the committee; they meet every week; and with regard to this committee of nine, I find that the average all the year round is that five members of the committee come every week, and go round the wards as well.

16808. Are there medical men on the house committee?—Yes, one physician and one surgeon.

16809. You have stated that there are 160 beds; what is your working number of beds?—We have 78 occupied.

16810. Why are not the others occupied?—In 1886 there were only four empty walls, and we had to furnish the hospital as well as to keep it going; and we began with 12 beds in 1888; at the end of 1889 we had 51; and at the end of last year, 78.

16811. What resident medical men have you?—Three: a house physician, a house surgeon, and an assistant house surgeon.

16812. Are they salaried officers?—All but the junior, and he is appointed for six months only,

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

only, and gets nothing at all beyond his board and lodging. The other two, the house physician and house surgeon, are always fully qualified medical men, young men, of course. They send in their applications in the usual way, and those applications are at once handed over to the medical committee for their report. The medical committee send up the names of three candidates to the committee of management, and they can put a recommendation in favour of any particular one of those three, and then the committee of management makes the final selection.

16813. What salary do they get?—If they stay for 12 months, 65 *l.* per annum and board and lodging; it is at the rate of 60 *l.* for the first six months, and 70 *l.* for the second.

16814. Do they carry on private practice?—No.

16815. What is your salary?—£. 300 a year.

16816. And board and lodging?—No.

16817. And in your absence who is in charge?—In my absence, in the case say of a fire or calamity my representative would be my assistant who does live in the hospital, and gets 60 *l.* a year and board.

16818. During your absence he is in charge?—He is in charge. I am speaking more particularly of fire, because I cannot think of anything else that would happen before the next morning; if anything did, he would have to act on his own judgment; he cannot interfere, of course, with the wards or the medical officers or the nurses.

16818*. Have you a steward?—No, everything is done in my own office by my assistant and myself. There is a housekeeper, who always sees that the meat is a proper weight, and that all the food that comes in, is as she orders it; she is directly responsible to the sister in charge of the nursing staff, and she again, to the committee.

16819. The sister in charge of the nursing staff is over the housekeeper?—Yes, over every female in the building.

16820. And she is not responsible to you?—She is responsible to me as the representative of the committee, but I could not discharge a nurse who was under her control. The most I could do would be to recommend or demand that a nurse should be suspended.

16821. You mentioned just now that the housekeeper was responsible for the quality of the food taken into the hospital and the weight?—Yes, she weighs it herself.

16822. Who makes the contracts?—The contracts are always made by the house committee.

16823. Is it an open tender?—It is an open tender; we do not advertise in the papers, but send to a great many firms. Last year at the beginning of December we sent to six firms for coals; the coals contract runs for twelve months; the drugs for six months, and all other contracts, maintenance contracts, bread, meat, and that sort of thing run for three months; so that if the meat is not good, the man knows perfectly well that he may lose the tender at any moment, certainly at the end of the three months, if it is not up to contract quality.

16824. Have you any complaints with regard (24.)

Chairman—continued.

to the food?—Very few indeed. I do not say none, because I think people, who all their lives, have had the worst to eat are the most particular; the patients may grumble a little, but I have never had any complaints made to me particularly. It is a common occurrence for them to ask me to thank the committee, and say that they have been very comfortable; but sometimes they say that they want more bread, or more butter; and if they do, they get it.

16825. Do you find everything for the patients?—Yes.

16826. Including tea, sugar, and butter?—Yes.

16827. With regard to the admission of patients, by whom are they admitted?—By the resident medical officer on duty. I have no power over that at all.

16828. That resident officer might be the assistant of whom you spoke just now?—It might be the assistant, if he happened to be on duty that particular day. He is a junior; the committee felt that they could not pay a third man, so only give him board and lodging.

16829. And I suppose the severity of the disease is the only test for admission?—Yes. If two cases came, a provident patient and a patient from outside, according to our own rules, we should certainly give the priority of claim to the provident patient.

16830. Then, has the honorary staff the power of admitting patients?—Certainly, because the salaried officers are their representatives. In the case of the presence of any member of the staff, he might make the necessary order himself, and say, "Take that patient in"; but there are always two resident officers on duty in the building, all day and all night.

16831. You say you have nothing to do with the admission of patients; is it your duty to visit the wards at all?—Certainly.

16832. And that you do?—That I do all over the building.

16833. Who is responsible for the sanitary state of the hospital?—We have an honorary surveyor, who, to my own knowledge, has paid three very lengthy visits to the hospital in the last nine months; and ours is such a new building that that has not been done which has been done at some other hospitals; I mean having plans of the drains put up. That seems to me a capital idea, and it certainly shall be done; but with the surveyor willing to come at any moment, I feel that the responsibility on my shoulders is a very slight one.

16834. Did it occur to you to have an outside inspection of the drains?—Yes; the committee appointed three gentlemen one day at the beginning of last autumn, after that dry weather, to go through the building, and examine everything in it with the honorary surveyor.

16835. But not an inspection by an expert from outside?—No, they merely went with the surveyor, and looked into everything.

16836. But I meant whether somebody not in connection with the hospital had inspected the drains?—No, our own surveyor did.

16837. My question was meant to point to do this: Do not you think that it would be well to have an outside inspector, somebody who was

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

not connected with the hospital?—Our surveyor did not build the hospital; he had nothing to do with the plan; it is not a question therefore of patting him on the back.

16838. What do you think as an abstract question of the advantage of having an outside opinion?—It seems to me an admirable thing; the committee have never thought of it.

16839. In the case of a nurse detecting a foul smell in one of the wards, for instance, what would be done?—I never heard of that yet; but if she detected it, she would report it to the sister of the ward; the sister would come probably to me at once, and I should see about it. We have a man in the immediate neighbourhood who is a very useful man to us; he is a builder in a small way (we cannot afford to keep a man employed all the year round to look after the drains, other than our own engineer), so that if anything went wrong with pipes we should call in this man, who lives within 100 yards of the hospital, and is paid for everything he does.

16840. The surveyor is an honorary officer, you say; does he receive any commission for work done?—He has never received any yet. At the beginning of last year he reported that the external iron-work of the building which was put up five years ago, ought to be repainted; he spent several days over the hospital, but did not send in any claim.

16841. Who is the head of the nursing staff?—In the hospital we call her the sister superior; she is Sister Dorothea, a Sister of All Saints; it is precisely the same system as at University College.

16842. Do I understand then that you contract for your nursing?—Yes, that is practically what we do.

16843. Is the responsibility of looking after the nurses in the hospital yours?—We board and lodge them and pay them a fixed salary.

16844. You pay the Sisterhood, not the individual nurses?—No, we pay the Sisterhood.

16845. But you board and lodge them?—Yes, we board and lodge them. At the present time our nursing staff consists of 32 persons altogether: one sister superior, one night superintendent (who I might say visits every ward at least three times a night; she perambulates all over the building at night); three ward sisters, 12 nurses, 13 probationers, and two lady pupils; and all nurses who are charge-nurses, in charge of a ward in absence of the ward sister, I find average three years and six months' experience. That staff consists of 19 day nurses, including two for the out-patients (there are always two in the out-patient department) and eight at night. We do not pay for all those nurses because the sister superior uses the hospital for her own purposes of training; we only pay for and board a certain number of nurses. As a matter of fact we have one nurse to two and a-half patients, and we only contract one to five patients; therefore we pay for 16 nurses, having the services of the ward sisters, the night superintendent, and the head of the nursing staff for nothing.

16846. Has that arrangement worked well in your opinion?—It has worked now for more than two years most admirably in every way; there never has been the slightest hitch.

Chairman—continued.

16847. And the probationers; by whom are they engaged?—Certainly not by the hospital. The nurses are engaged by the sister superior herself, and of course ratified by the committee. She says she has obtained such and such a nurse; but it is so much a question of contract that we have not the same power over nurses as long as they do their work well, as is the case if you have your own nursing staff.

16848. Does the sister superior live in the hospital?—Yes. The nurses came in November 1888, and I find that there has been no epidemic of any sort, and three hospital throats only last year.

16849. How many wards have you got?—One for men with 24 beds, one for women of the same size, one for children with 17 cots, and two small wards, holding 12 beds, originally intended for Jews, but as the Jews did not fill their beds, it was unanimously decided, at the suggestion of a Jewish member of the committee, that the beds should be filled anyhow, whether by Jews or Christians.

16850. Then, in each ward, is there a nurse at night?—Certainly.

16851. Are the ward sisters' rooms near the wards?—Side by side.

16852. Where do the nurses dine?—In their own dining-room upstairs. I have the time-table for the day nurses. They have breakfast at 7; then the first dinner is 12.30 till 1; the second dinner from 1 to 1.30; the first tea from 4 to 4.30; and the second from 4.30 to 5. They have supper at 8.15 till 9; prayers at 9, and bed at 10.30. The time-table for night nurses is, wards by 8.50 p. m., and off duty at 8.30 a. m.

16853. Are the day nurses off duty at all during the day?—Yes, they are off duty always for two hours every alternate day. The staff nurses get four hours off instead of two on alternate days; and those over one year's training get one Sunday a month. Probationers go off duty from 2 p. m. till 10 p. m. once a month; and one Sunday each nurse always, somehow or other, has four hours off duty. The lady pupils have rather easier hours than that; they go off duty at 7 p. m. instead of 9 if they have not been out, and at 8 p. m. if they have; they have one Sunday a month off duty. And the holidays, all round, are one calendar month in the year.

16854. Do the sisters get more?—No.

16855. Were these hours arranged by the hospital?—No, by the sister superior herself, and a copy of the rules was laid before my committee, and glanced at and approved.

16856. Is there no nursing committee?—No, none at all.

16857. Then the payment of individual nurses has nothing to do with you?—I pay them in a gross sum once a quarter.

16858. How much does it come to?—For the whole of the nursing last year we paid, or should have paid, a gross payment of 384 £.; but as I pointed out we pay for 16 nurses, and we have 32; the sister superior pays the hospital 10 s. a week board for ever nurse over the number that we stipulate to have, and that came to 249 £. in the year; so that our net payment to the nurses was only 135 £. last year.

16859. Does

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

16859. Does any high official, the housekeeper for instance, dine with the nurses?—The lady housekeeper takes one dinner, and the sister superior the other.

16860. What does that mean exactly?—That she has dinner with them, or at anyrate carves for them, and is always in the room all through that particular dinner.

16861. Now in the case of your requiring extra nurses, special nurses, you apply to the sister superior?—Certainly.

16862. And you pay for them?—We pay for them.

16863. And she would supply such extra nurses that you wanted?—Yes.

16864. Have you a chaplain?—An honorary chaplain, but the committee are meeting to make rules for the honorary chaplain. He attends the hospital every day; he holds a service in every adult ward every Sunday, and of course prayers are read by the sister of the ward in the morning and evening. The honorary chaplain is the Reverend R. S. Hassard, Vicar of Holy Trinity, Dalston; and as soon as the rules are drawn up I suppose the appointment will be made permanent.

16865. Do you take any lock cases?—Lock cases pure and simple as lock cases we do not take; if in complication with other diseases, we do.

16866. Have you to bury patients sometimes?—We never have yet had to do so. I should like to tell you (it might be seen from that plan) about our mortuary arrangements; as you ask about the burial of patients I mention the mortuary arrangements.

Earl Cathcart.

16867. The weak part of your system seems to be that, during your absence of 12 or 14 hours every day, the person left in charge is your clerk at 60 *l.* a year; he is a young man I suppose?—He is 32, I think.

16868. But still he is a subordinate officer at 60 *l.* a year?—With board and lodging, for which I suppose you would allow another 60 *l.* a year.

16869. Still you have found the system answer?—Yes, I have found the system answer.

16870. With regard to the nursing, have you any agreement that there shall be no proselytising?—There is a very stringent rule about that in our agreement with the All Saints' Sisters.

16871. Of your own knowledge, can you say whether the nurses are of mixed religions?—Certainly, I have heard that from more than one; that is to say, that they are not by any means extreme persons holding very extreme views.

16872. Of that you have no doubt whatever, in your own mind?—No doubt.

16873. With regard to water, how are you off for water?—We have a constant supply.

16874. That is absolutely essential, is it not?—I should think so.

16875. What do you do with your slops; where do you pour them away. (*The Witness explains it to his Lordship on the map.*)

16876. What becomes of the nasty things, like poultices and bandages?—Those are taken away (24.)

Earl Cathcart—continued.

twice a day straight to the engine-room and burnt, never left.

16877. Have you a special incinerator then?—Yes, in the boiler-room.

16878. There was a sort of hypothetical question raised here the other day, and I should like to ask you whether you have thought over it. Suppose you took in a patient from any accident or any other cause, and he was with you for some time, especially if he was a rich man, ought you to have some power of recovering the expense?—There is no legal remedy that I have ever heard of, if a man was mean enough in such a case to pay nothing.

16879. And do you think it would be a good thing if there was such a remedy?—No, I do not think so, because the majority of people, if they felt they had derived any benefit, would pay for it. A man came in the other day with an accident and his brother gave as a donation of 50 *l.*

16880. But supposing you found that a man was in a position to pay, without being actually rich, would you like to pursue him and seek to recover the amount?—No; I have in such a case pursued him quietly in the wards and suggested to him that we were very poor and that all contributions would be thankfully received.

16881. And was there a result?—Yes, in many instances.

16882. You do not think then that any powers are necessary in that respect?—No; the great thing is, that if a patient has been properly treated he will give something if he can.

Lord Zouche of Haryngworth.

16883. Are the probationers quite independent of the All Saints' Sisterhood?—The probationers have signed an agreement with the sister superior for so long.

16884. I meant to ask whether they belong to the sisterhood or whether they have to apply to the sisterhood to become probationers in the hospital?—They would certainly apply to the sisterhood and not to me.

16885. And they would be under the control of the sisterhood?—Yes, of the sister superior; and each hospital which is nursed by that sisterhood has its own particular nursing head.

Lord Clifford of Chudleigh.

16886. I noticed that in mentioning the nurses' hours, you mentioned prayers; do they all have to attend prayers; as a matter of fact do they all?—As a matter of fact they all do; I do not know that it is absolutely compulsory; I think as a matter of fact it is like school prayers; they all do attend.

Chairman.

16887. Have you any payments besides provident payments?—Very few; if an in-patient can pay something, he generally does, if it is only half-a-crown; something to say that it is not all charity.

16888. You get it if you can?—We get it if we can; there is no condition about it; we do not take him in on that condition.

R R 4

16889. You

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

16889. You have no paying wards?—No paying wards such as are usually understood by that term.

16890. About the fire drill, that is done by a private firm, I understand you to say?—Shand, Mason & Co. were the people who put up those hydrants and their foreman was a former member of the fire brigade; and four times a year they come and give a fire drill for the whole staff. The nurses attend it (of course all the nurses cannot leave the wards whilst this goes on), and all the porters as well.

16891. There is no particular reason for employing them in preference to the Metropolitan Fire Brigade, is there?—No, not at all. I wanted a fire drill in the first instance, and this firm had put up those hydrants, and I knew they did give fire drills at other hospitals, and I wrote and asked the charge, and it was five guineas a year.

16892. You have mentioned the subscriptions from provident members; where does the rest of your 7,000 *l.* income come from?—The chief source of our income for many years has been donations, which is not by any means as satisfactory as the subscriptions; but I ought to tell you that as an old City hospital a good many City firms give us money; they have been very good to us; they will give 10 *l.* or 20 *l.* or 50 *l.*, as the case may be, every year, but they will not call it a subscription, consequently our donations are 2,400 *l.* as against 565 *l.* subscriptions. Four years ago the subscriptions were under 400 *l.* a year. Then with regard to the dividends, we had last year a sum 240 *l.* 10 *s.* 10 *d.*; that is obtained chiefly from the money we received from John Jackson's estate, from North Eastern Railway stock and from London and North Western Railway stock. The dividend is never paid in direct to me but to the account at Glyn's. Then the legacies last year were 2,100 *l.*

16893. Was that a good year for legacies?—A very good year. The accounts are made up item for item with the sheet which the Hospital Sunday Fund sent round to all the hospital secretaries, and it seems to me, though I have not given it the same amount of attention that many of my fellow secretaries have done, that as a whole it is a wonderfully good sheet; and my committee were so impressed with the whole idea that they authorised me to make up my own balance sheet in the same form. There are certain items that they might have amplified a little more. For instance, while they have amplified, as of course they should have done, the maintenance expenses, they lump the dispensers, the engineer, the servants, and the porters altogether instead of giving them item by item; but, after all, those are only details, and I daresay this committee that is appointed will soon make a good balance sheet for all hospitals to adopt.

16894. What did you get from the Hospital Sunday Fund last year?—£. 312. 10 *s.* from the Sunday Fund, and 87 *l.* from the Saturday Fund. Four years ago, our grant from the Sunday Fund was 199 *l.*, and from the Saturday Fund 47 *l.* instead of 87 *l.*

16895. How did your income balance with your expenditure?—Last year we had a balance on the wrong side of 1,300 *l.*

Chairman—continued.

16896. What occurred; did you sell stock to meet that deficit?—No, we cannot touch any of that stock from which we receive dividends; it is all in the hands of official trustees; it is simply the case that we must try to get the money by appealing.

16897. Do you appeal constantly?—Always once a year, and sometimes at Christmas as well.

16898. As a hospital secretary, do you think it a good plan to appeal constantly?—If we did not appeal we should not get money at all. Our hospital has this disadvantage as compared with most other hospitals, that it is in a part of London where no rich man ever dreams of going unless he has a business there. Kingsland-road, to start with, is only a name to thousands of people in the West-end; we are not in the position of some hospitals which are passed, by thousands of well-to-do people every day.

16899. Is not that in itself a reason for your appealing to the public?—It is.

16900. How do you propose to make up that deficit?—By the usual inevitable festival dinner which takes place very early this year at the same time as all the other hospital dinners; though my committee I think, object to the hospital dinner, as a dinner, but still if we cannot get money without it, we must adopt that method.

16901. Have you ever made any comparison as to whether you get more money by a dinner annually, instead of once in every three or four years?—It has been the experience in time past that we get more by the annual dinner. We clear about 2,000 *l.* by a dinner; that has been the average for the last three years, and the expenses of the whole thing, including advertisements, dinner, &c., do not come to 240 *l.* or so.

16902. Can you tell me whether you are complained of at all by the medical men in the neighbourhood as causing loss to them?—Not lately. In the first instance they complained before they in the least understood what this provident department meant. I think they had an idea that the hospital was going to be run to do them harm; but I think what has proved to some of the local men in the neighbourhood that we are not trying to do them harm is that we reduced that wage-limit; directly we found that the neighbourhood was still poorer than we thought, we reduced the wage-limit by 5 *s.* a week in the case of a married man, and 4 *s.* a week in the case of a bachelor.

16903. Have you any idea of what the average wage is around your hospital?—I have dotted down here one page of my register: warehousemen, they get the best pay of the lot, 18 *s.* to 30 *s.* a week; packers, 20 *s.* to 30 *s.*; labourers, 20 *s.* to 25 *s.*, and the large majority get only 17 *s.*; boot-workers of all kinds, from 10 *s.* to 35; printers, 27 *s.* to 35 *s.*; carmen, 20 *s.* to 27 *s.*; factory hands, 5 *s.* to 25 *s.*; cabinet-makers, 20 *s.* to 35 *s.*; servants up to 14 *l.* per annum; that is a very unusual sum; bricklayers, 20 *s.* to 30 *s.*, and so on; needlewomen 5 *s.* to 20 *s.*; which is a very large outside sum; metal-workers, 10 *s.* to 35 *s.*

16904. Was it on that list of wages, that you based your wage-limit?—Yes, we consulted some of the clergymen, doctors, and others in the neighbourhood, who knew the financial position of

9 March 1891.]

Mr. BYERS.

[Continued.]

Chairman—continued.

of their parishioners; and first of all it was put at 40 s. and 25 s., and then reduced for the reason I stated.

Earl Cathcart.

16905. Do you happen to know this book by Mr. Charles Booth on the "Condition and Occupations of the Poor of East London and Hackney"?—I have read only a small portion of it.

16906. He is supposed to have made very elaborate calculations and investigations, and I should like to ask you, have you any reason to suppose that his conclusions are just?—I imagine that he has a far better chance of finding out the facts than I have.

16907. With regard to the patients' lift does your patients' lift go easy or does it jump?—It certainly never jumps; I could not say it goes easily, because it is on the old system with a balance weight.

16908. You have not an hydraulic lift?—No.

16909. In the great hospital opposite they killed a patient by the lift; perhaps you have seen that in the papers?—Yes. The man who last mended our lift has come and told me all about it and he assures me that it is impossible for our lift to jump.

Lord Thring.

16910. You wished to say something about the mortuary?—I should like to say that the dissecting room, the post-mortem room is in the basement. Of course no post-mortem ever takes place without the consent of the friends of the dead person. Side by side are two mortuaries, one for Jews, so that they may have their religious rites carefully carried out, and one for all the other patients. The body is carefully sewn up by a mortuary porter who has been trained to do the work, and is assisted by a nurse who is specially told off for that purpose. When that is done the patient is not immediately put into the shell, but, entirely by the action in the first instance of the head of our nursing staff, there is a small bed running on india-rubber tyred wheels, and the patient is laid in this; so that when the friends come, instead of seeing the body of their relative in the coffin, it is exactly as it would be if death had occurred in their own house; and directly the friends go away the body is moved from this small bed into the coffin brought by the undertaker or put back into one of the hospital shells. We felt that it was very necessary to try in all cases of death to do what could be done not to offend the susceptibilities of anybody.

Chairman.

16911. You have no students in your hospital I understand you to say?—No students of any sort.

Chairman—continued.

16912. How many patients in and out had you last year?—Ours has of necessity to be rather a progressive arrangement because of course the hospital is so new; but I can tell you what we had last year. The out-patients have increased from 9,000 free patients three years ago to 14,000 last year; and the out-patient attendances have increased from about 20,000 to 43,000 in the provident department. With regard to the in-patients, the first year we had only 12 beds, and with 12 beds for the whole of the year we had 51 in-patients; the following year we had 247, the year afterwards 489, and last year 709.

16913. But all those patients are of no use for purposes of instruction?—Ours is precisely the same case as that of any other hospital which, like ours, is without a school.

16914. Do you take in any diphtheria cases?—Special diphtheria cases are taken in where tracheotomy may be required, and they are always put in a separate ward. We have very few; we had only six last year. And typhoid cases are admitted into the general ward; there is no restriction; there were 22 cases only last year; among the nurses none in either case.

16915. The health of the nurses I understand you to say is good?—They have been two and a half years at the hospital, and three hospitals throats only is the extent of illness. I think one broke her leg.

16916. And you take all kinds of disease except those known as infectious diseases?—Certainly.

Earl Cathcart.

16917. How did that nurse who broke her leg fall?—She fell over something outside; it was reported that she had hurt herself.

Chairman.

16918. Is there anything else that you wish to state?—I do not think there is anything else which I can say myself. I do not know if you would like me to hand in any paper of the dietaries.

16919. Yes, if you please, and a list of the employes, with their salaries and a copy of the agreement. Will you hand in these?—Yes. I want to mention with regard to the other witnesses, Sir Edmund Hay Currie and Mr. Goodsall. Mr. Goodsall is here, and is a member of every committee; but Sir Edmund said he thought I must have forgotten (which is perfectly true), that when he was being examined here with reference to the London Hospital, he largely went into the question of his connection with the Metropolitan Hospital, and therefore there was no necessity for him to come to give evidence to-day.

The Witness is directed to withdraw.

9 March 1891.

MR. DAVID HENRY GOODSALL, is called in; and, having been sworn, is Examined, as follows:

Chairman.

16920. You are on the staff, are you not, of the Metropolitan Hospital?—Yes.

16921. Would you tell us what qualifications you hold?—I am a fellow of the Royal College of Surgeons of England, and Licentiate of the Royal College of Physicians of London.

16922. And how long have you been on the staff of the Metropolitan Hospital?—About 17 years.

16923. Then you have been through the various phases of the hospital?—Yes.

16924. And now do you consider it a very efficient hospital?—Yes.

16925. Are you a salaried officer?—No.

16926. Do you see out-patients?—Yes.

16927. Will you explain to us what the system pursued in regard to the out-patients is. When a man first comes to the hospital what happens?—He is seen by one of the house surgeons. If it is a trivial case or a case that is not likely to require treatment for more than a week the patient is prescribed for and is not seen again. If it is a more serious case the patient is told that he must join the provident department if he wishes to attend the hospital or he must go to another hospital in his own neighbourhood. If the case is more serious than that it may be at once admitted into the wards.

16928. Then in the event, I understand, of the man refusing to join the provident department he is told he must not come there again?—That he must not come there again. We give the patient attendance for a week, so that he may in the meantime be able to see a private medical man or to go to another hospital; but if he should live out of the district we should refer him to the hospital which was nearest to his residence and advise him to go there.

16929. You give him a bottle of medicine to last him a week?—Yes.

16930. He may of course during that week come to the hospital three or four times?—Yes.

16931. As soon as he requires to have his treatment renewed he must join the provident department or go somewhere else?—Unless it is a serious case; then he would be admitted.

16932. You admit everybody?—Yes.

16933. Are the inhabitants of that neighbourhood extremely poor?—A good many of them, a large percentage I should think.

16934. Has it ever occurred to you whether the people could or could not afford to become subscribers?—I think the majority could afford to pay the amount we ask from them, which averages about two shillings a year.

16935. You have no idea, I suppose, how far that goes towards the cost of defraying the expense of the treatment they receive?—It pays for the medical officers who attend to the provident department and for the drug bill for the provident patients.

16936. It does pay the drug bill?—Yes; I should think for all the drugs consumed in the provident department, and for the medical officers who attend to it, the rest is covered by these contributions. Of course it does not allow

Chairman—continued.

anything for the building in which the patients are seen.

16937. From your observation do you think that the population about there like the feeling of independence of paying something?—I think they do.

Lord Zouche of Haryngworth.

16938. I think you adopt the wage-test as far as possible in asking people to become members of the provident department?—Yes.

16939. Do you think that at all a reliable test or is it a fallacious one?—We check it. The district around the hospital is divided up into four parts; there is a medical man who lives in the centre of each district to attend to the patients living in that part, and therefore all his patients are within a very short distance of where he practises, and he sees the name and full address of the patients in the book, so that the medical man living in that district could say, "I think you must be earning more than you say you are if you are living in such and such a street; explain matters." So that in that way we have a check and can see that those who say they are not earning more than a guinea a week are not getting more.

16940. It is quite possible that a man earning a guinea a week might be really richer than a man earning more, is it not?—Occasionally.

16941. Often would it not be so; it would depend upon a man's family and whether he had had illness in the family?—A married man earning up to 35*s.* a week is at present allowed to join, but no single man earning more than a guinea a week is allowed to do so.

Chairman.

16942. Is your out-patient department very crowded?—Nothing like so much as it used to be formerly when any one could go there without payment.

16943. It is kept quite within reasonable limits is it?—Quite.

16944. Do you also have departments for special diseases?—No.

16945. You have no special department?—No, only for diseases of women.

16946. But you have not got skin and dental arrangements?—Yes, there is a dental department as well.

16947. On what principle are your medical officers elected; must they hold what are called the London qualifications?—All the surgeons must be fellows of the Royal College of Surgeons of England, and all the physicians must be members of the Royal College of Physicians of London.

16948. And must the assistant house surgeon or physician, whichever he is, hold the London qualifications?—Not necessarily; he must be a member of the Royal College of Surgeons, England.

16949. You have no students?—No.

16950. Therefore you have no teaching to do in the out-patient department?—No.

16951. Are

9 March 1891.]

Mr. GOODSALL.

[Continued.]

Chairman—continued.

16951. Are you in favour of the out-patient department?—Yes.

16952. On provident lines, or do you think it should be free?—It should be combined, I think, as we have it; I think, if it were entirely on provident lines you might prevent serious cases from receiving immediate attention. You see we are practically perfectly free, for a week; anybody and everybody can go for a week, and we say, "In the meantime you must elect whether you will go to another hospital or join the provident department or go to a private medical man."

Earl Cathcart.

16953. I think it was argued that the essential value of the out-patient department was in some respects compared with its importance as an educational establishment. But you say that *per se* the out-patient department is very essential?—I think so.

16954. Have the out-door practitioners complained to you in any way?—They complained very much of the provident department at first; but I think that now practically all the objection from medical men has subsided.

16955. Have you made any inquiry to ascertain their views at all?—Yes.

16956. I think it was said here that you have some 90 practitioners within your circumference; was it said so just now?—More than that. We sent notices to 85 medical men residing within a mile of the hospital asking them to come.

16957. With that number of gentlemen affected you surely would have complaints if they really suffered?—We had when we first started, recently we have not.

16958. My experience in the country is that of all the sensitive people in the world with whom I have had to do, the medical practitioners practising amongst the poor, in fact all medical practitioners, are the most sensitive, with regard to anything in the nature of interfering with their practice or trespassing upon them. Am I just in that observation?—Yes, I should think so.

Chairman.

16959. Who makes the inquiries as to what the circumstances of the patients are?—We ask the medical men connected with the provident department to use as much supervision as they can in seeing the patients. We have also two collectors whose duty it is; they have been recently appointed. Prior to that, we sent one of the clerks from the office, in any doubtful cases, to make full inquiries.

16960. But I understand that a person can attend for a week, and that, after that, he must either go elsewhere or he must become a member of the club?—Yes.

16961. Is it not possible that great hardship might arise owing to a person not being in such a position as to be able to pay the money, and yet having to go a great distance, two or three miles perhaps, to get into hospital, because you would not take him under any circumstances, I understand?—If a person was seriously ill, the rule would not be strictly enforced. We recognise that we are there to perform charitable

(24.)

Chairman—continued.

work, and what we want to do is to get the poor to be provident, and to contribute a very small sum towards their own relief.

16962. I understood you to say in answer to Earl Cathcart, that independently of the teaching of which we have heard a good deal in the inquiry, the out-patient department is essential for the poor?—Yes, I think it is very much to their advantage that they should be able to go to the out-patient department even for a slight ailment.

16963. Are there any provident dispensaries in your neighbourhood that you know of?—I believe there is one.

16964. Are there any free dispensaries that you have to compete with?—There is the German Hospital at Dalston; we compete with that, of course.

16965. But does that take other people than Germans?—Yes, as out-patients but not as in-patients, accidents excepted.

Lord Monkswell.

16966. Have you thought whether it would be desirable to keep up the London qualification?—I think it is most desirable.

16967. Could you give us any reasons why you think so?—It is the best proof that a man at a certain time of his life possessed very good knowledge of his professional work.

16968. Why do you say it is the best, have you any knowledge of the degrees or qualifications elsewhere, such as Dublin, Edinburgh and other places?—In Edinburgh I believe you can get a fellowship on payment, or you could until recently.

16969. Fellowship, yes; but is your qualification a fellowship not a membership?—A fellowship for all the permanent appointments.

16970. With regard to Dublin, do you know about the examinations there, the standard?—There is an examination there.

16971. You do not know whether the standard is higher or lower than that of London, or do you?—I cannot say from experience.

16972. We have been told that the London qualification is desirable, because the students' characters are more inquired into in London than they are elsewhere; do you know anything about that; should you say that was a good reason?—I could not say.

16973. Do you desire that no use should be made of your hospital for educational purposes?—There is a rule of the Royal College of Surgeons that for clinical teaching to be recognised 160 beds must be in use. At present although we have room for 160 beds we have not the funds to keep more than 78 occupied.

16974. So that if you could keep your 160 beds open, you would let the students come and be instructed?—Yes, they may come now.

16975. Do they come?—No; occasionally men come round with the surgeons and physicians; but the attendance is not recognised by the examining bodies.

16976. A certain amount of attendances is necessary to get the qualification, I suppose, and attendance at your hospital is not recognised?—Our field of observation is too limited at present to be recognised by the licensing bodies.

s s 2

9 March 1891.]

Mr. GOODSALL.

[Continued.]

Lord Monkswell—continued.

16977. That would be an additional reason why you would like to be able to open all your beds?—Yes, that would give the hospital a much better standing in the profession.

Chairman.

16978. Do you have to turn patients away, because you have not a bed to put them in?—Yes.

16979. Do you consider that the accommodation for relief of the sick in your district is very deficient?—Very deficient.

16980. I understand that you have no hospital within two miles of you?—A mile and three-quarters as the crow flies; it is further of course by road.

16981. Is there any parish infirmary belonging to your district?—Yes, at Shoreditch.

16982. Is that one of the new ones built since 1867?—I think so, I should think it is about 20 years old, so that it would be since then.

17983. Have you any means of judging whether a great many patients do go to other hospitals from your district, on your advice, that is to say?—I have heard that since we have been opened they have had far fewer patients from our district at Saint Bartholomew's Hospital than they used to get before the hospital was placed where it is.

16984. In spite of your provident system?—In spite of our provident system.

16985. What I mean is that the provident system does not drive the patients out from your district to other hospitals for relief?—I should think it does to some extent.

16986. Or does it put them on the poor law, do you think?—I should think it drives them to the general hospitals, where the attendance is perfectly free.

16987. You have to send some cases to the workhouse infirmary?—Incurable cases.

16988. Do you find that the poor dislike that very much?—They prefer going to the general hospitals; there is more liberty, and, I suppose, better food and better nursing.

16989. That is only a supposition though?—That is only a supposition. I know as a fact that they do not care to be taken to the poor-law infirmaries.

16990. Is there anything else you wish to say to the Committee; any other point you wish to raise?—I think not.

Earl Cathcart.

16991. Your provident system is still in an experimental stage, is it not?—It has been in force now for three years.

16992. But you cannot say yet that it is more than in an experimental stage; that is to say, it would not be a safe guide for any other institution immediately to follow?—I think it might safely be followed throughout London, and would lead to a large increase in the revenue for charities.

Chairman.

16993. Might not that cause the subscriptions to fall off?—Our subscriptions have increased. People approve of the principle of inducing the poor to assist themselves as much as they can.

16994. Are you on the staff of any other hospital?—Yes, of St. Mark's special hospital.

16995. For what purpose?—Fistula.

Earl Cathcart.

16996. Your system would no doubt work much better if it were general; it would not then have a tendency to drive people out?—I think it would be much better; I think that people who now go out of the district to go to free hospitals would come to us.

16997. But we have been told that people go a long distance to a favourite hospital?—Yes, they will pass the doors of one to get to another where they know the medical man, or where a friend has been cured.

16998. And that is adverse to your system?—Yes.

Chairman.

16999. Can you tell me is there any Samaritan Fund at your hospital?—No.

17000. None?—Not at the Metropolitan, there is at St. Mark's.

17001. Do you know whether out of the provident fund you pay any money to keep families going during the time the bread winner is in the hospital?—No, it is all devoted to paying the costs of working it.

Lord Monkswell.

17002. Do you know at all whether your system relieves the infirmaries, or whether it has had any effect upon the admissions to the poor-law infirmary; or have you not paid attention to that?—I should think it must have done so.

17003. But you do not know?—We do not know as a fact. I consider that we do relieve the rates of the parish in which we are.

17004. But you have no statistics about that?—No.

Lord Thring.

17005. With respect to the objection of the poor to poor-law infirmaries, does it not arise from the fact that they are considered as paupers in the poor-law infirmaries, not from any dislike of the treatment, I mean, but from the fact that they go there as paupers?—I could not say; I know as a fact that they do prefer being in the wards of a general hospital to going to the poor-law infirmary.

17006. But surely the poor-law infirmaries of the class that now exist in London are extremely well managed, are they not?—I cannot say anything about their management, I can only speak to the fact that the poor prefer the hospital.

17007. But you do not know whether that arises from dislike of being considered paupers or dislike of the management of infirmaries?—I cannot say.

The Witness is directed to withdraw.

9 March 1891.

MR. CHARLES H. BYERS, having been re-called; is further Examined, as follows :

Chairman.

17008. THERE is one question I forgot to ask you just now; what is your assessment?—£. 583 net, 700 *l.* gross; roughly we pay 160 *l.* a year.

The Witness is directed to withdraw.

Chairman. I wish to state to the Committee that I have had a letter from the Sister Superior at University College Hospital, which is addressed to the Clerk of the Committee, and is as follows :—“Dear Sir, In reply to your letter, I beg to state that on 6th April 1889 the Mother Superior of All Saints decided that it would be well to admit nurses of all creeds to the paid staff of the hospital. Mrs. Alison (of whom I have no recollection) must have applied previously to this decision. Prior to 6th April 1889 we trained nurses of all creeds, but did not take them on our paid staff. I am, sir,—Yours faithfully, Sister Cecilia, Sister Superior.”

MR. ALGERNON COOTE, is called in; and, having been sworn, is Examined, as follows :

Chairman.

17009. YOU are Secretary of the Lock Hospital, are you not?—I am.

17010. Will you tell us exactly what that is?—The Lock Hospital was started in the year 1746 originally in Grosvenor Place, Westminster, and it was moved about 50 years ago up to the Harrow-road, and is now divided into two separate departments. There is the female department at the Harrow-road and the male department in Dean-street, Soho, which has been started now, about 30 years. This was opened in the year 1862, only for male patients and out-patients; the female department being in the Harrow-road.

17011. Therefore you have two hospitals?—We have practically two hospitals; they are under one management.

17012. Are you secretary of both?—I am secretary of both.

17013. How long have you been secretary?—Three years.

17014. And previously to that had you any hospital experience?—No; previous to that I had no hospital experience.

17015. In what line of business were you previously?—For three or four years previously to that I had not any salaried appointment at all.

17016. You had no business training?—I had no business training. I had a University training.

17017. How many beds have you in the female hospital?—One hundred and forty beds at the hospital, but there is a rescue home under the same roof; possibly that is outside the present inquiry.

17018. And in the male department how many beds are there?—There are 20 beds in Dean-street.

17019. And into the bargain under the same roof on the female side you have a rescue home?—Yes.

17020. How many people does that hold?—We can accommodate 70; we have 56 in at the present moment.

17021. Are funds which are subscribed to the hospital for hospital purposes applied to the rescue home?—They are not, unless they are

(24.)

Chairman—continued.

requested to be so. If they are sent for general purposes, generally a third is given to the rescue home, unless otherwise specified.

17022. But in making an appeal and receiving, we will say, 1,000 *l.*, a third of that would be used towards the home?—Unless it was otherwise specified.

17023. But in all money subscribed to the general funds of the hospital unless specified otherwise, a third goes to the home?—A third goes to the home.

17024. Are your beds all full?—No, not all full.

17025. What is your working number?—I think in 1890 it would be 100, it was 96 in 1889.

17026. Have you any reason for keeping as many as 40 beds vacant?—There is no special reason; we do not refuse cases as a rule.

17027. Have you funds enough to occupy the whole?—No, nothing like enough funds to occupy the whole.

17028. Is that the reason why so many beds are vacant?—That is probably the reason why they have not been filled up, but at the present moment we are refusing no cases.

17029. Then is there a great disinclination to enter that hospital?—I do not know that there is; we are receiving more cases now than we did a year or two ago; there are more applications.

17030. Have you any means of telling whether that is because that particular disease is increasing or because other places of relief, general hospitals, and so on, will take them?—The reason is partly that since the repeal of the Contagious Diseases Act in 1886, as soon as those Acts were repealed, we lost a good many cases, but a great many cases are coming to us now from workhouse infirmaries. We have at the present time, I think, 46 cases sent us upon orders by the workhouse infirmaries.

17031. But you say that the cases fell off in 1886 immediately after the repeal of the Contagious Diseases Acts?—We had not so many cases afterwards in the following year.

17032. To what do you ascribe that; the
s s 3 disease

9 March 1891.]

Mr. COOTE.

[Continued.]

Chairman—continued.

disease not being so prevalent?—Under the Government Contagious Diseases Acts cases were sent to us, and we were obliged to take them in. Now it is absolutely voluntary.

17033. Will you tell us the constitution of your hospital?—The constitution of our hospital has been altered during the last year; the weekly board was open to all governors, but now there is a fortnightly board, and after next month the board will be elected at the annual meeting of the hospital. I have a copy of the new rules here, if your Lordship would like to see it; they were revised this last year, they had not been revised for about 50 years.

17034. If you will put a copy in we can deal with them?—Certainly (*handing in the same*).

17035. Is there a quarterly court or meeting?—There is a quarterly court open to all governors, and an annual meeting which is also open of course.

17036. It is open to the press?—It is open to the press.

17037. Do the press come to your annual meeting?—We have never had an annual meeting; this will be the first, the press will be invited.

17038. Have you never had any quarterly meeting when a report was read?—Only open to the governors till last year.

17039. Then it was not an open meeting? It was not.

17040. Will you have an annual meeting now?—We shall have.

17041. And a quarterly court?—Yes; but the April quarterly court will be called as the annual meeting and will be open to the public.

17042. Then what is the next body below that?—The fortnightly board, the board of the hospital.

17043. And are there any sub-committees?—There is a medical committee and a ladies' committee in connection with the female hospital, a standing committee.

17044. And any finance committee or nursing committee?—There is no finance or nursing committee. Our board is so small that it practically becomes a finance committee; we have a very small attendance at the board.

17045. It performs those functions itself?—Yes.

17046. What are its duties, what do they do at the fortnightly board?—Everything connected with the hospital comes before the fortnightly board.

17047. They are the executive of the hospital?—They are.

17048. Do they check all their books relating to provisions and to finance, and so forth, at that meeting?—Yes, they are all laid upon the table.

17049. Are they ever looked into?—Yes, they are looked into and initialed by the chairman. There are two visiting governors who visit every week, and look into everything at the hospital itself.

17050. Then all that time when the board is not sitting, are you in full charge of the hospital?—Yes, I am.

17051. Are you supreme in the absence of the

Chairman—continued.

board?—Yes, I am answerable to the board for everything.

17052. Therefore, you would have power to suspend anybody?—On special occasions for special reason.

17053. At least you might suspend, but you would be responsible for your action?—I should have to report to the board at its next meeting.

17054. Are there any medical men members of your fortnightly board?—There will be. Up to the present any medical man who is a governor could attend the fortnightly board. In future, the medical committee will elect their own representatives, they will nominate their own two members for the board of the hospital each year.

17055. Therefore, as well as having two men on the fortnightly board of the hospital, they will also have their medical committee?—They have their medical committee.

17056. Have you any other hospitals close to you?—St. Mary's is the nearest hospital to us.

17057. Do they take lock cases there?—No. We receive lock cases from most of the general hospitals, not from all, as well as from the work-house infirmaries.

17058. Who admits to the beds at the hospital on the male side?—It is practically free upon application; a governor's letter of course we receive upon, but it is not often used, and the rule of procedure is, that an applicant comes in, is seen by the medical man, and received into the hospital at once, if the case requires it.

17059. If not it is treated as an out-patient?—If not it is treated as an out-patient.

17060. Is the out-patient department very crowded?—Yes, it is now; there is a special reason for that, the out-patient department is at Dean-street not Harrow-road.

17061. What is the special reason?—Two and a-half years ago we commenced evening attendances for out-patients. On two evenings and Saturday afternoons out-patients are seen, and the attendance has exactly doubled in the time from 11,000 to 22,000.

17062. That is the attendances, not the new cases?—No. The new cases I have a memorandum about; they are reported and published.

17063. I will just ask you a question upon that. Can you give us the number of in-patients, male and female, and the number of new cases in the out-patient department for last year?—Last year there were 731 patients admitted into the female hospital, and into the male hospital 231, I think it was; 250 it was for 1889. I am not quite clear as to 1890.

17064. And out-patients?—There were 3,278 new male cases, and 415 new females. There were 19,600 males altogether, and 2,450 females altogether, of whom the 3,278 were new male cases, and 415 new female cases.

17065. Is your cost per bed very expensive?—I think it is as economical as in any hospital in London. Last year the cost per patient was only 16 s. 3 d. per week.

17066. If you take it for the year?—It would be between 40 l. and 45 l. a year. At the male hospital it is more, because we have fewer beds. At the male hospital it was about 60 l.

17067. Who

9 March 1891.]

Mr. COOTE.

[Continued.]

Chairman—continued.

17067. Who makes the contracts for the food?—The contracts are for six months, and the lowest tender is taken if the provision supplied is good. We have had the same contractor for some time for meat now, and it has been very good; it is the same man who supplies St. Mary's and St. Bartholomew's.

17068. Do you advertise for tenders?—No we do not advertise; we send to a certain number of firms.

17069. Who takes the food in?—The matron of the hospital takes the food in.

17070. Is there no steward?—There is no steward; I have to act as steward.

17071. And you have clerks in your office?—Yes, two permanent clerks.

17072. Who is responsible for the healthy condition of your building?—I presume I am. We have an inspection every spring of the whole hospital. We test it with peppermint or with rocket to see whether it is right.

17073. Who does that?—Until last spring it was done by the Sanitary Association, but the visiting governor last year thought it was hardly necessary to do that; we had been going on year by year and nothing really was wrong with the hospital, so last year the same man who went round with the Sanitary Association people tested it under my supervision.

17074. Have you any plan of your drains?—Yes, I have, but not here with me.

17075. It is kept up to date?—Yes, it is kept up to date.

17076. Supposing that a nurse or a physician or surgeon found something very defective in the way of smells or dirt or whatever it might be, to to whom would he report such a state of things?—To me.

17077. And what course would you take?—I should have it attended to at once if the visiting governors were not there.

17078. To whom would you apply to attend to that?—We have a man who has done our work for a great many years in the neighbourhood and given thorough satisfaction; he has tendered two or three times, and he has generally come in with the lowest tender; we can depend upon him.

17079. But is he a sanitary expert?—He is a contractor, and I presume he is a sanitary engineer; he does all our building and alterations.

17080. You do not know that he is specially skilled, that is to say in sanitation?—No, I do not know that he is.

17081. Do you pay him for what he does?—Yes, we pay him for what he does.

17082. Are you nursed by a sisterhood, or do you train your own nurses?—We have our own nurses. I think one reason why our cost is small per bed as compared with other hospitals is probably that 75 per cent. of our patients are able to assist the nurses, so that we only have a nursing staff at the present time of three head nurses and four assistant nurses under the matron.

17083. What do you pay your nurses?—The head nurses begin at 25 *l.* and are raised 1 *l.* a year. The one who has been there the longest is now getting 30 *l.*, and I do not think the board will give her higher than that. The assistant nurses begin at 18 *l.* and rise 1 *l.* a year.

(24. 13.)

Chairman—continued.

17084. Are they under the matron?—Yes, all are under the matron.

17085. And the matron is under you?—The matron is answerable through me to the board. Then there is the ladies' committees who have charge of the domestic arrangements of the hospital under the board in connection with myself.

17086. In the number of nurses do you include those in the male ward?—No; there is a male nurse in the male ward.

17087. One male nurse only?—There are only 20 beds; the average number occupied is 14.

17088. And that is all the assistance there is?—Yes; you see with men there are not many bed patients, they are able to help.

17089. Do you have any night nurses; is that necessary?—If we require special nurses, we generally engage special nurses for a time.

17090. Do you give your nurses any pension?—No, they have not stopped long enough; most of our nurses up to the last two years have not remained very long in the hospital; but they are remaining now.

17091. Where do they dine?—They have a dining-room of their own; they all have separate bedrooms; and they have an afternoon off, and an evening off every week, and on alternate Sundays afternoon or evening. Then they have a fortnight's holiday in the year.

17092. At what time do they begin their work in the day?—I am not quite clear. I think that would be more a question for a medical man; our house surgeon is here and he could give me the information, and I could give it to you.

17093. We will get it from him. Then as regards your funds where do you get your funds from?—We have no investments, and no endowments, and since the repeal of the Contagious Diseases Acts we have, of course, lost all Government support; but our funds are made up in different ways. All unions pay us for cases sent to us at the same rate per patient as was paid us by Government formerly, 16 *s.* per case; that is all cases that come to us on a workhouse order.

17094. That is per case you take in?—We never practically refuse workhouse cases. They are very much increasing; we have a great many more than we formerly had. I sent a notice out to all the unions in the United Kingdom a few months ago, and we have cases from unions in all parts of the United Kingdom sent to us.

17095. Do you know how long a case of that kind takes to get cured?—Seven weeks is the average.

17096. And they pay you 16 *s.* shillings for the whole treatment?—Sixteen shillings per week per case.

17097. How much did you get from that source last year, do you know?—£. 1,164 for the females, and 236 *l.* for the males.

17098. Then what was your gross expenditure last year?—The hospital is in departments; we work in departments and keep the expenditure separate for each department.

17099. But what was the gross expenditure?—Between 7,000 *l.* and 8,000 *l.* for the whole institution;

9 March 1891.]

Mr. COOTE.

[Continued.]

Chairman—continued.

institution; then 2,300 *l.* of that was for the home; so that leaves between 5,000 *l.* and 6,000 *l.*

17100. What receipts did you have to put against that?—We received last year in subscriptions about 1,500 *l.*; 958 *l.* only for the female hospital, and for the male hospital we received 99 *l.*

17101. £.1,500 in donations or subscriptions?—£.1,500 in subscriptions. We had a dinner last year; we had not had one for 20 years, which brought us in two thousand odd pounds; but every year we are about 1,500 *l.* to 2,000 *l.* on the wrong side of our accounts as we are working at present, so that we have now a debt of between 4,000 *l.* and 5,000 *l.* But last year through the special effort that was made by the dinner our receipts met our expenditure for the year, and we had a little over to pay towards the liabilities.

17102. How do you hope in future to get rid of that debt?—We hope to get rid of it merely by appeal; we are getting in a large amount by appeal. When I came to the hospital three years ago the debt was 6,000 *l.*; it has been reduced to 4,000 *l.*

17103. To whom do you owe money?—To the bankers 1,750 *l.*, and the rest to tradesmen standing over an average period of about nine months, I suppose. We have never been pressed by the tradesmen for the money.

17104. And you do not pay your bills quarterly?—We pay our bills quarterly, so far as we are able to pay them.

17105. As to the rest of the deficit, except the 1,500 *l.* which, of course, is not paid, where do you get that from, voluntary donations. We will go through the items; first of all 1,500 *l.* subscriptions for the two buildings, of course?—Yes, that is for the two buildings, including the asylum.

17106. That is subscriptions?—Yes.

17107. Then donations?—The donations last year amounted to 2,100 *l.*

17108. That was a very good year?—An exceptionally good year. Then we had last year 1,000 *l.* from legacies exactly; and we received by payment from unions, which I think your Lordship has, about 1,400 *l.* altogether; then we have received a very considerable amount from out-patients in voluntary contributions, averaging one shilling a-piece all round.

17109. How much do you charge them?—We charge them nothing, and some of them give nothing.

17110. How much did that amount to?—It came last year to 1,151 *l.*

17111. And your expenditure was how much?—Between 7,000 *l.* and 8,000 *l.*, taking the three places, the Female Hospital, the Asylum (Home), and the Male Hospital.

17112. So that you were out very little on the whole?—We were right last year, and we had a little balance on the right side last year (1889); but that was entirely owing to a special appeal.

17113. Do you appeal from time to time during the year?—We generally appeal in the autumn. We are appealing now, and getting a

Chairman—continued.

very fair response. Our last appeal has already brought us in about 1,000 *l.*

17114. What are you assessed at?—It is freehold property, 3½ acres in the Harrow-road, and the Dean-street Hospital is freehold also. We are assessed at 148 *l.* for Dean-street, and 150 *l.* for Harrow-road.

17115. Is that what you paid?—No, that is what we were assessed at.

17116. How much then do you have to pay for rates?—Rates do not come to very much; but last year the rates and taxes for the male hospital came to 44 *l.*, and 48 *l.* for the female.

17117. Have you any paid staff?—We have a resident medical officer at Harrow-road, and a resident medical officer at Dean-street. Then we have an assistant at Harrow-road for the female hospital; he is not a qualified man; he acts in the dispensary, and helps the resident medical officer.

17118. And then you have a staff beyond that?—Yes, we have an honorary staff.

17119. How many are there on that staff?—We have a consulting physician, a physician, and two consulting surgeons, and we are now just appointing a consulting ophthalmic surgeon, because there are so many cases suffering from their eyes. Then we have three visiting surgeons, one for the male hospital, and two for the female hospital, and three surgeons for the out-patients; also an anæsthetist.

17120. Are there any restrictions as regards the out-patients at all?—We do not admit them if we find that they are not suitable for hospital treatment; we are careful as to that.

17121. If they are not suitable for treatment for this special disease, you mean?—Yes, or if they can afford to pay a medical man.

17122. Do you restrict them as regards numbers at all?—No, we have never restricted them as regards numbers. We are very full, because our out-patient room although sufficient, is no more than sufficient, on the two evenings in the week.

17123. Is there a separate kitchen for the officers of the hospitals, and the nurses, and so forth, in the female hospital?—There is not a separate kitchen.

Earl Cathcart.

17124. As regards the general welfare of the population, probably your special hospital is one of the most important, if not the most important of all the special hospitals, and yet you live from hand to mouth?—Yes.

17125. Is that at all from any adverse feeling that might have been created during the discussion on the Contagious Diseases Acts?—I do not know whether that may be the case; but I think there is still an idea among some portion of the public, and probably among that portion who would give support to us, that we are still receiving support from the Government, which they object to.

17126. But by means of your circulars, and other means, you are making it known now that you are not doing so, are you not?—We do our best; we are gradually making it known.

17127. Have you any consolidated statistics which would show what amount of the disease prevails

9 March 1891.]

Mr. COOTE.

[Continued.]

Earl Cathcart—continued.

prevails in London and the country?—I have not; that is rather a question, I think, for the medical men who will come before your Lordships.

17128. Are they likely to be provided with such statistics?—I do not know as to statistics; one of them has been for 30 years surgeon at our hospital.

17129. He would naturally know a good deal about it; one of the principal medical newspapers has stated that, probably, when you appeared before this Committee you would be able to provide the Committee with statistics in relation to the disease; but you think that the medical officers would be better prepared in that respect?—They would be more likely to be prepared than I should.

17130. Your experience is limited; it has extended over three years only?—That is so.

17131. Therefore I need not, I suppose, trouble you with details as to statistics at all as you have not gone much into the matter?—I can give you the statistics during the three years that I have been secretary.

17132. Relating to the hospital?—Yes.

17133. But not relating to the prevalence of the disease, generally, in the country and metropolis?—No.

17134. And consequently as to the necessity for further accommodation?—No.

17135. Is it within your knowledge that some of the hospitals, recently at all events, have given up taking lock cases?—The larger hospitals are sending lock cases to us now more than they used to do; but there are some that have their own lock wards, the London and St. Bartholomew's, for instance.

17136. I see from a certain little book which you have published, and which, I suppose, is your own, that you have some cases of respectable married women?—Yes, we have a proportion of respectable married women come to our hospital.

17137. And that is inevitable, I suppose?—Yes.

17138. You would not be surprised, perhaps, to hear of a case that I read of the other day of a midwife, in one of the large provincial towns who had infected no less than 30 women and children with venereal disease; it is so stated, that such a thing is possible?—Quite so, but I have not heard of the case.

17139. The number of the male out-patients you have given us?—Yes.

17140. And you stated, which is a very satisfactory fact, that 1s. each on the average has been paid by each out-patient?—Yes.

17141. That covers nearly the whole of your expenditure, does it not?—It will make our male and out-patient departments very shortly quite self supporting.

17142. Are you of opinion that you have not taken people who are able to pay fees to outside doctors?—I cannot say so for certain, but I think that those who have come to us have not been to our own medical officers who would be the medical men that they would be most likely to go to.

17143. I suppose you cannot answer the question whether the disease is on the increase, or is

diminishing?—I can only answer it from hear say.

17144. Is it difficult to get nurses; do they dislike the sort of operation?—Yes, they naturally dislike it.

17145. Have you ever heard of the case of a nurse, or of anybody attached to the hospital contracting the disease?—We have had no case that we have been able to verify either of a doctor or a nurse.

17146. You have never heard of those who have been attending the patients being in any way affected by the disease, to your knowledge?—Not to my knowledge.

17147. Have you any pupils, or anybody who studies lock cases at the hospital?—Not at the female hospital; they are permitted at the male hospital if the surgeon who visits there brings them with him.

17148. Do they come from the larger hospitals?—Yes.

17149. Have you any female out-patient department?—Yes; that is also in Dean-street; but they come on a different day from the males.

17150. Is that a paying department also?—They do not give anything like the same amount as the men give.

17151. But they do pay something?—They give something, but it is entirely voluntarily.

17152. And you know nothing about the special hospitals in the other large towns in England?—Does your Lordship mean lock hospitals?

17153. Yes?—I have been over the Birmingham Hospital; they have very few beds there; the hospital has only been recently opened. And they have one at Liverpool and one at Manchester.

17154. They have a new hospital at Liverpool with 100 beds?—Yes.

17155. And that is quite separate from the other hospital?—Yes, I am aware of that.

17156. That is said to have worked very well, and to have done a great deal of good in Liverpool?—Yes.

17157. I suppose, as we have been told over and over again, that the reception of lock cases in any but special wards in a general hospital would not do?—It would not be permitted.

17158. This is merely a general question, but you can answer it from your own knowledge. Do you not think that it is wrong that these women should be left to suffer, and go about the town from want of sufficient means of curing them, for want of sufficient accommodation, that is to say, and that the effect on the general population must be very bad?—Undoubtedly. I was going to mention one fact which your Lordships would not be likely to ask me perhaps, viz., that since the repeal of the Contagious Diseases Acts we have no power to keep patients in. Our hospital is divided into separate wards; one ward is called the "Rescue" ward, into which we put cases from rescue homes, and married women; another ward is called the Cambridge ward, where we put the cases from workhouses with workhouse orders; then we have the London ward for cases of prostitutes

T T

from

9 March 1891.]

Mr. COOTE.

[Continued.]

Earl Cathcart—continued.

from the streets chiefly, and out of that ward 43 per cent. leave the hospital without being cured, that is, they are still in a contagious condition.

Chairman.

17159. Without being absolutely cured?—Yes.

Earl Cathcart.

17160. In a condition to infect the whole neighbourhood?—With the risk of infecting the whole neighbourhood.

17161. It has been argued here that these cases are not cases for charity because they have brought the disease upon themselves; but in all these cases you must be aware that a man eaten up with syphilis is an object of charity in himself?—Yes.

17162. A man afflicted with that most horrible of diseases?—Yes, certainly. I was speaking of the London ward where we put cases from the streets, and I said that 43 per cent. of those cases left the hospital without being relieved; but if you take the whole of the hospital about 31 per cent. go out at their own request.

Chairman.

17163. Male and female?—No, that is in the female hospital; in the male hospital they usually stop; we have only some 20 beds there.

Earl Cathcart.

17164. Can you trace whether the cases come from any particular district of the metropolis or from all parts?—I had a list worked out of the different places from which they come. We received cases last years from all over the country; our hospital is not only for London. I have a list of 24 places in the country, that is country and country unions; but in London we receive them from the Unions of Kensington, Lambeth, Bloomsbury, Woolwich, the Strand, Westminster, Camberwell, Chelsea, Lewisham, Poplar, Hackney, St. Olave's, Paddington, Greenwich, and Mile End, as well as upon their own application.

17165. Does not the Seamen's Hospital take them for Greenwich. I should have thought it would?—It only takes seamen I suppose. I am speaking of the female hospital. I do not know whether they take female cases or not.

17166. But you have only 100 beds for females and only 13 or 14 for males; that must be a totally inadequate proportion of beds for the metropolis?—We have 20 beds for males.

17167. But you only have an average of 14 occupied?—That is so.

17168. To go to more concrete matters now; I do not mean to say that this is my own view, but this is what has been stated: Three years ago, just at the time when you entered the hospital, was there any difficulty or anything that caused the resignation of your predecessor?—No, he resigned; he had been there eight years.

17169. Did you mention what your salary was?—No, I did not.

17170. What is it?—£. 250 a year.

17171. Your predecessor's salary used to be 105*l.* a year?—Yes; but formerly there were two secretaries, one for each hospital.

Chairman.

17172. Does that 250*l.* a year include board and lodging?—No; I have my luncheon at the hospital.

Earl Cathcart.

17173. And there was an accountant before your time, and an assistant secretary?—There is no assistant secretary now.

17174. He had 100*l.* a year?—There is none now.

17175. And there were two clerks?—There are two clerks now.

17176. One has 78*l.* and the other 52*l.* a year?—That is about what it is now.

17177. And the accounts of your two hospitals are kept altogether separate?—They are.

17178. That makes more work no doubt in the accountant's department, but as long as these two departments are kept separate it is necessary no doubt that the accounts should be kept separate?—Yes.

17179. And for the spiritual wants of 163 persons the clerical staff is a chaplain, whose remuneration is 350*l.* and a house?—It is not so now. There is a chapel connected with the hospital, but it is now detached from the hospital management; we have nothing to do with it, except that the asylum patients attend there.

17180. Have you a chaplain now?—Yes; we pay him 100*l.*, and give him a house equal to another 100*l.* for his work as chaplain.

17181. You used to give him 350*l.* a year and a house; and then there was an assistant chaplain with a salary of 150*l.*, what have you done with him?—He is still there, but we derive no receipts from the chapel now and the responsibility for the chapel has gone from us.

17182. Have you two chaplains now?—Yes.

17183. Are two chaplains necessary?—That is a matter for the chaplain. The assistant chaplain is practically his curate; he appoints him as his curate.

17184. But you pay him?—No, the chaplain pays him.

17185. But he used to be paid; was he paid out of the 350*l.*?—No, that was additional. But then we had all the pew-rents from the hospital chapel; we have none of them now.

17186. There was formerly a loss by the chapel, but that loss has ceased now?—The loss has ceased now because it is taken over by the chapel people themselves; there is a congregation meeting at the chapel.

17187. And the public used to be admitted on payment for the seats?—So they are still, but not to us.

17188. Then you could not have made money out of it when you had it in your own hands?—Not of late years, but in former years they made a considerable amount of money.

17189. Formerly the charity received a considerable benefit from the chapel?—Yes, they did, a very considerable benefit.

17190. There is an idea, I do not know whether it has been ventilated in your time, that it would be better to consolidate the two establishments, and that the chaplain's house should be utilized as the Male Lock Hospital?—I do not think that would be suitable; I never heard it suggested.

17191. I am only asking you whether you are able to contradict it?—When I was appointed secretary

9 March 1891.]

Mr. COOTE.

[Continued.]

Earl Cathcart—continued.

secretary I, myself, proposed that the male hospital should be moved up to Harrow-road, but it did not meet with the approval of the members of the board to whom I mentioned it.

17192. On what ground was their disapproval based?—Because formerly it was found objectionable to have the men and the women under the same roof; they met when they went out.

17193. But that would not be the case if the male patients had the chaplain's house?—But it is close by, and they would meet at the gate as they went out.

17194. Another reason why it probably would not be desirable to bring up the male department to the same hospital would be because of the out-patient department?—Quite so; it would be very objectionable. And the male hospital is self-supporting, or will be now, so that we need not consider that. We have no paying patients; we are paid for the patients, but we have no paying patients.

Chairman.

17195. You have no patients at a guinea a week, or anything of that kind?—No.

Earl Cathcart.

17196. Do I rightly understand you to say that you have any debt now beyond the debt you have mentioned of bills unpaid?—We have a debt to our bankers of 1,750 *l*.

17197. But there was a debt of 4,500 *l*?—Yes, that has been reduced.

17198. But still a debt remains?—Yes, a considerable part of it.

17199. Is it in the nature of a mortgage?—No; 1,750 *l*. of it has been advanced by the bankers; we pay them 4 per cent. for it.

Chairman.

17200. On what security, may I ask?—I cannot answer the question. I suppose they consider that the freehold of the hospitals would be a security, but I believe that we are not at liberty to dispose of the property without the permission of the Charity Commissioners.

Earl Cathcart.

17201. What have you done with the chaplain's residence?—He lives in it.

17202. Then he has that in addition to the 880 *l*. pew rents?—He has nothing like that amount; he only received last year 170 *l*. beyond what we gave him.

17203. What sort of people go to the chapel?—The people in the neighbourhood, but there are so many more churches now in the neighbourhood than there were that the Lock Chapel does not fill.

17204. Had you not some idea of selling a part of the ground at Westbourne-green for 1,200 *l*., to the Paddington Guardians?—There was an idea of that sort; that came up before the board the other day, but they decided not to do so, because the money would have to be invested according to law in a way that would bring in very little, and we want the ground.

17205. But they did offer you 1,200 *l*.?—That was before my time.

17206. For what purpose did the Paddington

(24.)

Earl Cathcart—continued.

Guardians want it?—I believe for the purpose of the workhouse infirmary next door.

17207. I hope you quite understand that the questions which I have asked you are not my own?—Certainly.

Lord Zouche of Haryngworth.

17208. I think you told us that you have an asylum connected with the Female Lock Hospital?—We have a rescue home.

17209. Does it answer practically, do you think?—It answers very well indeed. We consider that about one-fourth of our patients are permanently rescued; I do not mean that they simply go into the home, but we follow them up for years.

17210. You ascertain what happens to them?—Yes, we get them situations; we never have any difficulty in getting them situations. They stop one year in the home.

17211. Your work, of course, is very much limited by want of room at the asylum?—We have as many beds as we require; we have never for a long time had more than 60 cases there.

17212. Why do you suppose that the infirmaries send more cases to you than they did a few years ago?—I fancy that they were not aware that we would take them in the way we are taking them now. A circular letter that was sent round, drawing attention to that, has brought us a very large number of cases; one or two of the larger infirmaries have their own lock wards.

17213. Are you speaking of London or country infirmaries?—I was then speaking of London infirmaries. We have them from the country; we have a good many cases from the country infirmaries; we have had them sometimes from Wales.

17214. Were those cases formerly treated by those infirmaries themselves, or dismissed, and not allowed to come in?—I cannot answer, of course. So far as I know, I believe they were in many instances treated; but they were very glad to get rid of them, because, of course, naturally there was the risk of infection.

17215. Was there any other reason for the nurses not staying in your hospital besides a natural dislike to these cases?—I do not think so; it was owing to the unpleasantness of the work there. Their wages have been increased lately.

17216. You find that you can work with a very small staff of regular nurses?—With a very small staff: they work well, too, without any difficulty.

17217. You think that when the Contagious Diseases Acts were in force you were able to keep female patients better until they were quite cured?—Until they were relieved. A medical man will never say that they are cured of syphilis; they will never give a clean bill of health for syphilis.

17218. But, so far as might be expected, they would not be so likely to spread the disease?—Until they were practically free from it they would not have been allowed to go out.

T T 2

17219. Now,

9 March 1891.]

Mr. COOTE.

[Continued.]

Lord Zouche of Haryngworth—continued.

17219. Now, there is no guarantee at all that that happens, is there?—None whatever.

17220. On the contrary, you say that nearly half the cases go out before they are cured?—About 30 per cent. last year.

17221. Are those usually very bad cases, infectious cases?—They vary; I cannot say for certain whether they are or not; that is rather a medical question, I think.

17222. At all events this proportion has greatly increased since the Acts were repealed?—Yes.

17223. Would you say then that since the repeal of the Acts many more women are allowed to spread the disease and death in society?—Certainly, they are allowed to spread the disease; we had a remarkable case. A young girl went out to be married with the disease full upon her. Our surgeons did their best to keep her in; they told her practically that she was a murderess, but she would go; I communicated with the registrar, and I did my best to communicate with the man she was going to marry; but it was no good. Under the old Acts (I am not expressing an opinion upon the old Acts, it is not for me to do so) she would have been kept in.

17224. You would not go so far as to say that the repeal of those Acts was a benefit?—I do not think I ought to give any opinion. When I came to the hospital I certainly thought that the repeal of the Contagious Diseases Acts was a great benefit to the community; but I have modified my views since then. I should not myself say that it would be a good thing to re-commence the Acts as they were before; but I think there ought to be some modified form of guarding the cases.

17225. I think the Acts never applied to London?—I think they applied to London; they applied to garrison towns.

Lord Thring.

17226. They never applied to London, if you mean the whole of London, but to certain parts of it?—Yes, to garrison towns, such as Woolwich.

Lord Zouche of Haryngworth.

17227. With regard to these subscriptions that were given voluntarily by out-patients, were they mostly from male patients?—Mostly from the male patients; I think the females spend their money as soon as they get it; that is our experience.

Lord Thring.

17228. What is the motive of the women going out before they are cured, is it lust, or a dislike of the restraint of the hospital?—They clan together a very great deal. One of our difficulties is that these women come in from certain neighbourhoods, and, if one takes it into her head to go out she will very often take others out with her. We very nearly reclaim two or three women, and then, at the last moment, some bad woman talks them over, and they have gone. I do not think it is lust; it may be the desire to make money.

17229. And the dislike of restraint. There is a certain amount of restraint in the hospital,

Lord Thring—continued.

of course?—Yes, there is a certain amount of restraint.

17230. I gather that you would not object to a legislative provision, if necessary, that women who come into the hospital with that disease should not be allowed to go out until they are cured?—I think it would be a most useful thing if it could be done.

17231. What time would that generally mean; what time do they take to be cured?—Seven weeks was the average last year; three weeks for the men, and seven for the women; the main reason for the difference, probably being that the men are able to do work and to get about to their work sooner than the women. Many of the women, of course, have no work.

17232. But seven weeks, as a general rule, would not render a woman harmless, would it?—An average of seven weeks. Some are in for a great deal longer. We have had one in six months or a year.

17233. But, as a general rule, supposing that there were a legislative enactment that they should remain in hospital until they are cured, it would not involve more than seven weeks' confinement, you think?—No, not as a general rule.

Lord Clifford of Chudleigh.

17234. Is your hospital used for clinical teaching at all?—There is no school.

17235. It is not used in that way then?—The male hospital may be so used; it has not been very much used.

17236. The female hospital is not used at all for that purpose?—No.

Lord Saye and Sele.

17237. Would you kindly tell me whether the rescue ward is under any sisterhood, or whom is it under?—The rescue ward is merely our own name for one of the wards of the hospital.

17238. With regard to the Home, who is that under?—That is under the ladies' committee who are answerable to the board.

17239. Under the chaplain, I suppose?—Under the chaplain.

17240. I suppose it is quite optional for the patients to go to the home, or not?—Quite optional. Many of them go to other homes, what they call shorter homes, where they are not kept in so long.

Lord Thring.

17241. I should like to ask you another question. Where do doctors learn and obtain a knowledge of this disease, if you have no clinical teaching at your hospital?—The doctors, I presume, learn it from practice among patients and from books, but according to our laws, which have just been revised, we have the power, as I say, to have pupils at the male hospital.

17242. But at the present moment, as I understand you, it is not used for teaching at all?—No, it is not.

17243. And also the other hospitals in London exclude Lock cases as a rule; therefore as a rule there is no teaching at all in regard to that disease?—Not of that particular disease. Our board

9 March 1891.]

Mr. COOTE.

[Continued.]

Lord Thring—continued.

board feels very strongly, rightly or wrongly, that they do not like to open the female wards to male students.

17244. That is to say, you are afraid of what would be said?—They really do not quite think it would be fair to the women, considering the nature of the disease.

Lord Zouche of Haryngworth.

17245. You entirely ignore the fact of the men who attend them being more or less ignorant of the nature of the disease?—They can learn it at the out-patient departments of other hospitals. We have a great many patients sent to us by other hospitals.

Earl Cathcart.

17246. Because they are disgusting cases, and they try to shunt them I suppose. One reason why they went out in my experience was that there was some local tea or feast, and they went to it. I daresay the same thing prevails in London?—Yes, they go out at such times certainly; they will go out a great deal more in the Derby week, or any time of that kind you will find.

Chairman.

17247. Do you have any army or navy doctors come to you for instruction?—No, not for instruction. We have medical men visiting there, and they can go round the hospital, and they do.

17248. But those are men connected with your staff, are they not?—No, medical men may come and visit the hospital, and many of them do come, not students, but any qualified medical man is at liberty; they simply have to send a card in to my office, and get permission from one of our medical staff.

17249. They can come to you for experience?—Yes, qualified men. I am only speaking of students when I say that they do not come.

Lord Thring.

17250. You allow these qualified men to learn, as it were, and to stay as long as they like?—According to the law, as revised this year, a medical man may visit the hospital with the knowledge of the secretary and an introduction from any member of the staff.

17251. I suppose there is no disease that is so much quacked as this disease?—None, I should think.

17252. And none which requires more accurate knowledge, or more accurate teaching?—That is so. And in the evening attendances, where we have now 22,000 instead of 11,000, I know that the great proportion of those cases went to quacks before.

17253. But this is a disease which is obviously the least taught in London of any disease?—Yes.

Earl Cathcart.

17254. What becomes of the awful cases which are too horrible to mention, where people are nearly eaten away altogether?—There are very few of them.

17255. There are some?—Very few.

17256. Have you never had any?—We have had about two or three a year.

(24.)

Earl Cathcart—continued.

17257. What became of them?—One is still in the hospital; she was sent to us from a Union in Kent, and is still in the hospital; she was a married woman.

17258. And these cases come up of respectable women?—Apparently; this was a married woman.

17259. Do these cases come up usually for careful and skilful treatment?—Yes; that case was from a workhouse infirmary.

17260. But there are cases so horrible that they can hardly be mentioned, where people are nearly eaten away, are there not?—Yes, but not nearly so many as people think.

Lord Saye and Sele.

17261. Is there a fund from which assistance is given to patients on leaving the hospital?—There is no actual fund from which assistance is given; but if there were any special case the ladies' committee would mention it, and the board would give something.

17262. At the Home?—When they leave the Home they go into service, and at the end of the year they receive a guinea if they keep their situation.

17263. Out of what funds is that given?—It is given to them by the board; it is an understood thing that they will have it in such a case.

Lord Monkswell.

17264. With regard to the Contagious Diseases Acts, I suppose you could only keep in women until they were cured under the Acts; you had no jurisdiction over the women?—No.

17265. Therefore you could keep only a small proportion of the women?—Yes.

17266. How do you account for there being such a small proportion of beds for men, when you have so many for women?—Because the men can get out to their employment so much better than women can when they are suffering from the disease.

17267. They are not so much knocked up with it?—No, they are able to do their work and get about. We have occasionally to refuse men; the hospital has been filled sometimes, but not often.

17268. When they go to the Home do you insist on their staying until they are well?—They never go there until they are relieved; they go to the Kinnaird Ward until they express a wish to go into the Home, then they go to the Home.

Chairman.

17269. Is the Kinnaird Ward the convalescent ward?—No, not exactly, because directly they express the wish they are drafted from the other wards of the hospital into that ward.

Lord Monkswell.

17270. Do you keep them in the Home until you can get situations for them?—Yes. There is not the slightest difficulty in getting them situations.

Chairman.

17271. Do these people get the same wages as other servants?—Some of them are getting very high

9 March 1891.]

Mr. COOTE.

[Continued.]

Chairman—continued.

high wages indeed now; they do not begin with such high wages; some of them begin as general servants, which is the best for them when they are looked after by the mistress.

Lord Monkswell.

17272. What proportion relapse again after they have left the Home?—A very small proportion. They are in the Home a year before they go out. Many are afterwards married.

17273. You do not send them out before the year is over?—Not as a rule.

Earl Cathcart.

17274. According to your little book here; I suppose it is yours?—Yes.

17275. And you know that the letters in it are genuine, no doubt?—Yes.

17276. Many of them marry, and do very well, I see?—Yes.

17277. And marry in a superior position?—Some of them marry in a superior position.

Lord Clifford of Chudleigh.

17278. You said that the men were able to go to their work earlier than the women; do you mean by that that some of the men go away before they are cured?—Before they are actually cured, undoubtedly.

17279. That is to say, they go away while they are still liable to communicate the contagion?—Yes, quite so.

Chairman.

17280. Have you any means of telling what the proportion of prostitutes is to the number you treat in the female hospital?—I was asking a doctor that question to-day. We cannot say definitely; because the prostitutes go into the London ward, and we have in that ward I see about 45 per cent. But there are some of those who are not actually prostitutes; some come from laundries, and we cannot say whether they are or are not prostitutes, but they are not on the streets in the sense that the word is used generally.

Lord Monkswell.

17281. But as to that, surely the Cambridge ward must also contain a great many prostitutes that come from infirmaries, those sent from Chelsea are invariably prostitutes?—Yes, they are.

Chairman.

17282. You understood what I meant. I meant what was the proportion of people whom you considered to be prostitutes to the number that you treat; that was the way in which you answered my question, was it not?—We had about 80 per cent. altogether last year; 40 per cent. came from workhouses to us, and so far as a great many of those cases are concerned, no doubt they were prostitutes; but some are married women who come to us through the workhouse infirmaries; 15 per cent. are rescue cases from "Homes" when they come to us. And a great many of those are rescued afterwards who come to us as prostitutes in the first instance.

Lord Thring.

17283. Supposing that you had more money, would you have more rescue cases, in your opinion?—I do not think we should have more rescue cases; but the work is very trying, because it is such a difficult hospital to beg for. I am sure that if we could get clear of our debt we should have little difficulty in keeping the hospital going on as far as it is required.

17284. Supposing you had considerably more funds, would you be able to rescue a great many more women?—Probably not; because we take in all the cases who apply to us, and we rescue what proportion of them we are able to. We rescue quite a quarter of those who come; in fact rather more than 25 per cent. are rescued.

17285. I do not understand why so few come?—We do not refuse any.

Chairman.

17286. You never refuse a female case, and very seldom a male case?—Very few indeed.

Earl Cathcart.

17287. You seem to be of the view that there is really sufficient accommodation for these cases?—I am sure we have sufficient. We have two large wards we could put beds in if necessary; I have not mentioned those.

Chairman.

17288. That is to say, if you had the money?—Yes, and if we had the patients.

Earl Cathcart.

17289. My idea was that you send patients away because you have not money?—We have not done so. Our board closed a ward once with the idea that they could appeal more satisfactorily to the public; but it did not succeed, and we are getting our debt cleared off very slowly.

Lord Saye and Sele.

17290. How far are the two hospitals apart; four or five miles?—A good long way.

17291. Does not that add greatly to the working expenses?—It does not add to the working expenses; it adds to my work.

17292. Does your secretarial business take you to both every day?—No, not every day. I visit the male hospital when I am required to do so; but I am always there on Thursdays regularly.

Chairman.

17293. Who is the authority at the male hospital in your absence?—We have a house-keeper, a very respectable widow woman, a resident house-surgeon, and a dispenser.

Lord Thring.

17294. Do you suppose the dread of being found out prevents people applying to your hospital?—Some, undoubtedly, it does. I do not think very many.

17295. Of course, you take care not to unduly publish names?—We never publish names; we never give any information as to our inmates;

9 March 1891.]

Mr. COOTE.

[Continued.]

Lord Thring—continued.

inmates; we decline to do so except on a subpœna. We are a hospital, not a prison. Formerly we were more in the nature of a prison under the Contagious Diseases Acts.

Lord Zouche of Haryngworth.

17296. Then to what do you attribute this paucity of applications?—I really do not know. I suppose they think they are not ill enough to come in, not ill enough to require our treatment.

Earl Cathcart.

17297. Have you any reason to think that the type of the disease is less severe than it was formerly?—From what the medical men tell me, they say it is so, that probably it is more widespread, and as it becomes more widespread, it becomes less severe. That is a medical question.

17298. The extreme virulence is dying away?—Yes, I think so.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 12^o Martii, 1891.

LORDS PRESENT:

Earl CATHCART.

Earl of KIMBERLEY.

Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. HENRY DOBBIN, is called in; and, having been sworn, is Examined, as follows:

Chairman.

17299. ARE you the Secretary of the Consumption Hospital?—I am, of the Hospital for Consumption at Brompton.

17300. Is that the actual title of it?—The Hospital for Consumption and Diseases of the Chest, Brompton, is the proper title.

17301. That is what is termed a special hospital, is it not?—Quite so.

17302. That is to say that you take only cases of one particular description?—Cases of consumption and all diseases of the chest, including heart disease, every disease of the chest in every form and every stage, practically.

17303. How long have you been Secretary?—I have been Secretary 33 years. I began life in the offices of one of the largest railway companies, the Great Western Railway Company. I remained there for seven years and got promoted to be head of a department with clerks and porters under me; but the promotion was very slow, and I got the offer of another appointment, that of accountant to the "Art Journal"; and when the partnership was dissolved and different arrangements were made, I was invited to become the financial secretary of the Nightingale Fund; and I also held at the same time the post of secretary to the Home for Gentlewomen in Reduced Circumstances in Queen's-square, Bloomsbury; and then, soon after, the appointment of Secretary to the Brompton Hospital became vacant, and I was a candidate, and was elected.

17304. Then you have had a thorough training in administration, and in accounts?—I think so.

17305. May I ask what salary you get as secretary of the Brompton Hospital?—I get 500 *l.* a year, and am non-resident.

17306. And luncheon?—Luncheon or dinner, or whatever you like to call it.

17307. Where is the Brompton Hospital?—In the Fulham-road, just beyond the Cancer Hospital. We are really on both sides of the road now, in two parishes, Kensington and
(24.) e

Chairman—continued.

Chelsea. The new extension building is in Chelsea.

17308. When was the hospital founded?—In 1841, at a very large and influential meeting at Hanover-square Rooms; I think Lord Harewood was in the chair.

17309. Is it generally looked upon by your medical staff as a suitable building for the purpose?—Quite so; I think that anything that was not considered so very desirable in the old building has been altered and remedied in the new. There is nothing of any importance that was not thought suitable. The heavy stone mullions of the windows, although looking very picturesque, and the rather high windows of a Tudor building, rather shut out the light; and so in erecting the new building they have had rather larger and lower windows without any mullions.

17310. How many beds have you in the hospital?—We have 184 in the old building, and 137 in the new; making 321 altogether.

17311. And of those how many are for males?—There will be about 185 for males, and not quite so many for females; 137 for women, or something of that sort. In erecting the new building regard was had to the fact that so very many more male applicants were always on the list than women, and therefore we have two floors for men in the new building, and only one for women.

17312. What is your working number of beds; how many are occupied on the average?—When the hospital is full our daily average number of beds has been 300.

17313. To whom are you responsible as secretary?—I am responsible to the committee of management.

17314. Would you tell us what the constitution of your hospital is; first, I will ask you, have you an annual meeting?—We have four meetings of governors, which are open to the press and to any governor. The annual court is held
U U

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

held in May, and that is convened by advertisement, and by a special notice sent to every individual governor.

17315. Is that annual court one of the four meetings?—Yes, that is one of the four meetings; that is the principal meeting. Then the annual report is presented, and adopted, if the governors so please; and as to the other three meetings those meetings are convened by public advertisement only in certain papers.

17316. Then the next body below that is what?—That is the committee of management, which is appointed by the governors in annual court assembled.

17317. Is that appointed from their own number of governors?—Yes, from the body of governors.

17318. And what is the number of that committee of management?—Twenty-five elected members, and the whole of the medical staff, numbering 16; and the president, and the treasurer, and the chaplain are members of the committee.

17319. That is to say, there are 25 lay governors, 16 professional, one chaplain, and the treasurer; these constitute the committee of management?—Yes, and the president of the hospital, who is Lord Derby.

17320. As to the committee of management, who is the ordinary chairman of the committee of management?—The chairman and vice-chairman are elected at the first meeting after the annual court of governors by the committee themselves. Mr. Thomas Beckwith is the chairman, and Mr. Robert Gillespie is the vice-chairman. Mr. Beckwith is here this morning to offer himself to give evidence if the Committee desire him to do so.

17321. What is the quorum of the 40 or so members of the committee of management?—Three for ordinary business.

17322. And what is your average attendance?—We have always a good working committee, five or six, or if it is specially summoned for any business, very much more than that.

17323. About five or six on ordinary occasions?—Very often more. It somewhat depends upon the time of the year, and on a variety of circumstances.

17324. Would you say that it was as many as a dozen on an average?—I think hardly as many as a dozen on an average. We generally find the larger the committee the less satisfactorily the work is gone through.

17325. How often do they meet?—Every week.

17326. And are there any sub-committees?—There are constantly sub-committees for the various subjects that arise, drainage or ventilation, or anything of that sort.

17327. But are there any standing sub-committees?—There is a finance committee, consisting of five, which meets every month. Then we have medical committees and medical sub-committees.

17328. But I am only just now on this committee, which is the executive of the hospital, as I understand?—It is the executive.

17329. And they meet once a week, and have

Chairman—continued.

one sub-committee, which is the finance committee?—Yes.

17330. At that committee of management are all the books placed upon the table, the stores book, the alcohol return and bank-pass books, and small books of every description?—Yes, a variety of books, a wheelbarrow full of books of various sorts; various returns of the admission and discharge of patients, and all sorts of returns and statistics are laid before the committee.

17331. How long does that committee generally take over the work?—That depends upon the circumstances. If there is nothing beyond the ordinary business, an hour or a little over would suffice.

17332. Does that committee find that an hour is sufficient for all that business, going through those books, item by item?—They are not gone through; they are read over at the committee.

17333. You mean that the sum total is read to them?—Yes, the figures; the number of admissions, the number of discharges, the number of deaths, and the names of the patients who have died, the number of days the patients have been in the hospital, and the number of patients waiting to come in, male and female; an immense quantity of information.

17334. But I mean these books which really are the guide as to how the expenditure of an institution is rising or decreasing. Take, for instance, a weekly book belonging to a house-keeper in which every item is put down; those are guides, are they not, as to how the expenses of the hospital are kept down or possibly increasing?—That would be more in the province of the finance committee; all those books come before the finance committee and the bills.

17335. All these books, then, have to do with the finance committee?—Not the books which I was first speaking of, showing the admissions and discharges, and the names of the patients going out, and the length of time they have been in and the progress they have made, and so on.

17336. But what I want to get at is the guides that you have with regard to the expenditure of your institution, as to whether things may be on the increase or the decrease. That obviously can only be determined by systematic checking and comparison; is not that so?—Yes; we have regular returns which come before the finance committee every three months, what we call the quarterly finance committee.

17337. But with regard to finding out whether the expenditure is on the increase or the decrease, that can only be done by checking the expenditure very systematically; is not that so?—If the committee were to go through all the books and check everything, they would be practically doing my work and the work of my clerks over again. They have to take the results to some extent which are presented to them.

17338. But is not the committee responsible for the expenditure of the hospital?—Certainly.

17339. And, as a man of business (I am not speaking of your particular institution), can they be responsible unless they do check the expenditure?—I think so; they have quarterly returns of various kinds.

17340. I know

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

17340. I know that; but if you have quarterly returns a quarter is rather a lengthy time to check any account, is it not?—They have also all these bills before them every month as well.

17341. Yes; but the quarterly check is for rather a lengthy period, is it not. I am only asking you as a man of business, because you have had a great deal of experience; I am not condemning the system, but asking you your opinion?—I do not think any difficulty has been found in connection with that. I will put in, if your Lordship pleases, some of the papers that are laid before the committee.

17342. Are these books initialed every week or every month?—Yes; everything that goes before the committee is signed by the chairman.

17343. Every book that is placed on the table?—Yes.

17344. But if the committee only take an hour over their work, and there are no sub-committees, is not the glance rather a cursory one?—I do not know that it is particularly so; it is considered sufficient for the purpose, I think.

17345. At least your committee are satisfied with it?—Yes, quite.

17346. Is the treasurer an honorary officer?—Yes; you mean in the sense of being paid.

17347. I mean in the sense of being paid?—Quite honorary; and he does not take the same position that the treasurers of the large hospitals, like St. Bartholomew's and Guy's do, where the treasurer is everybody. At our hospital he is merely the custodian of the hospital funds, and the person who signs receipts for legacies and so on. He is considered an important officer in point of dignity, and in the absence of the vice-president or president he takes the chair at any meeting.

17348. He no doubt signs all cheques and receipts?—He only signs the legacy receipts; the cheques are signed by the chairman and another member of the committee, usually the vice-chairman, and then countersigned by myself as secretary.

17349. Have you official auditors?—We have five auditors; they are elected by the annual court of governors.

17350. Are any of those auditors members of the Society of Chartered Accountants?—No, they are not.

17351. They are all private individuals?—They are private individuals, men of business.

17352. With a good knowledge of accounts?—Decidedly; the audit is every three months.

17353. There is no professional audit?—No.

17354. Do you take any paying patients, or is it all free?—All free. Our patients all are supposed to be unable to pay for medical advice.

17355. You did not mention it, therefore I will ask the question; have you an out-patient department?—A very large out-patient department. I shall be happy to give your Lordships some fuller particulars of the in and out patient departments by-and-bye.

17356. I will come to that in a minute or two?—The administrative part, of course, is in my office.

17357. I will come to that later. Now, as
(24.)

Chairman—continued.

regards the admission of the cases, in whose hands does that lie?—The patients are admitted in this way, upon letters of recommendation signed by the governors, or in the case of out-patients, probably signed by subscribers; and in this letter the governor or subscriber writes that he or she has satisfied himself or herself that the patient is unable to pay for medical advice.

17358. Then that is the only way that the admission of in-patients is done, on the letter of the governor?—Not entirely. Some in-patients are admitted as what are called acute cases; that is to say, if a patient presents himself or herself in the out-patient department, and is found to be suffering from any acute malady, pneumonia, or pleurisy with effusion, or anything of that sort, the medical officers have power to admit that patient immediately under certain restrictions, the signatures of three of the medical officers; and those are very rigidly reported from time to time to the committee of management, with a view to exercise a check upon the admission and retention of those cases.

17359. They are only what you might call extremely urgent cases?—They are not what the public call urgent cases. The public consider an urgent case, a case which they think should come in at once, from poverty or anything of that sort.

17360. Possibly every person may think his own case urgent; but I mean urgent in the opinion of the staff?—Quite so.

17361. But unless they are considered urgent cases by the staff or admitting officer, the governor's letter is the only passport to admission?—With another exception, which is this; that if a patient, coming from a distance, in the out-patient department is found to be so very ill and exhausted as to be unable to perform the journey home again with safety, that patient is admitted temporarily into a ward; and very frequently such patients perforce remain there and die; they never become able to go away.

17362. Then, as I understand you, patients get a governor's letter and are admitted or else they are very urgent cases and are admitted. Then who is the officer of the establishment who receives them when they first arrive in the hospital and are taken in as in-patients?—They are seen by one of my assistants, who questions them as to their religious belief, that is to say he is the first person who sees them, putting aside the porter who puts them into the room and so on; and then they remain in the admission room, in the waiting room, until the arrival of the medical board. Our admitting days are Monday, Wednesday, and Friday, when they are seen by one or more of the medical staff, and passed and sent up to the wards, or in some few instances rejected.

17363. But supposing that the patient arrived on Tuesday, the medical board does not meet till Wednesday, what happens then?—We should send the patient up to the ward and tell him to come down on the following day and be seen by the medical board; or if he was very ill we should ask one of the doctors to go up and see him specially. In the case of their coming from
a very

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

a very long distance we say, "Come up the previous evening and we will take care of you, and you can be passed through the medical board the next day.

17364. Passed, or, it may be, rejected?—Yes.

17365. But have you any resident medical officers who do that work?—We have a resident medical officer and an assistant resident medical officer. In the absence of the medical board, or if they are late, or anything of that sort, we ask the resident medical officer to attend to the cases.

17366. Is he a salaried official?—Yes.

17367. What is his salary?—He has 200 l. a year, and everything found.

17368. And his assistant?—His assistant gets 50 l., a year and everything found.

17369. Is this a permanent appointment, that of the assistant resident medical officer?—It is held from year to year.

17370. He is eligible for re-election?—He is eligible for re-election.

17371. In addition to that you have house physicians?—In addition to that we have four house physicians. No medical qualification is necessary, but the appointment is very much prized by young medical men; consequently we always get men as candidates who are doubly and trebly qualified, very often graduates of Oxford or Cambridge, bachelors or doctors of medicine, members of the College of Surgeons and so on.

17372. Have they to undergo any examination at the hospital?—Not now; they have to bring their testimonials. It used to be so; they had to examine a case and report upon it; but it is considered that, with regard to these men, who have passed, very often with great distinction, and who are gold medallists occasionally, it would be rather *infra dig.* to make them pass an examination, and now they are passed upon their testimonials, and upon the personal knowledge which the medical staff have of them.

17373. You said that when the patient first came he was received by your assistant, and questioned as to his religious belief; is that with a view to excluding him?—By no means. The only object is this, and we always tell them so, in order that their feelings should not be hurt, or that they should think there was any preference shown; we tell them that it is only in order, if they are not members of the Church of England, and consequently in special charge of the chaplain, that they may have their own minister to attend them, or their priest, if Roman Catholics; and then, immediately after their admission, if they wish to see a minister of their own persuasion, we have a form that we send off at once, requesting the minister or priest to attend them.

17374. Do you take any other cases besides consumption and diseases of the chest?—No; we have had one or two cases which have not been strictly of that kind; cases of external tuberculosis; but that was merely to assist the medical staff in their observation and investigation of Professor Koch's treatment, upon purely phthisical patients.

17375. With regard to phthisis, do you take

Chairman—continued.

any cases of acute phthisis?—Yes; those are the acute cases.

17376. Do you take any cases of chronic phthisis?—Yes, certainly; in all stages.

17377. Do you ever take any cases of disease of the liver?—Not unless it is complicated with chest disease; at least I think I am right in saying so. I never heard of a case of liver complaint, pure and simple, being taken.

17378. Now would you not be in a position to know the disease from which any patient was suffering; because I understand that these cases go through your office practically?—Yes, but not medically; that is all ascertained by the physician. Then if they are found to be not suitable cases, after a little while, the medical men having had sufficient time to inquire into and study their cases, they are sent home. That is not very often the case; they generally stay their full time.

17379. Who makes the contracts for your food and supplies?—The committee of management, every six months.

17380. And is that done by open tender?—The contracts are not advertised, but they are sent round to a number of respectable people in the neighbourhood, five or six of each trade, sometimes more.

17381. Who sees the food taken in, and who is responsible for it?—The steward.

17382. Is he under you?—Yes.

17383. Is he a salaried officer?—Yes.

17384. And what may he get?—£. 80 a year and his board and lodging; he does not actually live in the hospital, but he lives under the shadow of the hospital, and we pay him lodging money, because there is not room for him in the buildings. He gets his full board.

17385. And he personally takes in all the food?—He personally receives it; his office is close to the store room, and then he goes out under the glass shed, sees all the meat weighed, examines it, and so on.

17386. He is responsible for the quantity, and for the quality as far as he can tell?—Yes.

17387. And then suppose the quality was found inferior on its getting to the hospital kitchen, the cook would complain, I suppose?—The cook would complain, and we should send it back.

17388. To whom would the cook complain, to you or to the steward?—To the steward; then the steward makes a complaint to the committee of management, if he has anything special to report; and if it is as to the quality of the meat he is desired to write to the contractor.

17389. That takes place at the meeting of this committee of management, which meets weekly?—Yes; but we are very well supplied as a rule.

17390. How much did your hospital cost you last year; that is to say, what was the total expenditure of the hospital last year?—£. 24,495. May I put in this (*handing in a statement of "Receipts and Expenditure for the year 1890."*) That is prepared annually for the use and information of the committee.

17391. Twenty-four thousand four hundred pounds odd you say was your total expenditure; and

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

and where do you get your funds from to meet that expenditure?—We get from ground rents 932 *l.* odd; from rents from the Chelsea estate (those are some houses that were bought by the committee some time ago), 198 *l.* odd; then dividends, 3,590 *l.* odd; annual subscriptions, 8,050 *l.* 14 *s.*; and from Dr. Lambert's fund, 18 *l.* 17 *s.* That was a sum of money left to be set apart, and the annual interest was to be added to the annual subscription list. Then from donations we had 5,206 *l.* last year.

17392. Was that an exceptionally good year?—Well, I think it was a very good year. From legacies, 9,594 *l.*; that is an extremely fluctuating source of income.

17393. Could you give me any average of what the legacies have been for the last ten years?—They have averaged for the last ten years, cash and stock, 14,900 *l.*

17394. Then last year was a poor year, so far as legacies go?—It was not quite up to the average, but we should not call it a poor year.

17395. Is any of this a permanent endowment that you cannot sell the principal of?—Only a small portion; that is the Harrington Memorial Trust Fund, 400 *l.* odd Bank Stock, and Hollins's Trust Fund.

17396. With regard to all the rest of your property you can dispose of it as you require it?—Yes. The exact amount of the Bank Stock is 416 *l.* 15 *s.* 3 *d.* as given by the Countess of Harrington; and the other was a bequest of 1,000 *l.* Consols.

17397. Then the next item, after the 9,594 *l.* for legacies, is what?—Church collections, 168 *l.* 6 *s.* 4 *d.*; Hospital Sunday Fund, 1,562 *l.* 10 *s.*; and Hospital Saturday Fund, 662 *l.* 2 *s.*; making altogether from the collections, 2,392 *l.* 18 *s.* 4 *d.* The total of the donations, as I have said, is 5,206 *l.* Then "incidental receipts and interest," 3,549 *l.* 0 *s.* 4 *d.*

17398. What sort of items are the "incidental receipts"?—Principally for private nursing; also fees of lady pupils, alms boxes, sale of kitchen stuff, sale of soups in the out-patient department, sale of old materials of various kinds, sale of reports and pharmacopœias; that is a small item. Private nursing is the largest item.

17399. Have you a collector?—Yes.

17400. How do you pay him; what percentage does he get?—He gets a limited percentage; he gets 5 per cent. upon all old subscriptions, nothing upon new subscriptions unless they actually come through his hands, which is very rare; but on any sum over 5 *l.* he gets no commission beyond that on 5 *l.*; so that on Messrs. Rothschild's subscription of 50 guineas he only gets 5 *s.*, and on the Queen's subscription of 25 *l.* he gets 5 *s.*

17401. Do you get any commission on subscriptions?—None whatever, no commission of any sort or kind.

17402. With regard to that 1,562 *l.* 10 *s.* which you received from the Hospital Sunday Fund, is it an increasing sum or a decreasing sum that you receive from that fund?—It varies; the last two or three years it has decreased. I do not exactly know the principle on which they act, but I think our previous good years of legacies (24.)

Chairman—continued.

have told upon us there. Shall I read the figures for the last few years of the Hospital Sunday Fund, and the Hospital Saturday Fund?

17403. Yes; will you take the last ten?—From the Hospital Saturday Fund in 1881, we had 287 *l.*; in 1882, 756 *l.*; in 1883, 477 *l.*; in 1884, 630 *l.*; in 1885, 578 *l.*; in 1886, 589 *l.*; in 1887, 571 *l.*; in 1888, 542 *l.*; in 1889, 585 *l.*; and in 1890, 662 *l.* That makes an average of 567 *l.* Then from the Hospital Sunday Fund, the amount for 1881 is 1,058 *l.*; for 1882, 1,051 *l.*; for 1883, 1,248 *l.*; for 1884, 1,528 *l.*; for 1885, 1,533 *l.*; for 1886, 1,861 *l.*; for 1887, 1,870 *l.*; for 1888, 1,872 *l.*; for 1889, 1,718 *l.*; and for 1890, 1,562 *l.*; rather a drop in those last two years. That makes an average on the ten years of 1,530 *l.* The annual subscriptions have steadily increased for many years.

17404. I should like to ask about one item; how do your salaries and wages compare with your annual subscriptions?—The salaries and wages last year were 5,446 *l.*, about two-thirds of the amount of the annual subscriptions.

17405. Do you look upon the annual subscription, then, as your most reliable source of income?—Yes, certainly, after the dividends and rents, of course.

17406. You say that you are in two parishes?—Yes.

17407. At what are you assessed?—We are assessed, I am sorry to say, in Kensington now, gross, 1,250 *l.*; rateable, 834 *l.*; we paid last year 212 *l.* 16 *s.* Formerly we used to be assessed at 40 *l.* a year rateable value, the supposed worth of the resident medical officers' apartments. And in the new building in Chelsea we are assessed gross, 2,000 *l.*; rateable, 1,500 *l.*; rates, 387 *l.* 10 *s.* So that we pay out of our hard got subscriptions 600 *l.* a year in that shape.

17408. Now is your hospital nursed by a sisterhood or by your own nurses?—Not by a sisterhood, but by our own nurses.

17409. Who is the head of the nursing staff?—The lady superintendent.

17410. Does she reside in the hospital?—She does.

17411. And what salary does she receive?—She has 150 *l.* a year.

17412. And board and lodging?—And everything found. She has a special fee for lectures to the nurses which she gives, of 20 guineas a year; and the committee have given her in recent years, since the private nursing has been established (it was quite a new thing inaugurated by her and involving a great deal of additional work and anxiety and responsibility) a special gratuity of 50 guineas, it being quite outside the ordinary work of the hospital.

17413. So that she receives, in one way and another, 223 *l.* 10 *s.*?—Yes; and the last payment was for a larger year, and it was rather more liberal on the occasion of her leaving the hospital service.

17414. Then this lady has gone now?—Yes, she has just gone; she left the hospital last Tuesday week to be married. She will be very happy to come and give evidence before your Lordships.

U U 3

17415. But

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

17415. But you are competent to speak about the nurses?—To a limited extent.

17416. Of course, if there are any questions which you are not acquainted with, you will tell us so, and we can get that evidence from another witness.

17417. Now would you tell us the number of the staff of nurses?—We have seven sisters; one at the head of each gallery for day duty, and two night sisters or night superintendents, one for each building to go round and see that the nurses are always at their posts. That makes nine. Then we have 61 regular nurses.

17418. Do you call those staff nurses?—Yes, staff nurses, and perhaps some of them would be probationers; they are all paid nurses. That includes 18 private nurses. Then we have nine extra nurses.

17419. Private nurses are people who go out to nurse?—Yes.

17420. Have you any lady pupils?—We have sometimes; I do not think we have any at the present moment.

17421. What are the extra nurses; just merely for cases of emergency?—Yes, I think in times of special pressure they have been had in.

17422. Do they board and lodge in the hospital?—Yes, usually.

17423. Have you any difficulty in getting nurses when you want them for special occasions?—I do not think so; there is always a great demand for nurses, but I could not tell you exactly the details of that.

17424. Then do you change your night nurses and day nurses round frequently, or do they go on for periods of six months?—I think three months or six months; I am not sure which.

17425. Could you tell us the hours that these nurses work?—The day nurses are on duty from 7 in the morning till 9 at night. They are off duty three times a week from 6 to 8 in the evening, and once a month from 2 to 10 o'clock, and once a month from 12 to 10, and one Sunday in the month from 6 to 9.11. They have an annual holiday of 16 days. The lady superintendent was telling me yesterday that she proposes, with the sanction of the Committee, to give them, instead of a time off every other day, a time off every day; she thinks we shall be able to manage that.

17426. That is from 7 in the morning to 9 at night for those on day duty; do they breakfast before they go to the wards?—I believe they do; I am not quite sure.

17427. Perhaps then I had better not ask you any question about the details of it; do you know how much time they have for dinner?—I do not exactly, but I believe quite a sufficient time. I have frequently seen them in the dining room, and I have never seen any evidence of hurry.

17428. Have they a separate kitchen?—Everything is cooked in the kitchen at the top of the hospital. It is the hospital kitchen, but it is quite detached from the wards, and it is at the top of the hospital, in the new building, and built out in the case of the old building.

17429. Do you employ ward maids?—Yes.

Chairman—continued.

17430. Is it the duty of the matron to go round the hospital?—Yes.

17431. How often does she go round?—She seems to be constantly going round, sometime or other; she certainly goes round every day, and most likely twice every day.

17432. Have you any children's ward?—No children's ward, but we have a number of children, and we find no inconvenience, but rather the reverse, from mixing them up with the other patients; they help to amuse the adult patients; these patients make great pets of the children, and the children themselves are as happy as they can be.

17433. Do you yourself appoint any officers or servants in the hospital?—Practically I appoint the porters, whenever we have a change, subject to the approval of the committee.

17434. And do you appoint the nurses too?—No, I have nothing to do with that; the lady superintendent does that.

17435. Have you any power of suspension?—I do not think I have; it is nominally in the hands of the resident medical officer; but that has been so rarely exercised during my 33 years that I can hardly say. We are always in accord, and if there should be anything wrong, we should soon exercise whatever power we had.

17436. You and the resident medical officer, then, represent two different heads of the hospital?—I am the general head of the hospital, and he is the head in regard to the internal management of the wards.

17437. You represent the committee?—Yes.

17438. Would you have the power to suspend a medical officer of the hospital; supposing that you or the resident medical officer considered that a medical officer in the establishment had committed a serious breach of discipline, have you the power to suspend him, pending the next meeting of the committee?—I have never known a case of the kind. I remember the case of a gentleman who did not conduct himself satisfactorily, and he was told to go; I do not think it came before the committee; it was managed by the resident medical officer and the physicians.

17439. Then that did not come before the committee of management?—No, I do not think it did. The resident medical officer I do not think would have the power to suspend or dismiss a house physician.

17440. Therefore, supposing that a certain officer did commit a serious breach of discipline he would go on with his duties until the committee of management met; is that so?—No, I do not think he would; but we really have never had an instance of the kind in my experience.

Earl of Kimberley.

17441. Supposing that one of the medical officers was found to be very drunk indeed, so as to be unable to discharge his duties, would you allow him to remain in the hospital?—No, I do not think so. We have never had a case of the sort.

17412. That such a case should happen is very improbable, but it might happen, might it not?—It might.

17443. And

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Earl of Kimberley—continued.

17443. And supposing it did happen, who would have authority to inquire into it, and suspend him?—I think we should consider that we had both conjoint authority and should at once put ourselves into communication with the house physicians' immediate superiors, the medical staff, perhaps the senior physician; something of that sort; but we have never had an instance of the sort.

Lord Clifford of Chudleigh.

17444. Who did you say appointed the nurses?—The lady superintendent.

17445. And the probationers too?—And probationers too.

17446. Is the lady superintendent coming to give evidence here?—She will be unable to do so to-day, but she will be very happy to come next Thursday if it can be made convenient, if the Committee wish any further information. She is no longer in the hospital service.

Lord Saye and Sele.

17447. If any of these young doctors committed any breach of discipline in the hospital itself they would be reported to the chairman, I suppose?—Yes. The only instance I remember is one where a young house surgeon was inclined rather to flirt with one of the nurses, something of that sort; and it was put down with a very strong hand. He had to go at once; he was sent away.

17448. Have these young medical officers latchkeys?—No.

17449. Have they to be in at a certain time?—The hospital is shut at 10 o'clock at night, and any one who is out has to ring the bell, and he is let in by the night sister. People always see the condition in which a man arrives home. But we get a superior class of men, as you know, different from what are ordinarily termed medical students.

Lord Monkswell.

17450. You said that you have a committee of management of 44 members, as I understood you, and that the attendance averaged less than 12, and that this committee of management consisted of the whole medical staff; about 16, I think, you said the medical staff were. How many of that staff attend usually?—They do not attend frequently in any large numbers; one or two perhaps would attend in the ordinary way; they do not attend in any large numbers, unless there is something interesting to them, matters of drainage or medical matters.

17451. But do you try to arrange that some of them shall always attend?—No, we cannot take anything particular means to do that, but they are summoned when there is any special business.

17452. Then sometimes it happens, I may take it, that no members of the medical staff attend these meetings of the committee of management?—Occasionally; that is not very often the case.

17453. You say that the letter of the governor states that the patient recommended is too poor to pay; do you make any inquiry into the fact whether he is really too poor to pay or not?—

(24.)

Lord Monkswell—continued.

If we have any cause to think that he is in a position to pay, we always make inquiry; but we have generally found that the case is a suitable one for the hospital. I inquired the other day into the case of an applicant on the list, the Reverend Mr. So-and-so in a town on the coast of South Wales; I did not think he could pay, but I wrote to him all the same as a matter of duty. I got a polite letter in return saying that he had been for 12 months ill and unable to work; and, consequently, being only a Welsh curate, we might assume that he was perfectly unable to pay.

17454. What sort of circumstances would put you upon an inquiry?—If we saw a person with very superior clothes, or superior belongings, or anything of that sort.

17455. Then you would ask questions of the friends?—We would ask the friends or the patient himself.

17456. Have you any inquiry officer?—We are our own inquiry officers.

17457. You do not employ any inquiry officer specially?—No; you are referring in your questions to the in-patients as I understand. The out-patients we are just as particular about.

17458. Have you any inquiry made about the out-patients?—Yes.

17459. Any inquiry officer?—No; no inquiry officer but one of my assistants who registers them makes inquiry in each case.

17460. In regard to the in-patients, would the governor who had given the letter of recommendation be communicated with if you found that the case was not a fit one in your opinion for the hospital?—Certainly.

17461. Have you ever communicated with a governor under such circumstances?—I do not remember that we ever had a case that called for that communication.

17462. With regard to the out-patients, you make inquiries but have no inquiry officer I understand you to say?—No inquiry officer; our assistant sees every patient; I see a great many myself.

17463. Every patient is asked by you, or the assistant you mention, what station in life he occupies and so on?—Yes, and if we think he is a person who can pay we say to him, you must not come again. Then there are some of an intermediate class, who perhaps can pay a little, and we tell them that they must put what they honestly can afford into the alms box to pay something towards the medicine.

17464. You have never refused yet, as I understand, to admit an in-patient because you have not found him a fit subject for relief, but you do occasionally send away out-patients for that reason?—We do occasionally send away out-patients.

17465. Do you think that the out-patient department is much abused?—I have no reason to suppose so. I see patients who come to my office; I see some three or four a day and they say, "I did not know I should require a letter; what can I do?" and I generally have from a governor who does not want to use it himself, an out-patient letter to give away, but I make searching inquiries before I give it.

U U 4

17466. A governor

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Lord Monkswell—continued.

17466. A governor will very often send a letter to a friend of his, will he not; and then, I suppose, he does not consider himself personally responsible. You do not know, do you, whether the letter comes straight from the governor?—No. I may say that often we find people presenting a respectable appearance, well dressed, who are quite fit objects of hospital relief. Perhaps a girl comes in a sealskin jacket, and you find that she is the daughter of a rector of a parish who died and left not a sixpence; and she is a teacher of music, and helps to support an invalid parent; or she is an assistant in the mantle-room of Marshall and Snelgrove. Sometimes this well-dressed person is the wife of a city clerk who has been laid up from work for 14 months (these are cases I have in my memory), and she supports the husband and two children by going out as a governess.

17467. Have you any rule as to not giving people relief who have more than a certain amount a week in wages?—We have no wage limit. We are in a different position from a General Hospital; you are in this way, that, as a rule, our patients have been ill and laid aside from earning money; they or the bread winner of their family, for many months or years; and in the case of in-patients, when they die, frequently nothing is found in the purse but a packet of pawn tickets.

17468. With regard to your contracts, you say that you do not advertise them; who selects the tradesmen?—I practically do, or my chief clerk.

17469. Do you take the opinion of the committee of management as to the selection of the tradesmen?—No.

17470. They always leave it to you?—Yes.

17471. They then never make any inquiries in the matter; what inquiries do you make?—A good many of the tradesmen we know as tradesmen in the neighbourhood.

17472. Within what limit do you select your tradesmen?—Perhaps within a limit of about a mile.

17473. You do not go beyond about a mile?—Somewhere about that. It is inconvenient to be supplied by a man living at a long distance, in the event of anything having to be sent back or any addition having to be made to the order.

17474. Do you ever change your tradesmen?—Some we do; and some have gone on supplying us for a considerable time; the butcher for instance has had the contract for several years.

17475. Have you gone to any other butchers and found out whether they would do it cheaper, or are you satisfied without that?—We are satisfied; we have never found any man serve us better.

17476. Have you tried anybody else?—We have had other butchers but have not been so well served. We have sent forms of tender to the principal people round about.

17477. Do you consider that it is part of your duty to go within a certain radius and inquire of the tradesman about their prices?—No, we do not do that; we leave them to give us their prices in the tenders.

17478. Then how do you put a man on the

Lord Monkswell—continued.

tender list?—We send them a tender form by post or leave it to them to fill it up and send it back.

17479. What rule do you go by in selecting those to whom you send these tender forms?—We merely select those we consider to be respectable tradesmen; people with nice-looking things in their shops.

17480. How do you test the quality of the article?—By observation; passing a butcher's shop and seeing whether the meat looks good, and in that way.

17481. Is there any reason why you should distinguish your "cash" legacies from other legacies; legacies of stock I suppose you mean?—There is no particular reason; only the stock legacies do not come into the cash book; they are transferred straight to the account of the president, vice-president, treasurer, and governors of the corporation.

17482. Do you take very young children into your hospital?—We have had them as young as two years old, but we do not care to have them as young as that. They come in very often as acute cases and get marvellous relief.

17483. Do you not find that those very young children are rather a nuisance to the other patients?—No.

17484. From crying in the night, for instance?—No, we hardly ever hear a cry.

17485. Then the question has not been mooted, whether you ought to put the young children in a separate ward?—We have often been asked the question, and I have given the answer that I gave to his Lordship just now, that it has been found rather a source of pleasure to the other patients than otherwise.

Lord Saye and Sele.

17486. Do you happen to have an in-patient letter that you could show us?—Yes; an in-patient letter and an out-patient letter (*handing in the same*).

Chairman.

17487. As to these tenders, unless you advertise for tenders, how are you in a position to know that you get good food at the cheapest rate?—Cheapness is not the committee's first desideratum.

17488. I said "good food at the cheapest rate"?—I do not know that the advertising would help us, bringing us, as it would, a number of tenders from distant people, of whom we know nothing whatever. Those in the neighbourhood are fairly well known to some of us.

17489. Have you ever compared the price you pay with the prices paid by similar institutions?—I do not think we have specially.

17490. Have you done it at all?—No, I do not think I have. We compare them with the prices that we pay as private individuals, and we get the food at the hospital for very much less, with the exception of the beef for beef tea. As regards the patients, we have to order legs of mutton entirely, with the exception of once a week.

17491. Is that always English meat?—Yes, all English meat.

17492. Is

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

17492. Is there any reason that you should always have legs of mutton?—It is found to cut to better advantage, and there is less fat and less bone; it is generally considered the primest part of the sheep. It is very nicely cooked, and it looks extremely good when put upon the table.

17493. Is the meat carved in the wards or below?—It is carved in the galleries. There is no eating or drinking in the wards, unless patients are bedridden. Ours is what is termed a corridor hospital. We have wide corridors, and they branch out in a large bay or recess, and in those there are tables where the patients take their meals and sit and work. These corridors are warmed to the same temperature as the wards, and the passages and staircases as well.

17494. Do you ever have any complaints of the food from your patients?—Very rarely.

17495. But in the case of a complaint being made, it would be made to the sister of the ward or by the sister of the ward, I suppose?—It would be made to the sister of the ward, or the lady superintendent, or one of the doctors.

17496. But supposing that one of the nurses was not satisfied with the quantity or quality of the food, what would she do?—She would go down and complain of it, and it would be remedied.

17497. But there is little complaint with regard to the food, you say?—Very little. The committee, I may say, grudge no expense in any way; and we have lifts for the conveyance of food up, and speaking tubes, and electric bells.

Earl Cathcart.

17498. You are aware that it is exactly in the direction of contracts that fraud and corruption would creep in first; is it not so?—It is possible, but it never occurred to me. We have never had any fraud or corruption.

17499. I do not impute it for a moment. I should have thought it would have been the duty of the best and most active business men on your committee to look after the contract themselves; but that is not done in your hospital?—It is not.

17500. And I understand from you, that you, yourself, do not look after the contracts in every case, but entrust it to your clerk?—They come sealed, and are laid before the committee.

17501. You told us that you sometimes leave the arrangement of contracts with your clerk?—The selection under my supervision of the tradespeople. He says, "I have sent out so many contracts to So-and-so," butchers or bakers, "who else shall I send to?"

17502. Do you leave it to your clerk to make arrangements for contracts with tradesmen?—There are no arrangements beyond sending out blank contracts.

17503. Has your clerk any power in the matter, or is it done by yourself?—He has no power, nor have I over the contracts.

17504. Everything comes in the last resort, does it not, to you, before it is decided?—No, it comes to the committee, and is decided by them. The tenders are sealed and laid before the committee; they open them.

17505. Has the clerk any sort of power what-
(24.) e

Earl Cathcart—continued.

ever in selecting or giving preference to any particular tradesmen?—Not the slightest.

Chairman.

17506. But would you, on the suggestion of you clerk, send a paper to any particular tradesman?—Yes. And if anyone said, "So-and-so is a very capital butcher or cheesemonger; he supplies me very well," and any member of the committee might do so. I should say, "Well, next time we send tenders, send one to So-and-so," mentioning that tradesman.

Earl Cathcart.

17507. Is any person connected with the hospital in a position to receive a fee or reward from any tradesman; is it possible, I mean, that anyone connected with the hospital is in a position to receive any fee or reward from a tradesman who obtains a contract?—No, I should say not.

17508. There is no opportunity of fraud in that direction, you think?—No; it has never been attempted I am sure.

17509. To turn to quite another subject, are your drains up to date?—Perfectly.

17510. What is the date of them?—Three years ago the whole of the drainage of the old building was overhauled and reconstructed by Mr. Rogers Field.

17511. Is your water supply a constant supply?—Yes.

17512. From the Chelsea Waterworks Company?—Yes.

17513. How do you get a constant supply, by paying extra?—When I say "constant," it is nearly constant. If there are any repairs, or in very hot weather it is turned off a little.

17514. But practically the water supply never falls short; you have always plenty of water?—Yes, we have large cisterns all over the buildings.

17515. With regard to fire, what arrangements have you?—We have very complete arrangements; we have hydrants that go from top to bottom of each building.

17516. Have you any fire drill?—Yes, a drill by the fire inspector; the engineer of the local fire brigade, under the shadow of our new building.

17517. You have nothing, have you, in the nature of a two months' book. Do you understand that term?—No.

17518. It is a book which they have in many hospitals; it is a book which shows how many patients have been in the hospital two months or more?—No, we have not such a book, but a periodical report upon the patients in the hospital is read over by me to the committee of management every week, and signed by the chairman.

17519. Then from the nature of the diseases which you treat you do not hurry the patients at all?—No; it would be absurd in the case of slow chronic disease to consider they were well in three or four weeks, or something of that sort.

17520. What is about the average time that they stay?—Sixty-five days last year; it has been very much longer than that.

17521. Have you any temperature book of the temperature of the wards?—Yes, certainly.

17522. Have you any difficulty in keeping
X x up

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Earl Cathcart—continued.

up the temperature to 60 degrees?—No difficulty whatever with our system of warming and ventilation.

17523. That is by hot water, is it not?—By hot-water pipes all over the building. In the old building in the east wing, the cold air comes in at the floor level, passes into a large air chamber, and circulates amongst about a mile of our hot-water pipes.

17524. You did not mention a bank pass-book; at least I did not hear it mentioned. Is the bank pass-book always produced and examined by the committee?—Yes, always produced.

17525. Have you more than one bank account?—Only one.

17526. What is the reason for not having a professional audit. My experience teaches me that whenever there is an expenditure of public money there ought to be a professional audit, as being that which is most satisfactory to the subscribers and to the public generally; what is your reason for not having a professional audit?—Our practice is simply in accordance with the standing rules as made by the governors themselves.

17527. But as an abstract question, do not you think it right and proper, with a turnover of some 24,000 £ a year, to have a professional audit?—Personally, I do not see the advantage. Nothing can be more business-like or careful than our audit. Every amount is checked by the counterfoils of the receipts, and these are all numbered and checked by the auditors and initialled.

17528. But my experience in a good many instances is this, that none but a professional audit is satisfactory; that is not your experience you say?—That is not mine. It depends of course on how it is done.

17529. Do not you think that a professional auditor could prepare you a better balance sheet than this which you have just before us, or a more comprehensive one?—That is not a balance sheet; that is a private account which I get out every year as a matter of interest to the committee. The balance sheet is printed with the annual report.

17530. With regard to private nursing, do you only send out nurses for cases analogous to the cases which you treat in the hospital?—We nurse all complaints; we send out nurses for all complaints, because our nurses have outside training; they are not exclusively trained in our hospital; all our nurses are hospital trained.

17531. Is your cooking gas cooking?—Yes, gas cooking and steam.

17532. Do you find it very convenient having the kitchen at the top of the house?—Yes, far better than any other arrangement.

17533. You get rid of the smell in that way?—Yes; with the kitchen of the old building taken away from the main building, we still find on occasions that some of the kitchen smells are wafted in, according to the set of the wind.

17534. Have you ever known any case where a servant, or any person connected with the establishment, has contracted consumption from having been in the establishment?—I have no knowledge of that; I think you will get that better from the medical witnesses.

Earl Cathcart—continued.

17535. But in 33 years' experience you must have heard a great deal; have you ever heard of a case where a servant or any other person employed in the establishment has contracted consumption from employment in the hospital?—No, I do not think I have. I remember a case where a servant of the hospital came back to us. In one case a head nurse married a consumptive patient who had been in the hospital; and she went away and had family trouble and privation and came back to us as a patient and died.

Lord Zouche of Haryngworth.

17536. I notice a very large amount on your receipts side under the heading, "Incidental Receipts and Interests;" can you explain what that arises from, a sum of 3,500 £ and more?—The bulk of that is from private nursing, which is represented by 3,218 £, I think it is.

17537. What is the number of the private nurses?—We have 18 private nurses borne on the books as such, but during last year we had, as you will see by the foot-note to that account, a considerable portion of the hospital, the whole of the new building, empty; and the lady superintendent did not disband these nurses; she always has more demands for nurses than she can supply; therefore, she was very glad to utilise the services of these nurses.

17538. So that when the new building was unoccupied, that brought you in more income?—Yes.

17539. Would you consider this item an unusually large one?—It is the largest we have ever had for nursing; and it is in a great measure due to the fact of our having had more nurses at liberty to send out. We have sent away half-a-dozen applicants a day who want our nurses.

Lord Thring.

17540. Your bill of fare seems rather monotonous; why do you always have legs of mutton?—We do not always; for the exceptions are very numerous. The patients have roast leg of mutton every day in the week except Wednesday, and then it is boiled; and then on Sunday they have roast beef. But the doctors have power to order special diet, and, as a matter of fact, they do very extensively.

17541. And are your nurses also fed on nothing but legs of mutton?—No; they have a variety of food.

17542. However, leg of mutton is the prevailing fare?—Leg of mutton is what is called "ordinary full diet;" but then the doctors order just what they like.

17543. Is it supposed to be particularly good for consumptive patients to eat mutton?—It is considered to be very digestible; I think much more so than beef, more nourishing.

17544. I want to ask you with respect to another matter, with respect to your mortuary; have you one?—Yes; that is under the post-mortem building, which is the detached building on the opposite side of the road. It is quite detached in every possible way; the ventilation of it is up a separate shaft.

17545. I will ask you the question which I have

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Lord Thring—continued.

have so often asked, with regard to the post-mortem examination, are they conducted with propriety, and by whom?—They are conducted by the curator, or the assistant medical officer, under his direction.

17546. And who sees that the body is delivered up in a decent state to the relatives?—The house porter; that is his duty.

17547. Nobody but the house porter, as a rule?—No; they come after dark for them. A post-mortem examination is not made as a matter of course.

17548. Who sees that the body is properly sewn up?—That is done, I believe, under the supervision of the medical officer.

17549. You do not know about that?—No.

17550. Does any sister or nurse attend at that time?—No.

17551. As far as you know it depends upon the porter alone?—He works under the observation of one of the medical officers.

17552. But when the relations come, in order to take care that their feelings are not affronted by the condition of the body, there is nobody but the porter?—I suppose he is the individual personally responsible; he is a man we have had for a great number of years, and we have never had any complaint about him.

Earl of Kimberley.

17553. Could you tell how much a pound you are paying for these legs of mutton?—I cannot tell you exactly; I fancy something about 7½ d. or 8 d. a pound.

Chairman.

17554. Would you tell me what the amount of your chicken bill is in a week, when the hospital is quite full?—Probably about 6 l. or 8 l. a week.

17555. Perhaps you would put in a return of your contract prices, or send them to us?—I will send them with pleasure.

17556. You have a certain number of nurses who are sent out to do private nursing?—Yes.

17557. How long do you teach them before they are qualified to go out?—I cannot tell exactly; but really they are not sent out until they are considered qualified to do the work which they have to do.

17558. I want to know how long do you keep them before they are sent out in that way?—I should say we should hardly send out a nurse under 12 months' training for consumptive patients.

17559. I will not press you on that, as we may have another witness who will speak to that. You have a chaplain?—We have a chaplain.

17560. And how much does he receive in salary?—£. 300 a year, and a house.

17561. And board?—No, no board.

17562. Has he any assistant?—No.

17563. Then, as regards your system of accounts, is your system of accounts the same as that of the Hospital Sunday Fund; is it based on that, or on a system of your own?—It is on a system that was introduced by or under the auspices of the late Mr. John Ball, who was a member of our committee, of the firm of Quilter and Ball. The books are kept by double entry, and enable us to give information upon

(24.)

Chairman—continued.

almost any point; and we publish, and always have published yearly, in addition to the cash balance-sheet, an account of the actual expenses of the hospital under different heads in a concise form. May I put in that? (*Handing in the last annual report.*)

17564. Then, have you a Samaritan Fund?—We have; it is called the Rose Charity Fund. It was inaugurated in honour of Mr. Rose, who became Sir Philip Rose, who was the founder of the hospital.

17565. And what do you pay out of that Samaritan Fund; do you out of it assist any families, the heads of which are in the hospital?—We do not assist the families.

17566. You do not practically give out-door relief in that way?—No. We give washing money to those patients who cannot afford to pay for the washing of their personal linen each a shilling a-week, and then sometimes a trifle when they go away. It is a great help to them to give them 10 s. or 1 l. then. We do not profess to pay travelling expenses, but giving them that sum helps them to go second class by a fast train, when otherwise they would have had to go third class on a long journey. We have had patients from the extreme north-west of Ireland, and from Scotland, and from Madrid, and from Germany, and we had, the other day, a girl who was in the Vienna Post Office, and who came all the way from Vienna to be treated as an in-patient; she has now returned.

17567. Have you any convalescent home?—Not connected with the hospital; but we have an arrangement with the London Samaritan Society, by which we send patients to their convalescent homes.

17568. How much did that cost you last year?—Patients at convalescent homes in 1890 cost 1,430 l. We send them there for three or four weeks after they have been in the hospital for a couple of months, when it is felt that perhaps they would do more good at the seaside than by continuing at the hospital, having derived benefit up to a certain point.

17569. How many in-patients had you last year?—We had 1,528 admitted.

17570. And how many out-patients?—Thirteen thousand seven hundred and fifty-three out-patients. Those figures you will find also in the account which I put in.

17571. And have you ever made a calculation as to the cost per occupied bed?—Yes, certainly; it is 89 l. 1 s. 3 d.

17572. And how do you arrive at that?—By simple calculation.

17573. Taking the gross expenses and dividing the number of patients into it?—Yes; that includes, I should explain, if you will allow me, a good many things that do not specially concern the patients. Collector's commission, chapel expenses, and the honoraria to the assistant-physicians and curator. If you were to eliminate those it would bring down the cost of the bed considerably. Then, before we make that calculation, we take out the cost of the drugs for the out-patients.

17574. Have you a separate dispensary for the out-patients?—No.

x x 2

17575. Then

12 March 1891.]

Mr. DOBBIN.

[*Continued.*]*Chairman*—continued.

17575. Then how do you get at the amount of drugs which you use in that department?—We calculate, by rule of three, the proportion. We know what the drugs are, and we take out from the total drug amount everything that pertains specially to the in-patients, such as wine, spirit, and that kind of thing.

Lord Thring.

17576. To arrive at the cost per bed you take your whole expenditure and divide it by the number of patients, and then exclude the drugs for the out-patients?—Yes, I could tell you, if you like, the cost for the last two or three years per bed.

Chairman.

17577. At the same time there are a certain number of officials who are engaged both for out-patients and in-patients, are there not?—Yes, but we have not gone into the calculation so nicely as that. For instance, one of my assistants, who has been here a considerable time, gives a portion of his time to the out-patient department; he is away out of my office in the other building during a portion of the day, perhaps between three and four hours. Then in the dispensary, the dispenser and his assistants do the work for the out-patients as well as for the in-patients. In fact, they do a great deal more for the former than for the latter.

17578. Then you have certain porters engaged in the out-patient department?—We have certain porters who are engaged in the dispensary.

17579. And you have to estimate the value of that?—We have done that for another purpose, but not for the purpose of this particular calculation.

17580. As a matter of fact, all these comparisons as to the cost of beds are very fallacious, are they not; because no one of the public knows on what basis the cost of the bed is arrived at in any two hospitals?—It would not make a very material difference in the cost of the bed, I think, if the wages of these men were apportioned with a great degree of nicety.

17581. At any rate that plan which you adopt is considered good enough for your purpose?—Yes, quite good enough.

17582. Would you like to see a general system of accounts throughout all the hospitals, for purposes of comparison?—I think it might be advantageous; but we have generally given the fullest possible information, and in as simple and concise a form as possible, to the governors; and if there are any facts which they desire to arrive at, they can pretty well get at them by looking at our balance sheet or expenses account. And with regard to the Hospital Sunday Fund, we have no difficulty in making out their account; it is chiefly, I think, a matter of grouping rather differently. In fact, our accounts are fuller than their accounts, considerably.

17583. You have a medical committee, I think you said just now?—Yes.

17584. What is their particular function?—Anything relating to the medical department of the hospital.

17585. Do the medical committee take any

Chairman—continued.

part on the weekly board?—They have power to join in the weekly deliberations.

17586. Supposing that something having to do with the medical requirements of the hospital came before the board, would that be referred to the medical committee?—It would be referred to the medical committee specially; they meet twice a month.

17587. Are all the professional members of the board members of the medical committee?—Yes; all the medical staff are members of the medical committee.

17588. And how many members are there of the medical committee?—Eighteen; they include the consulting surgeon, Sir Joseph Lister, and the acting surgeon.

17589. Therefore, any matter which is referred from the weekly board to the medical committee is referred to a body which is, in fact, itself a portion of the weekly board?—Yes, in that sense.

17590. That is the constitution of your hospital?—Yes.

Lord Thring.

17591. Now, about the cost of beds, have you a heavy debt?—We have no debt, I am happy to say.

17592. But in calculating the expenses of your beds, you assume that the hospital is built and furnished and complete for the reception of the patient; you do not put any of that expense into the sum which you divide by the number of your beds?—No.

17593. You assume that you have got a hospital fully furnished?—Fully furnished.

17594. And then you take the whole of your expenditure, including the expenses of collection and everything, and divide it by the beds?—Yes; excluding extraordinary expenses. We are spending now, for instance, 1,541 *l.* in improving the drains of the new buildings; we should exclude that from the calculation of the cost per bed.

17595. That ought not to be excluded, ought it; a certain portion of that is obviously a part of the expenses of the hospital?—That is perfectly true, but we consider that to be extraordinary expenditure, not part of the ordinary expenses of maintaining the patients and maintaining the building.

Lord Thring.] I want only to accentuate what the Chairman says, that really and truly these calculations of the cost per bed, however useful they may be in other respects, are, for purposes of comparison, useless.

Chairman.

17596. Will you give us a return of your employés and their salaries?—Certainly; do you require the names?

17597. No, not the names, but their description and their salaries?—At page xxvi, in the preliminary part of the annual report you will see the whole of them; for instance, the chaplain, 250 *l.*; and there is a foot-note to explain that he has besides 50 *l.* from the chapel endowment fund.

17598. But

12 March 1891.]

Mr. DOBBIN.

[Continued.]

Chairman—continued.

17598. But on that page you say "Wages of nurses, 1,726 l."; we have not the number of nurses stated. Then "Servants, 696 l.," but we have not the number stated; I want to know the number of people employed and paid by the hospital, and the amount that they receive?—I will furnish that.

Lord Saye and Sele.

17599. Patients are sometimes sent away abroad for their health, are they not?—Not by us. I believe there is an institution, one of those health resorts, but it has nothing to do with the hospital, where governesses and ladies of that class go.

17600. Have any of the new treatments for the cure of consumption, such as Dr. Koch's, been tried at your hospital?—Yes, they are now being tried at the hospital.

17601. To what extent?—I could not tell you on how many patients, but Dr. Williams, who will follow me, will be able to tell you.

Lord Monkswell.

17602. You say you make some provision for Nonconformist ministers, and I suppose Roman Catholic priests attending in the hospital?—Yes.

17603. What sort of provision is made?—They are able to come in at any reasonable time and visit their people.

17604. And they do come in?—They do come in. The Roman Catholic priest is very regular and assiduous in his visits, remarkably so.

17605. And have you ever had raised in your committee the question of paying either the Nonconformist minister or the Roman Catholic priest?—No.

17606. Are there many Nonconformists or Roman Catholics in the hospital?—I could not tell you exactly; there is a fair proportion.

Chairman.

17607. Is there anything else you wish to state?—I think you were going to ask me something about the fire appliances?

Earl Cathcart.

17608. You have already stated that you have

Earl Cathcart—continued.

fire drill?—We have fire drill every month, and in addition to that we have fire pumps and buckets at every point and a fire escape, means of escaping on to the roof of the old building.

Chairman.

17609. I think you said you employed a local fire brigade?—No, the ordinary fire brigade, Captain Shaw's.

17610. You did say "local?"—The fire station happens to be immediately behind the hospital, in the mews behind the hospital. Then we have four staircases from the top to the bottom of each building, and a means of access to the roof of the old building, in case of fire, in two or three places.

17611. I believe there is something you want to add to your evidence on one point. You told us just now that there was a weekly board, and that as a rule over 16 of them were members of the medical staff?—Quite so.

17612. And in elaborating it a little I discovered that these members of the medical staff are also members of the medical committee, and comprise the whole of that medical committee, with the exception possibly, of one or two; and that therefore, supposing anything was referred from that weekly board to the medical committee, practically it was referred back to a portion of the board itself?—I merely want to say that I ought to have explained that the medical staff, although members of the committee of management, have no voting power; that is the only point, but I ought to mention it, because of course it makes a difference.

17613. Then I should like to ask you this further question: Have you any visiting weekly governors?—We have house visitors, generally two a month; they go round the hospital at their own times, and come in contact with the patients and ask them if they have any complaint to make.

17614. Is there anything else you desire to say?—No.

The Witness is directed to withdraw.

MR. C. THEODORE WILLIAMS, M.D., is called in; and having been sworn, is Examined, as follows:

Chairman.

17615. You are on the staff of the Brompton Consumption Hospital?—I am.

17616. What is your exact position there?—I am the senior physician of that hospital, head of the acting staff.

17617. Will you tell us what qualifications you hold?—I am an M.D. of Oxford, and a Fellow of the Royal College of Physicians of London.

17618. How long have you been at the hospital?—I was 3½ years assistant physician and I have been nearly 20 years full physician of that hospital.

17619. What is the nature of the cases that you take at the Consumption Hospital?—Diseases of the chest; that is what it is limited to. The

(24.)

Chairman—continued.

great part of the cases are those of consumption, that is to say from 67 to 70 per cent. of all the cases admitted are cases of consumption. The rest are cases of other forms of chest disease; a certain number of diseases of the heart; pleurisy and empyema; then bronchitis, asthma, what we call emphysema, congestion of the lungs, different forms of pneumonia and pleuro-pneumonia; in fact, generally speaking, diseases of the heart and lungs, including consumption.

17620. Then do you take in cases of phthisis?—Yes.

17621. In its early stages or in its later stages?—Whenever we can get hold of it we take it in its early stages, but we practically take it in in all its stages.

X v 3

17622. You

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Chairmen—continued.

17622. You would not exclude a patient in the early stage?—No, just the reverse; we would rather take a case in its early stage. But the only thing is that sometimes we find that cases of that sort are better dealt with as out-patients; but we should give them relief either in the in-patient or out-patient departments, and if possible we should take them into the in-patient department, because we think in those cases we can do more good than in any.

17623. Now would you take a diphtheritic case in?—No, strictly speaking we should not, because that is more a general disease. We look upon diphtheria like scarlet fever or measles or that class of cases. There are cases of sore throat accompanying consumption and other chest diseases; and in fact we have a throat department; but it is intended for cases of lung disease in which the patients have throat affections, and as you may imagine there are a great many of those. But we should not take in a case of diphtheria; we should remove it to another hospital, or we should isolate it, and then get rid of it as soon as possible.

17624. You would take it in only to give temporary relief?—We should be very sorry to have it in the hospital at all, because the disease might spread in other quarters. It is just like a case of small-pox; you are in great danger if you have a diphtheria case of causing risk to the other patients.

17625. Have you taken any cases of disease of the liver?—Not knowingly; we do not, as a rule, take in cases of that description. I do not remember at the present moment any cases of disease of the liver having been admitted. Probably, if a case of that sort was taken in, it was in connection with heart or lung disease. In many cases, as you know, where there is heart disease the liver is affected.

17626. That is to say, you confine your charity entirely to cases of chest disease?—Yes; diseases of the thorax; we include the whole of the air passages to a great extent. We cannot help treating sometimes colds, and sometimes diseases of the nostrils, as part of the air passages. You are obliged to treat them; but what we aim at is treating consumption and diseases of the chest; consumption mainly, and diseases of the chest as well.

17627. Do you think there is no fear of cases being admitted to your hospital which might be properly treated at a general hospital to the exclusion of cases which you might treat, but which could not be treated properly at a general hospital?—No, I do not think there is that fear; and I think the proof is the number of cases of consumption admitted; 67 to 70 per cent. are cases of consumption.

17628. Do you think that your hospital is situated in the best possible place for a consumption hospital?—Well, I do not know. It is a very good place; and I believe it was the best place according to the knowledge of the time when it was founded; but I frankly admit that my own view, and the view of a great many others, is that the best place for consumption hospitals is not in towns at all, that they ought to be in purer air. But then there are great difficulties that you will have to meet with; you cannot have the patients dragged out to great distances,

Chairman—continued.

certainly not those of the out-patient department. And then another difficulty is that you could not have the same medical staff; you could not procure the same stamp of physicians to go out a great distance into the country as you obtain in London. We do the best we can by having convalescent establishments attached to the hospitals in London, so that any case of consumption, such as you spoke of in the early stage, is practically for about two months under treatment at the Brompton Hospital, and then is drafted off into one of the convalescent institutions in connection with the Brompton Hospital.

17629. That is to say, to which you subscribe?—Yes; to which we subscribe.

17630. Is consumption now considered, by medical men, to be an infectious disease?—There are some who think it is an infectious disease, and there is some slight ground for that view. As far as the example of Brompton Hospital is concerned, however, it is dead against it. The institution has been founded since 1841, and we have got a careful history of all the physicians, and assistant physicians, and house physicians, and resident medical officers, and nurses and, in fact, of the whole staff from beginning to end; and we practically have not had a single case of consumption from infection in the hospital since its foundation; not a single case proved. There have been one or two doubtful cases, but none proved. There have been some cases of consumption, but they either had come on in the official before he came to the hospital, or else some time after he quitted it. And as regards the mortality from phthisis among the residents, it amounts to this: that as far as it has been gone into, it is considerably less than the mortality from phthisis among the residents of some of the general hospitals which have not to do with phthisis at all. So that, I think, there is no doubt about it, and I should like, in order to save your Lordships' time, to present you, if I might, with a report which I made some years ago, at the request of my colleagues and others, on that very subject, on the personnel of the Brompton Hospital, and how it bears on the question of consumption.

17631. Are any measures taken to stop infection?—Yes.

17632. What is the opinion of your staff as to whether there is a fear of infection or not?—My impression is, as regards the staff, that on the whole they are unanimous that in Brompton Hospital there is no fear of infection. I do not know whether we should be quite unanimous about the possibility of infection under other circumstances; and for my own part I freely admit that there have been some very, very rare instances of infection from consumption, very rare, indeed; and they have taken place under very unfavourable circumstances. For instance, I have known cases where consumptive husbands have infected their wives; I have known that where two young women were sleeping together in the same bed, one a consumptive far advanced in the disease and the other healthy, the healthy one has been infected. But I must tell you that I have had large experience in this disease during the last 25 years, and I could not, by counting up every instance that I ever came across, arrive at

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Chairman—continued.

at more than six or seven such cases of infection in the whole of that time, and those have been under the most unfavourable circumstances. As regards the hospital, I should like to say a few words about the measures adopted and the reason why there is no chance of infection there; and it bears so much on the structure of the hospital that I should have to say a few words about the structure and the ventilation.

17633. Will you please do so; we shall be glad to hear anything you may say on this subject?—The great principle that we go on at the Brompton Hospital, as apart from the ordinary treatment, by giving excellent food and tonics and so forth, and with respect to medical treatment, is to give the patients plenty of air, and air at the temperature at which they can breathe it. If you take, for instance, the new wing of the hospital, which is the best arranged part of the hospital (and what I say about the new equally applies to the old, though that is not quite so perfect a machine, as being of older date); and if you take one floor of that wing, you will find that it consists of a number of wards and some very roomy large corridors and large dining halls; and our principle is that the patients should live the greater part of the day in the dining halls and corridors and not in the wards. Nevertheless, in each ward we give each patient 1,400 cubic feet of space, and we also give him as much as 115 superficial feet floor space. Then the next thing is what we do as regards ventilation, and that is the most important of all. Our ventilation now, the system that we have adopted for many years in both buildings, is by extraction. In the new building we have four extraction towers. In each of these towers there is a large coil of steam pipes which is kept up, of course, to a certain temperature; and those four extractors of the hospital are situated at different parts of the building at a good height above it. Air is admitted into the wards and the corridors by a series of openings direct, that is to say, on the same level. Supposing it were this room, it would be admitted, as it were, underneath that window (*pointing to the window*). It is admitted through an opening; and after the air is admitted it is divided into two supplies. One supply goes up a sort of vertical tube; a half goes that way, and that is comparatively cool; the other half passes through a coil of hot-water pipes and enters the gallery that way. But practically the two currents mix together just above the coil, as it were, so that there is no draught. The air is admitted in that way. Then it is extracted by a series of openings from the wards and galleries connected with flues, and those flues are connected together by another series of flues, and they eventually leave the building through the four large towers in which the hot-water steam coil is. In this way we are able to change the air of each ward three times in an hour, and we change it to that extent; and by changing it three times an hour each patient has 4,000 cubic feet an hour of fresh air—at least as fresh as we can give it. Then, besides that, there is another most important point. This is easy enough to do so far, only there is one very im-

(24.)

Chairman—continued.

portant thing. How do you maintain the temperature? Now, you know, it is very easy to ventilate a place and have a draught; but we manage to do it without a draught, and to maintain the temperature of those wards all through the winter (such a winter as we have had lately) day and night, at a temperature of from 60 to 62 degs. Fahrenheit. Then when it comes to the summer, the heating apparatus is shut off; we do not use the hot-water coil at all, but we keep up the steam coils in the towers; they are kept as hot as ever; in fact, the heat has to be raised, because our rule is this: that the temperature of the tower shall always be 10 degrees higher than the temperature of the wards. In that way you will always get a current running through. That is how it is that we are able to supply plenty of air to our patients. The same thing takes place in the old building. There are two towers there, but the ventilation is not quite so perfect; we do not give the patients there quite so much cubic space; that is to say, instead of having 1,400 cubic feet per patient, they have about 1,100 or 1,000; something of that sort. They had rather less, but we reduced the number of beds on purpose. I tell your Lordships this to show you how it is that we prevent any chance of infection. The patients are surrounded with an immense amount of air, and there is no fear of any overcrowding or anything of that sort. But of the presence of tubercle bacilli in the air, and that they could infect people, I have had ample proof; for I have detected the tubercle bacilli in the flues of the hospital; and there is a curious proof of it. If you have a ward, for instance, such as I tried an experiment with once, with cases of consumption, and then take another ward containing no cases of consumption, but cases of heart disease and others, you will find the tubercle bacilli in the flues coming from the consumptive ward, but not in those coming from the other ward. Then, as regards the other measures to prevent infection, we are not very particular about our arrangement of patients. It has been urged that we ought never to put a case of incipient phthisis, or a patient with lung disease, not phthisical, next to a case of advanced phthisis; and we bear this in mind, but we do not always carry it out. Sometimes you will see an advanced case near a non-phthisical patient, but, at any rate, we have never had such a thing as infection of one patient from another. That is quite unknown. I have watched for it during the last 20 years, and I never found a single instance. Then another most important thing is about the expectoration. Your Lordships know that the expectoration is the worst and most virulent part of the disease, that is to say that if the disease is to be communicated at all it may be communicated by the sputum; and that is a very important matter, and it is one of the great arguments against the infectiousness of consumption, that in the highways there are a number of consumptive people who go about and who are spitting all over the pavement, and in the summer this is wafted about and people who walk there, including your Lordships, may inhale this stuff and yet they do not get this consumption;

X X 4

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Chairman—continued.

tion; showing that the infectiousness cannot be very great. What we do is this: the sputum is received into the ordinary spittoons; the opening is very small so as to allow as little evaporation as possible; and at the bottom of each spittoon is a certain amount of anti-septic fluid. Then these are emptied into covered vulcanised iron buckets which are collected twice a day in the wards; it is taken down and the whole mass of that is mixed with the small coal which is used to heat the furnaces and burnt there, and it is all consumed, every bit. And this answers a double purpose; we get rid of what might be a dangerous ingredient, and at the same time we, to a certain extent, reduce the consumption of coal in the furnace. That is what I have got to say about infection.

17634. I will ask you this question: Is the health of the nurses good on the whole?—Very good indeed. We get, of course, little ailments; and though there have been cases of sore throat, and I cannot say that the whole life of the hospital, I mean to say of the residents of the hospital, has been entirely without a blot on its scutcheon, because there have been times when we have had small outbreaks, nothing very much, of sore throat, for instance, and even there has been erysipelas, yet that was due partly in past years (many years ago now) to defective drainage, which was corrected at great expense, and which is thoroughly right at the present moment under the able supervision of Mr. Rogers Field. And another thing is that when the ventilation goes wrong, then we are alive to anything of the sort. If when going round my wards, for instance, I find more than one case of sore throat, I do not inquire of the resident medical officer about it, but I go at once into one of these shafts, where the extraction is going on, to see whether it is acting properly; and if I find that there is not the proper difference between the temperature of the shaft and the temperature of the ward, that is to my mind at once one reason why there should be some ailment of the sort.

17635. Have you any knowledge whether the soil on which the hospital stands is impregnated by the drainage?—No, there is nothing of the sort. It is pure gravel and sand, chiefly sand I should say; I do not think there is any clay in the region. We have been having fresh pipes laid down for one thing and another, and I have seen the new hospital built and different things done, and there is no sign of anything of that sort. We have got plenty of sewers close by us and there is no difficulty about carrying off our drainage; we are rather favoured in that way I believe.

17636. Do you treat a large number of out-patients?—Yes; but if your Lordship will allow me, I will leave the out-patient department to my colleague, Dr. Fowler, who I believe follows me; he is the senior assistant physician, and with regard to anything connected with the out-patient department he will give you far better experience, it being 20 years since I left the out-patient department.

17637. You said there was another head on which you would speak?—There are one or two heads that I have still left.

Chairman—continued.

17638. Anything you may have to tell us we shall be glad to hear?—I wanted to say a word about the reasons why there ever were consumption hospitals. I have understood that the question has been raised why consumptive patients should not be treated in general hospitals in special departments, and why we should have consumption and chest hospitals at all. Well, the reason of it is very simple. The reason was that, though some of the other hospitals took in consumptive patients, the great majority of the metropolitan and London general hospitals did not take any consumptive patients, but they refused, and even to this day a large number of them refuse, to take in cases of either consumption or of confirmed consumption. Here I have collected the letters of seven hospitals, and if you look at those you will see that in those seven hospitals consumption is one of the diseases which is debarred from admission.

17639. Is that because consumption is looked upon as incurable?—I believe it was because it was looked upon as incurable, and cases of it blocked the wards to much. There are three hospitals in London, there may be more, but I think there are three of the general hospitals which admit cases of consumption, a certain number, but only for a short time. But when they are admitted into those three hospitals the cases do not do well. One reason is they have not got all our appliances, which are very expensive and troublesome, no doubt, but still very effective; and the other thing is that they keep them such a short time. I took the trouble to inquire of some of my friends at the general hospitals, for instance, St. Bartholomew's and Guy's, what number of consumptive patients they take in, and also particularly what the mortality was; and Dr. Steele, of Guy's Hospital, was kind enough to supply me with the information about Guy's; also Dr. Gee at St. Bartholomew's; and the result was this: the mortality for the last four years among cases of phthisis at St. Bartholomew's Hospital is 54 per cent. of the cases admitted, and at Guy's Hospital it is nearly the same, about 50 per cent.: the average stay of a patient at Guy's Hospital is from 28 to 30 days. Now, I thought your Lordships would like to know what we do at Brompton. I may say that the average stay—

17640. The former witness has told us that the average time that they stay is 65 days; you might give us the mortality percentage at your hospital?—The mortality percentage, taking the same four years as I have taken at St. Bartholomew's, of the cases of phthisis and consumption is 17 per cent., or, to give it exactly, it is 17.1. The percentage of the mortality of the whole hospital is 14 per cent. You see that makes a great difference; but then we keep the patients longer, and then we give them all these appliances which are exceedingly expensive and troublesome, but which at the same time have been proved by medical science to be necessary for the treatment of consumption; and that is one of the reasons why I do not see that it would be possible to admit consumptive patients with any great advantage into the general hospitals. If general hospitals are prepared

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Chairman—continued.

pared to establish hospitals of the same character as Brompton in connection with their own, I do not see why they should not do as well as we do; but it would be very costly for them to do that. Say that you had 50 beds at one of the general hospitals for the teaching of the treatment of consumption and diseases of the chest, it would be an extremely costly business. We find it much cheaper, the more we have; that is to say, we can do 320 beds cheaper per bed than we could do 100. That is obvious. The great point is that the arrangements for the consumptive and chest cases in our hospital are somewhat different from those of general hospitals; we have large corridors, and they are warmed; and I may say, in relation to the result of our treatment as regards the purifying of the air, and keeping a good supply, that I have had the air at Brompton tested on several occasions; I have had it tested for carbonic acid, and I have had it tested for tubercle bacilli, as I have already said, and for other organisms; and the result is that in the new wing the amount of carbonic acid is exceedingly small. One day, in the corridors (certainly it was a fine day) the windows were not open, but simply the ventilation was going, and there were a few patients about in the corridors, and Dr. Marcet, F.R.S., found no difference between the amount of carbonic acid in the corridors and the amount in the external air; at the same time, in the wards there was a slight rise, but very slight, indeed. Air is held to be impure when the carbonic acid reaches 1 in 100. If the percentage is 0.4 per cent. that is pure. Now, on that occasion the wards showed 0.6, 0.7, against 0.4 of the outside air, for instance; you will see that that is a long way from any impurity. This was with patients in it. Then, as regards the question of the extension of consumption hospitals, I think the great argument for the existence of our hospital is the fact of the way in which other hospitals of the kind have sprung up. We were the first hospital, I believe, with beds for the treatment of consumption; but other hospitals have sprung up. There are four hospitals for consumption in London; and there are a number in the country; there is one at Liverpool, there is one at Manchester, there is one at Belfast, and, I believe, there are no less than 18 institutions of different sorts for the treatment of consumption and kindred diseases in the United Kingdom.

17641. Have you any reason to suppose that those hospitals are as well organised as yours is?—The Victoria Park, I think, is quite as well organised; I cannot speak of the others because I have not visited them all, but the Victoria Park was really founded on very much the same principles as ours, and is akin to ours; it is a smaller hospital, that is all. But what I have noticed of late years, and what has struck me so much, is the anxious inquiries from foreign countries about our hospital; I have had commissions from various countries, for instance, from the city of Paris, from Berlin, from St. Petersburg, and various ones from America, to study the arrangements of the Brompton Hospital with a view to imitation; and it is about 12 years ago that I submitted the plans of the

(24.) e

Chairman—continued.

Brompton Hospital to Professor Senator, of Berlin, for at that time they were anxious to establish a similar hospital at Berlin, and they still wish to do it, and I saw him the other day in Berlin, and he still thinks they will be able to do it; and a few years ago Professor Virchow, who is well known by name to you, when he came over told me that his principal object in coming was to study the arrangements of Brompton Hospital; he paid a very careful visit, and went all over it; the new wing was hardly open then, but he saw the way it was to be managed, and he wrote me a letter afterwards, which I read to the committee of management, and which was to the effect that everything was done in our hospital that was possible for the consumptive patient.

17642. You have no school at the Brompton Hospital?—We have pupils, but we do not teach other subjects than those which have to do with the diseases of the chest.

17643. How do you arrange it; do they come from other hospitals to you to study those diseases?—Yes, there are a certain number who do so, but they are few; any student can enter on the payment of the fee, for the practice of the hospital; either for two or three months; two guineas for two months, and three guineas for three months; and I believe there is a committee sitting to determine whether a pupil should be admitted for one month. We have not heard the report of that committee, but it is quite possible that that may come about too. In addition to that, we give lectures; at present we have joined the post graduate course, a course chiefly arranged not for students but for graduates, qualified practitioners who wish to make special studies at different hospitals; and we have joined with six or seven other special hospitals in which the course is carried out, ours being arranged according to the necessities of the practitioners. We give two lectures a week during the greater part of the year in that course.

17644. Do you know what number of pupils you have at the present moment?—I do not know now; I know that one year we had 30 entries.

17645. And a large number of pupils besides who had entered before?—No; because you see men do not enter there for more than a year; there are a few perpetual pupils, still very few; if a man wants to study in that way, if he comes for a year that is quite enough.

17646. This Brompton Hospital is essentially a special hospital, is it not?—Yes.

17647. Are you, from your experience, in favour of special hospitals for special diseases, as opposed to general hospitals with special departments?—That is a very difficult subject to give an opinion on. I think on the whole I am in favour of special hospitals; but if I had been asked that many years ago, before any special hospitals had been built, and if the general hospitals had been ready to offer those opportunities to special departments which they were later, I should have said decidedly that it would have been much better to have a special department in a general hospital. But it has got too far for all that; you must have special hospitals.

Y r

17648. Then

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Chairman—continued.

17648. Then you do not agree with what has been told us here by witnesses during this inquiry, that the presence of the special hospitals is rather a farce now that the general hospitals have a special department; yours is the contrary opinion?—Yes; I consider that it would be too expensive for a general hospital to erect a special hospital for diseases of the chest. I have given you some reasons, I think, for the establishment of consumption hospitals in this country; but there is another point which I want particularly to draw attention to, and that is to the reduction of the mortality from consumption in this country. I daresay your Lordship is aware that there has been an enormous reduction in the death-rate from consumption in the United Kingdom, and that is a very important fact. For instance, shortly after this hospital was built, viz.: in 1848, that is some years after the hospital was opened, the mortality from consumption in the United Kingdom, out of a population of 17,340,492, was 51,663, or 2·97 per thousand; in 1888, that is 40 years afterwards, out of a population of 28,628,804, it was 44,248 or 1·54 in a thousand; practically it had been halved. In France and the United States during the same period the phthisis-mortality has increased. Now, it may be said that this diminution of mortality was due to a great many causes. I think it is one of the greatest triumphs as regards sanitary and other sciences that has ever been achieved. The great point is what that has been due to. No doubt it has been due to a great many causes. It has been due to improved legislation, in the better housing of some classes, in the Factory Acts, and, above all, to the great drainage of the land. But I claim that the earlier diagnosis of the disease, and the better treatment of it, has had a great deal to do with it. The saving of what would have been 50,000 deaths a year by this time is a matter of great importance. Your Lordship said something about facilities for medical education; I should like to say something about that. At the Brompton Hospital we have a certain number of pupils, no doubt, and we have the post graduate course of instruction, thirty of which post graduates are now attending at Brompton. Then we have a certain number of others. Where we claim to do a great deal of good to the country is in this way: we have what are called the house physicians; they were formerly called clinical assistants; and we have a resident medical officer and an assistant medical officer. These house physicians are appointed for six months; they are young men for the most part qualified; they get the appointment by competition from other hospitals; and some of them have turned out exceedingly well; they are brilliant young fellows, a good many of them; and so we send out every year eight of these young men into the country with a very fair knowledge of the chest diseases, they having taken care of cases of consumption under our guidance and instruction; and in that way we have sent out hundreds of young men well qualified to deal with these diseases.

17649. Then I understand you that this appointment is given by some kind of competitive examination?—Yes, it is a competitive examination. We do not always examine them so much

Chairman—continued.

now, but it is competition certainly. There is an advertisement in the paper stating when they are to apply; they come and we see them, and select those that we think best.

17650. Would you have room for more pupils than you have at present?—Yes, we could have and for the lectures. We never could have a very large number, I think, because the examination of patients necessitates personal examination which cannot be undertaken by a very large number at a time. The same applies to general hospitals.

Earl Cathcart.

17651. The period you mention in which the very satisfactory decline of consumption to the present rate has taken place, exactly corresponds with the period when the drainage of England was commenced; that was in 1845, was it not?—1848 was the date that I took.

17652. Therefore, I suspect that the drainage had a very great deal to do with the satisfactory decline of mortality from that disease?—If you remember, I said that the drainage of the soil was the great thing.

17653. But in the same time the disease of cancer has greatly increased?—Yes, it has increased, I believe.

17654. Is there any analogy at all between the two diseases, consumption and cancer?—I do not think there is much.

17655. Is the bacillus of the lung the same as any other tubercle bacillus?—Just the same.

17656. Or of the liver or any other part of the body?—Of any organ it is the same.

17657. I understood you to say that the microbe is in the air from the dried-up sputum, that that microbe desires a nidus, and if it does not find a nidus it does not produce a bad effect upon the person passing?—That is quite true.

17658. It requires a congenial soil in which it may grow?—Quite so.

17659. From an abstract point of view it cannot be a very desirable thing to bring a number of people into the same place all suffering from the same disease, whatever that disease may be?—I do not agree with your Lordship. I think, for several reasons, it is desirable; for the study of the complaint, for instance, I think it is most advantageous; I do not see how you can study disease unless you get a number of cases together.

17660. I am speaking now of the patient, and I mean that your private patient living by himself in his own house would have a better chance than if he were brought into a consumption hospital, however good it was?—I consider that, if you take the proper means of preventing the evils of overcrowding, then that case in the consumptive hospital has just as good a chance as my private case, perhaps better.

17661. There is a certain depressing influence, I suppose, from having a great number of people in the same place, all suffering in the same way; is not that depressing to the spirits?—We find exactly the opposite. They cheer each other, and we do all we can to encourage this. We have entertainments going on once a week, as I daresay the secretary has told you. The moral effect is carried out; we have got a beautiful room in which we have all sorts of entertainments going

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Earl Cathcart—continued.

going on, and a great deal of other excitement; so that there is plenty to raise their spirits.

17662. There are three principal things, are there not, to be attended to in a consumption hospital; first, the dryness of the soil, which is most desirable; secondly, the admirable ventilation which you have described; and thirdly, the food?—Yes.

17663. Are you quite satisfied with regard to the food supplied in the consumption hospital?—I am quite satisfied.

17664. You have never had cause to complain of it?—There have been occasions on which I did not quite approve of what I saw in the wards, but then that has always been rectified at once; and at the present moment it is excellent. I have had occasions when I have seen on a patient's plate something I did not quite approve of, and I have quietly taken the plate down to the committee of management and shown it to the chairman, and it has been set right at once.

17665. You admit that there is a fear of infection through contiguity?—Under certain circumstances which I mentioned.

17666. That is to say you would never dream of placing a healthy child in the same bed with a nurse who was suffering from consumption?—Not if it were advanced consumption; I should not mind consumption in an early stage, but when there were large cavities in the lungs with a large amount of secretion, and a great deal of expectoration came away, I should be afraid.

17667. Now with regard to infection through the marital conditions, you attribute the infection from the husband to the wife; but is there not a corresponding infection; is it not the case that the wife might infect the husband?—I have known a case from marital relations, but not where the husband has been infected by the wife; it was through inhaling the breath.

17668. But in the other way where the husband infects the wife it is through the marital relations?—Yes, it is generally.

17669. And do you think in that way, through the marital relations and through the father, the children inherit the tendency to consumption?—As regards father and son it is apparently from bequeathing a weak soil, that it is to say, a weak constitution.

17670. You mean rather a congenial soil do you not, congenial to the bacillus?—Yes, that is the thing; and the reason why when you walk out in Bond-street or Regent-street, you do not get consumption, is because your soil is not congenial; because I have not the slightest doubt that you and I, and all of us, swallow quantities of these bacilli.

17671. With regard to infection through the milk of diseased animals, or even of consumptive women, would you explain what you meant by "through the milk of diseased animals"?—There is a Royal Commission at work on that subject, I believe. I meant by swallowing milk. For instance, with regard to the milk of diseased cows, particularly where the udders have been diseased, it has been found that the milk of some of these cows contained tubercle bacilli, and children swallow that milk have been infected; that has been

(24.)

Earl Cathcart—continued.

found to be the case, not here, but on the continent.

17672. And is that bacillus found in the udders of these cows, the same bacillus as you meet with in the corridors of a consumption hospital?—Practically it is the same.

Lord Zouche of Haryngworth.

17673. I think you mentioned, or the last witness did, that the average stay of patients was 65 days in your hospital?—Yes; 65 to 70 days.

17674. Do you find that is ordinarily sufficient to effect the cure of a patient; do you think that a large proportion of those who go away are eventually cured?—I cannot say that they are all cured; they are greatly improved; very often the disease becomes quiescent, and they go on very well for years, at all events for months, following their occupation; but a fresh exciting cause may bring it on again at any time. I do not consider that you can effect a permanent cure of consumption, without prolonged treatment or special climates, or certain measures, which must be put in force for years, not months.

17675. But would you go so far as to say that the majority of the patients at your hospital are cured?—No, I would not say that the majority are cured; I would say greatly improved. There are some that one might say are cured, but "cured" is a strong term, because you may relapse again. If your soil has been congenial to the bacillus, though you have rendered it uncongenial for a time, if you get depressed by bad conditions, bad fortune, hard food, and by similar causes, the soil may become congenial again, and the next bacillus may come and settle.

Earl of Kimberley.

17676. Have you found that consumption is at all more prevalent in districts in those parts of the country where milk is difficult to procure, and where, therefore, the population get very little milk?—I have no experience on that; I have not made that a special study.

17677. Would it not be a point worth while considering?—Quite worth while.

17678. I live in a part of the country where milk is very difficult to obtain, and, in fact, is hardly used by the labouring population, except in cases of illness, and it has often occurred to me that it would be a curious matter for inquiry whether consumption is in any way affected by the absence of milk; possibly that might be a source from which information might be procured?—Yes, I think there is evidence on the subject; not my own evidence, but I think you will find there is evidence of the sort; in some of the old books that has been gone into; and, generally speaking, we consider that as regards children the great thing is plenty of milk; that it wards off consumption; that if you can get a plentiful supply of pure milk it will prevent it.

17679. Then, to turn the matter the other way, do you think there is any reason to suppose that where there has been great difficulty in procuring milk for the children the infantile mortality has increased?—I could not express an opinion; I have no facts as to that; what I have been

Y X 2

giving

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued]

Earl of *Kimberley*—continued.

giving you in my evidence is my own experience, but on that matter I have not the experience that would enable me to answer the question.

Lord *Clifford of Chudleigh*.

17680. You say that deaths from consumption have very enormously decreased in the last 40 years; I do not quite understand in what way well managed hospitals like yours would account for this decrease, because I suppose the number really cured is comparatively small?—Well, you must remember that there is this way in which you may look at that. You get them very much better, you get the disease into a quiescent state, and they live for long periods of life, and they probably die of something else. We are very cautious about using the word “cured;” it is a very difficult word to handle, as it were. I have no doubt in regard to some of the cases, if I were to show them to your Lordships, you would say from all I have said that the disease was cured; but still I called them “greatly improved;” I prefer on the whole that form of expressing it.

17681. Still they are improved to such an extent as to live long enough to die of something else?—Certainly; that is a common thing; and as regards the upper classes, I have statistics showing that the duration of life in cases of consumption was extended from the original limit of two years on the average to eight years; it is rather longer now; that was calculated on a thousand lives.

17682. I quite understand that hospitals under proper management may very easily prolong the life of a consumptive patient; but if it does not eventually cure him, or prolong his life to such an extent as that he dies of something else, it would have no effect at all, would it, upon the mortality; or am I wrong there?—My view of the matter is this: You take a consumptive patient into Brompton Hospital, say in the early stage; the disease becomes arrested, and he goes on for years and years, during which he never knows that he has any disease. He is a comparatively strong man; then he gets into bad circumstances, want of food or something else, and he has a recurrence of the disease. He comes to the Consumption Hospital, he gets relief again, and goes on for years and years again, and in that way you cannot say he is a cured case; but he may live the natural duration of life; he may die at 70 or 80. I have known consumptives, patients that were still consumptive, live till 83 and 84 years of age. You cannot say that they do not die of consumption, they are consumptive still.

17683. Would not another effect of that prolongation of life be to increase the number of people who are born with a disposition congenial to consumption?—There is something in that. That is what Mr. Darwin has always attacked hospitals for. His argument is that they do a great deal of harm, because they keep alive a number of people who ought not to be alive, and able to marry and increase the population.

Earl of *Kimberley*.

17684. That would be a good argument against the existence of the medical profession alto-

Earl of *Kimberley*—continued.

gether, would it not?—I have heard some of your Lordships say that they are very useful in the opposite way.

Lord *Sage and Sele*.

17685. You gave it as your opinion, if I rightly understood you, that Brompton was not a very suitable site for a consumptive hospital?—No, I did not say that. I said that for instance, *qua* London, Brompton is a very suitable site; but I must confess that if I were wanting a model site for a consumption hospital, I would not put it in the town at all but in the country; that is the best.

17686. But then the Chelsea site was adopted on the advice of the medical committee, was it not?—As far as I remember it was.

17687. Of which medical committee you were a member, were you not?—I was not a member of it then; I was three years old at that time.

17688. But a great many sites, elsewhere, were inspected by the medical committee, were they not?—Yes; and I wish you clearly to understand that my opinion is, that it is one of the best sites in London.

17689. But the Committee looked at sites in the country; at Wimbledon, and other places?—Yes, but that was for the convalescent institution, I think.

17690. No; for the new branch of the hospital?—We were going to have a convalescent institution; you will remember they were anxious to have a convalescent establishment somewhere; and we visited numbers of sites, I should think 16 or 20, but we never got what we wanted, and so we never have erected the convalescent institution. Now we have solved the difficulty by adopting other convalescent institutions, and we send a large number of patients to Sandgate and Bournemouth, and other places, when they have been about two months in the hospital. That is how we have solved the difficulty, and with great advantage.

17691. But I was asking you about the large sum of money spent in building the new branch, and it was then that they considered sites in the country?—It may be so, but I did not remember that; but I am quite sure as regards London, that we could not have done better. We have got an excellent soil, and we have a large open space, as far as you can get it in London; you can get the best medical advice easily; and so we have done very well, in my opinion.

Lord *Monkswell*.

17692. Lord Clifford expressed some surprise that the ventilation in your hospital has had a very considerable effect upon the general death rate from consumption; but I suppose that the ventilation all over the country is one of the things that has made enormous strides in the last 30 or 40 years?—Yes.

17693. So that the diminution of the death-rate is due not only to the improved drainage, but to the attention paid to the question of ventilation?—Yes, I alluded to that when I spoke of the Factory Acts and the improved housing of certain classes. I hope that the new Acts will do a great deal of good.

17694. When

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Lord Monkswell—continued.

17694. When you talked of general as against special hospitals, you suggested that a peculiar kind of hospital was desirable for consumption, which it would be very expensive to erect as part of a general hospital?—Yes.

17695. But I suppose your system of ventilation is one which it would be very desirable to have carried out in every hospital, particularly in every hospital with infectious diseases?—The only thing is that most of those hospitals want what they call forced ventilation, that is to say, windows opposite each other, and the air blowing right through. A great many diseases, and certainly infectious fevers, are best treated by the patients being practically in the open air, that is to say, with the windows open; they stand cold much better than our patients do. Our difficulty is that where we let any amount of air in without warming it, we get a number of troublesome complaints like bronchitis and pneumonia which make the consumption a great deal worse. So that we have to supply not only pure air, but air at a certain temperature.

17696. I suppose there might be other diseases besides consumption in which it would be desirable to keep the patient in a uniform temperature?—Yes, there are others; it is not only in consumption but in diseases of the chest generally; and there are others, such as rheumatism, in its various forms.

17697. Is it not the case that for members of your staff, London qualifications are necessary?—Yes, you must take the membership of the College of Physicians; that is just like the other hospitals.

17698. Not all of them?—General hospitals, I mean.

17699. Not all even of the general hospitals. Do you think it desirable that the London qualifications should be made necessary?—I think highly desirable, and I will tell you why: for the sake of the hospital and also for the sake of the physicians, it is desirable that you should have some corporation or some body that should guide to some extent the conduct of a physician in difficult cases. I, for instance, have derived immense comfort from the college which I am connected with, because I feel that if I am placed in a difficult position with my hospital, or the committee, or with patients, or with members of my profession, I can go for counsel to that body, to the president, or to the officers, and ask them what I should do. We have at the College of Physicians a Censors' board, which is supposed to look after the conduct of the licentiates, members, and fellows; and if we misbehave ourselves, we are cited before that board; for instance, if I did anything derogatory, I should be cited before that Censors' board to answer with regard to it; and if I misbehaved myself very grossly, I should have my name taken off the roll; and I think it is desirable to have something of that sort. But you may say, why should you be obliged to hold that qualification? Remember now, though it is obligatory, it does not mean a very terrible ordeal. Supposing a man comes from Scotland with a good Scotch degree, and he wishes to be a candidate for the assistant physicianship or physicianship of the Brompton (24.)

Lord Monkswell—continued.

Hospital; he has not yet the membership of the College of Physicians; and he is told he must go there. He has been in practice in Scotland for many years, say 10 years; he presents himself to the Censors' board; under those circumstances the Censors do not put him through the long examination that they would an ordinary candidate. If he has been 10 years in practice he is given a simple practical examination in those subjects which he must know to practise his profession; that is to say, he is examined in medicine; he is taken to a hospital to see a few cases, and he may have to write a prescription or something of that sort; but all the preliminary things, the high pathological anatomy, and the various preliminary things, are left out, and if he passes this examination he is presented with his diploma without more ado. You know there is something of the same sort with the College of Surgeons, but I do not deal with that. I am saying this of the College of Physicians. And this not only applies to English people or Scotch or Irish, but it applies to foreigners. I remember a distinguished French physician who came over here with the Orleans family, and wished while he was here to practice as a physician in London. He had no qualification except the Paris qualification, and under that he could not register here. He applied to the College of Physicians. The Censors' board at once received him, and they examined him in a practical examination, and he was made a member of the College of Physicians; and as soon as they could do it, according to the rules, he was elected a Fellow of the College of Physicians. So that the Censors' board is open to all proper applications; it is not a hard-and-fast line that is drawn by them. Of course a young man coming up from the university goes in for a regular examination; but for men who have been in practice the great thing is that the College of Physicians have to make sure, is that they are qualified to hold hospital appointments.

17700. I understand you to say that, as regards the qualification for practice, an Edinburgh degree or a Dublin degree would be just as good?—Yes, I admit that, for actual practice; but then you must remember that you are liable to have to teach at these hospitals; that is a very important thing to be borne in mind.

17701. Do you think it desirable that a man duly qualified at Dublin or at Edinburgh should have to go through that practical examination of which you speak?—Yes.

17702. And pay for it?—And pay for it; it is not a very high cost. But you must remember that Edinburgh does just the same for us. Supposing, for instance, that I go to Edinburgh, and I apply for the post of assistant physician or physician to the Edinburgh Infirmary, do you think they are satisfied with my qualification as a Fellow of the Royal College of Physicians of London? I was not sure about it, but I wrote to the president of the Royal College of Physicians of Edinburgh, and he writes me in reply, and tells me that it is a *sine quâ non* that you should take the Edinburgh qualification.

Y Y 3

17703. Is

12 March 1891.]

Mr. WILLIAMS, M.D.

[Continued.]

Earl of Kimberley.

17703. Is not that a *reductio ad absurdum*?—No, I think not.

17704. Inasmuch as the London qualification is, I suppose, universally admitted to be higher than the Edinburgh one, is it not a *reductio ad absurdum* to say that this Edinburgh qualification is necessary to enable you, who hold the London qualification, to receive an appointment in Edinburgh?—I do not know whether they would actually examine you. I look upon it more in a moral and disciplinary point of view; I think it is a good thing that you should have a body to go to that is answerable for your conduct to some extent.

17705. I can understand the force of that, but that is another point?—Yes; but that is the point of view from which I view it, and I say that if a man has been 10 years in practice and is fit for anything, he has no difficulty in passing the London examination.

Lord Monkswell.

17706. Lord Kimberley has suggested to another witness that persons taking an appointment in a hospital should put themselves under the censorship of the College of Physicians or Surgeons; what would you say to that?—I do not think the College of Physicians would accept the censorship of anyone out of their body with whom they have nothing to do; I know I would not.

Earl of Kimberley.

17707. Why should they not?—They do not know enough of them.

Earl of Kimberley—continued.

17708. But assuming that a man is a competent man, it is possible, is it not, for the College of Surgeons or Physicians to see that he conforms to the rules of the profession, exactly the same as one of their own body; what would be the difficulty?—It is possible, certainly.

17709. Is there any difficulty?—You are suggesting putting a number of men under corporations who have nothing to do with them.

17710. I fully admit the force of the argument that the disciplinary control is exceedingly desirable. If that disciplinary control can be secured by the voluntary submission of certain men to the body, is there any inferiority in that arrangement to the arrangement which is made with reference to those who are members of the College itself; in what respect is it less a guarantee?—I think there is something in what your Lordship says; I am not at all opposed to it, but I have never heard it proposed yet; it is new to me.

17711. At all events, without pursuing it too far, you would regard that as a possible arrangement?—Yes, as possible.

17712. May I ask, is it not the fact that the College of Physicians have not the power of expelling from their body anyone who has misconducted himself?—I cannot answer that; I am not sure. Still I hold that it is desirable that physicians holding these appointments should have the membership of the College of Physicians. I do not think there is any great grievance about it.

The Witness is directed to withdraw.

MR. JAMES K. FOWLER, M.D., is called in; and, having been sworn, is Examined as follows:

Chairman.

17713. You are on the staff of the Brompton Consumptive Hospital, are you not?—Yes.

17714. Will you tell us exactly what the position is you occupy there?—I am the senior assistant physician.

17715. Are you on the staff of any general hospital?—I am senior assistant physician at the Middlesex Hospital.

17716. That, as we have been told, is a general hospital; and in your position as senior assistant physician at the Brompton Hospital, have you to do with the out-patient department?—Yes, I am the physician to the out-patients.

17717. And are there, as we have been told, about 13,700 out-patients who come to the out-patient department of the Brompton Hospital?—About that number of new cases a year.

17718. Does that, in your opinion, represent the work that the out-patient department does?—I believe there are about 77,000 attendances during the year.

17719. What do you treat for at the out-patient department of the Brompton Hospital, I mean to say speaking in general terms?—Cases of bronchitis, bronchial catarrh, and its results, are the most numerous; consumption, heart disease; of patients suffering from anæmia or poorness of blood, there are a considerable number; and a great variety of others.

Chairman—continued.

17720. And dyspepsia;—Yes, and debility, and a great variety of others.

17721. Do those two latter diseases come within the category of chest complaints, dyspepsia for instance?—No, certainly not.

17722. Would these be treated as well at a general hospital?—A case of dyspepsia could be treated equally well at the general hospitals.

17723. This Brompton Hospital is essentially a chest hospital, I understand?—Yes; but many of those persons come thinking that they have consumption.

17724. Do you keep them until they are cured?—They are allowed to remain as long as they get letters; they are not turned away.

17725. And those letters to the number mentioned in the return come from the governors?—From the governors.

17726. Have you any assistant in your out-patient department?—No.

17727. Then do you see all these cases?—All of them.

17728. Is not your out-patient department very crowded?—It is a large one, and on Mondays, I believe, it is rather crowded; but on other days it could not be said to be crowded; there are a good number there.

17729. I meant is the number inconveniently large for the purpose of proper diagnosis?—The work

12 March 1891.]

Mr. FOWLER, M.D.

[Continued.]

Chairman—continued.

work is very heavy; it takes a large number of hours, four or five hours.

17730. How often do you go there?—Twice a week.

17731. Do you do any teaching work?—Yes; there are a certain number of students attending the out-patient department, five, or six, or seven or eight, not many more on my days.

17732. Do those students come in with the other pupils that were mentioned just now?—They are the pupils that Dr Theodore Williams referred to.

17733. If it is difficult from the number of out-patients to take a diagnosis, is not the large number also difficult for teaching purposes?—One does not attempt teaching in the same way as in a general hospital; they are all qualified men who come to us: they are all senior men.

17734. You are an official of a general hospital; have you any opinion as to whether cases of this description could be treated as well in a special department of a general hospital?—You mean cases of consumption. The out-patients might be equally well treated at a general hospital. The in-patients, I think, are better treated in the wards at Brompton than they would be in the wards of a general hospital.

17735. Does that answer apply, in your opinion, to other special hospitals?—I am in favour of the existence of special hospitals in many departments.

17736. Have you any particular reason to give; do you think that study could more effectually be brought to bear upon the cases in special hospitals?—I think that the staff of the special hospital gets advantages from seeing a large number of cases of the same kind.

17737. Do you know if any inquiry is made as to the position of the out-patients who come to you, to ascertain whether they are able to pay anything to a general practitioner?—No, I do not think that any systematic inquiry is made.

17738. Do you think that the charity is abused, from what you have observed?—I do not think so; with regard to the men, certainly not. With regard to the women, anyone accustomed to a general hospital might think that the charity was abused, possibly from their dress; but on inquiry you nearly always find that they are people who could obtain materials for dress cheaply, milliners or dressmakers, or ladies' maids, or something of that sort.

17739. Their dress is no criterion, in fact?—Not at all.

17740. And do you think that at the general hospital with which you are connected the charity is abused at all?—No, I think not.

17741. Do you think that the free out-patient department that exists at Brompton is hard upon the general practitioners, that is to say, by what has been called starving them?—I do not think so. The general practitioners make great use of the hospital; they frequently send cases there; I rarely go without having cases which have come from them; they also constantly recommend cases to go there. The other hospitals send cases to Brompton constantly.

17742. And as a general question, are you in

(24.)

Chairman—continued.

favour of the out-patient departments at the hospitals with which you are connected; take the Brompton first?—Yes, I think the out-patient department at Brompton does a great deal of good.

17743. Do your patients come from far for that relief?—From all parts of the country.

17744. To the out-patient department, do you mean?—Yes.

17745. But it is not so much used for teaching purposes in the Brompton Hospital as in a general hospital, is it?—No, it is not.

17746. And as to the out-patient department of the general hospitals, do you consider that an essential for education?—Yes, I think essential.

Earl Cathcart.

17747. Suppose an accident occurred in the street, outside your special hospital, what would they do; would they tie the patient up until something happened, or what?—There is a resident staff at the hospital.

17748. You do not remember any such accident close to the Brompton Hospital?—Such a thing may have happened; it is not within my knowledge.

Chairman.

17749. Can you tell us what is the staff at Brompton?—There are six physicians, six assistant physicians, one surgeon, and a dentist, and there is a resident staff. There are also consulting physicians; they are not on the acting staff.

Earl Cathcart.

17750. It would have a good effect upon the health of people taking out stumps and that sort of thing, and therefore you have a dentist?—In a large hospital like Brompton the services of a dentist are often required.

Earl of Kimberley.

17751. You said you thought that there was an advantage in a special hospital because a large number of cases of the same disease could be seen there?—Yes.

17752. But that would apply, would it not, equally well to a special department of a general hospital?—If you were starting the whole hospital system anew I think you would group special departments around general hospitals. Things being as they are, I am in favour of there being special hospitals.

17753. Now is there not this objection to a special hospital, that it diminishes the opportunity for teaching; for example, to take your own hospital, consumptive cases going there in large numbers, and being no doubt excellently treated, are not as available for teaching purposes as the same cases would be in a general hospital, where there is a medical school?—The cases in the wards at Brompton are not so useful for teaching purposes; but there is ample material for teaching the signs and general treatment of consumption in the general hospitals.

17754. You do not think you withdraw so large a number of cases from the general hospitals

Y Y 4

12 March 1891.]

Mr. FOWLER, M.D.

[Continued.]

Earl of Kimberley—continued

pitals as to incur that objection to your hospital?—Not at all.

17755. Can you give us the average number of out-patients that you have usually on your days?—There are two assistant physicians who sit every day; the average is from 230 to 250 out-patients every day.

17756. And how long does the time of examination last?—The time for attendance is at 12, and it lasts to 3, 4 or 5, sometimes half-past 5 o'clock.

17757. There is no actual limit of time?—The physician has to continue there until all the work is done; it depends on the number of cases.

Lord Saye and Sele.

17758. The drugs for the out-patients cost I notice over 2,000*l.* a year; where are they obtained from, are they obtained by contract, do you know?—Yes, I believe they are, but I do not know anything about that.

17759. The contracts for the drugs are not taken by the medical committee, are they?—I do not know.

Lord Monkswell.

17760. Are patients admitted without letters to the out-department, or how do they get there?—They are not admitted without letters.

17761. Supposing a man comes who is really a proper subject for treatment, what do you do if he has not a letter?—He is referred to the secretary, who generally has letters given him by people who do not want to use them themselves.

17762. The man has to walk round to the secretary's office?—Yes. If the secretary considers it a good case he gives him a letter.

17763. Would you send him round with a note recommending him for a letter?—He would not be seen by me till he had a letter.

17764. The porter would tell him to go the secretary's office?—Yes. It would be quite an exceptional way of admission to the out-patient department for the patient to have a letter given him by the secretary; I thought you were referring to an emergency or where some patient who was very ill came to the out-patient department without a letter.

17765. If he was very ill indeed you would see him at once, I suppose, even without a letter?—Yes.

17766. But in an ordinary case the patients know perfectly well that they must have letters, and if they have not a letter they go round to the secretary and get one?—The patients would not know that they could obtain letters in that way; but a patient might come from the country, not having the necessary letter, and I have known such cases referred to the secretary.

17767. There might be any number of out-

Lord Monkswell—continued

patients quite close to you who would be proper subjects of treatment as out-patients, but if they could not manage to get a letter they would not be treated?—No.

Chairman.

17768. From your general experience at the hospitals with which you are connected, do you think there would be any advantage in having an inquiry officer for the out-patients?—No; I think it would be useless unless it were done thoroughly. In case of the Brompton Hospital, if it were done thoroughly you would require inspectors travelling all over the country to carry the system out.

17769. And the total expense that might be saved would not be worth while?—I do not think it would be worth while.

17770. Have you ever considered whether special hospitals could be affiliated to a general hospital, so that any very bad special case might be sent from a general hospital to a special hospital for treatment?—I have not considered the subject, but I think it is more or less done now; cases are sent to Brompton, for instance, from the general hospitals. I send cases to Middlesex Hospital from the Brompton often; serious cases which are not suitable to us.

17771. The feeling, you would say, between the best general and best special hospitals is so good that they do co-operate?—Yes.

17772. I forgot to put this question to you at the beginning: would you tell us what your qualifications are?—I am a Doctor of Medicine of Cambridge, a Fellow of the College of Physicians, and a Member of the College of Surgeons.

17773. Is there any other point you would like to add?—No.

Earl Cathcart.

17774. If hospitals generally were in telephonic communication with one another, according to a suggestion which has been made here, it would be a good thing; what is your view of that?—It might occasionally be of service.

Lord Clifford of Chudleigh.

17775. Could you give me any idea of the proportion that exists between the patients who come to the Brompton Hospital from London and the neighbourhood, and those who come from the country?—No, I have no knowledge on that point, but no doubt the larger proportion come from London and the neighbourhood.

17776. Would it be anything like two-thirds from London, or three-fifths; you could not give any approximate idea perhaps?—No, I should not like to attempt to speak with accuracy as to the proportion.

The Witness is directed to withdraw.

12 March 1891.

MR. SEYMOUR TAYLOR, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

17777. WHAT are your qualifications?—I am Doctor of Medicine of the University of Aberdeen, and a Member of the Royal College of Physicians of London, and a Member of the Royal College of Surgeons of England; besides that I am a Master of Surgery.

17778. Are you attached to the staff of any hospital now?—The West England now, at Hammersmith, as assistant physician.

17779. And are you a general practitioner?—No, I am in practice as a physician. I have been in general practice, but I am now practising as a physician.

17780. Do you find that the out-patient department of the general hospital with which you are acquainted is so overcrowded as to make it difficult to work it properly?—I do.

17781. What is the number of out-patients you have to see?—I average all the year round 80 a day; every day of my attendance, that is to say.

17782. Are those new cases?—No.

17783. What proportion of new cases is there, as a rule?—The proportion would be about 60 old patients and 20 new therefore, all the year round. It gets heavier in winter and lighter in summer.

17784. At that particular hospital have you any assistant at all?—No, except those men whom I can bring down to help me.

17785. To profit by the instruction?—Yes.

17786. Is there any school at that hospital?—None at present.

17787. And have you ever suggested to your authorities any organisation by which the difficulties of the out-patient department might be decreased?—Yes.

17788. And have you not been met by them?—Yes they have met me well; the committee have done everything they could possibly do.

17789. Have the difficulties disappeared?—Slightly.

17790. How would you propose to remedy the state of things?—The evil is chronic in the London charities by reason of the competition for money. The competition for money, voluntary contributions and subscriptions, in London is so keen that they must of necessity publish a report, saying, "We have seen so many out-patients in the year," because it is found practically, if I may put it as an equation, that x out-patients brings in y money, and therefore $2x$ out-patients would bring in $2y$ money.

17791. There are many of the cases of these patients that you see so trivial that they ought not to come to a hospital?—They ought never to come to any hospital whatever, they are such trumpery trivial cases, many of them.

17792. Could not something be done by means of organisation to remedy that?—Yes.

17793. That is to say, by having a sifting officer?—As they do across the river; that is the model out-patient department, St. Thomas's, across the river.

17794. Where a sifting takes place?—Yes.

17795. It has been explained to us what the

(24.) e

Chairman—continued.

system at St. Thomas's is; could you not carry that out at your hospital?—Then we should want a resident officer who is of greater experience than the house physician or house surgeon is.
